THE BOUNDARY POST.

They have marched away into Siberia

THE CENTURY MAGAZINE.

VOL. XXXVI.

MAY, 1888.

NO. 1

SIBERIA AND THE EXILE SYSTEM.

AUTHOR'S PREFACE.

BEFORE beginning this series of papers upon Siberia and the Exile System, it seems to me both proper and necessary that I should say a few words with reference to the circumstances under which I made the journey that I am about to describe, and the opinions concerning Russian affairs which I held at the time it was undertaken. The idea of exploring some of the less known parts of Siberia, and of making, in connection with such exploration, a careful study of the exile system, first took definite form in my mind in the year 1879. From such observations as I had been able to make during a residence of two and a half years in the country, and a subsequent journey of five thousand miles overland to St. Petersburg, it seemed to me that Siberia offered to a competent investigator an extremely interesting and promising field of research. To the Russians, who had possessed it in whole or in part for nearly three centuries, it was, of course, comparatively familiar ground; but to the average American, at that time, it was almost as much a *terra incognita* as central Africa or Thibet. In 1881 the assassination of Alexander II., and the exile of a large number of Russian revolutionists to the mines of the Trans-Baikal, increased my interest in Siberia and intensified my desire not only to study the exile system on the ground, but to investigate the Russian revolutionary movement in the only part of the empire where I thought such an investigation could successfully be made,—namely, in the region to which the revolutionists themselves had been banished. It seemed to me a hopeless task to look for nihilists in the cities of St. Petersburg and Moscow, or to seek there an explanation of the political events and the social phenomena which interested me. Most of the leading actors in the revolutionary drama of 1878–79 were already in Siberia; and if the Imperial Police could not discover the few who still remained at large in European Russia, it was not at all likely that I could. In Siberia, however, communication with exiled nihilists might perhaps be practicable; and there, if anywhere, was to be obtained the information which I desired.

Circumstances, and the want of time and means for such an extended journey as I wished to make, prevented me from taking any definite steps in the matter until the summer of 1884, when the Editor of THE CENTURY MAGAZINE became interested in my plans, and proposed to me that I should go to Siberia for that periodical and give to it the results of my work. I thereupon made a preliminary excursion to St. Petersburg and Moscow for the purpose of collecting material and ascertaining whether or not obstacles were likely to be thrown in my way by the Russian Government. I returned in October, fully satisfied that my scheme was a practicable one; that there was really nothing in Siberia which needed concealment; and that my literary record—so far as I had made a record—was such as to predispose the Russian Government in my favor, and to secure for me all the facilities that a friendly investigator might reasonably expect. The opinions which I held at that time with regard to the Siberian exile system and the treatment of political offenders by the Russian Government

were set forth fully and frankly in an address which I delivered before the American Geographical Society of New York in 1882, and in the newspaper controversy to which that address gave rise. I then believed that the Russian Government and the exile system had been greatly misrepresented by such writers as Stepniak and Prince Krapotkin; that Siberia was not so terrible a country as Americans had always supposed it to be; and that the descriptions of Siberian mines and prisons in the just-published book of the Rev. Henry Lansdell were probably truthful and accurate. I also believed, although I did not say, that the nihilists, terrorists, and political malcontents generally, who had so long kept Russia in a state of alarm and apprehension, were unreasonable and wrong-headed fanatics of the anarchistic type with which we in the United States have recently become so familiar. In short, all my prepossessions were favorable to the Russian Government and unfavorable to the Russian revolutionists. I lay stress upon this fact, not because my opinions at that time had intrinsically any particular weight or importance, but because a just estimate of the results of an investigation cannot be formed without some knowledge of the preconceptions and personal bias of the investigator. I also lay stress upon it for the further reason that it partly explains the friendly attitude towards me which was taken by the Russian Government, the permission which was given me to inspect prisons and mines, and the comparative immunity from arrest, detention, and imprisonment which I enjoyed, even when my movements and associations were such as justly to render me an object of suspicion to the local Siberian authorities. It is very doubtful whether a traveler who had not already committed himself to views that the Government approved would have been allowed to go to Siberia for the avowed purpose of investigating the exile system, or whether, if permitted to go there, he would have escaped serious trouble when it was discovered that he was associating on terms of friendly intimacy with political criminals of the most dangerous class. In my frequent skirmishes with the police, and with suspicious local officials in remote Siberian villages, nothing but the letter which I carried from the Russian Minister of the Interior saved me from summary arrest and imprisonment, or from a search of my person and baggage which probably would have resulted in my expulsion from the empire under guard and in the loss of all my notes and documentary material. That letter, which was my sheet-anchor in times of storm and stress, would never, I think, have been given to me, if I had not publicly defended the Russian Government against some of its numerous assailants, and if it had not been believed that personal pride, and a desire to seem consistent, probably would restrain me from confessing error, even should I find the prison and exile system worse than I anticipated, and worse than I had represented it to be. How far this belief was well founded, and to what extent my preconceived ideas were in harmony with the facts, I purpose, in the present series of papers, to show.

Before closing this preface I desire to tender my most sincere and hearty thanks to the many friends, acquaintances, and well-wishers throughout European Russia and Siberia who encouraged me in my work, coöperated in my researches, and furnished me with the most valuable part of my material. Some of them are political exiles, who imperiled even the wretched future which still remained to them by writing out for me histories of their lives; some of them are officers of the Exile Administration, who, trusting to my honor and discretion, gave me without reserve the results of their long experience; and some of them are honest, humane prison officials, who, after reporting again and again upon the evils and abuses of the prison system, finally pointed them out to me, as the last possible means of forcing them upon the attention of the Government and the world. Most of these people I dare not even mention by name. Although their characters and their services are such as to make their names worthy of remembrance and honor, it is their misfortune to live in a country where the Government regards a frankly expressed opinion as an evidence of "untrustworthiness," and treats an effort to improve the condition of things as an offense to be punished. To mention the names of such people, when they live under such a government, is simply to render them objects of suspicion and surveillance, and thus deprive them of the limited power they still exercise for good. All that I can do, therefore, to show my appreciation of their trust, their kindness, and their aid, is to use the information which they gave me as I believe they would wish it to be used,—in the interest of humanity, freedom, and good government. For Russia and the Russian people I have the warmest affection and sympathy; and if, by a temperate and well-considered statement of the results of my Siberian investigations, I can make the country and the nation better known to the world, and ameliorate, even little, the lot of the "unfortunates" to whom "God is high above and the Tsar is far away," I shall be more than repaid for the hardest journey and the most trying experience of my life.

Line of Route
National
Boundaries

ACROSS THE RUSSIAN FRONTIER.

THE Siberian expedition of THE CENTURY MAGAZINE sailed from New York for Liverpool on the second day of May, 1885. It consisted of Mr. George A. Frost, an artist of Boston, and the author of this paper. We both spoke Russian, both had been in Siberia before, and I was making to the empire my fourth journey. Previous association in the service of the Russian-American Telegraph Company had acquainted us with each other, and long experience in sub-arctic Asia had familiarized us with the hardships and privations of Siberian travel. Our plan of operations had been approved by THE CENTURY; we had the amplest discretionary power in the matter of ways and means; and although fully aware of the serious nature of the work in hand, we were hopeful, if not sanguine, of success. We arrived in London on Sunday, May 10, and on Wednesday, the 13th, proceeded to St. Petersburg by rail, via Dover, Ostend, Cologne, Hanover, Berlin, and Eyd-kuhnen. As the season was already advanced, and as it was important that we should reach Siberia in time to make the most of the summer weather and the good roads, I decided to remain in the Russian capital only five days; but we were unfortunate enough to arrive there just at the beginning of a long series of church holidays, and were able to utilize in the transaction of business only four days out of ten.

As soon as I could obtain an interview with Mr. Vlangalli, the assistant Minister of Foreign Affairs, I presented my letters of introduction and told him frankly and candidly what we desired to do. I said that in my judgment Siberia and the exile system had been greatly misrepresented by prejudiced writers; that a truthful description of the country, the prisons, and the mines would, I thought, be advantageous rather than detrimental to the interests of the Russian Government; and that, inasmuch as I had already committed myself publicly to a defense of that Government, I could hardly be suspected of an intention to seek in Siberia for facts with which to undermine my own position. This statement, in which there was not the least diplomacy or insincerity, seemed to impress Mr. Vlangalli favorably; and after twenty minutes' conversation he informed me that we should undoubtedly be permitted to go to Siberia, and that he would aid us as far as

possible by giving us an open letter to the governors of the Siberian provinces, and by procuring for us a similar letter from the Minister of the Interior. Upon being asked whether these letters would admit us to Siberian prisons, Mr. Vlangalli replied that they would not; that permission to inspect prisons must in all cases be obtained from provincial governors. As to the further question whether such permission probably would be granted, he declined to express an opinion. This, of course, was equivalent to saying that the Government would not give us *carte-blanche*, but would follow us with friendly observation, and grant or refuse permission to visit prisons, as might from time to time seem expedient. I foresaw that this would greatly increase our difficulties, but I did not deem it prudent to urge any further concession; and after expressing my thanks for the courtesy and kindness with which we had been received, I withdrew.

At another interview, a few days later, Mr. Vlangalli gave me the promised letters, and at the same time said that he would like to have me stop in Moscow on my way to Siberia and make the acquaintance of Mr. Katkoff, the well-known editor of the Moscow "Gazette." He handed me a sealed note of introduction to Baron Buhler, keeper of the Imperial Archives in Moscow, and said that he had requested the latter to present me to Mr. Katkoff, and that he hoped I would not leave Moscow without seeing him. I was not unfamiliar with the character and the career of the great Russian champion of autocracy, and was glad, of course, to have an opportunity of meeting him; but I more than suspected that the underlying motive of Mr. Vlangalli's request was a desire to bring me into contact with a man of strong personality and great ability, who would impress me with his own views of Russian policy, confirm my favorable opinion of the Russian Government, and guard me from the danger of being led astray by the specious misrepresentations of exiled nihilists, whom I might possibly meet in the course of my Siberian journey. This precaution — if precaution it was — seemed to me wholly unnecessary, since my opinion of the nihilists was already as unfavorable as the Government itself could desire. I assured Mr. Vlangalli, however, that I would see Mr. Katkoff if possible; and after thanking him again for his assistance, I bade him good-bye.

THE "FAIR-CITY" OF NIZHNI NOVGOROD, FROM THE SOUTHERN BANK OF THE OKA.

In reviewing now the representations which I made to high Russian officials before leaving St. Petersburg, I have not to reproach myself with a single act of duplicity or insincerity. I did not obtain permission to go to Siberia by means of false pretenses, nor did I at any time assume a deceptive attitude for the sake of furthering my plans. If the opinions which I now hold differ from those which I expressed to Mr. Vlangalli in 1885, it is not because I was then insincere, but because my views have since been changed by an overwhelming mass of evidence.

On the afternoon of May 31, having selected and purchased photographic apparatus, obtained all necessary books and maps, and provided ourselves with about fifty letters of introduction to teachers, mining engineers, and Government officials in all parts of Siberia, we left St. Petersburg by rail for Moscow. The distance from the Russian capital to the Siberian frontier is about 1600 miles; and the route usually taken by travelers, and always by exiles, is that which passes through the cities of Moscow, Nizhni Novgorod, Kazan, Perm, and Ekaterineburg. The eastern terminus of the Russian railway system is at Nizhni Novgorod, but in summer steamers ply constantly between that city and Perm on the

rivers Volga and Kama; and Perm is connected with Ekaterineburg by an isolated piece of railroad about 180 miles in length, which crosses the mountain chain of the Ural, and is intended to unite the navigable waters of the Volga with those of the Ob.*

Upon our arrival in Moscow I presented my sealed note of introduction to Baron Buhler, and called with him at the office of the Moscow "Gazette" for the purpose of making the acquaintance of its editor. We were disappointed, however, to find that Mr. Katkoff had just left the city and probably would be absent for two or three weeks. As we could not await his return, and as there was no other business to detain us in Moscow, we proceeded by rail to Nizhni Novgorod, reaching that city early on the morning of Thursday, June 4.

To a traveler visiting Nizhni Novgorod for the first time there is something surprising, and almost startling, in the appearance of what he supposes to be the city, and in the scene presented to him as he emerges from the railway station and walks away from the low bank of the Oka River in the direction of the Volga. The clean, well-paved streets; the long rows of substantial buildings; the spacious boulevard, shaded by leafy birches and poplars; the

* During our stay in Siberia this railroad was extended to Tiumen, on one of the tributaries of the Ob, so that St. Petersburg is now in communication, by

rail or steamer, with points in Siberia as remote as Semipalatinsk and Tomsk, the former 2600 and the latter 2700 miles away.

canal, spanned at intervals by graceful bridges; the picturesque tower of the water-works; the enormous cathedral of Alexander Nevski; the Bourse; the theaters; the hotels; the market places—all seem to indicate a great populous center of life and commercial activity; but of living inhabitants there is not a sign. Grass and weeds are growing in the middle of the empty streets and in the chinks of the travel-worn sidewalks; birds are singing fearlessly in the trees that shade the lonely and deserted boulevard; the countless shops and warehouses are all closed, barred, and padlocked; the bells are silent in the gilded belfries of the churches; and the astonished stranger may perhaps wander for a mile between solid blocks of buildings without seeing an open door, a vehicle, or a single human being. The city appears to have been stricken by a pestilence and deserted. If the new-comer remembers for what Nizhni Novgorod is celebrated, he is not long, of course, in coming to the conclusion that he is on the site of the famous fair; but the first realization of the fact that the fair is in itself a separate and independent city, and a city which during nine months of every year stands empty and deserted, comes to him with the shock of a great surprise.

The fair-city of Nizhni Novgorod is situated on a low peninsula between the rivers Oka and Volga, just above their junction, very much as New York City is situated on Manhattan Island between East River and the Hudson. In geographical position it bears the same relation to the old town of Nizhni Novgorod that New York would bear to Jersey City if the latter were elevated on a steep terraced bluff four hundred feet above the level of the Hudson. The Russian fair-city, however, differs from New York City in that it is a mere temporary market—a huge commercial caravansary where 500,000 traders assemble every year to buy and to sell commodities. In September it has frequently a population of more than 100,000 souls, and contains merchandise valued at \$75,000,000; while in January, February, or March all of its inhabitants might be fed and sheltered in the smallest of its hotels, and all of its goods might be put into a single one of its innumerable shops. Its life, therefore, is a sort of intermittent commercial fever, in which an annual paroxysm of intense and unnatural activity is followed by a long interval of torpor and stagnation.

It seems almost incredible at first that a city of such magnitude—a city which contains churches, mosques, theaters, markets, banks, hotels, a merchants' exchange, and nearly seven thousand shops and inhabitable buildings, should have so ephemeral a life, and should be so completely abandoned every

year after it has served the purpose for which it was created. When I saw this unique city for the first time, on a clear frosty night in January, 1868, it presented an extraordinary picture of loneliness and desolation. The moonlight streamed down into its long empty streets where the unbroken snow lay two feet deep upon the sidewalks; it touched with silver the white walls and swelling domes of the old fair-cathedral, from whose towers there came no clangor of bells; it sparkled on great snow-drifts heaped up against the doors of the empty houses, and poured a flood of pale light over thousands of snow-covered roofs; but it did not reveal anywhere a sign of a human being. The city seemed to be not only uninhabited, but wholly abandoned to the arctic spirits of solitude and frost. When I saw it next, at the height of the annual fair in the autumn of 1870, it was so changed as to be almost unrecognizable. It was then surrounded by a great forest of shipping; its hot, dusty atmosphere thrilled with the incessant whistling of steamers; merchandise to the value of 125,000,000 rubles lay on its shores or was packed into its 6000 shops; every building within its limits was crowded; 60,000 people were crossing every day the pontoon bridge which connected it with the old town; a military band was playing airs from Offenbach's operas on the great boulevard in front of the governor's house; and through all the streets of the re-animated and reawakened city poured a great tumultuous flood of human life.

I did not see the fair-city again until June, 1885, when I found it almost as completely deserted as on the occasion of my first visit, but in other ways greatly changed and improved. Substantial brick buildings had taken the place of the long rows of inflammable wooden shops and sheds; the streets in many parts of the city had been neatly paved; the number of stores and warehouses had largely increased; and the lower end of the peninsula had been improved and dignified by the erection of the great Alexander Nevski cathedral, which is shown in the center of the illustration on page 7, and which now forms the most prominent and striking architectural feature of the fair.

It was supposed that, with the gradual extension of the Russian railway system, and the facilities afforded by it for the distribution of merchandise throughout the empire in small quantities, the fair of Nizhni Novgorod would lose most of its importance; but no such result has yet become apparent. During the most active period of railway construction in Russia, from 1868 to 1881, the value of the merchandise brought annually to the fair rose steadily from 126,000,000 to 246,000,000

rubles,* and the number of shops and stores in the fair-city increased from 5738 to 6298. At the present time the volume of business transacted during the two fair-months amounts to something like 225,000,000 rubles, and the

old town on the other side is maintained in summer by means of a steam ferry, or a long floating bridge consisting of a roadway supported by pontoons. As the bridge, at the time of our arrival, had not been put in posi-

A STREET IN THE OLD TOWN OF NIZHNI NOVGOROD.

number of shops and stores in the fair exceeds 7000.

The station of the Moscow and Nizhni Novgorod railway is situated within the limits of the fair-city, on the left bank of the river Oka, and communication between it and the

* The value of the Russian ruble is a little less than half a dollar.

tion for the season, we crossed the river on a low flat barge in tow of a small steamer.

The view which one gets of the old fortified city of Nizhni Novgorod while crossing the Oka from the fair is both striking and picturesque. The long steep bluff upon which it is situated rises abruptly almost from the water's edge to the height of four hundred

feet, notched at intervals by deep V-shaped cuts through which run the ascending roads to the upper plateau, and broken here and there by narrow terraces upon which stand white-walled and golden-domed cathedrals and monasteries half buried in groves of trees. In the warm, bright sunshine of a June day the snowy walls of the Byzantine churches scattered along the crest of the bluff; the countless domes of blue, green, silver, and gold rising out of dark masses of foliage on the terraces; the smooth, grassy slopes which descend here and there almost to the water's edge; and the river front, lined with steamers and bright with flags—all make up a picture which is hardly surpassed in northern Russia. Fronting the Volga, near what seems to be the eastern end of the ridge, stands the ancient Kremlin,* or stronghold of the city, whose high, crenelated walls descend the steep face of the bluff toward the river in a series of titanic steps, and whose arched gateways and massive round towers carry the imagination back to the Middle Ages. Three hundred and fifty years ago this great walled inclosure was regarded as an absolutely impregnable fortress, and for more than a century it served as a secure place of refuge for the people of the city when the fierce Tartars of Kazan invaded the territories of the Grand Dukes. With the complete subjugation of the Tartar khanate, however, in the sixteenth century, it lost its importance as a defensive fortification, and soon began to fall into decay. Its thirteen towers, which were originally almost a hundred feet in height, are now half in ruins; and its walls, which have a circuit of about a mile and a quarter, would probably have fallen long ago had they not been extraordinarily thick, massive, and deeply founded. They make upon one an impression of even greater solidity and strength than do the walls of the famous Kremlin in Moscow.

* A Kremlin, or, to use the Russian form of the word, a "Kremle," is merely a walled inclosure with towers at the corners, situated in a commanding position near the center of a city, and intended to serve as a stronghold, or place of refuge, for the inhabitants in time of war. It differs from a castle or fortress in that it generally incloses a larger area, and contains a num-

ber of buildings, such as churches, palaces, treasuries, etc., which are merely protected by it. It is popularly supposed that the only Kremlin in Russia is that of Moscow; but this is a mistake. Nizhni Novgorod, Kazan, and several other towns in that part of Russia which was subject to Tartar invasion, had strongholds of this kind.

Upon landing from the ferry-boat in the old town of Nizhni Novgorod, we drove to a hotel in the upper part of the city, and, after securing rooms and sending our passports to the chief of police, we walked down past the Kremlin to the river front. Under the long bluff upon which the city and the Kremlin stand, and between the steep escarpment and the river,

A PEASANT WOMAN OF SIMBIRSK.

there is a narrow strip of level ground which is now given up almost wholly to commerce and is known as the "lower bazar." Upon this strip of land are huddled together in picturesque confusion a multitude of buildings of the most heterogeneous character and appearance. Pretentious modern stores, with gilded signs and plate-glass windows, stand in neighborly proximity to wretched hucksters' stalls of rough, unpainted boards; banks, hotels, and steamship offices, are sandwiched

her of buildings, such as churches, palaces, treasuries, etc., which are merely protected by it. It is popularly supposed that the only Kremlin in Russia is that of Moscow; but this is a mistake. Nizhni Novgorod, Kazan, and several other towns in that part of Russia which was subject to Tartar invasion, had strongholds of this kind.

in among ship-chandlers' shops, old-clothes stalls and "traktirs"; fantastic highly colored churches of the last century appear in the most unexpected places, and give an air of sanctity to the most disreputable neighborhoods; and the entire region, from the river to the bluff, is crowded with wholesale, retail, and second-hand shops, where one can buy anything and everything—from a paper of pins, a wooden comb, or a string of dried mushrooms, to a ship's anchor, a church bell, or a steam-engine. In a single shop of the lower bazar I saw exposed for sale a set of parlor chairs, two wicker-work baby-carriages, a rustic garden seat, two cross-cut log saws, half a dozen battered samovars, a child's cradle, a steam-engine, one half of a pair of elk horns, three old boilers, a collection of telescopes, an iron church-cross four feet in height, six or eight watches, a dilapidated carriage top, feather dusters, opera-glasses, log chains, watch charms, two blacksmith's anvils, measuring tapes, old boots, stove covers, a Caucasian dagger, turning lathes, sleigh bells, pulleys and blocks from a ship's rigging, fire-engine nozzles, horse collars, an officer's sword, axe helms, carriage cushions, gilt bracelets, iron barrel-hoops, trunks, accordions, three or four soup plates filled with old nails and screws, carving-knives, vises, hinges, revolvers, old harnesses, half a dozen odd lengths of rusty stove pipe, a tin can of "mixed biscuits" from London, and a six-foot bath tub. This list of articles, which I made on the spot, did not comprise more than a third part of the dealer's heterogeneous stock in trade; but I had not time for a careful and exhaustive enumeration. In a certain way this shop was illustrative and typical of the whole lower bazar, since nothing, perhaps, in that quarter of the city is more striking than the heterogeneity of buildings, people, and trades. The whole river front is lined with landing-stages and steamers: it is generally crowded with people from all parts of the empire, and it always presents a scene of great commercial activity. Steamers are departing almost hourly for the lower Volga, the frontier of Siberia, and the far-away Caspian; huge black barges, which lie here and there at the landing-stages, are being loaded or unloaded by gangs of swarthy Tartar stevedores; small unpainted one-horse "telegas," which look like longitudinal halves of barrels mounted on four wheels, are carrying away bags, boxes, and crates from the piles of merchandise on the shore; and the broad dusty street is thronged all day with traders, peddlers, peasants, longshoremen, pilgrims, beggars, and tramps.

Even the children seem to feel the spirit of trade which controls the city; and as I

stood watching the scene on the river front, a ragged boy, not more than eight or nine years of age, whose whole stock in trade consisted of a few strings of dried mushrooms, elbowed his way through the crowd with all the assurance of an experienced peddler, shouting in a thin childish treble, "Mushrooms! Fine mushrooms! Sustain commerce, gentlemen! Buy my mushrooms and sustain commerce!"

The diversity of popular types in the lower bazar is not perhaps so great in June as it is in September, during the fair, but the peculiarities of dress are such as to make almost every figure in the throng interesting and noteworthy to a foreign observer. There are swarthy Tartars in round skull caps and long loose "khalat"; Russian peasants in greasy sheepskin coats and huge wicker-work shoes, with their legs swathed in dirty bandages of coarse linen cloth and cross-gartered with hempen cords; disreputable-looking long-haired, long-bearded monks, who solicit alms for hospitals or churches, receiving contributions on small boards covered with black velvet and transferring the money deposited thereon to big tin boxes hung from their necks and secured with enormous iron padlocks; strolling dealers in "kvas," mead, sherbet, and other seductive bright-colored drinks; brazen-throated peddlers proclaiming aloud the virtues of brass jewelry, salted cucumbers, strings of dried mushrooms, and cotton handkerchiefs stamped with railroad maps of Russia; and, finally, a surging crowd of wholesale and retail traders from all parts of the Volga River basin.

The first thing which strikes the traveler on the threshold of south-eastern Russia is the *greatness* of the country—that is, the enormous extent of its material resources, and the intense commercial activity manifested along its principal lines of communication. The average American thinks of south-eastern Russia as a rather quiet, semi-pastoral, semi-agricultural country, which produces enough for the maintenance of its own half-civilized and not very numerous population, but which, in point of commercial activity, cannot bear comparison for a moment with even the most backward of our States. He is not a little astonished, therefore, at Nizhni Novgorod, to find the shipping of the Volga occupying six or eight miles of river front; to learn that for its regulation there is in the city a shipping court with special jurisdiction; that the "pristan," or, as a Western steamboatman would say, the levee, is under the control of an officer appointed by the Minister of Ways and Communications and aided by a large staff of subordinates; that the number of steamers plying on the Volga and its tributaries is greater than the number

STREET IN A PEASANT VILLAGE ON THE VOLGA —
WATER-CARRIER IN THE FOREGROUND.

on the Mississippi; * that \$15,000,000 worth of products annually come down a single tributary of the Volga—namely, the Kama, a stream of which few Americans have ever heard; and, finally, that the waters of the Volga River system annually float nearly 5,000,000 tons of merchandise, and furnish employment to 7000 vessels and nearly 200,000 boatmen. It may be that an ordinarily well-educated American ought to know all these things; but I certainly did not know them, and they came to me with the shock of a complete surprise.

On the morning of Saturday, June 6, after having visited the fair-city and the Kremlin and made as thorough a study of Nizhni Novgorod as the time would permit, we embarked on one of the Kamenski Brothers' steamers for a voyage of nearly a thousand miles down the Volga and up the Kama to Perm.

It has been said that Egypt is the creation of the Nile. In a different sense, but with equal truth, it may be said that eastern Russia is the creation of the Volga. The ethnological composition of its population was mainly determined by that river; the whole history of the country has been intimately connected with it for more than a thousand years; the character and pursuits of all the east Russian tribes have been greatly modified by it; and upon it

now depend, directly or indirectly, the welfare and prosperity of more than 10,000,000 people. From any point of view, the Volga must be regarded as one of the great rivers of the world. Its length, from the Valdai hills to the Caspian Sea, is nearly 2300 miles; its width below Tsaritsin, in time of high water, exceeds 30 miles, so that a boatman, in crossing it, loses sight entirely of its low banks and is virtually at sea; it washes the borders of nine provinces, or administrative divisions of the empire, and on its banks stand 39 cities and more than 1000 villages and settlements. The most important part of the river, commercially, is that lying between Nizhni Novgorod and the mouth of the Kama, where there ply, during the season of navigation, about 450 steamers. As far down as the so-called "Samara bend," the river presents almost everywhere a picture of busy life and activity, and is full of steamers, barges, and great hulks, like magnified canal-boats, loaded with goods from eastern Russia, Siberia,

and central Asia. The amount of merchandise produced, even in the strip of country directly tributary to the Volga itself, is enormous. Many of the agricultural villages, such as Liskovo, which the steamer swiftly passes between Nizhni Novgorod and Kazan, and which seem, from a distance, to be insignificant clusters of unpainted wooden houses, load with grain 700 vessels a year.

The scenery of the upper Volga is much more varied and picturesque than one would expect to find along a river running through a flat and monotonous country. The left bank, it is true, is generally low and uninteresting; but on the other side the land rises abruptly from the water's edge to a height of 400 or 500 feet, and its boldly projecting promontories, at intervals of two or three miles, break the majestic river up into long still reaches, like a series of placid lakes opening into one another and reflecting in their tranquil depths the dense foliage of the virgin forest on one side and the bold outlines of the half mountainous shore on the other. White-walled churches with silver domes appear here and there on the hills, surrounded by little villages of unpainted wooden houses, with elaborately carved and decorated gables; deep valleys, shaggy with hazel bushes, break through the wall of bluffs on the right at intervals, and afford glimpses of a rich farming country in the interior; and now and then, in sheltered nooks half up the mountain-side overlooking the

* In 1880 there were on the upper and the lower Mississippi 681 steamers. The number on the Volga and its tributaries is about 700.

river, appear the cream-white walls and gilded domes of secluded monasteries, rising out of masses of dark-green foliage. Sometimes, for half an hour together, the steamer plows her way steadily down the middle of the stream, and the picturesque right bank glides past like a magnificent panorama with a field of vision ten miles wide; and then suddenly, to avoid a bar, the vessel sweeps in towards the land, until the wide panorama narrows to a single vivid picture of a quaint Russian hamlet which looks like an artistically contrived scene in a theater. It is so near that you can distinguish the features of the laughing peasant girls who run down into the foreground to wave their handkerchiefs at the passing steamer; or you can talk in an ordinary tone of voice with the "muzhiks" in red shirts and black velvet trousers who are lying on the grassy bluff in front of the green-domed village church. But it lasts only a moment. Before you have fairly grasped the details of the strange Russian picture it has vanished, and the steamer glides swiftly into a new reach of the river, where there is not a sign of human

the blended fragrance of flowery meadows and damp forest glens; the river lay like an expanse of shining steel between banks whose impenetrable blackness was intensified rather than relieved by a few scattered spangles of light; and from some point far away in the distance came the faint voice of a timber rafter, or a floating fisherman, singing that song dear to the heart of every Russian boatman—"V 'nis po matushke po Volge" ["Down the Mother Volga"].

After drinking a few tumblers of fragrant tea at the little center-table in the steamer's small but cozy cabin, we unrolled the blankets and pillows with which we had provided ourselves in anticipation of the absence of beds, and bivouacked, as Russian travelers are accustomed to do, on the long leather-covered couches which occupy most of the floor space in a Russian steamer, and which make the cabin look a little like an English railway carriage with all the partitions removed.

About 5 o'clock in the morning I was awakened by the persistent blowing of the steamer's whistle, followed by the stoppage of

A PEASANT HAMLET ON THE BANK OF THE VOLGA.

habitation, and where the cliffs on one side and the forest on the other seem to be parts of a vast primeval wilderness.

Fascinated by the picturesque beauty of the majestic Volga and the ever-changing novelty of the scenes successively presented to us as we crossed from side to side, or swept around great bends into new landscapes and new reaches of tranquil water, we could not bear to leave the hurricane deck until long after dark. The fresh, cool air was then filled with

the machinery, the jar of falling gang-planks, and the confused trampling of a multitude of feet over my head. Presuming that we had arrived at Kazan, I went up on deck. The sun was about an hour high and the river lay like a quivering mass of liquid silver between our steamer and the smooth, vividly green slopes of the high western bank. On the eastern side, and close at hand, was a line of the black hulls with yellow roofs and deck-houses which serve along the Volga as land-

ing-stages, and beside them lay half a dozen passenger steamers, blowing their whistles at intervals and flying all their holiday flags. Beyond them and just above high-water mark on the barren, sandy shore was a row of heterogeneous wooden shops and lodging-houses,

of Kazan stands was washed by the waters of the Volga; but it has been left four or five miles inland by the slow shifting of the river's bed to the westward; and the distant view of the city which one now gets from the shore is only just enough to stimulate the imagina-

A SIBERIAN VILLAGE GATE-KEEPER (PASKÓTNIK).

which, but for a lavish display of color in walls and roofs, would have suggested a street of a mining settlement in Idaho or Montana. There were in the immediate foreground no other buildings; but on a low bluff far away in the distance, across a flat stretch of marshy land, there could be seen a mass of walls, towers, minarets, and shining domes, which recalled to my mind in some obscure way the impression made upon me as a child by a quaint picture of "Vanity Fair" in an illustrated copy of the "Pilgrim's Progress." It was the famous old Tartar city of Kazan. At one time, centuries ago, the bluff upon which the Kremlin

tion and to excite, without gratifying, the curiosity.

The pristan, or steamer-landing of Kazan, however, is quite as remarkable in its way as the city itself. The builders of the shops, hotels, and "rooms for arrivers" on the river bank, finding themselves unable, with the scanty materials at their command, to render their architecture striking and admirable in form, resolved to make it at least dazzling and attractive in color; and the result is a sort of materialized architectural aurora borealis, which astounds if it does not gratify the beholder. While our steamer was lying at the

landing I noted a chocolate-brown house with yellow window-shutters and a green roof; a lavender house with a shining tin roof; a crimson house with an emerald roof; a sky-blue house with a red roof; an orange house with an olive roof; a house painted a bright metallic green all over; a house diversified with dark-blue, light-blue, red, green, and chocolate-brown; and, finally, a most extraordinary building which displayed the whole chromatic scale within the compass of three stories and an attic. What permanent effect, if any, is produced upon the optic nerves of the inhabitants by the habitual contemplation of their brilliantly colored and sharply contrasted dwellings I am unable to say; but I no longer wonder that "*prekrasni*," the Russian word for "beautiful," means literally "very red"; nor that a Russian singer imagines himself to be using a highly complimentary phrase when he describes a pretty girl as "*krasnaya devitsa*" ["a red maiden"]. When I think of that steamboat-landing at Kazan I am only surprised that the Russian language has not produced such forms of metaphorical expression as "a red-and-green maiden," "a purple-scarlet-and-blue melody," or "a crimson-yellow-chocolate-brown poem." It would be, so to speak, a red-white-and-blue convenience if one could express admiration in terms of color, and use the whole chromatic scale to give force to a superlative.

About 7 o'clock passengers began to arrive in carriages and droschki from the city of Kazan, and before 8 o'clock all were on board, the last warning whistle had sounded, the lines had been cast off, and we were again under way. It was Sunday morning, and as the weather was clear and warm, we spent nearly the whole day on the hurricane deck, enjoying the sunshine and the exhilarating sense of swift movement, drinking in the odorous air which came to us from the forest-clad hills on the western bank, and making notes or sketches of the strange forms of boats, barges, and rafts which presented themselves from time to time, and which would have been enough to identify the Volga as a Russian river even had we been unable to see its shores. First came a long stately "caravan" of eight or ten huge black barges, like dismantled ocean steamers, ascending the river slowly in single file behind a powerful tug; then followed a curious kedging barge, with high bow and stern and a horse-power windlass amidships, pulling itself slowly upstream by winding in cables attached to kedging anchors which were carried ahead and dropped in turn by two or three boats' crews; and finally we passed a little Russian hamlet of ready-made houses, with elaborately carved

gables, standing on an enormous timber raft 100 feet in width by 500 in length, and intended for sale in the treeless region along the lower Volga and around the Caspian Sea. The bare-headed, red-shirted, and blue-gowned population of this floating settlement were gathered in a picturesque group around a blazing camp-fire near one end of the raft, drinking tea; and I could not help fancying that I was looking at a fragment of a peasant village which had in some way gotten adrift in a freshet and was miraculously floating down the river with all its surviving inhabitants. Now and then there came to us faintly across the water the musical chiming of bells from the golden-domed churches here and there on the right bank, and every few moments we passed a large six-oared "*lodka*" full of men and women in bright-colored costumes, on their way to church service.

About 11 o'clock Sunday morning we left the broad, tranquil Volga and turned into the swifter and muddier Kama, a river which rises in the mountains of the Ural on the Siberian frontier, and pursues a south-westerly course to its junction with the Volga, fifty or sixty miles below Kazan. In going from one river to the other we noticed a marked change, not only in the appearance of the people, villages, boats, and landing-stages, but in the aspect of the whole country. Everything seemed stranger, more primitive, and in a certain sense wilder. The banks of the Kama were less thickly inhabited and more generally covered with forests than those of the Volga; the white-walled monasteries, which had given picturesqueness and human interest to so many landscapes between Nizhni Novgorod and Kazan, were no longer to be seen; the barges were of a ruder, more primitive type, with carved railings and spirally striped red and blue masts surmounted by gilded suns; and the crowds of peasants on the landing-stages were dressed in costumes whose originality of design and crude brightness of color showed that they had been little affected by the sobering and conventionalizing influence of western civilization. The bright colors of the peasant costumes were attributable perhaps, in part, to the fact that, as it was Sunday, the youths and maidens came down to the steamer in holiday attire; but we certainly had not before seen in any part of Russia young men arrayed in blue, crimson, purple, pink, and violet shirts, nor young women dressed in lemon-yellow gowns, scarlet aprons, short pink over-jackets, and lilac head-kerchiefs.

Our four-days' journey up the river Kama was not marked by any particularly noteworthy incident, but it was, nevertheless, a novel and a delightful experience. The weather was as

perfect as June weather can anywhere be; the scenery was always varied and attractive, and sometimes beautifully wild and picturesque; the foliage of the poplars, aspens, and silver-birches which clothed the steep river banks,

the hills. So comfortable, pleasant, and care free had been our voyage up the Kama that when, on Wednesday, June 10, it ended at the city of Perm, we bade the little steamer *Alexander* good-bye with a feeling of sincere regret.

THE CITY OF PERM.

and in places overhung the water so as almost to sweep the hurricane deck, had the first exquisite greenness and freshness of early summer; and the open glades and meadows, which the steamer frequently skirted at a distance of not more than fifteen or twenty feet, were blue with forget-me-nots or yellow with the large double flowers of the European trol-lius. At every landing-place peasant children offered for sale great bunches of lilies of the valley, and vases of these fragrant flowers, provided by the steward, kept our little dining-saloon constantly filled with delicate perfume. Neither in the weather, nor in the scenery, nor in the vegetation was there anything to suggest an approach to the frontier of Siberia. The climate seemed almost Californian in its clearness and warmth; flowers blossomed everywhere in the greatest profusion and luxuriance; every evening we heard nightingales singing in the forests beside the river; and after sunset, when the wind was fair, many of the passengers caused samovars to be brought up and tables to be spread on the hurricane deck, and sat drinking tea and smoking cigarettes in the odorous night air until the glow of the strange northern twilight faded away over

Perm, which is the capital of the province of the same name, is a city of 32,000 inhabitants, situated on the left bank of the Kama, about 125 miles from the boundary line of Asiatic Russia. It is the western terminus of the Ural Mountain railroad, and through it passes nearly the whole of the enormous volume of Siberian commerce. In outward appearance it does not differ materially from other Russian provincial towns of its class; and although cleaner and more prosperous than Nizhni Novgorod, it is much less picturesque, both in architecture and in situation.

In Perm, where we spent only one night, we had our first skirmish with the Russian police; and although the incident has intrinsically little importance, it is perhaps worth recital as an illustration of the suspicion with which strangers are regarded on the great exile route to Siberia, and of the unlimited power of the Russian police to arrest and examine with or without adequate cause. Late in the afternoon on the day of our arrival, Mr. Frost and I set out afoot for the summit of a high hill just east of the town, which we thought would afford a good point of view for a sketch. In making our way towards it

we happened to pass the city prison; and as this was one of the first Russian prisons we had seen, and was, moreover, on the exile route to Siberia, we naturally looked at it with interest and attention. Shortly after passing it we discovered that the hill was more distant than we had supposed it to be; and as the afternoon was far advanced, we decided to postpone our sketching excursion until the following day. We thereupon retraced our steps, passed the prison the second time, and returned to our hotel. Early the next morning we again set out for the hill; and as we did not know any better or more direct route to it, we took again the street which led past the prison. On this occasion we reached our destination. Mr. Frost made a sketch of the city and its suburbs, and at the expiration of an hour, or an hour and a half, we strolled homeward. On a large, open common near the prison we were met by two droshkies, in which were four officers armed with swords and revolvers, and in full uniform. I noticed that the first couple regarded us with attentive scrutiny as they passed; but I was not as familiar at that time as I now am with the uniforms of the Russian police and gendarmes, and I did not recognize them. The two officers in the second droshky left their vehicle just before reaching us, walked away from each other until they were forty or fifty feet apart, and then advanced on converging lines to meet us. Upon looking around I found that the first pair had left their carriages and separated in a similar way behind us, and were converging upon us from that direction. Then for the first time it flashed upon my mind that they were police officers, and that we, for some inconceivable reason, were objects of suspicion, and were about to be arrested. As they closed in upon us, one of them, a good-looking gendarme officer about thirty years of age, bowed to us stiffly, and said, "Will you permit me to inquire who you are?"

"Certainly," I replied; "we are American travelers."

"When did you arrive in Perm?"

"Yesterday."

"Where did you come from?"

"From Nizhni Novgorod."

"Where are you going?"

"To Siberia."

"Ah! To Siberia! Allow me to inquire what you are going to Siberia for?"

"We are going there to travel."

"But tourists [with a contemptuous intonation] are not in the habit of going to Siberia. You must have some particular object in view. What is that object?"

I explained to him that American travelers — if not tourists — are in the habit of going

everywhere, and that the objects they usually have in view are the study of people and places, and the acquirement of knowledge. He did not seem, however, to be satisfied with this vague general statement, and plied me with all sorts of questions intended to elicit a confession of our real aims and purposes in going to such a country as Siberia. Finally he said, "Yesterday you deigned to walk past the prison."

"Yes," I replied.

"What did you do that for?"

I explained.

"You looked at it very attentively?"

"We did."

"Why did you do that?"

Again I explained.

"But you did not go up on the hill — you merely went a little way past the prison and then came back; and in going and returning you devoted all your attention to the prison. This morning it was the same thing over again. Now, what were you looking at the prison in that way for?"

When I understood from these questions how we happened to fall under suspicion, I could not help smiling in the officer's face; but as there was no responsive levity, and as all four officers seemed to regard this looking at a prison as an exceedingly grave offense, I again went into explanations. Finally the gendarme officer, to whom my statements were evidently unsatisfactory, said, a little more peremptorily, "Give me your passport, please." When informed that our passports were at the hotel, he said that we must regard ourselves as under arrest until we could satisfactorily establish our identity and explain our business in Perm. We were then separated, Frost being put into one droshky under guard of the gendarme officer, and I into another with a gray-bearded official whom I took to be the chief of police, and we all proceeded to the hotel. We were evidently taken for political conspirators meditating an attempt to release somebody from the Perm prison; and as I politely invited our captors into our room at the hotel, gave them cigarettes, and offered to get them tea to drink while they examined our papers, the suspicious young gendarme officer looked at me as if I were some new species of dangerous wild animal not classified in the books, and consequently of unknown power for evil. Our passports did not seem, for some reason, to be satisfactory; but the production of the letter of recommendation from the Russian Minister of Foreign Affairs brought the comedy of errors to an abrupt termination. The gendarme officer's face flushed a little as he read it, and after a whispered consultation with the chief of police he came to me with some embarrassment and

said that he hoped we would pardon what was evidently an "unfortunate misunderstanding"; that they had taken us for two important German criminals (!) of whom they were in search, and that in detaining us they were only doing what they believed to be their duty. He hoped that they had not treated us discourteously, and said that it would gratify them very much if we would shake hands with them as an evidence that we did not harbor any resentment on account of this "lamentable mistake." We shook hands solemnly with them all, and they bowed themselves out. This little adventure, while it interested me as a practical illustration of Russian police methods, made me feel some anxiety with regard to the future. If we were arrested in this way before we had even reached the Siberian frontier, and for merely looking at the outside of a prison, what probably would happen to us when we should seriously begin our work of investigation?

On Thursday, June 11, at half-past 9 o'clock in the evening, we left Perm by the

A VERST-POST ON THE URAL RAILROAD.

Ural Mountain railroad for Ekaterineburg. As we were very tired from two days spent almost wholly in walking about the streets of the former city, we converted two of the extension seats of the railway carriage into a bed, and with the help of our blankets and pillows succeeded in getting a very comfortable night's rest.

When I awoke, about 8 o'clock on the following morning, the train was standing at the station of Biser near the summit of the Urals. The sun was shining brightly in an unclouded sky; the morning air was cool, fresh, and laden with the odor of flowers and the resinous fragrance of mountain pines; a cuckoo was singing in a neighboring grove of birches; and the glory of early summer was over all the earth. Frost made hasty botanical researches beside the railroad track and as far away from the train as he dared to venture, and came back with alpine roses, daisies, wild pansies, trollius, and quantities of other flowers to me unknown.

The scenery of the Ural where the railroad crosses the range resembles in general outline that of West Virginia where the Baltimore and Ohio railroad crosses the Alleghanies; but it differs somewhat from the latter in coloring, owing to the greater preponderance in the Ural of evergreen trees. All the forenoon, after leaving Biser, the train swept around great curves in a serpentine course among the forest-clad hills, sometimes running for an hour at a time through a dense larch wood, where there was not a sign of human life; sometimes dashing past placer mining camps, where hundreds of men and women were at work washing auriferous gravel; and sometimes coming out into beautiful park-like openings diversified with graceful clumps of silver-birch, and carpeted with turf almost as smooth and green as that of an English lawn. Flowers were everywhere abundant. Roses, dandelions, violets, wild strawberries, and lilies of the valley were in blossom all along the track, and occasionally we crossed an open glade in the heart of the forest where the grass was almost entirely hidden by a vivid sheet of yellow trollius.

We were greatly surprised to find in this wild mining region of the Ural, and on the very remotest frontier of European Russia, a railroad so well built, perfectly equipped, and luxuriously appointed as the road over which we were traveling from Perm to Ekaterineburg. The stations were the very best we had seen in Russia; the road-bed was solid and well ballasted; the rolling stock would not have suffered in comparison with that of the best lines in the empire; and the whole railroad property seemed to be in the most perfect possible order. Unusual attention evidently had been paid to the ornamentation of the grounds lying adjacent to the stations and the track. Even the verst-posts were set in neatly fitted mosaics three or four feet in diameter of colored Ural stones. The station of Nizhni Tagil, on the Asiatic slope of the mountains, where we stopped half an hour for dinner, would have been in the highest degree creditable to the best railroad in the United States. The substantial station building, which was a hundred feet or more in length, with a covered platform twenty feet wide extending along the whole front, was tastefully painted in shades of brown and had a red sheet-iron roof. It stood in the middle of a large, artistically planned park or garden, whose smooth, velvety greensward was broken by beds of blossoming flowers and shaded by the feathery foliage of graceful white-stemmed birches; whose winding walks were bordered by neatly trimmed hedges; and whose air was filled with the perfume of wild roses and the murmuring plash

A STREET IN EKATERINEBURG.

of falling water from the slender jet of a sparkling fountain. The dining-room of the station had a floor of polished oak inlaid in geometrical patterns, a high dado of dark carved wood, walls covered with oak-grain paper, and a stucco cornice in relief. Down the center of the room ran a long dining-table, beautifully set with tasteful china, snowy napkins, high glass epergnes and crystal candelabra, and ornamented with potted plants, little cedar-trees in green tubs, bouquets of cut flowers, artistic pyramids of polished wine-bottles, druggists' jars of colored water, and an aquarium full of fish, plants, and artificial rock-work. The chairs around the table were of dark hard wood elaborately turned and carved; at one end of the room was a costly clock as large as an American jeweler's "regulator," and at the other end stood a huge bronzed oven by which the apartment was warmed in winter. The waiters were all in evening dress, with low-cut waistcoats, spotless shirt-fronts, and white ties; and the cooks, who filled the waiters' orders as in an English grill room, were dressed from head to foot in white linen and wore square white caps. It is not an exaggeration to say that this was one of the neatest, most tastefully furnished, and most attractive public dining-rooms that I ever entered in any part of the world; and as I sat there eating a well-cooked and well-served dinner of four courses, I found it utterly impossible to realize that I

was in the unheard-of mining settlement of Nizhni Tagil, on the Asiatic side of the mountains of the Ural. This, however, was our last glimpse of civilized luxury for many long, weary months, and after that day we did not see a railway station for almost a year.

Early in the evening of Friday, June 12, we reached the city of Ekaterineburg, on the eastern slope of the Urals, about 150 miles from the Siberian frontier. As the railway from Ekaterineburg to Tiumen had not then been completed, we began at this point with horses a journey which lasted nine months, and covered in the aggregate a distance of about 8000 miles. At the time when we reached Ekaterineburg there was in operation between that city and Tiumen an excellent horse express service, by means of which travelers were conveyed over the intervening 200 miles of country in the comparatively short time of 48 hours. The route was let by the Government to a horse express company, which sold through tickets, provided the traveler with a vehicle, and carried him to his destination with relays of horses stationed along the road at intervals of about eighteen miles. The vehicle furnished for the traveler's use in summer is a large, heavy, four-wheeled carriage called a "tarantas," which consists of a boat-shaped body without seats, a heavy leathern top or hood, and a curtain by which the vehicle can be

A POST STATION ON THE GREAT SIBERIAN ROAD.

closed in stormy weather. The body of the tarantas is mounted upon two or more long stout poles, which unite the forward with the rear axletree, and serve as rude springs to break the jolting caused by a rough road. The traveler usually stows away his baggage in the bottom of this boat-shaped carriage, covers it with straw, rugs, and blankets, and reclines on it with his back supported by one or more large soft pillows. The driver sits sidewise on the edge of the vehicle in front of the passenger and drives with four reins a team of three horses harnessed abreast. The rate of speed attained on a good road is about eight miles an hour.

On the evening of June 16, having bought through tickets, selected a tarantas, and stowed away our baggage in it as skillfully as possible, we climbed to our uncomfortable seat on Mr. Frost's big trunk, and gave the signal for a start. Our gray-bearded driver gathered up his four reins of weather-beaten rope, shouted "Noo rodneeya!" ["Now, then, my relatives!"], and with a measured jangle, jangle, jangle of two large bells lashed to the arch over the shaft-horse's back we rode away through the wide unpaved streets of Ekaterineburg, across a spacious parade-ground in front of the soldiers' barracks, out between two square white pillars surmounted by double-

headed eagles, and then into a dark, gloomy forest of pines and firs.

When we had passed through the gate of Ekaterineburg we were on the "great Siberian road" — an imperial highway which extends from the mountains of the Ural to the head-waters of the Amur River, a distance of more than three thousand miles. If we had

large wooden pins. Every horse is fastened by a long halter to the preceding wagon, so that a train of fifty or a hundred obozes forms one unbroken caravan from a quarter of a mile to half a mile in length. We passed 538 of these loaded wagons in less than two hours, and I counted 1445 in the course of our first day's journey. No further evidence was needed

A TRAIN OF FREIGHT WAGONS (OBOZES) ON THE SIBERIAN ROAD.

ever supposed Siberia to be an unproductive arctic waste, we soon should have been made aware of our error by the long lines of loaded wagons which we met coming into Ekaterineburg from the Siberian frontier. These transport wagons, or "obozes," form a characteristic feature of almost every landscape on the great Siberian road from the Ural Mountains to Tiumen. They are small four-wheeled, one-horse vehicles, rude and heavy in construction, piled high with Siberian products, and covered with coarse matting securely held in place by

of the fact that Siberia is not a land of desolation. Commercial products at the rate of 1500 tons a day do not come from a barren arctic waste.

As it gradually grew dark towards midnight, these caravans began to stop for rest and refreshment by the roadside, and every mile or two we came upon a picturesque bivouac on the edge of the forest, where a dozen or more oboz drivers were gathered around a cheerful camp-fire in the midst of their wagons, while their liberated but hopped horses grazed and jumped

BIVOUAC OF A PARTY OF TEAMSTERS (OCHOZ DRIVERS).

awkwardly here and there along the road or among the trees. The gloomy evergreen forest, lighted up from beneath by the flickering blaze and faintly tinged above by the glow of the northern twilight, the red and black Rembrandt outlines of the wagons, and the group of men in long kaftans and scarlet or blue shirts gathered about the camp-fire drinking tea, formed a strange, striking, and peculiarly Russian picture.

We traveled without stop throughout the night, changing horses at every post station, and making about eight miles an hour over a fairly good road. The sun did not set until half-past 9 and rose again about half-past 2, so that it was not at any time very dark. The villages through which we passed were sometimes of

great extent, but consisted almost invariably of only two lines of log houses standing with their gables to the road, and separated one from another by inclosed yards without a sign anywhere of vegetation or trees. One of these villages formed a double row five miles in length of separate houses, all fronting on the Tsar's highway. Around every village there was an inclosed area of pasture land, varying in extent from 200 to 500 acres, within which were kept the inhabitants' cattle; and at the point where the inclosing fence crossed the road, on each side of the village, there were a gate and a gate-keeper's hut. These village gate-keepers are almost always old and broken-down men, and in Siberia they are generally criminal exiles. It is their duty

to see that none of the village cattle stray out of the inclosure, and to open the gates for passing vehicles at all hours of the day and night. From the village commune they receive for their services a mere pittance of three or four rubles a month, and live in a wretched hovel made of boughs and earth, which throughout the year is warmed, lighted,

grouped in parties and sent to their places of banishment on foot. Able-bodied exiles of both sexes, unless they belong to certain privileged classes, are compelled to walk; but rude carts or telegas are provided for the sick and the infirm. As I did not have an opportunity to travel with a marching party of exiles until I reached Tomsk, I will not in this paper

HUTS OF VILLAGE GATE-KEEPERS.

and filled with smoke by an open fire on the ground.

On the next day after leaving Ekaterineburg we saw for the first time an *étape*, or exile station house, and began to pass parties of criminals on their way to Siberia. Since the establishment of regular steam communication between Nizhni Novgorod and Perm, and the completion of the Ural Mountain railroad, exiles from points west of the Urals have been transported by rail and barge from the forwarding prisons of Moscow, Nizhni Novgorod, and Kazan to Ekaterineburg. None of them are now compelled to march until after they have crossed the Urals, when those destined for points in western Siberia are

attempt to describe the life of such a party on the road.

On the second day after our departure from Ekaterineburg, as we were passing through a rather open forest between the villages of Markova and Tugulinskaya, our driver suddenly pulled up his horses, and turning to us said, "Vot granitsa" ["Here is the boundary"]. We sprang out of the tarantas and saw, standing by the roadside, a square pillar ten or twelve feet in height, of stuccoed or plastered brick, bearing on one side the coat of arms of the European province of Perm, and on the other that of the Asiatic province of Tobolsk. It was the boundary post of Siberia. No other spot between St. Petersburg and the Pacific

is more full of painful suggestions, and none has for the traveler a more melancholy interest than the little opening in the forest where stands this grief-consecrated pillar. Here hundreds of thousands of exiled human beings — men, women, and children; princes, nobles, and peasants — have bidden good-bye forever to friends, country, and home.

No other boundary post in the world has witnessed so much human suffering, or been passed by such a multitude of heart-broken people. More than 170,000 exiles have traveled this road since 1878, and more than half a million since the beginning of the present century. As the boundary post is situated about half-way between the last European and the first Siberian étape, it has always been customary to allow exile parties to stop here for rest and for a last good-bye to home and country. The Russian peasant, even when a criminal, is deeply attached to his native land; and heart-rending scenes have been witnessed around the boundary pillar when such a party, overtaken perhaps by frost and snow in the early autumn, stopped here for a last farewell. Some gave way to unrestrained grief; some comforted the weeping; some knelt and pressed their faces to the loved soil of their native country, and collected a little earth to take with them into exile; and a few pressed their lips to the European side of the cold brick pillar, as if kissing good-bye forever to all that it symbolized.

At last the stern order "Stroisa!" ["Form ranks!"] from the under officer of the convoy put an end to the rest and the leave-taking, and at the word "March!" the gray-coated troop of exiles and convicts crossed themselves hastily all together, and, with a confused jingling of chains and leg-fetters, moved slowly away past the boundary post into Siberia.

Until recently the Siberian boundary post was covered with brief inscriptions, good-byes, and the names of exiles scratched or penciled on the hard cement with which the pillar was originally overlaid. At the time of our visit, however, most of this hard plaster had apparently been pounded off, and only a few words, names, and initials remained. Many of the inscriptions, although brief, were significant and touching. In one place, in a man's hand, had been written the words "Praschai Marya!" ["Good-bye, Mary!"] Who the writer was, who Mary was, there is nothing now left to show; but it may be that to the exile who scratched this last farewell on the boundary pillar "Mary" was all the world, and that in crossing the Siberian line the writer was leaving behind him forever, not only home and country, but love.

After picking a few flowers from the grass at the base of the boundary pillar, we climbed into our carriage, said "Good-bye" to Europe, as hundreds of thousands had said good-bye before us, and rode away into Siberia.

George Kennan.

INTERLUDES.

I. MEMORY.

MY mind lets go a thousand things,
Like dates of wars and deaths of kings,
And yet recalls the very hour —
'T was noon by yonder village tower,
And on the last blue noon in May —
The wind came briskly up this way,
Crisping the brook beside the road;
Then, pausing here, set down its load
Of pine-scents, and shook listlessly
Two petals from that wild-rose tree.

II. A REFRAIN.

HIGH in a tower she sings,
I, passing by beneath,
Pause and listen, and catch
These words of passionate breath —
"Asphodel, flower of Life, amaranth, flower of Death!"

Sweet voice, sweet unto tears!
 What is this that she saith?
 Poignant, mystical — hark!
 Again, with passionate breath —
"Asphodel, flower of Life, amaranth, flower of Death!"

III. ACT V.

FIRST, two white arms that held him very close,
 And ever closer as he drew him back
 Reluctantly, the loose gold-colored hair
 A thousand delicate fibers reaching out
 Still to detain him; then some twenty steps
 Of iron staircase winding round and down,
 And ending in a narrow gallery hung
 With Gobelin tapestries — Andromeda
 Rescued by Perseus, and the sleek Diana
 With her nymphs bathing; at the farther end
 A door that gave upon a starlit grove
 Of citron and clipt palm-trees; then a path
 As bleached as moonlight, with the shadow of leaves
 Stamped black upon it; next a vine-clad length
 Of solid masonry; and last of all
 A Gothic archway packed with night, and then —
 A sudden gleaming dagger through his heart.

IV. ON REVISING A DISCARDED POEM.

THE Song I made and cast away
 Comes singing to my heart to-day,
 And pleads: "I know my many faults;
 I know that here 's a rhythm that halts,
 And there — a thing we both abhor —
 A very much-mixed metaphor.
 In certain passages, I hold,
 My story is not clearly told;
 Those lack dramatic touch, and these
 Are clouded with parentheses.
 And yet, by dropping here and there
 The dactyls that I well may spare,
 And forging new ones, just to bind
 The sequence, you will surely find
 I 'm not so poor a little thing.
 I pray you, sing me!" So I sing.
 And if these random couplets seem
 Too light a prelude to the theme —
 Why, 't is the sun that casts the shade;
 Of gall and honey life is made;
 A discord helps the perfect note
 On harpstring or in linnet's throat;
 Crouched in the blue of April skies
 The unleashed lightning somewhere lies.
 So let Thalia laugh; anon
 Melpomene comes sweeping on.
 One actor in both parts appears:
 The self-same eyes that smile, shed tears.

Thomas Bailey Aldrich.

SOLACE.

WHAT though you lie, like the still pool of rain,
Silent, forgotten in some lowly place;
Or if remembered, in your being to trace
But the remainder of a past storm's pain?
What though the storm-drops, falling fast again,—
Call we them "years" that hasten down apace,—
Smite your still breast, as if they would efface
All sign of peace, and leave but blot and stain?
Look! even now the reaper-beams appear,
And gather in the clouds' spare aftermath,
With glancing scythes, of silver every one.
While in the pool's still bosom, mirror-clear
Is Heaven pictured; and a mystic path
Strikes from its heart's clear center to the Sun.

Julie M. Lippmann.

A LOVE STORY REVERSED.

THE golden hands of the parlor clock point glimmeringly to an hour after midnight and the house is still. The gas is turned almost out, but the flickering of the dying sea-coal fire in the grate fitfully illumines

the forms and faces of two young women who are seated before it talking earnestly in low tones. It is apparent from their costumes that they have been spending the evening out.

The fair girl in the low chair, gazing pensively into the fire, is Maud Elliott, the daughter of the house. Not generally called handsome, her features are good and well balanced, and her face is altogether a sweet and wholesome one. She is rather tall, and the most critical admit that she has a fine figure. Her eyes are blue, and their clear, candid expression indicates an unusually sincere and simple character. But, unfortunately, it is only her friends who are fully conversant with the expression of her eyes, for she is very shy. Shyness in little people is frequently piquant, but its effect in girls of the Juno style is too often that of awkwardness. Her friends call Maud Elliott stately; those who do not like her call her stiff; while indifferent persons speak of her as rather

too reserved and dignified in manner to be pleasing. In fact, her excess of dignity is merely the cloak of her shyness, and nobody knows better than she that there is too much of it. Those who know her at all well, know that she is not dull, but with mere acquaintances she often passes for that. Only her intimate friends are aware what wit and intelligence, what warmth and strength of feeling, her coldness, when in company, conceals.

No one better understands this, because no one knows her better or has known her longer, than her present companion before the fire, Lucy Merritt. They were room-mates and bosom friends at boarding-school; and Lucy, who recently has been married, is now on her first visit to her friend since that event. She is seated on a hassock, with her hands clasped over her knees, looking up at Maud—an attitude well suited to her petite figure. She is going home on the morrow, or rather on the day already begun; and this fact, together with the absorbing nature of the present conversation, accounts for the lateness of the session.

"And so, Maud," she is saying while she regards her friend with an expression at once sympathetic and amused—"and so that is what has been making your letters so dismal lately. I fancied that nothing less could suggest such

melancholy views of life. The truth is, I came on this visit as much as anything to find out about him. He is a good-looking fellow, certainly; and, from what little chance I had to form an opinion to-night, seems sensible enough to make it quite incredible that he should not be in love with such a girl in a thousand as you. Are you quite sure he isn't?"

"You had a chance to judge to-night," replied Maud, with a hard little laugh. "You overheard our conversation. 'Good-evening, Miss Elliott; jolly party, is n't it?' 'That was all he had to say to me, and quite as much as usual. Of course, we are old acquaintances, and he's always pleasant and civil: he could n't be anything else; but he wastes mighty little time on me. I don't blame him for preferring other girls' society. He would show very little taste if he did not enjoy Ella Perry's company better than that of a tongue-tied thing like me. She is a thousand times prettier and wittier and more graceful than I am."

"Nonsense," exclaimed Lucy. "She is a flirt and a conceited little minx. She is not to be mentioned the same day with you; and he would think so, if he could only get to know you. But how in the world is he ever going to? Why, you seem to be shyer than ever, poor dear. You were actually distant, almost chilling, in your manner towards him to-night, although I know you did n't mean to be."

"I know it. Don't I know it!" groaned Maud. "I always am shyer and stiffer with him than with any one else. O Lucy! you can't guess what a dreadful thing it is to be shy. It is as if you were surrounded by a fog which benumbs you, and chills all who approach you. I dare say he thinks that I actually dislike him. I could not blame him if he did. And I can't help it. I could never make him understand anything else, unless I told him in so many words."

The tears filled her eyes as she spoke, and hung heavy on the lashes. Lucy took one of her hands in both of hers, and pressed and stroked it caressingly.

"I know you could n't, poor dear, I know you could n't," she said; "and you cannot tell him in so many words because, forsooth, you are a woman. I often think, Maud, what a heap of trouble would be saved if women, when they cannot make themselves understood in other ways, were allowed to speak out as men do, without fear or reproach. Some day they will, when the world gets wiser — at least I think so. Why should a woman have to hide her love, as if it were a disgraceful secret? Why is it any more a disgrace to her than to a man?"

"I can't quite see what good it would do

me," said Maud, "even if women could 'speak out,' as you say. If a man did n't care for one already, I can't see how it would make him know that one cared for him. I should think she would prefer to keep her secret."

"That is n't what men do," replied Lucy. "If they have such a secret they tell it right away, and that is why they succeed. The way half the women are induced to fall in love is by being told the men are in love with them; you know that."

"But men are different," suggested Maud.

"Not a bit of it: they're more so, if anything," was the oracular response of the young wife. "Possibly there are men," she continued,—"the story-tellers say so, anyhow,—who are attracted by repulsion and warmed by coldness, who like resistance for the pleasure of overcoming it. There must be a spice of the tyrant in such men. I would n't want to marry one of them. Fortunately, they're not common. I've noticed that love, like lightning, generally takes the path of least resistance with men as well as women. Just suppose now, in your case, that Mr. Burton had followed us home and had overheard this conversation from behind that door."

"No, no," she added laughing, as Maud looked around apprehensively; "he is n't there. But if he had been there and had overheard you own that you were pining for him, what a lucky chance it would have been! If he, or any other man, once knew that a magnificent girl like you had done him the honor to fall in love with him, half the battle would be won, or I'm no judge of men. But such lucky eavesdropping only happens in stories and plays; and for lack of it this youth is in a fair way to marry a chit of a girl, who does not think half so much of him as you do, and of whom he will never think a quarter what he would of you. He is not, probably, entirely stupid either. All he wants, very likely, is just a hint as to where his true happiness lies: but, being a woman, you can't give it in words; and, being Maud Elliott, you can't give it in any other way if you died for it. Really, Maud, the canon which makes it a woman's duty to be purely passive in love is exasperating, especially as it does not represent what anybody really believes, but only what they pretend to believe. Everybody knows that unrequited love comes as often to women as to men. Why, then, should n't they have an equal chance to seek requital? Why have not they the same right to look out for the happiness of their lives by all honorable means that men have? Surely it is far more to them to marry the men they love than to a man to marry any particular woman. It seems to me that making suitable matches is not such an easy mat-

ter that society can afford to leave the chief part of it to the stupider sex, giving women merely the right of veto. To be sure, even now women who are artful enough manage to evade the prohibition laid on their lips and make their preference known. I am proud to say that I have a royal husband, who would never have looked my way if I had not set out to make him do so; and if I do say it, who should n't, I flatter myself he has a better wife than he could have picked out without my help. There are plenty of women who can say the same thing; but, unluckily, it is the best sort of women, girls like you—simple, sincere, noble, without arts of any sort—who can't do this. On them the etiquette that forbids women to reveal their hearts except by subterfuge operates as a total disability. They can only sit with folded hands, looking on, pretending not to mind, while their husbands are run away with by others."

Maud took up the poker and carefully arranged the coals under the grate in a heap. Then she said: "Suppose a girl did what you've been speaking of. I mean, suppose she really said such a thing to a man,—said that she cared for him, or anything like that,—what do you suppose he would think of her? Don't you fancy she would be in danger of making him think very cheaply of her?"

"If she thought he were that kind of a man," replied Lucy, "I can't understand her ever falling in love with him. Of course, I'm not saying that he would necessarily respond by falling in love with her. She would have to take her chance of that; but I'm sure if he were a gentleman she need have no fear of his thinking unworthily of her. If I had spoken to Dick in that way, even if he had never wanted to marry me, I know he would have had a soft spot for me in his heart all the rest of his life, out of which even his wife would not have quite crowded me. Why, how do we think of men whom we have refused? Do we despise them? Do we ridicule them? Some girls may, but they are not ladies. A low fellow might laugh at a woman who revealed a fondness for him which he did not return; but a gentleman, never. Her secret would be safe with him."

"Girls!" It was the voice of Mrs. Elliott speaking from the upper hall. "Do you know how late it is? It is after 1 o'clock."

"I suppose we might as well go to bed," said Lucy. "There's no use sitting up to wait for women to get their rights. They won't get them to-night, I dare say; though, mark my word, some day they will."

"This affair of yours may come out all right yet," she said hopefully, as they went upstairs together. "If it does not, you can

console yourself with thinking that people in general, and especially girls, never know what is good for them till afterward. Do you remember that summer I was at the beach, what a ninny I made of myself over that little Mr. Parker? How providential it was for me that he did not reciprocate. It gives me the cold shivers when I think what might have become of me if he had proposed."

At the door of her room Lucy said again: "Remember, you are to come to me in New York for a long visit soon. Perhaps you will find there are other people in the world then."

Maud smiled absently, and kissed her good-night. She seemed preoccupied, and did not appear to have closely followed what her lively friend was saying.

The following afternoon, as she was walking home after seeing Lucy on the cars, she met a gentleman who lifted his hat to her. It was Arthur Burton. His office was on the one main street of the small New England city which is the scene of these events, and when out walking or shopping Maud often met him. There was therefore nothing at all extraordinary in the fact of their meeting. What was extraordinary was its discomposing effect upon her on this particular afternoon. She had been absorbed a moment before in a particularly brown study, taking no more notice of surrounding objects and persons than was necessary to avoid accidents. On seeing him she started perceptibly, and forthwith became a striking study in red. She continued to blush so intensely after he had passed, that, catching sight of her crimson cheeks in a shop window, she turned down a side street and took a quieter way home.

There was nothing particularly remarkable about Arthur Burton. Fortunately there does not need to be anything remarkable about young men to induce very charming girls to fall in love with them. He was just a good-looking fellow, with agreeable manners and average opinions. He was regarded as a very promising young man, and was quite a favorite among the young ladies. If he noticed Maud's confusion on meeting him, he certainly did not think of associating it in any way with himself. For although they had been acquaintances these many years, and belonged to the same social set, he had never entertained the first sentimental fancy concerning her. So far as she had impressed him at all, it was as a thoroughly nice girl, of a good family, not bad-looking, but rather dull in society, and with very little facility in conversation; at least he had always found it hard to talk with her.

Ten days or a fortnight after Lucy Merritt's departure there was a little party at Ella Perry's, and both Arthur Burton and Maud

were present. It was the custom of the place for the young men to escort the girls home after evening entertainments, and when the couples were rightly assorted the walk home was often the most agreeable part of the evening. Although they were not engaged, Arthur imagined that he was in love with Ella Perry, and she had grown into the habit of looking upon him as her particular knight. Towards the end of the evening he jestingly asked her whom he should go home with, since he could not that evening be her escort.

"Maud Elliott," promptly suggested Ella, selecting the girl of those present in her opinion least likely to prove a diverting companion. So it chanced that Arthur offered his company to Maud.

It struck him, as she came downstairs with her wraps on, that she was looking remarkably pale. She had worn a becoming color during the evening, but she seemed to have lost it in the dressing-room. As they walked away from the house Arthur began, to the best of his ability, to make himself agreeable, but with very poor success. Not only was Maud, as usual, a feeble contributor of original matter, but her random answers showed that she paid little attention to what he was saying. He was mentally registering a vow never again to permit himself to be committed to a tête-à-tête with her, when she abruptly broke the silence which had succeeded his conversational efforts. Her voice was curiously unsteady, and she seemed at first to have some difficulty in articulating, and had to go back and repeat her first words. What she said was:

"It was very good in you to come home with me to-night. It is a great pleasure to me."

"You're ironical, this evening, Miss Elliott," he replied, laughing, and the least bit nettled.

It was bore enough doing the polite to a girl who had nothing on her mind without being giped by her to boot.

"I'm not ironical," she answered. "I should make poor work at irony. I meant just what I said."

"The goodness was on your part in letting me come," he said, mollified by the unmistakable sincerity of her tone, but somewhat embarrassed withal at the decidedly flat line of remark she had chosen.

"Oh, no," she replied; "the goodness was not on my side. I was only too glad of your company, and might as well own it. Indeed, I will confess to telling a fib to one young man who offered to see me home, merely because I hoped the idea of doing so would occur to you."

This plump admission of partiality for his society fairly staggered Arthur. Again he thought, "She must be quizzing me"; and, to

make sure, stole a sidelong glance at her. Her eyes were fixed straight ahead, and the pallor and the tense expression of her face indicated that she was laboring under strong excitement. She certainly did not look like one in a quizzing mood.

"I am very much flattered," he managed to say.

"I don't know whether you feel so or not," she replied. "I'm afraid you don't feel flattered at all, but I—I wanted to—tell you."

The pathetic tremor of her voice lent even greater significance to her words than in themselves they would have conveyed.

She was making a dead set at him. There was not a shadow of doubt any longer about that. As the full realization of his condition flashed upon him, entirely alone with her and a long walk before them, the strength suddenly oozed out of his legs, he felt distinctly cold about the spine, and the perspiration started out on his forehead. His tongue clung to the roof of his mouth, and he could only abjectly wonder what was coming next. It appeared that nothing more was coming. A dead silence lasted for several blocks. Every block seemed to Arthur a mile long, as if he were walking in a hasheesh dream. He felt that she was expecting him to say something, to make some sort of response to her advances; but what response, in Heaven's name, could he make! He really could not make love. He had none to make; and had never dreamed of making any to Maud Elliott, of all girls. Yet the idea of letting her suppose him such an oaf as not to understand her, or not to appreciate the honor a lady's preference did him, was intolerable. He could not leave it so.

Finally, with a vague idea of a compromise between the impossible alternative of making love to her, which he could not, and seeming an insensible boor, which he would not, he laid his disengaged hand upon hers as it rested on his arm. It was his intention to apply to it a gentle pressure, which, while committing him to nothing, might tend to calm her feelings and by its vaguely reassuring influence help to stave off a crisis for the remainder of their walk. He did not, however, succeed in carrying out the scheme; for at the moment of contact her hand eluded his, as quicksilver glides from the grasp. There was no hint of coquettish hesitation in its withdrawal. She snatched it away as if his touch had burned her; and although she did not at the same time wholly relinquish his arm, that was doubtless to avoid making the situation, on the street as they were, too awkward.

A moment before only concerned to evade her apparent advances, Arthur found himself in the position of one under rebuke for

offering an unwarranted familiarity to a lady. There was no question that he had utterly misconstrued her previous conduct. It was very strange that he could have been such a fool; but he was quite too dazed to disentangle the evidence just then, and there was no doubt about the fact.

"Pardon me," he stammered, too much overcome with confusion and chagrin to be able to judge whether it would have been better to be silent.

The quickness with which the reply came showed that she had been on the point of speaking herself.

"You need not ask my pardon," she said. Her tones quivered with excitement and her utterance was low and swift. "I don't blame you in the least after the way I have talked to you to-night. But I did not mean that you should think lightly of me. I have said nothing right, nothing that I meant to. What I wanted to have you understand was that I care for you very much." Her voice broke here, but she caught her breath and went right on. "I wanted you to know it somehow, and since I could not make you know it by ways clever girls might, I thought I would tell you plainly. It really amounts to the same thing; don't you think so? and I know you'll keep my secret. You need n't say anything. I know you've nothing to say and may never have. That makes no difference. You owe me nothing merely because I care for you. Don't pity me. I'm not so much ashamed as you'd suppose. It all seems so natural when it's once said. You need n't be afraid of me. I shall never say this again or trouble you at all. Only be a little good to me; that's all."

She delivered this little speech almost in one breath, with headlong, explosive utterance, as if it were something she had to go through with, cost what it might, and only wanted somehow to get out the words, regardless, for the time, of their manner or effect. She ended with an hysterical sob, and Arthur felt her hand tremble on his arm as she struggled with an emotion that threatened to overcome her. But it was over almost instantly; and without giving him a chance to speak, she exclaimed, with an entire alteration of tone and manner:

"Did you see that article in the '*Gazette*' this morning about the craze for collecting pottery which has broken out in the big cities? Do you suppose it will reach here? What do you think of it?"

Now it was perfectly true, as she had told him, that Arthur had nothing whatever to say in response to the declaration she had made; but all the same it is possible, if she had not just so abruptly diverted the conversation,

that he would then and there have placed himself and all his worldly goods at her disposal. He would have done this, although five minutes before he had had no more notion of marrying her than the Emperor of China's daughter, merely because every manly instinct cried out against permitting a nice girl to protest her partiality for him without meeting her half-way. Afterward, when he realized how near he had come to going over the verge of matrimony, it was with such reminiscent terror as chills the blood of the awakened sleep-walker looking up at the dizzy ridge-pole he has trodden with but a hair's breadth between him and eternity.

During the remainder of the way to Maud's door the conversation upon pottery, the weather, and miscellaneous topics was incessant—almost breathless, in fact. Arthur did not know what he was talking about, and Maud probably no better what she was saying, but there was not a moment's silence. A stranger meeting them would have thought, "What a remarkably jolly couple!"

"I'm much obliged for your escort," said Maud, as she stood upon her doorstep.

"Not at all. Great pleasure, I'm sure."

"Good-evening."

"Good-evening." And she disappeared within the door.

Arthur walked away with a slow, mechanical step. His fallen jaw, open mouth, and generally idiotic expression of countenance would have justified his detention by any policeman who might have met him, on suspicion of being a feeble-minded person escaped from custody. Turning the first corner, he kept on with the same dragging step till he came to a vacant lot. Then, as if he were too feeble to get any farther, he stopped and leaned his back against the fence. Bracing his legs before him so as to serve as props, he thrust his hands deep in his pockets, and raising his eyes appealingly to the stars, ejaculated, "Proposed to, by Jove!" A period of profound introspection followed, and then he broke forth: "Well, I'll be hanged!" emphasizing each word with a slow nod. Then he began to laugh—not noisily; scarcely audibly, indeed; but with the deep unctuous chuckle of one who gloats over some exquisitely absurd situation, some jest of many facets, each contributing its ray of humor.

Yet, if this young man had tremblingly confessed his love to a lady, he would have expected her to take it seriously.

Nevertheless, let us not be too severe with him for laughing. It was what the average young man probably would have done under similar circumstances, and it was particularly stated at the outset that there was nothing at

all extraordinary about Arthur Burton. For the rest it was not a wholly bad symptom. Had he been a conceited fellow, he very likely would not have laughed. He would have stroked his mustache and thought it quite natural that a woman should fall in love with him, and even would have felt a pity for the poor thing. It was, in fact, because he was not vain that he found the idea so greatly amusing.

On parting with Arthur, Maud rushed upstairs and locked herself in her room. She threw herself into the first chair she stumbled over in the dimly lighted apartment, and sat there motionless, her eyes fixed on the empty air with an expression of desperation, her hands clinched so tightly that the nails bit the palms. She breathed only at considerable intervals, with short, quick inhalations.

Yet the act which caused this extraordinary revulsion of feeling had not been the result of any sudden impulse. It was the execution of a deliberate resolve which had originated in her mind on the night of Lucy Merritt's departure, as she sat with her before the fire, listening to her fanciful talk about the advantages which might be expected to attend franker relations in love affairs between men and women. Deeply in love, and at the same time feeling that in the ordinary course of events she had nothing but disappointment to look forward to, she was in a state of mind just desperate enough to catch at the idea that if Arthur Burton knew of her love there would be some chance of his returning it. It seemed to her that if he did not, she could be no worse off than she was already. She had brooded over the subject day and night ever since, considering from every point of view of abstract right or true feminine propriety the question whether a woman might, without real prejudice to her maidenly modesty, tell a man that she cared for him, without waiting for him to ask her to marry him. Her conclusion had been that there was no reason, apart from her own feelings, why any woman, who dared do it, should not; and if she thought her life's happiness dependent on her doing it, that she would be a weak creature who did not dare.

Her resolve once taken, she had only waited an opportunity to carry it out; and that evening, when Arthur offered to walk home with her, she felt that the opportunity had come. Little wonder that she came downstairs from the dressing-room looking remarkably pale, and that after they had started, and she was trying to screw up her courage to the speaking point, her responses to his conversational efforts should have been at random. It was terribly hard work, this screwing up her cour-

age. All the fine arguments which had convinced her that her intended course was justifiable and right had utterly collapsed. She could not recall one of them. What she had undertaken to do seemed shocking, hateful, immodest, scandalous, impossible. But there was a bed-rock of determination to her character; and a fixed, dogged resolve to do the thing she had once made up her mind to, come what might, had not permitted her to draw back. Hardly knowing what she was about, or the words she was saying, she had plunged blindly ahead. Somehow she had got through with it, and now she seemed to herself to be sitting amidst the ruins of her womanhood.

It was particularly remarked that Arthur Burton's laughter, as he leaned against the fence a square away in convulsions of merriment, was noiseless, but it was perfectly audible to Maud, as she sat in the darkness of her chamber. Nay, more: although his thoughts were not uttered at all, she overheard them, and among them some which the young man, to do him justice, had the grace not to think.

The final touch to her humiliation was imparted by the reflection that she had done the thing so stupidly—so blunderingly. If she must needs tell a man she loved him, could she not have told him in language which at least would have been forcible and dignified. Instead of that, she had begun with mawkish compliments, unable in her excitement to think of anything else, and ended with an incoherent jumble that barely escaped being hysterical. He would think that she was as lacking in sense as in womanly self-respect. At last she turned up the gas, for very shame avoiding a glimpse of herself in the mirror as she did so, and bathed her burning cheeks.

II.

MEANWHILE Arthur had reached home and was likewise sitting in his room, thinking the matter over from his point of view, with the assistance of a long-stemmed pipe. But instead of turning the gas down, as Maud had done, he had turned it up, and, having lighted all the jets in the room, had planted his chair directly in front of the big looking-glass, so that he might enjoy the reflection of his own amusement and be doubly entertained.

By this time, however, amazement and amusement had passed their acute stages. He was considering somewhat more seriously, but still with frequent attacks of mirth, the practical aspects of the predicament in which Maud's declaration had placed him; and the more he considered it, the more awkward as well as absurd that predicament appeared. They had

the same acquaintances, went to the same parties, and were very likely to meet whenever they went out of an evening. What if she should continue to pursue him? If she did, he either would have to cut society, which had promised to be unusually lively that winter, or provide himself with a chaperon for protection. For the first time in his life he was in a position to appreciate the courage of American girls, who, without a tremor, venture themselves, year in and year out, in the company of gentlemen from whom they are exposed at any time to proposals of a tender nature. It was a pity if he could not be as brave as girls who are afraid of a mouse. Doubtless it was all in getting used to it.

On reflection, he should not need a chaperon. Had she not assured him that he need not be afraid of her, that she would never repeat what she had said, or trouble him again? How her arm trembled on his as she was saying that, and how near she came to breaking down! And this was Maud Elliott, the girl with whom he had never ventured to flirt as with some of the others, because she was so reserved and distant. The very last girl anybody would expect such a thing from! If it had been embarrassing for him to hear it, what must it have cost such a girl as Maud Elliott to say it! How did she ever muster the courage?

He took the pipe from his mouth, and the expression of his eyes became fixed, while his cheeks reddened slowly and deeply. In putting himself in Maud's place he was realizing for the first time how strong must have been the feeling which had nerved her to such a step. His heart began to beat rather thickly. There was something decidedly intoxicating in knowing that one was regarded in such a way by a nice girl, even if it were impossible, as it certainly was in this case, to reciprocate the feeling. He continued to put himself mentally in Maud's place. No doubt she was also at that moment sitting alone in her chamber, thinking the matter over as he was. She was not laughing, however, that was pretty certain; and it required no clairvoyant's gift for him to be sensible that her chief concern must be as to what he might be at that moment thinking about her. And how had he been thinking about her?

As this question came up to his mind he saw himself for a moment, through Maud's eyes, sitting there smoking, chuckling, mowing like an idiot before the glass because, forsooth, a girl had put herself at his mercy on the mistaken supposition that he was a gentleman. As he saw his conduct in this new light he had such an access of self-contempt that, had it been physically convenient, it would have been a relief to kick himself. What

touching faith she had shown in his ability to take a generous, high-minded view of what she had done, and here he had been guffawing over it like a corner loafer. He would not, for anything in the world, have her know how he had behaved. And she should not. She should never know that he was less a gentleman than she believed him.

She had told him, to be sure, that he owed her nothing because she loved him; but it had just struck him that he owed her at least, on that account, a more solicitous respect and consideration than any one else had the right to expect from him.

There were no precedents to guide him, no rules of etiquette prescribing the proper thing for a young man to do under such circumstances as these. It was a new problem he had to work out, directed only by such generous and manly instincts as he might have. Plainly the first thing, and in fact the only thing that he could do for her, seeing that he really could not return her affection, was to show her that she had not forfeited his esteem.

At first he thought of writing her a note and assuring her, in a few gracefully turned sentences, of his high respect in spite of what she had done. But somehow the gracefully turned sentences did not occur to his mind when he took up his pen, and it did occur to him that to write persons that you still respect them is equivalent to intimating that their conduct justly might have forfeited your respect. Nor would it be at all easier to give such an assurance by word of mouth. In fact, quite the reverse. The meaning to be conveyed was too delicate for words. Only the unspoken language of his manner and bearing could express it without offense. It might, however, be some time before chance brought them together in society, even if she did not, for a while at least, purposely avoid him. Meantime, uncertain how her extraordinary action had impressed him, how was she likely to enjoy her thoughts?

In the generous spirit bred of his new contrition, it seemed to him a brutal thing to leave her weeks or even days in such a condition of mind as must be hers. Inaction on his part was all that was required to make her position intolerable. Inaction was not therefore permissible to him. It was a matter in which he must take the initiative, and there seemed to be just one thing he could do which would at all answer the purpose. A brief formal call, with the conversation strictly limited to the weather and similarly safe subjects, would make it possible for them to meet thereafter in society without too acute embarrassment. Had he the pluck for this, the nerve to carry it through? That was the only question. There was no doubt as

to what he ought to do. It would be an awkward call, to put it mildly. It would be skating on terribly thin ice—a little thinner, perhaps, than a man ever skated on before.

If he could but hit on some pretext, it scarcely mattered how thin,—for of course it would not be intended to deceive her,—the interview possibly could be managed. As he reflected, his eyes fell on a large volume, purchased in a fit of extravagance, which lay on his table. It was a profusely illustrated work on pottery, intended for the victims of the fashionable craze on that subject, which at the date of these events had but recently reached the United States. His face lighted up with a sudden inspiration, and taking a pen he wrote the following note to Maud, dating it the next day:

MISS ELLIOTT:

Our conversation last evening on the subject of old china has suggested to me that you might be interested in looking over the illustrations in the volume which I take the liberty of sending with this. If you will be at home this evening I shall be pleased to call and learn your impressions.

ARTHUR BURTON.

The next morning he sent this note and the book to Maud, and that evening called upon her. To say that he did not twist his mustache rather nervously as he stood upon the doorstep, waiting for the servant to answer the bell, would be to give him credit for altogether more nerve than he deserved. He was supported by the consciousness that he was doing something rather heroic, but he very much wished it were done. As he was shown into the parlor, Maud came forward to meet him. She wore a costume which set off her fine figure to striking advantage, and he was surprised to perceive that he had never before appreciated what a handsome girl she was. It was strange that he should never have particularly observed before what beautiful hands she had, and what a dazzling fairness of complexion was the complement of her red-brown hair. Could it be this stately maiden who had uttered those wild words the night before? Could those breathless tones, that piteous shamefacedness, have been hers? Surely he must be the victim of some strange self-delusion. Only the deep blush that mantled her face as she spoke his name, the quickness with which, after one swift glance, her eyes avoided his, and the tremor of her hand as he touched it, fully assured him that he had not dreamed the whole thing.

A shaded lamp was on the center-table, where also Arthur's book on pottery lay open. After thanking him for sending it and expressing the pleasure she had taken in looking it

over, Maud plunged at once into a discussion of Sèvres, and Cloisonné, and Palissy, and tiles, and all that sort of thing, and Arthur bravely kept his end up. Any one who had looked casually into the parlor would have thought that old crockery was the most absorbing subject on earth to these young people, with such eagerness did they compare opinions and debate doubtful points. At length, however, even pottery gave out as a resource, especially as Arthur ceased, after a while, to do his part, and silences began to ensue, during which Maud rapidly turned the pages of the book or pretended to be deeply impressed with the illustrations, while her cheeks grew hotter and hotter under Arthur's gaze. He knew that he was a detestable coward thus to revel in her confusion, when he ought to be trying to cover it, but it was such a novel sensation to occupy this masterful attitude towards a young lady that he yielded basely to the temptation. After all, it was but fair. Had she not caused him a very embarrassing quarter of an hour the night before?

"I suppose I shall see you at Miss Oswald's next Thursday," he said, as he rose to take his leave.

She replied that she hoped to be there. She accompanied him to the door of the parlor. There was less light there than immediately about the table where they had been sitting. "Good-evening," he said. "Good-evening," she replied; and then, in a lowered voice, hardly above a whisper, she added, "I appreciate all that was noble and generous in your coming to-night." He made no reply, but took her hand and, bending low, pressed his lips to it as reverently as if she had been a queen.

Now Arthur's motive in making this call upon Maud, which has been described, had been entirely unselfish. Furthest from his mind, of all ideas, had been any notion of pursuing the conquest of her heart which he had inadvertently made. Nevertheless, the effect of his call, and that, too, even before it was made,—if this bull may be pardoned,—had been to complete that conquest as no other device, however studied, could have done.

The previous night Maud had been unable to sleep for shame. Her cheeks scorched the pillows faster than her tears could cool them; and altogether her estate was so wretched that Lucy Merritt, could she have looked in upon her, possibly might have been shaken in her opinion as to the qualifications of women to play the part of men in love, even if permitted by society.

It had been hard enough to nerve herself to the point of doing what she had done in view of the embarrassments she had foreseen. An

hour after she uttered those fatal words her whole thinking was summed up in the cry, "If I only had not done it, then at least he would still respect me." In the morning she looked like one in a fever. Her eyes were red and swollen, her face was pallid but for a hard red spot in each cheek, and her whole appearance was expressive of bodily and mental prostration. She did not go down to breakfast, pleading a very genuine headache, and Arthur's note and the book on pottery were brought up to her. She guessed his motive in a moment. Her need gave her the clew to his meaning.

What was on Arthur's part merely a decent sort of thing to do, her passionate gratitude instantly magnified into an act of chivalrous generosity, proving him the noblest of men and the gentlest of gentlemen. She exaggerated the abjectness of the position from which his action had rescued her, in order to feel that she owed the more to his nobility. At any time during the previous night she gladly would have given ten years of her life to recall the confession that she had made to him; now she told herself, with a burst of exultant tears, that she would not recall it if she could. She had made no mistake. Her womanly dignity was safe in his keeping. Whether he ever returned her love or not she was not ashamed, but was glad, and always should be glad, that he knew she loved him.

As for Arthur, the reverence with which he bent over her hand on leaving her was as heartfelt as it was graceful. In her very disregard of conventional decorum she had impressed him the more strikingly with the native delicacy and refinement of her character. It had been reserved for her to show him how genuine a thing is womanly modesty, and how far from being dependent on those conventional affectations with which it is in the vulgar mind so often identified, with the effect of seeming as artificial as they.

When, a few evenings later, he went to Miss Oswald's party, the leading idea in his mind was that he should meet Maud there. His eyes sought her out the moment he entered the Oswald parlors, but it was some time before he approached her. For years he had been constantly meeting her, but he had never before taken special note of her appearance in company. He had a curiosity about her now as lively as it was wholly new. He took a great interest in observing how she walked and talked and laughed, how she sat down and rose up and demeaned herself. It gave him an odd but marked gratification to note how favorably she compared in style and appearance with the girls present. Even while he was talking with Ella Perry, with

whom he believed himself in love, he was so busy making these observations that Ella dismissed him with the sarcastic advice to follow his eyes, which he presently proceeded to do.

Maud greeted him with a very fair degree of self-possession, though her cheeks were delightfully rosy. At first it was evidently difficult for her to talk, and her embarrassment betrayed uncertainty as to the stability of the conventional footing which his call of the other evening had established between them. Gradually, however, the easy, nonchalant tone which he affected seemed to give her confidence, and she talked more easily. Her color continued to be unusually though not unbecomingly high, and it took a great deal of skirmishing for him to get a glance from her eyes, but her embarrassment was no longer distressing. Arthur, indeed, was scarcely in a mood to notice that she did not bear her full part in the conversation. The fact of conversing on any terms with a young lady who had confessed to him what Maud had was so piquant in itself that it would have made talk in the deaf-and-dumb alphabet vivacious. All the while, as they laughed and talked together quite as any other two young people might do, those words of hers the other night: "I care for you very much," "Be a little good to me," were ringing in his ears. The reflection that by virtue of her confession of love she was his whenever he should wish to claim her, even though he never should claim her, was constantly in his mind, and gave him a sense of potential proprietorship which was decidedly heady.

"Arthur Burton seems to be quite fascinated. I never supposed that he fancied Maud Elliott before, did you?" said one of the young ladies, a little maliciously, to Ella Perry. Ella tossed her head and replied that really she had never troubled herself about Mr. Burton's fancies, which was not true. The fact is, she was completely puzzled as well as vexed by Arthur's attentions to Maud. There was not a girl in her set of whom she would not sooner have thought as a rival. Arthur had never, to her knowledge, talked for five minutes together with Maud before, and here he was spending half the evening in an engrossing tête-à-tête with her to the neglect of his other acquaintances and of herself in particular. Maud was looking very well, to be sure, but no better than often before, when he had not glanced at her a second time. What might be the clew to this mystery? She remembered, upon reflection, that he had escorted Maud home from the party at her own house the week before, but that explained nothing. Ella was aware of no weapon in

the armory of her sex capable of effecting the subjugation of a previously quite indifferent young man in the course of a ten-minutes' walk. If, indeed, such weapons there had been, Maud Elliott, the most reserved and diffident girl of her acquaintance,—“stiff and pokerish,” Ella called her,—was the last person likely to employ them. It must be, Ella was forced to conclude, that Arthur was trying to punish her for snubbing him by devoting himself to Maud; and, having adopted this conclusion, the misguided damsel proceeded to flirt vigorously with a young man whom she detested.

In the latter part of the evening, when Arthur was looking again for Maud, he learned that she had gone home, a servant having come to fetch her. The result was that he went home alone, Ella Perry having informed him rather crushingly that she had accorded the honor of escorting herself to another. He was rather vexed at Ella's jilting him, though he admitted that she might have fancied she had some excuse.

A few days later he called on her, expecting to patch up their little misunderstanding, as on previous occasions. She was rather offish, but really would have been glad to make up had he shown the humility and tractableness he usually manifested after their tiffs; but he was not in a humble frame of mind, and, after a brief and unsatisfactory call, took his leave. The poor girl was completely puzzled. What had come over Arthur? She had snubbed him no more than usual that night, and generally he took it very meekly. She would have opened her eyes very wide indeed if she had guessed what there had been in his recent experience to spoil his appetite for humble-pie.

It was not late when he left Ella, and as he passed Maud's house he could not resist the temptation of going in. This time he did not pretend to himself that he sought her from any but entirely selfish motives. He wanted to remove the unpleasantly acid impression left by his call on Ella by passing an hour with some one whom he knew would be glad to see him and not be afraid to let him know it. In this aim he was quite successful. Maud's face fairly glowed with glad surprise when he entered the room. This was their second meeting since the evening Arthur had called to talk pottery, and the tacit understanding that her tender avowal was to be ignored between them had become so well established that they could converse quite at their ease. But ignoring is not forgetting. On the other hand, it implies a constant remembering; and the mutual consciousness between these young people could scarcely fail to give a peculiar piquancy to their intercourse.

That evening was the first of many which the young man passed in Maud's parlor, and the beginning of an intimacy which caused no end of wonder among their acquaintances. Had its real nature been suspected, that wonder would have been vastly increased. For whereas they supposed it to be an entirely ordinary love affair, except in the abruptness of its development, it was, in fact, a quite extraordinary variation on the usual social relations of young men and women.

Maud's society had in fact not been long in acquiring an attraction for Arthur quite independent of the peculiar circumstances under which he had first become interested in her. As soon as she began to feel at ease with him her shyness rapidly disappeared, and he was astonished to discover that the stiff, silent girl whom he had thought rather dull possessed culture and originality such as few girls of his acquaintance could lay claim to. His assurance beyond possibility of doubt that she was as really glad to see him whenever he called as she said she was, and that though his speech might be dull or his jests poor they were sure of a friendly critic, made the air of her parlor wonderfully genial. The result was that he fell into a habit whenever he wanted a little social relaxation, but felt too tired, dispirited, or lazy for the effort of a call on any of the other girls, of going to Maud. One evening he said to her just as he was leaving, “If I come here too much, you must send me home.”

“I will when you do,” she replied, with a bright smile.

“But really,” he persisted, “I am afraid I bore you by coming so often.”

“You know better than that,” was her only reply, but the vivid blush which accompanied the words was a sufficient enforcement of them; and he was, at the bottom of his heart, very glad to think he did know better.

Without making any pretense of being in love with her, he had come to depend on her being in love with him. It had grown so pleasing to count on her loyalty to him that a change in her feelings would have been a disagreeable surprise. Getting something for nothing is a mode of acquisition particularly pleasing to mankind, and he was enjoying in some respects the position of an engaged man without any of the responsibilities.

But if in some respects he was in the position of an engaged man, in others he was farther from it than the average unengaged man. For while Maud and he talked of almost everything else under heaven, the subject of love was tabooed between them. Once for all Maud had said her say on that point, and Arthur could say nothing unless he said as much as she had said. For the same reason, there

was never any approach to flirting between them. Any trifling of that sort would have been meaningless in an intimacy begun, as theirs had been, at a point beyond where most flirtations end.

Not only in this respect, but also in the singular frankness which marked their interchange of thought and opinion, was there something in their relation savoring of that of brother and sister. It was as if her confession of love had swept away by one breath the whole lattice of conventional affectations through which young men and women usually talk with each other. Once for all she had dropped her guard with him, and he could not do less with her. He found himself before long talking more freely to her than to any others of his acquaintance, and about more serious matters. They talked of their deepest beliefs and convictions, and he told her things that he had never told any one before. Why should he not tell her his secrets? Had she not told him hers? It was a pleasure to reciprocate her confidence if he could not her love. He had not supposed it to be possible for a man to become so closely acquainted with a young lady not a relative. It came to the point finally that when they met in company, the few words that he might chance to exchange with her were pitched in a different key from that used with the others, such as one drops into when greeting a relative or familiar friend met in a throng of strangers.

Of course, all this had not come at once. It was in winter that the events took place with which this narrative opened. Winter had meantime glided into spring, and spring had become summer. In the early part of June a report that Arthur Burton and Maud Elliott were engaged obtained circulation, and, owing to the fact that he had so long been apparently devoted to her, was generally believed. Whenever Maud went out she met congratulations on every side, and had to reply a dozen times a day that there was no truth in the story, and smilingly declare that she could not imagine how it started. After doing which, she would go home and cry all night, for Arthur was not only not engaged to her, but she had come to know in her heart that he never would be.

At first, and indeed for a long time, she was so proud of the frank and loyal friendship between them, such as she was sure had never before existed between unpledged man and maid, that she would have been content to wait half her lifetime for him to learn to love her, if only she were sure that he would at last. But, after all, it was the hope of his love, not his friendship, that had been the motive of her desperate venture. As month after month

passed, and he showed no symptoms of any feeling warmer than esteem, but always in the midst of his cordiality was so careful lest he should do or say anything to arouse unfounded expectations in her mind, she lost heart and felt that what she had hoped was not to be. She said to herself that the very fact that he was so much her friend should have warned her that he would never be her lover, for it is not often that lovers are made out of friends.

It is always embarrassing for a young lady to have to deny a report of her engagement, especially when it is a report she would willingly have true; but what made it particularly distressing for Maud that this report should have got about was her belief that it would be the means of bringing to an end the relations between them. It would undoubtedly remind Arthur, by showing how the public interpreted their friendship, that his own prospects in other quarters, and he might even think justice to her future, demanded the discontinuance of attentions which must necessarily be misconstrued by the world. The public had been quite right in assuming that it was time for them to be engaged. Such an intimacy as theirs between a young man and a young woman, unless it were to end in an engagement, had no precedent and belonged to no known social category. It was vain, in the long run, to try to live differently from other people.

The pangs of an accusing conscience completed her wretchedness at this time. The conventional proprieties are a law written on the hearts of refined, delicately nurtured girls; and though, in the desperation of unreciprocated and jealous love, she had dared to violate them, not the less did they now thoroughly revenge themselves. If her revolt against custom had resulted happily, it is not indeed likely that she would ever have reproached herself very seriously; but now that it had issued in failure, her self-confidence was gone and her conscience easily convicted her of sin. The outraged Proprieties, with awful spectacles and minatory, reproachful gestures, crowded nightly around her bed, the Titanic shade of Mrs. Grundy looming above her satellite shams and freezing her blood with a Gorgon gaze. The feeling that she had deserved all that was to come upon her deprived her of moral support.

Arthur had never showed that he thought cheaply of her, but in his heart of hearts how could he help doing so? Compared with the other girls, serene and unapproachable in their virgin pride, must she not necessarily seem bold, coarse, and common? That he took care never to let her see it only proved his kindness of heart. Her sense of this kindness was more and more touched with abjectness.

The pity of it was that she had come to love him so much more since she had known him so well. It scarcely seemed to her now that she could have truly cared for him at all in the old days, and she wondered, as she looked back, that the shallow emotion she then experienced had emboldened her to do what she had done. Ah, why had she done it? Why had she not let him go his way? She might have suffered then, but not such heart-breaking misery as was now in store for her.

Some weeks passed with no marked change in their relations, except that a new and marked constraint which had come over Arthur's manner towards her was additional evidence that the end was at hand. Would he think it better to say nothing, but merely come to see her less and less frequently and so desert her, without an explanation, which, after all, was needless? Or would he tell her how the matter stood and say good-bye? She thought he would take the latter course, seeing that they had always been so frank with each other. She tried to prepare herself for what she knew was coming, and to get ready to bear it. The only result was that she grew sick with apprehension whenever he did not call, and was only at ease when he was with her, in the moment that he was saying good-bye without having uttered the dreaded words.

The end came during a call which he made on her in the last part of June. He appeared preoccupied and moody, and said scarcely anything. Several times she caught him furtively regarding her with a very strange expression. She tried to talk, but she could not alone keep up the conversation, and in time there came a silence. A hideous silence it was to Maud, an abyss yawning to swallow up all that was left of her happiness. She had no more power to speak, and when he spoke she knew it would be to utter the words she had so long expected. Evidently it was very hard for him to bring himself to utter them — almost as hard as it would be for her to hear them. He was very tender-hearted she had learned already. Even in that moment she was very sorry for him. It was all her fault that he had to say this to her.

Suddenly, just as she must have cried out, unable to bear the tension of suspense any longer, he rose abruptly to his feet, uttering something about going and an engagement which he had almost forgotten. Hastily wishing her good-evening, with hurried steps he half-crossed the room, hesitated, stopped, looked back at her, seemed to waver a moment, and then, as if moved by a sudden decision, returned to her and took her gently by the hand. Then she knew it was coming.

For a long moment he stood looking at her.

She knew just the pitifulness that was in his expression, but she could not raise her eyes to his. She tried to summon her pride, her dignity, to her support. But she had no pride, no dignity, left. She had surrendered them long ago.

"I have something to say to you," he said, in a tone full of gentleness, just as she had known he would speak. "It is something I have put off saying as long as possible, and perhaps you have already guessed what it is."

Maud felt the blood leaving her face; the room spun around; she was afraid she should faint. It only remained that she should break down now to complete her humiliation before him, and apparently she was going to do just that.

"We have had a most delightful time the past year," he went on; "that is, at least I have. I don't believe the friendship of a girl was ever so much to a man as yours has been to me. I doubt if there ever was just such a friendship as ours has been, anyway. I shall always look back on it as the rarest and most charming passage in my life. But I have seen for some time that we could not go on much longer on the present footing, and tonight it has come over me that we can't go on even another day. Maud, I can't play at being friends with you one hour more. I love you. Do you care for me still? Will you be my wife?"

When it is remembered that up to his last words she had been desperately bracing herself against an announcement of a most opposite nature, it will not seem strange that for a moment Maud had difficulty in realizing just what had happened. She looked at him as if dazed, and with an instinct of bewilderment drew back a little as he would have clasped her. "I thought," she stammered — "I thought — I —"

He misconstrued her hesitation. His eyes darkened and his voice was sharpened with a sudden fear as he exclaimed, "I know it was a long time ago you told me that. Perhaps you don't feel the same way now. Don't tell me, Maud, that you don't care for me any longer, now that I have learned I can't do without you."

A look of wondering happiness, scarcely able even yet to believe in its own reality, had succeeded the bewildered incredulity in her face.

"O Arthur!" she cried. "Do you really mean it? Are you sure it is not out of pity that you say this? Do you love me after all? Would you really like me a little to be your wife?"

"If you are not my wife, I shall never have

one," he replied. "You have spoiled all other women for me."

Then she let him take her in his arms, and as his lips touched hers for the first time he faintly wondered if it were possible he had ever dreamed of any other woman but Maud Elliott as his wife. After she had laughed and cried awhile, she said:

"How was it that you never let me see you cared for me? You never showed it."

"I tried not to," he replied; "and I would not have shown it to-night if I could have helped it. I tried to get away without betraying my secret, but I could not." Then he told her that when he found he had fallen in love with her, he was almost angry with himself. He was so proud of their friendship that a mere love affair seemed cheap and common beside it. Any girl would do to fall in love with; but there was not, he was sure, another in America capable of bearing her part in such a rare and delicate companionship as theirs. He was determined to keep up their noble game of friendship as long as might be.

Afterward, during the evening, he boasted himself to her not a little of the self-control

he had shown in hiding his passion so long, a feat the merit of which perhaps she did not adequately appreciate.

"Many a time in the last month or two when you have been saying good-bye to me of an evening, with your hand in mine, the temptation has been almost more than I could withstand to seize you in my arms. It was all the harder, you see, because I fancied you would not be very angry if I did. In fact, you once gave me to understand as much in pretty plain language, if I remember rightly. Possibly you may recall the conversation. You took the leading part in it, I believe."

Maud had bent her head so low that he could not see her face. It was very cruel in him, but he deliberately took her chin in his hands, and gently but firmly turned her face up to his. Then, as he kissed the shamed eyes and furiously blushing cheeks, he dropped the tone of banter and said, with moist eyes, in a voice of solemn tenderness:

"My brave darling, with all my life I will thank you for the words you spoke that night. But for them I might have missed the wife God meant for me."

Edward Bellamy.

THE TWILIGHT OF THE HEART.

WHEN day is dying in the west,
Through shadows faint and far,
It holds upon its gentle breast
A tender, nursling star,
As if to symbolize above
How shines a fair young mother's love.
I watch the sun depart;
A whisper seems to say:
So comes the twilight of the heart,
More beautiful than day.

The listless summer sleeps in green
Among my orange flowers;
The lazy south wind steals between
The lips of languid hours,
As if Endymion, lapped in fern,
Lay dreaming of the moon's return.
The long years seem to part
Like shadows cold and gray,
To show the twilight of the heart
More beautiful than day.

Old hopes and wishes seem to breathe
The gentle evening air,
Of love and sorrow laid beneath
A faded fold of hair.
Life had no other love to give,
Love had no other life to live.
What though the tears must start
For sorrows passed away;
There is a twilight of the heart
More beautiful than day.

I seem to see the smiling eyes
That loved me long ago
Look down the pure and tranquil skies
From out the after-glow;
The still delight, the smiles and tears,
Come back through all the silent years
In which we are apart,
As if they wished to say:
This is the twilight of the heart,
More beautiful than day.

SHERIFF'S WORK ON A RANCH.

BY THEODORE ROOSEVELT.

ILLUSTRATIONS BY FREDERIC REMINGTON.

A TEXAN COWBOY.

UP to 1880 the country through which the Little Missouri flows remained as wild and almost as unknown as it was when the old explorers and fur traders crossed it in the early part of the century. It was the last great Indian hunting-ground across which Grosventres and Mandans, Sioux and Cheyennes, and even Crows and Rees wandered in chase of game, and where they fought one another and plundered

the small parties of white trappers and hunters that occasionally ventured into it. Once or twice generals like Sully and Custer had penetrated it in the course of the long, tedious, and bloody campaigns that finally broke the strength of the northern Horse Indians; indeed, the trail made by Custer's baggage train is to this day one of the well-known landmarks, for the deep ruts worn by the wheels of the heavy wagons are in many places still as distinctly to be seen as ever.

In 1883 a regular long-range skirmish took place just south of us between some Cheyennes and some cowboys, with bloodshed on both sides, while about the same time a band of Sioux plundered a party of buffalo hunters of everything they owned, and some Crows who attempted the same feat with another party were driven off with the loss of two of their number. Since then there have been in our neighborhood no stand-up fights or regular raids; but the Indians have at different times proved more or less troublesome, burning the grass, and occasionally killing stock or carrying off horses that have wandered some distance away. They have also themselves suffered somewhat at the hands of white horse-thieves.

Bands of them, accompanied by their squaws and children, often come into the ranch country, either to trade or to hunt, and are then, of course, perfectly meek and peace-

able. If they stay any time they build themselves quite comfortable tepees (wigwams, as they would be styled in the East), and an Indian camp is a rather interesting, though very dirty, place to visit. On our ranch we get along particularly well with them, as it is a rule that they shall be treated as fairly as if they were whites: we neither wrong them ourselves nor allow others to wrong them. We have always, for example, been as keen in putting down horse-stealing from Indians as from whites — which indicates rather an advanced stage of frontier morality, as theft from the "redskins" or the "Government" is usually held to be a very trivial matter compared with the heinous crime of theft from "citizens."

There is always danger in meeting a band of young bucks in lonely, uninhabited country — those that have barely reached manhood being the most truculent, insolent, and reckless. A man meeting such a party runs great risk of losing his horse, his rifle, and all else he has. This has happened quite frequently during the past few years to hunters or cowboys who have wandered into the debatable territory where our country borders on the Indian lands; and in at least one such instance, that took place two years ago, the unfortunate individual lost his life as well as his belongings. But a frontiersman of any experience can generally "stand off" a small number of such assailants, unless he loses his nerve or is taken by surprise.

My only adventure with Indians was of a very mild kind. It was in the course of a solitary trip to the north and east of our range, to what was then practically unknown country, although now containing many herds of cattle. One morning I had been traveling along the edge of the prairie, and about noon I rode Manitou up a slight rise and came out on a plateau that was perhaps half a mile broad. When near the middle, four or five Indians suddenly came up over the edge, directly in front of me. The second they saw me they whipped their guns out of their slings, started their horses into a run, and came on at full tilt, whooping and brandishing their weapons. I instantly reined up and dismounted. The level plain where we were was of all places the one on which such an onslaught could best be

met. In any broken country, or where there is much cover, a white man is at a great disadvantage if pitted against such adepts in the art of hiding as Indians; while, on the other hand, the latter will rarely rush in on a foe who, even if overpowered in the end, will probably inflict severe loss on his assailants. The fury of an Indian charge, and the whoops by which it is accompanied, often scare horses so as to stampede them; but in Manitou I had perfect trust, and the old fellow stood as steady as a rock, merely cocking his ears and looking round at the noise. I waited until the Indians were a hundred yards off, and then threw up my rifle and drew a bead on the foremost. The effect was like magic. The whole party scattered out as wild pigeons or teal ducks sometimes do when shot at, and doubled back on their tracks, the men bending over alongside their horses. When some distance off they halted and gathered together to consult, and after a minute one came forward alone, ostentatiously dropping his rifle and waving a blanket over his head. When he came to within fifty yards I stopped him, and he pulled out a piece of paper—all Indians, when absent from their reservations, are supposed to carry passes—and called out, "How! Me good Indian!" I answered "How," and assured him most sincerely I was very glad he *was* a good Indian, but I would not let him come closer; and when his companions began to draw near, I covered him with the rifle and made him move off, which he did with a sudden lapse into the most canonical Anglo-Saxon profanity. I then started to lead my horse out to the prairie; and after hovering round a short time they rode off, while I followed suit, but in the opposite direction. It had all passed too quickly for me to have time to get frightened; but during the rest of my ride I was exceedingly uneasy, and pushed tough, speedy old Manitou along at a rapid rate, keeping well out on the level. However, I never saw the Indians again. They may not have intended any mischief beyond giving me a fright; but I did not dare to let them come to close quarters, for they would have probably taken my horse and rifle, and not impossibly my scalp as well. Towards nightfall I fell in with two old trappers who lived near Killdeer Mountains, and they informed me that my assailants were some young Sioux bucks, at whose hands they themselves had just suffered the loss of a couple of horses.

However, in our own immediate locality, we have had more difficulty with white desperadoes than with the redskins. At times there has been a good deal of cattle-killing and horse-stealing, and occasionally a murder or two. But as regards the last, a man has

very little more to fear in the West than in the East, in spite of all the lawless acts one reads about. Undoubtedly a long-standing quarrel sometimes ends in a shooting-match; and of course savage affrays occasionally take place in the barrooms; in which, be it remarked, that, inasmuch as the men are generally drunk, and, furthermore, as the revolver is at best a rather inaccurate weapon, outsiders are nearly as apt to get hurt as are the participants. But if a man minds his own business and does not go into barrooms, gambling saloons, and the like, he need have no fear of being molested; while a revolver is a mere foolish incumbrance for any but a trained expert, and need never be carried.

Against horse-thieves, cattle-thieves, claim-jumpers, and the like, however, every ranchman has to be on his guard; and armed collisions with these gentry are sometimes inevitable.

The fact of such scoundrels being able to ply their trade with impunity for any length of time can only be understood if the absolute wildness of our land is taken into account.

The country is yet unsurveyed and unmapped; the course of the river itself, as put down on the various Government and railroad maps, is very much a mere piece of guesswork, its bed being in many parts—as by my ranch—ten or fifteen miles, or more, away from where these maps make it.

White hunters came into the land by 1880; but the actual settlement only began in 1882, when the first cattle-men drove in their herds, all of Northern stock, the Texans not passing north of the country around the head-waters of the river until the following year, while until 1885 the territory through which it ran for the final hundred and fifty miles before entering the Big Missouri remained as little known as ever.

Some of us had always been anxious to run down the river in a boat during the time of the spring floods, as we thought we might get good duck and goose shooting, and also kill some beaver, while the trip would, in addition, have all the charm of an exploring expedition. Twice, so far as we knew, the feat had been performed, both times by hunters, and in one instance with very good luck in shooting and trapping. A third attempt, by a couple of men on a raft, made the spring preceding that on which we made ours, had been less successful; for when a score or so of miles below our ranch, a bear killed one of the two adventurers, and the survivor returned.

We could only go down during a freshet; for the Little Missouri, like most plains' rivers, is usually either a dwindling streamlet, a

mere slender thread of sluggish water, or else a boiling, muddy torrent, running over a bed of shifting quicksand, that neither man nor beast can cross. It rises and falls with extraordinary suddenness and intensity; an instance of which has just occurred as this very

bottom ice did not break up, and a huge gorge, scores of miles in length, formed in and above the bend known as the Ox-bow, a long distance up-stream from my ranch. About the middle of March this great Ox-bow jam came down past us. It moved slowly,

STANDING OFF INDIANS.

page is being written. Last evening, when the moon rose, from the ranch veranda we could see the river-bed almost dry, the stream having shrunk under the drought till it was little but a string of shallow pools, with between them a trickle of water that was not ankle deep, and hardly wet the fetlocks of the saddle-band when driven across it; yet at daybreak this morning, without any rain having fallen near us, but doubtless in consequence of some heavy cloudburst near its head, the swift, swollen current was foaming brim high between the banks, and even the fords were swimming-deep for the horses.

Accordingly we had planned to run down the river sometime towards the end of April, taking advantage of a rise; but an accident made us start three or four weeks sooner than we had intended.

In 1886 the ice went out of the upper river very early, during the first part of February; but it at times almost froze over again, the

its front forming a high, crumbling wall, and creaming over like an immense breaker on the seashore: we could hear the dull roaring and crunching as it plowed down the river-bed long before it came in sight round the bend above us. The ice kept piling and tossing up in the middle, and not only heaped itself above the level of the banks, but also in many places spread out on each side beyond them, grinding against the cottonwood trees in front of the ranch veranda, and at one moment bidding fair to overwhelm the house itself. It did not, however, but moved slowly down past us with that look of vast, resistless, relentless force that any great body of moving ice, as a glacier, or an iceberg, always conveys to the beholder. The heaviest pressure from the water that was backed up behind being, of course, always in the middle, this part kept breaking away, and finally was pushed on clear through, leaving the river so changed that it could hardly be known. On each

bank, and for a couple of hundred feet out from it into the stream, was a solid mass of ice, edging the river along most of its length, at least as far as its course lay through lands that we knew; and in the narrow channel between the sheer ice-walls the water ran like a mill-race.

At night the snowy, glittering masses, tossed

ONE OF THE BOYS.

and heaped up into fantastic forms, shone like crystal in the moonlight; but they soon lost their beauty, becoming fouled and blackened, and at the same time melted and settled down until it was possible to clamber out across the slippery hummocks.

We had brought out a clinker-built boat especially to ferry ourselves over the river when it was high, and were keeping our ponies on the opposite side, where there was a good range shut in by some very broken country that we knew they would not be apt to cross. This boat had already proved very useful and now came in handier than ever, as without it we could take no care of our horses. We kept it on the bank tied to a tree, and every day would carry it or slide it across the hither ice bank, usually with not a little tumbling and scrambling on our part, lower it gently into the swift current, pole it across to the ice on the farther bank, and then drag it over that, repeating the operation when we came back. One day we crossed and walked off about ten miles to a tract of wild and rugged country, cleft in every direction by ravines and cedar canyons, in the deepest of which we had left four deer hanging a fortnight before, as game thus hung up in cold weather keeps indefinitely. The walking was

very bad, especially over the clay buttes; for the sun at midday had enough strength to thaw out the soil to the depth of a few inches only, and accordingly the steep hillsides were covered by a crust of slippery mud, with the frozen ground underneath. It was hard to keep one's footing, and to avoid falling while balancing along the knife-like ridge crests, or while clinging to the stunted sage brush as we went down into the valleys. The deer had been hung in a thicket of dwarfed cedars; but when we reached the place we found nothing save scattered pieces of their carcasses, and the soft mud was tramped all over with round, deeply marked footprints, some of them but a few hours old, showing that the plunderers of our cache were a pair of cougars—"mountain lions," as they are called by the Westerners. They had evidently been at work for some time, and had eaten almost every scrap of flesh; one of the deer had been carried for some distance to the other side of a deep, narrow, chasm-like gully across which the cougar must have leaped with the carcass in its mouth. We followed the fresh trail of the cougars for some time, as it was well marked, especially in the snow still remaining in the bottoms of the deeper ravines; finally it led into a tangle of rocky hills riven by dark cedar-clad gorges, in which we lost it, and we retraced our steps, intending to return on the morrow with a good track hound.

But we never carried out our intentions, for next morning one of my men who was out before breakfast came back to the house with the startling news that our boat was gone—stolen, for he brought with him the end of the rope with which it had been tied, evidently cut off with a sharp knife; and also a red woolen mitten with a leather palm, which he had picked up on the ice. We had no doubt as to who had stolen it; for whoever had done so had certainly gone down the river in it, and the only other thing in the shape of a boat on the Little Missouri was a small flat-bottomed scow in the possession of three hard characters who lived in a shack or hut some twenty miles above us, and whom we had shrewdly suspected for some time of wishing to get out of the country, as certain of the cattle-men had begun openly to threaten to lynch them. They belonged to a class that always holds sway during the raw youth of a frontier community, and the putting down of which is the first step towards decent government. Dakota, west of the Missouri, has been settled very recently, and every town within it has seen strange antics performed during the past five or six years. Medora, in particular, has had more than its full share of shooting and stabbing affrays, horse-stealing and cattle-killing.

But the time for such things was passing away; and during the preceding fall the vigilantes—locally known as “stranglers,” in happy allusion to their summary method of doing justice—had made a clean sweep of the cattle country along the Yellowstone and that part of the Big Missouri around and below its mouth. Be it remarked, in passing, that while the outcome of their efforts had been in the main wholesome, yet, as is always the case in an extended raid of vigilantes, several of the sixty odd victims had been perfectly innocent men who had been hung or shot in company with the real scoundrels, either through carelessness and misapprehension or on account of some personal spite.

case, and had been chief actor in a number of shooting scrapes. The other two were a half-breed, a stout, muscular man, and an old German, whose viciousness was of the weak and shiftless type.

We knew that these three men were becoming uneasy and were anxious to leave the locality; and we also knew that traveling on horseback, in the direction in which they would wish to go, was almost impossible, as the swollen, ice-fringed rivers could not be crossed at all, and the stretches of broken ground would form nearly as impassable barriers. So we had little doubt that it was they who had taken our boat; and as they knew there was then no boat left on the river, and

MOUNTAIN LIONS AT THE DEER CACHE.

The three men we suspected had long been accused—justly or unjustly—of being implicated both in cattle-killing and in that worst of frontier crimes, horse-stealing: it was only by an accident that they had escaped the clutches of the vigilantes the preceding fall. Their leader was a well-built fellow named Finnigan, who had long red hair reaching to his shoulders, and always wore a broad hat and a fringed buckskin shirt. He was rather a hard

as the country along its banks was entirely impracticable for horses, we felt sure they would be confident that there could be no pursuit.

Accordingly we at once set to work in our turn to build a flat-bottomed scow, wherein to follow them. Our loss was very annoying, and might prove a serious one if we were long prevented from crossing over to look after the saddle-band; but the determining

motive in our minds was neither chagrin nor anxiety to recover our property. In any wild country where the power of the law is little felt or heeded, and where every one has to rely upon himself for protection, men soon get to feel that it is in the highest degree unwise to submit to any wrong without making an immediate and resolute effort to avenge it upon the wrong-doers, at no matter what cost of risk or trouble. To submit tamely and meekly to theft, or to any other injury, is to invite almost certain repetition of the offense, in a place where self-reliant hardihood and the ability to hold one's own under all circumstances rank as the first of virtues.

Two of my cowboys, Seawall and Dow, were originally from Maine, and were mighty men of their hands, skilled in woodcraft and the use of the ax, paddle, and rifle. They set to work with a will, and, as by good luck there were plenty of boards, in two or three days they had turned out a first-class flat-bottom, which was roomy, drew very little water, and was dry as a bone; and though, of course, not a handy craft, was easily enough managed in going down-stream. Into this we packed flour, coffee, and bacon enough to last us a fortnight or so, plenty of warm bedding, and the mess kit; and early one cold March morning slid it into the icy current, took our seats, and shoved off down the river.

There could have been no better men for a trip of this kind than my two companions, Seawall and Dow. They were tough, hardy, resolute fellows, quick as cats, strong as bears, and able to travel like bull moose. We felt very little uneasiness as to the result of a fight with the men we were after, provided we had anything like a fair show; moreover, we intended, if possible, to get them at such a disadvantage that there would not be any fight at all. The only risk of any consequence that we ran was that of being ambushed; for the extraordinary formation of the Bad Lands, with the ground cut up into gullies, serried walls, and battlemented hilltops, makes it the country of all others for hiding-places and ambushes.

For several days before we started the weather had been bitterly cold, as a furious blizzard was blowing; but on the day we left there was a lull, and we hoped a thaw had set in. We all were most warmly and thickly dressed, with woolen socks and underclothes, heavy jackets and trousers, and great fur coats, so that we felt we could bid defiance to the weather. Each carried his rifle, and we had in addition a double-barreled duck gun, for water-fowl and beaver. To manage the boat, we had paddles, heavy oars, and long iron-shod poles, Seawall steering

while Dow sat in the bow. Altogether we felt as if we were off on a holiday trip, and set to work to have as good a time as possible.

The river twisted in every direction, winding to and fro across the alluvial valley bottom, only to be brought up by the rows of great barren buttes that bounded it on each edge. It had worn away the sides of these till they towered up as cliffs of clay, marl, or sandstone. Across their white faces the seams of coal drew sharp black bands, and they were elsewhere blotched and varied with brown, yellow, purple, and red. This fantastic coloring, together with the jagged irregularity of their crests, channeled by the weather into spires, buttresses, and battlements, as well as their barrenness and the distinctness with which they loomed up through the high, dry air, gave them a look that was a singular mixture of the terrible and the grotesque. The bottoms were covered thickly with leafless cottonwood trees, or else with withered brown grass and stunted, sprawling sage bushes. At times the cliffs rose close to us on either hand, and again the valley would widen into a sinuous oval a mile or two long, bounded on every side, as far as our eyes could see, by a bluff line without a break, until, as we floated down close to its other end, there would suddenly appear in one corner a cleft through which the stream rushed out. As it grew dusk the shadowy outlines of the buttes lost nothing of their weirdness; the twilight only made their uncouth shapelessness more grim and forbidding. They looked like the crouching figures of great goblin beasts.

Those two hills on the right
Crouched like two bulls locked horn in fight—
While to the left a tall scalped mountain. . . .
The dying sunset kindled through a cleft:
The hills, like giants at a hunting, lay
Chin upon hand, to see the game at bay—

might well have been written after seeing the strange, desolate lands lying in western Dakota.

All through the early part of the day we drifted swiftly down between the heaped-up piles of ice, the cakes and slabs now dirty and unattractive looking. Towards evening, however, there came long reaches where the banks on either side were bare, though even here there would every now and then be necks where the jam had been crowded into too narrow a spot and had risen over the side as it had done up-stream, grinding the bark from the big cottonwoods and snapping the smaller ones short off. In such places the ice-walls were sometimes eight or ten feet high, continually undermined by the restless current; and every now and then overhanging pieces would break off and slide into the stream with

a loud sullen splash, like the plunge of some great water beast. Nor did we dare to go in too close to the high cliffs, as bowlders and earth masses, freed by the thaw from the grip of the frost, kept rolling and leaping down their faces and forced us to keep a sharp lookout lest our boat should be swamped.

At nightfall we landed, and made our camp on a point of wood-covered land jutting out into the stream. We had seen very little trace of life until late in the day, for the ducks had not yet arrived; but in the afternoon a sharp-tailed prairie fowl flew across stream ahead of the boat, lighting on a low branch by the water's edge. Shooting him, we landed and picked off two others that were perched high up in leafless cottonwoods, plucking the buds. These three birds served us as supper; and shortly afterward, as the cold grew more and more biting, we rolled in under our furs and blankets and were soon asleep.

In the morning it was evident that instead of thawing it had grown decidedly colder. The anchor ice was running thick in the river, and we spent the first hour or two after sunrise in hunting over the frozen swamp bottom for white-tail deer, of which there were many tracks; but we saw nothing. Then we broke camp—a simple operation, as we had no tent, and all we had to do was to cord up our bedding and gather the mess kit—and again started down-stream. It was colder than before, and for some time we went along in chilly silence, nor was it until midday that the sun warmed our blood in the least. The crooked bed of the current twisted hither and thither, but whichever way it went the icy north wind, blowing stronger all the time, drew steadily up it. One of us remarking that we bade fair to have it in our faces all day, the steersman announced that we could n't, unless it was the crookedest wind in Dakota; and half an hour afterward we overheard him muttering to himself that it *was* the crookedest wind in Dakota. We passed a group of tepees on one bottom, marking the deserted winter camp of some Grosventre Indians, which some of my men had visited a few months previously on a trading expedition. It was almost the last point on the river with which we were acquainted. At midday we landed on a sand-bar for lunch; a simple enough meal, the tea being boiled over a fire of driftwood, that also fried the bacon, while the bread only needed to be baked every other day. Then we again shoved off. As the afternoon waned the cold grew still more bitter, and the wind increased, blow-

ing in fitful gusts against us, until it chilled us to the marrow when we sat still. But we rarely did sit still; for even the rapid current was unable to urge the light-draught scow down in the teeth of the strong blasts, and we only got her along by dint of hard work with pole and paddle. Long before the sun went down the ice had begun to freeze on the handles of the poles, and we were not sorry to haul on shore for the night. For supper we again had prairie fowl, having shot four from a great patch of bulberry bushes late in the afternoon. A man doing hard open-air work in cold weather is always hungry for meat.

During the night the thermometer went down to zero, and in the morning the anchor ice was running so thickly that we did not care to start at once, for it is most difficult to handle a boat in the deep frozen slush. Accordingly we took a couple of hours for a deer hunt, as there were evidently many white-tail on the bottom. We selected one long, isolated patch of tangled trees and brushwood, two of us beating through it while the other watched one end; but almost before we had begun four deer broke out at one side, loped easily off, evidently not much scared, and took refuge in a deep glen or gorge, densely wooded with cedars, that made a blind pocket in the steep side of one of the great plateaus bounding the bottom. After a short consultation, one of our number crept round to the head of the gorge, making a wide détour, and the other two advanced up it on each side, thus completely surrounding the doomed deer. They attempted to break out past the man at the head of the glen, who shot down a couple, a buck and a yearling doe. The other two made their escape by running off over ground so rough that it looked fitter to be crossed by their upland-loving cousins, the black-tail.

THE CAPTURE OF THE GERMAN.

This success gladdened our souls, insuring us plenty of fresh meat. We carried pretty much all of both deer back to camp, and, after a hearty breakfast, loaded our scow and started merrily off once more. The cold still continued intense, and as the day wore away we became numbed by it, until at last an incident occurred that set our blood running freely again.

terest, for the capture itself was as tame as possible.

The men we were after knew they had taken with them the only craft there was on the river, and so felt perfectly secure; accordingly, we took them absolutely by surprise. The only one in camp was the German, whose weapons were on the ground, and who, of course, gave up at

"HANDS UP!"—THE CAPTURE OF FINNIGAN.

We were, of course, always on the alert, keeping a sharp lookout ahead and around us, and making as little noise as possible. Finally our watchfulness was rewarded, for in the middle of the afternoon of this, the third day we had been gone, as we came round a bend, we saw in front of us the lost boat, together with a scow, moored against the bank, while from among the bushes some little way back the smoke of a camp-fire curled up through the frosty air. We had come on the camp of the thieves. As I glanced at the faces of my two followers I was struck by the grim, eager look in their eyes. Our overcoats were off in a second, and after exchanging a few muttered words, the boat was hastily and silently shoved towards the bank. As soon as it touched the shore ice I leaped out and ran up behind a clump of bushes, so as to cover the landing of the others, who had to make the boat fast. For a moment we felt a thrill of keen excitement, and our veins tingled as we crept cautiously towards the fire, for it seemed likely there would be a brush; but, as it turned out, this was almost the only moment of much in-

once, his two companions being off hunting. We made him safe, delegating one of our number to look after him particularly and see that he made no noise, and then sat down and waited for the others. The camp was under the lee of a cut bank, behind which we crouched, and, after waiting an hour or over, the men we were after came in. We heard them a long way off and made ready, watching them for some minutes as they walked towards us, their rifles on their shoulders and the sunlight glinting on the steel barrels. When they were within twenty yards or so we straightened up from behind the bank, covering them with our cocked rifles, while I shouted to them to hold up their hands—an order that in such a case, in the West, a man is not apt to disregard if he thinks the giver is in earnest. The half-breed obeyed at once, his knees trembling as if they had been made of whalebone. Finnigan hesitated for a second, his eyes fairly wolfish; then, as I walked up within a few paces, covering the center of his chest so as to avoid overshooting, and repeating the command, he saw he had no show, and, with an oath,

"TAKE OFF YOUR BOOTS!"

let his rifle drop and held his hands up beside his head.

It was nearly dusk, so we camped where we were. The first thing to be done was to collect enough wood to enable us to keep a blazing fire all night long. While Seawall and Dow, thoroughly at home in the use of the ax, chopped down dead cottonwood trees and dragged the logs up into a huge pile, I kept guard over the three prisoners, who were huddled into a sullen group some twenty yards off, just the right distance for the buckshot in the double-barrel. Having captured our men, we were in a quandary how to keep them. The cold was so intense that to tie them tightly hand and foot meant, in all likelihood, freezing both hands and feet off during the night; and it was no use tying them at all unless we tied them tightly enough to stop in part the circulation. So nothing was left for us to do but to keep perpetual guard over them. Of course we had carefully searched them, and taken away not only their firearms and knives, but everything else that could possibly be used as a weapon. By this time they were pretty well cowed, as they found out very quickly that they would be well treated so long as they remained quiet, but would receive some rough handling if they attempted any disturbance.

Our next step was to cord their weapons up in some bedding, which we sat on while we

took supper. Immediately afterward we made the men take off their boots — an additional safeguard, as it was a cactus country, in which a man could travel barefoot only at the risk of almost certainly laming himself for life — and go to bed, all three lying on one buffalo robe and being covered by another, in the full light of the blazing fire. We determined to watch in succession a half-night apiece, thus each getting a full rest every third night. I took first watch, my two companions, revolver under head, rolling up in their blankets on the side of the fire opposite that on which the three captives lay; while I, in fur cap, gantlets, and overcoat, took my station a little way back in the circle of firelight, in a position in which I could watch my men with the absolute certainty of being able to stop any movement, no matter how sudden. For this night-watching we always used the double-barrel with buckshot, as a rifle is uncertain in the dark; while with a shot-gun at such a distance, and with men lying down, a person who is watchful may be sure that they cannot get up, no matter how quick they are, without being riddled. The only danger lies in the extreme monotony of sitting still in the dark guarding men who make no motion, and the consequent tendency to go to sleep, especially when one has had a hard day's work and is feeling really tired. But neither on the first night nor on any subsequent one did we ever abate a jot of our watchfulness.

Next morning we started down-stream, having a well-laden flotilla, for the men we had caught had a good deal of plunder in their boats, including some saddles, as they evidently intended to get horses as soon as they reached a part of the country where there were any, and where it was possible to travel. Finnigan, who was the ringleader, and the man I was especially after, I kept by my side in our boat, the other two being put in their own scow, heavily laden and rather leaky, and with only one paddle. We kept them just in front of us, a few yards distant, the river being so broad that we knew, and they knew also, any attempt at escape to be perfectly hopeless.

For some miles we went swiftly down-stream, the cold being bitter and the slushy anchor ice choking the space between the boats; then the current grew sluggish, eddies forming along the sides. We paddled on until, coming into a long reach where the water was almost backed up, we saw there was a stoppage at the other end. Working up to this, it proved to be a small ice jam, through which we broke our way only to find ourselves, after a few hundred yards, stopped by another. We had hoped that the first was merely a jam of anchor ice, caused by the cold of the last few days; but the jam we had now come to was black and solid, and, running the boats ashore, one of us went off down the bank to

find out what the matter was. On climbing a hill that commanded a view of the valley for several miles, the explanation became only too evident—as far as we could see, the river was choked with black ice. The great Ox-bow jam had stopped and we had come down to its tail.

We had nothing to do but to pitch camp, after which we held a consultation. The Little Missouri has much too swift a current,—when it has any current at all,—with too bad a bottom, for it to be possible to take a boat up-stream; and to walk, of course, meant abandoning almost all we had. Moreover we knew that a thaw would very soon start the jam, and so made up our minds that we had best simply stay where we were, and work down-stream as fast as we could, trusting that the spell of bitter weather would pass before our food gave out.

The next eight days were as irksome and monotonous as any I ever spent: there is very little amusement in combining the functions of a sheriff with those of an arctic explorer. The weather kept as cold as ever. During the night the water in the pail would freeze solid. Ice formed all over the river, thickly along the banks; and the clear, frosty sun gave us so little warmth that the melting hardly began before noon. Each day the great jam would settle down-stream a few miles, only to wedge again, leaving behind it several smaller jams, through which we would work our way until we were as close to the tail of the large one as we dared to go.

We had to be additionally cautious on account of being in the Indian country, having worked down past Killdeer Mountains, where some of my cowboys had run across a band of Sioux—said to be Teton—the year before. Very probably the Indians would not have harmed us anyhow, but as we were hampered by the prisoners, we preferred not meeting

them; nor did we, though we saw plenty of fresh signs, and found, to our sorrow, that they had just made a grand hunt all down the river, and had killed or driven off almost every head of game in the country through which we were passing. As our stock of provisions grew scantier and scant-

ON GUARD AT NIGHT.

ier, we tried in vain to eke it out by the chase; for we saw no game. Two of us would go out hunting at a time, while the third kept guard over the prisoners. The latter would be made to sit down together on a blanket at one side of the fire, while the guard for the time being stood or sat some fifteen or twenty yards off. The prisoners being un-

We broke camp in the morning, on a point of land covered with brown, leafless, frozen cottonwoods; and in the afternoon we pitched camp on another point in the midst of a grove of the same stiff, dreary trees. The discolored river, whose eddies boiled into yellow foam, flowed always between the same banks of frozen mud or of muddy ice. And what

DOWN-STREAM.

armed, and kept close together, there was no possibility of their escaping, and the guard kept at such a distance that they could not overpower him by springing on him, he having a Winchester or the double-barreled shot-gun always in his hands cocked and at the ready. So long as we kept wide-awake and watchful, there was not the least danger, as our three men knew us, and understood perfectly that the slightest attempt at a break would result in their being shot down; but, although there was thus no risk, it was harassing, tedious work, and the strain, day in and day out, without any rest or let up, became very tiresome.

The days were monotonous to a degree. The endless rows of hills bounding the valley, barren and naked, stretched along without a break. When we rounded a bend, it was only to see on each hand the same lines of broken buttes dwindling off into the distance ahead of us as they had dwindled off into the distance behind. If, in hunting, we climbed to their tops, as far as our eyes could scan there was nothing but the great rolling prairie, bleak and lifeless, reaching off to the horizon.

VOL. XXXVI.—7.

was, from a practical standpoint, even worse, our diet began to be as same as the scenery. Being able to kill nothing, we exhausted all our stock of provisions and got reduced to flour, without yeast or baking-powder; and unleavened bread, made with exceedingly muddy water, is not, as a steady thing, attractive.

Finding that they were well treated and were also watched with the closest vigilance, our prisoners behaved themselves excellently and gave no trouble, though afterward, when out of our hands and shut up in jail, the half-breed got into a stabbing affray. They conversed freely with my two men on a number of indifferent subjects, and after the first evening no allusion was made to the theft, or anything connected with it; so that an outsider overhearing the conversation would never have guessed what our relations to each other really were. Once, and once only, did Finnigan broach the subject. Somebody had been speaking of a man whom we all knew, known as "Calamity," who had been recently taken by the sheriff on a charge of horse-stealing. Calamity had escaped once, but was caught at a disadvantage the next time;

"A SHARP PRELIMINARY TUSSELE."

nevertheless, when summoned to hold his hands up, he refused, and attempted to draw his own revolver, with the result of having two bullets put through him. Finnigan commented on Calamity as a fool for "not knowing when a man had the drop on him"; and then, suddenly turning to me, said, his weather-beaten face flashing darkly: "If I'd had any show at all, you'd have sure had to fight, Mr. Roosevelt; but there wasn't any use making a break when I'd only have got shot myself, with no chance of harming any one else." I laughed and nodded, and the subject was dropped.

Indeed, if the time was tedious to us, it must have seemed never-ending to our prisoners, who had nothing to do but to lie still and read, or chew the bitter cud of their reflections, always conscious that some pair of eyes was watching them every moment, and that at least one loaded rifle was ever ready to be used against them. They had quite a stock of books, some of a rather unexpected kind. Dime novels and the inevitable "History of the James Brothers"—a book that, together with the "Police Gazette," is to be found in the hands of every professed or putative ruffian in the West—seemed perfectly in place; but it was somewhat surprising to find that a large number of more or less dreadfully silly "society" novels, ranging from Ouida's to those of The

Duchess and Augusta J. Evans, were most greedily devoured.

Our commons grew shorter and shorter; and finally even the flour was nearly gone, and we were again forced to think seriously of abandoning the boats. The Indians had driven all the deer out of the country; occasionally we shot prairie fowl, but they were not plentiful. A flock of geese passed us one morning, and afterward an old gander settled down on the river near our camp; but he was over two hundred yards off, and a rifle-shot missed him.

But when the day was darkest the dawn appeared. At last, having worked down some thirty miles at the tail of the ice jam, we struck an outlying cow-camp of the C Diamond (C ◇) ranch, and knew that our troubles were almost over. There was but one cowboy in it, but we were certain of his cordial help, for in a stock country all make common cause against either horse-thieves or cattle-thieves. He had no wagon, but told us we could get one up at a ranch near Killdeer Mountains, some fifteen miles off, and lent me a pony to go up there and see about it—which I accordingly did, after a sharp preliminary tussle when I came to mount the wiry bronco. When I reached the solitary ranch spoken of, I was able to hire a large prairie schooner and two tough little bronco mares, driven by the settler

himself, a rugged old plainsman, who evidently could hardly understand why I took so much bother with the thieves instead of hanging them off-hand. Returning to the river the next day, we walked our men up to the Killdeer Mountains. Seawall and Dow left me the following morning, went back to the boats, and had no further difficulty, for the weather set in very warm, the ice went through with a rush, and they reached Mandan in about ten days, killing four beaver and five geese on the way, but lacking time to stop and do any regular hunting.

Meanwhile I took the three thieves in to

with them, except for the driver, of whom I knew nothing, I had to be doubly on my guard, and never let them come close to me. The little mares went so slowly, and the heavy road rendered any hope of escape by flogging up the horses so entirely out of the question, that I soon found the safest plan was to put the prisoners in the wagon and myself walk behind with the inevitable Winchester. Accordingly I trudged steadily the whole time behind the wagon through the ankle-deep mud. It was a gloomy walk. Hour after hour went by always the same, while I plodded along through the dreary landscape — hunger,

ON THE ROAD TO DICKINSON.

Dickinson, the nearest town. The going was bad, and the little mares could only drag the wagon at a walk, so, though we drove during the daylight, it took us two days and a night to make the journey. It was a most desolate drive. The prairie had been burned the fall before, and was a mere bleak waste of blackened earth, and a cold, rainy mist lasted throughout the two days. The only variety was where the road crossed the shallow headwaters of Knife and Green rivers. Here the ice was high along the banks, and the wagon had to be taken to pieces to get it over. My three captives were unarmed, but as I was alone

cold, and fatigue struggling with a sense of dogged, weary resolution. At night, when we put up at the squalid hut of a frontier granger, the only habitation on our road, it was even worse. I did not dare to go to sleep, but making my three men get into the upper bunk, from which they could get out only with difficulty, I sat up with my back against the cabin-door and kept watch over them all night long. So, after thirty-six hours' sleeplessness, I was most heartily glad when we at last jolted into the long, straggling main street of Dickinson, and I was able to give my unwilling companions into the hands of the sheriff.

Theodore Roosevelt.

And to think I ust to scold him for his everlastin' noise!—

THE ABSENCE OF LITTLE WESLEY.

SENCE little Wesley went, the place seems all so strange and still —
W'y, I miss his yell o' "Gran'pap!" as I'd miss the whipperrwill!
And to think I ust to scold him fer his everlastin' noise,
When I on'y rickollect him as the best o' little boys!
I wisht a hunderd times a day 'at he 'd come trompin' in,
And all the noise he ever made was twic't as loud ag'in! —
It 'u'd seem like some soft music played on some fine instrument,
'Longside o' this loud lonesomeness, sence little Wesley went!

Of course the clock don't tick no louder than it ust to do —
Yit now they 's times it 'pears like it 'u'd bu'st itself in-two!
And, let a rooster, suddent-like, crow som'ers clos't around,
And seems 's ef, mighty nigh it, it 'u'd lift me off the ground!
And same with all the cattle when they bawl around the bars,
In the red o' airly mornin', er the dusk and dew and stars,
When the neighbors' boys 'at passes never stop, but jes go on,
A-whistlin' kind o' to theirse'v's — sence little Wesley 's gone!

And then, o' nights when Mother 's settin' up oncommon late,
A-bilin' pears er somepin, and I set and smoke and wait,
Tel the moon out through the winder don't look bigger 'n a dime,
And things keeps gittin' stiller — stiller — stiller all the time, —
I 've ketched myse'f a-wishin' like — as I clumb on the cheer
To wind the clock, as I hev done fer more 'n fifty year' —
A-wishin' 'at the time hed come fer us to go to bed,
With our last prayers, and our last tears, sence little Wesley 's dead!

James Whitcomb Riley.

MILTON.*

BY MATTHEW ARNOLD.

THE most eloquent voice of our century uttered, shortly before leaving the world, a warning cry against "the Anglo-Saxon contagion." The tendencies and aims, the view of life and the social economy of the ever-multiplying and spreading Anglo-Saxon race, would be found congenial, this prophet feared, by all the prose, all the vulgarity amongst mankind, and would invade and overpower all nations. The true ideal would be lost, a general sterility of mind and heart would set in.

The prophet had in view, no doubt, in the warning thus given, us and our colonies, but the United States still more. There the Anglo-Saxon race is already most numerous, there it increases fastest; there material interests are

most absorbing and pursued with most energy; there the ideal, the saving ideal, of a high and rare excellence, seems perhaps to suffer most danger of being obscured and lost. Whatever one may think of the general danger to the world from the Anglo-Saxon contagion, it appears to me difficult to deny that the growing greatness and influence of the United States does bring with it some danger to the ideal of a high and rare excellence. The *average man* is too much a religion there; his performance is unduly magnified, his shortcomings are not duly seen and admitted. A lady in the State of Ohio sent to me only the other day, a volume on American authors; the praise given throughout was of such high pitch that in thanking her I could not forbear saying that for only one or two of the authors named was such a strain of praise admissible, and that

* An address delivered in St. Margaret's Church, Westminster, on the 13th of February, 1888, at the un-

veiling of a Memorial Window presented by Mr. George W. Childs of Philadelphia.

we lost all real standard of excellence by praising so uniformly and immoderately. She answered me with charming good temper, that very likely I was quite right, but it was pleasant to her to think that excellence was common and abundant. But excellence is not common and abundant; on the contrary, as the Greek poet long ago said, excellence dwells among rocks hardly accessible, and a man must almost wear his heart out before he can reach her. Whoever talks of excellence as common and abundant, is on the way to lose all right standard of excellence. And when the right standard of excellence is lost, it is not likely that much which is excellent will be produced.

To habituate ourselves, therefore, to approve as the Bible says, things that are really excellent, is of the highest importance. And some apprehension may justly be caused by a tendency in Americans to take, or, at any rate, attempt to take, profess to take, the average man and his performances too seriously, to over-rate and over-praise what is not really superior.

But we have met here to-day to witness the unveiling of a gift in Milton's honor, and a gift bestowed by an American, Mr. Childs of Philadelphia; whose cordial hospitality so many Englishmen, I myself among the number, have experienced in America. It was only last autumn that Stratford upon Avon celebrated the reception of a gift from the same generous donor in honor of Shakspeare. Shakspeare and Milton—he who wishes to keep his standard of excellence high, cannot choose two better objects of regard and honor. And it is an American who has chosen them, and whose beautiful gift in honor of one of them, Milton, with Mr. Whittier's simple and true lines inscribed upon it, is unveiled to-day. Perhaps this gift in honor of Milton, of which I am asked to speak, is, even more than the gift in honor of Shakspeare, one to suggest edifying reflections to us.

Like Mr. Whittier, I treat the gift of Mr. Childs as a gift in honor of Milton, although the window given is in memory of his second wife, Catherine Woodcock, the "late espoused saint" of the famous sonnet, who died in childhood at the end of the first year of her marriage with Milton, and who lies buried here with her infant. Milton is buried in Cripplegate, but he lived for a good while in this parish of St. Margaret's, Westminster, and here he composed part of "Paradise Lost," and the whole of "Paradise Regained" and "Samson Agonistes." When death deprived him of the Catherine whom the new window commemorates, Milton had still some eighteen years to live, and Cromwell, his "chief of men," was yet ruling

England. But the Restoration, with its "Sons of Belial," was not far off; and in the mean time Milton's heavy affliction had laid fast hold upon him, his eyesight had failed totally, he was blind. In what remained to him of life he had the consolation of producing the "Paradise Lost" and the "Samson Agonistes," and such a consolation we may indeed count as no slight one. But the daily life of happiness in common things and in domestic affections—a life of which, to Milton as to Dante, too small a share was given—he seems to have known most, if not only, in his one married year with the wife who is here buried. Her form "vested all in white," as in his sonnet he relates that after her death she appeared to him, her face veiled, but, with "love, sweetness and goodness" shining in her person,—this fair and gentle daughter of the rigid sectarist of Hackney, this lovable companion with whom Milton had rest and happiness one year, is a part of Milton indeed, and in calling up her memory, we call up his.

And in calling up Milton's memory we call up, let me say, a memory upon which, in prospect of the Anglo-Saxon contagion and of its dangers supposed and real, it may be well to lay stress even more than upon Shakspeare's. If to our English race an inadequate sense for perfection of work is a real danger, if the discipline of respect for a high and flawless excellence is peculiarly needed by us, Milton is of all our gifted men the best lesson, the most salutary influence. In the sure and flawless perfection of his rhythm and diction he is as admirable as Virgil or Dante, and in this respect he is unique amongst us. No one else in English literature and art possesses the like distinction.

Thomson, Cowper, Wordsworth, all of them good poets who have studied Milton, followed Milton, adopted his form, fail in their diction and rhythm if we try them by that high standard of excellence maintained by Milton constantly. From style really high and pure Milton never departs; their departures from it are frequent.

Shakspeare is divinely strong, rich, and attractive. But sureness of perfect style Shakspeare himself does not possess. I have heard a politician express wonder at the treasures of political wisdom in a certain celebrated scene of "Troilus and Cressida"; for my part I am at least equally moved to wonder at the fantastic and false diction in which Shakspeare has in that scene clothed them. Milton, from one end of "Paradise Lost" to the other, is in his diction and rhythm constantly a great artist in the great style. Whatever may be said as to the subject of his poem, as to the conditions under which he received his subject

and treated it, that praise, at any rate, is assured to him.

For the rest, justice is not at present done, in my opinion, to Milton's management of the inevitable matter of a Puritan epic, a matter full of difficulties, for a poet. Justice is not done to the *architectonics*, as Goethe would have called them, of "Paradise Lost"; in these, too, the power of Milton's art is remarkable. But this may be a proposition which requires discussion and development for establishing it, and they are impossible on an occasion like the present.

That Milton, of all our English race, is by his diction and rhythm the one artist of the highest rank in the great style whom we have; this I take as requiring no discussion, this I take as certain.

The mighty power of poetry and art is generally admitted. But where the soul of this power, of this power at its best, chiefly resides, very many of us fail to see. It resides chiefly in the refining and elevation wrought in us by the high and rare excellence of the great style. We may feel the effect without being able to give ourselves clear account of its cause, but the thing is so. Now, no race needs the influences mentioned, the influences of refining and elevation, more than ours; and in poetry and art our grand source for them is Milton.

To what does he owe this supreme distinction? To nature first and foremost, to that bent of nature for inequality which to the worshipers of the average man is so unacceptable; to a gift, a divine favor. "The older one grows," says Goethe, "the more one prizes natural gifts, because by no possibility can they be procured and stuck on." Nature formed Milton to be a great poet. But what other poet has shown so sincere a sense of the grandeur of his vocation, and a moral effort so constant and sublime to make and keep himself worthy of it? The Milton of religious and political controversy, and perhaps of domestic life also, is not seldom disfigured by want of amenity, by acerbity. The Milton of poetry, on the other hand is one of those great men, "who are modest" — to quote a fine remark of Leopardi, that gifted and stricken young Italian, who in his sense for poetic style is worthy to be named with Dante and Milton — "who are modest, because they continually compare themselves, not with other men, but with that idea of the perfect which they have before their mind." The Milton of poetry is the man, in his own magnificent phrase, of "devout prayer to that Eternal Spirit that can enrich with all utterance and knowledge, and sends out his Seraphim with the hallowed fire of his altar, to touch and pu-

rify the lips of whom he pleases." And finally, the Milton of poetry is, in his own words again, the man of "industrious and select reading." Continually he lived in companionship with high and rare excellence, with the great Hebrew poets and prophets, with the great poets of Greece and Rome. The Hebrew compositions were not in verse, and can be not inadequately represented by the grand, measured prose of our English Bible. The verse of the poets of Greece and Rome no translation can adequately reproduce. Prose cannot have the power of verse; verse-translation may give whatever of charm is in the soul and talent of the translator himself, but never the specific charm of the verse and poet translated. In our race are thousands of readers, presently there will be millions, who know not a word of Greek and Latin and will never learn those languages. If this host of readers are ever to gain any sense of the power and charm of the great poets of antiquity, their way to gain it is not through translations of the ancients, but through the original poetry of Milton, who has the like power and charm, because he has the like great style.

Through Milton they may gain it, for, in conclusion, Milton is English; this master in the great style of the ancients is English. Virgil, whom Milton loved and honored, has at the end of the "Æneid" a noble passage, where Juno, seeing the defeat of Turnus and the Italians imminent, the victory of the Trojan invaders assured, entreats Jupiter that Italy may nevertheless survive and be herself still, may retain her own mind, manners, and language, and not adopt those of the conqueror.

Sit Latium, sint Albani per secula reges!

Jupiter grants the prayer; he promises perpetuity and the future to Italy — Italy reinforced by whatever virtue the Trojan race has, but Italy, not Troy. This we may take as a sort of parable suiting ourselves. All the Anglo-Saxon contagion, all the flood of Anglo-Saxon commonness, beats vainly against the great style but cannot shake it, and has to accept its triumph. But it triumphs in Milton, in one of our own race, tongue, faith, and morals. Milton has made the great style no longer an exotic here; he has made it an inmate amongst us, a leaven, and a power. Nevertheless he, and his hearers on both sides of the Atlantic, are English and will remain English:

Sermonem Ausonii patrium moresque tenebunt.

The English race overspreads the world, and at the same time the ideal of an excellence the most high and the most rare abides a possession with it forever.

Matthew Arnold.

ABRAHAM LINCOLN: A HISTORY.*

THE BORDER STATES.

BY JOHN G. NICOLAV AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

REBELLIOUS MARYLAND.

NO sooner had the secession ordinance been secretly passed by the convention of Virginia than Governor Letcher notified Jefferson Davis of the event, and (doubtless by preconcert) invited him to send a commissioner from Montgomery to Richmond to negotiate an alliance. The adhesion of Virginia was an affair of such magnitude and pressing need to the cotton-States, that Davis made the Vice-President of the new Confederacy, Alexander H. Stephens, his plenipotentiary, who accordingly arrived at Richmond on the 22d of April. Here he found everything as favorable to his mission as he could possibly wish. The convention was filled with a new-born zeal of insurrection; many lately stubborn Union members were willingly accepting offices in the extemporized army of the State; the governor had that day appointed Robert E. Lee commander-in-chief of the Virginia forces, which choice the convention immediately confirmed. Stephens was shrewd enough to perceive that his real negotiation lay neither with the governor nor the convention, but with this newly created military chieftain. That very evening he invited Lee to a conference, at which the late Federal colonel forgot the sentiment written by his own hand two days before, that he never again desired to draw his sword except in defense of his native State,† and now expressed great eagerness for the proposed alliance. Lee being willing, the remainder of the negotiation was easy; and two days afterward (April 24) Stephens and certain members of the convention signed a formal military league, making Virginia an immediate member of the "Confederate States," and placing her armies under the command of Jefferson Davis—thus treating with contempt the convention proviso that the secession ordinance should only take effect after ratification by the people, the vote on which had been set for the fourth Thursday of May. Lee and others endured this military usurpation, under which they became

beneficiaries, without protest. No excuse for it could be urged. Up to this time not the slightest sign of hostility to Virginia had been made by the Lincoln administration—no threats, no invasion, no blockade; the burning of Harper's Ferry and Gosport were induced by the hostile action of Virginia herself. On the contrary, even after these, Mr. Lincoln repeated in writing, in a letter to Reverdy Johnson which will be presently quoted, the declarations made to the Virginia commissioners on the 13th, that he intended no war, no invasion, no subjugation—nothing but defense of the Government.

At the time of the Baltimore riot the telegraph was still undisturbed; and by its help, as well as by personal information and private letters, that startling occurrence and the succeeding insurrectionary uprising were speedily made known throughout the entire South, where they excited the liveliest satisfaction and most sanguine hopes. All the Southern newspapers immediately became clamorous for an advance on Washington; some of the most pronounced Richmond conspirators had all along been favorable to such an enterprise; and extravagant estimates of possibilities were telegraphed to Montgomery. They set forth that Baltimore was in arms, Maryland rising, Lincoln in a trap, and not more than 1200 regulars and 3000 volunteers in Washington; that the rebels had 3000 men at Harper's Ferry; that Governor Letcher had seized three to five steamers on the James River; that the connecting Southern railroads could carry 5000 to 7000 men daily at the rate of 350 miles per day.

As a leader we want Davis. An hour now is worth years of common fighting. One dash, and Lincoln is taken, the country saved, and the leader who does it will be immortalized.‡

This, from a railroad superintendent supposed to have practical skill in transportation, looked plausible. The Montgomery cabinet caught the enthusiasm of the moment, and on April 22 Jefferson Davis telegraphed to Governor Letcher at Richmond:

In addition to the forces heretofore ordered, requisitions have been made for 13 regiments; 8 to rendezvous at Lynchburg, 4 at Richmond, and 1 at Harper's Ferry. Sustain Baltimore, if practicable. We reinforce you.

† Lee to General Scott, April 20, 1861.

‡ Bird to Walker, April 20, 1861. War Records.

This dispatch shows us what a farce even the Virginia military league was, since two days before its conclusion "foreign" rebel troops were already ordered to the "sacred soil" of the Old Dominion. Governor Letcher was doubtless willing enough to respond to the suggestion of Davis, but apparently had neither the necessary troops nor preparation. He had as yet been able to muster but a shadowy force on the line of the Potomac, notwithstanding his adjutant-general's pretentious report of the previous December. Nevertheless, hoping that events might ripen the opportunity into better conditions for success, he lost no time in sending such encouragement and help as were at his control. The rebel commander at Harper's Ferry had already communicated with the Baltimore authorities and effected a cordial understanding with them, and they promised to notify him of hostile menace or approach.* Mason, late senator, appears thereupon to have been dispatched to Baltimore.† He seems to have agreed to supply the Maryland rebels with such arms as Virginia could spare; and some 2000 muskets actually found their way to Baltimore from this source during the following week,‡ though an arrangement to send twenty cannon (32-pounders) to the same city from the Gosport navy yard§ apparently failed.

But it would appear that the project of a dash at Washington found an unexpected obstacle in the counsels of Virginia's new military chief, Robert E. Lee, who assumed command of the State forces April 23.|| He instructed the officers at Alexandria and along the Potomac to act on the defensive, to establish camps of instruction, and collect men and provisions.¶ This course was little to the liking of some of the more ardent rebels. They telegraphed (in substance) that Davis's immediate presence at Richmond was essential; that his non-arrival was causing dissatisfaction; that the troops had no confidence in Lee and were murmuring; that there were signs of temporizing, hopes of a settlement without collision, and consequent danger of demoralization; that Lee "dwelt on enthusiasm North and against aggression from us." Said another dispatch:

Have conversed with General Robert E. Lee. He wishes to repress enthusiasm of our people. His troops not ready, although pouring in every hour. They remain here. General Cocke has three hundred and no more. Corps of observation on Potomac near Alexandria. He considers Maryland helpless, needing encouragement and succor. Believes twenty thousand men in and near Washington.**

In no State were the secession plottings more determined or continuous than in Maryland. From the first a small but able and unwearied knot of Baltimore conspirators sought to commit her people to rebellion by the empty form of a secession ordinance. They made speeches, held conventions, besieged the governor with committees; they joined the Washington conspirators in treasonable caucus; they sent recruits to Charleston; they incited the Baltimore riot; and there is no doubt that in these doings they reflected a strong minority sentiment in the State. With such a man as Pickens or Letcher in the executive chair they might have succeeded, but in Governor Hicks they found a constant stumbling-block and an irremovable obstacle. He gave Southern commissioners the cold shoulder. He refused at first to call the legislature. He declined to order a vote on holding a convention. He informed General Scott of the rebel plots of Maryland, and testified of the treasonable designs before the investigating committee of Congress. His enemies have accused him of treachery, and cite in proof a letter which they allege he wrote a few days after Lincoln's election in which he inquired whether a certain militia company would be "good men to send out to kill Lincoln and his men." If the letter be not a forgery, it was at most an ill-judged and awkward piece of badinage; for his repeated declarations and acts leave no doubt that from first to last his heart was true to the Union. He had the serious fault of timidity, and in several instances foolishly gave way to popular clamor; but in every case he soon recovered and resumed his hostility to secession.

The Baltimore riot, as we have seen, put a stop to the governor's arrangements to raise and arm four regiments of Maryland volunteers, of picked Union men, for United States service within the State or at Washington. Instead of this, he, in the flurry of the uprising, called out the existing militia companies, mainly disloyal in sentiment and officered by secessionists. The Baltimore authorities collected arms, bought munitions, and improvised companies to resist the passage of troops; they forbade the export of provisions, regulated the departure of vessels, controlled the telegraph. General Stewart, commanding the State militia, established posts and patrols, and in effect Maryland became hostile territory to the North and to the Government. The Union flag disappeared from her soil. For three or

** Duncan to Walker, April 26, 1861. MS.

four days treason was rampant; all Union men were intimidated; all Union expression or manifestation was suppressed by mob violence. The hitherto fearless Union newspapers, in order to save their offices and materials from destruction, were compelled to drift with the flood, and print editorials advising, in vague terms, that all must now unite in the defense of Maryland. It was in this storm and stress of insurrection that Governor Hicks protested against Butler's landing, and sent Lincoln his proposal of mediation;* and on the same day (April 22), and by the same influence, he was prevailed upon to notify the legislature to meet on the 26th. It so happened that the seats of the Baltimore members were vacant. A special election, dominated by the same passions, was held on the 24th. Only a "States Rights" ticket was voted for; and of the 30,000 electors in the city 9244, without opposition, elected the little knot of secession conspirators—the Union men not daring to nominate candidates or come to the polls.

For the moment the leading Unionists of Maryland deemed their true rôle one of patience and conciliation. In this spirit Reverdy Johnson, a lawyer and statesman of fame and influence both at home and abroad, came to Lincoln upon the stereotyped errand to obtain some assurance in writing that he meditated no invasion or subjugation of the South; to which the President confidentially replied:

I forebore to answer yours of the 22d because of my aversion (which I thought you understood) to getting on paper and furnishing new grounds for misunderstanding. I do say the sole purpose of bringing troops here is to defend this Capital. I do say I have no purpose to invade Virginia with them or any other troops, as I understand the word invasion. But suppose Virginia sends her troops, or admits others through her borders, to assail this Capital, am I not to repel them even to the crossing of the Potomac, if I can? Suppose Virginia erects, or permits to be erected, batteries on the opposite shore to bombard the city, are we to stand still and see it done? In a word, if Virginia strikes us, are we not to strike back, and as effectively as we can? Again, are we not to hold Fort Monroe (for instance), if we can? I have no objection to declare a thousand times that I have no purpose to invade Virginia or any other State, but I do not mean to let them invade us without striking back.†

Mr. Johnson replied, thanking the President for his frankness, and indorsing all his

* War Records.

|| As the legislature, at its last session, had unseated

policy. "In a word," said he, "all that your note suggests would be my purpose were I intrusted with your high office." He also promised that the President's note should "be held perfectly confidential."‡ But it appears that Mr. Johnson chose his confidants with very poor judgment; for within four days its substance was written from Washington direct to Jefferson Davis.§

By no means the least of the difficult problems before Mr. Lincoln and his Cabinet was the question how to deal with the Maryland legislature, so unexpectedly called to assemble. The special election in Baltimore,|| held under secession terrorism, had resulted in the unopposed choice of ten delegates from the city, all believed to be disloyal, and several of them known to be conspicuous secessionists. With this fresh element of treason suddenly added to a legislative body so small in numbers, it seemed morally certain that its first act would be to arm the State, and pass something equivalent to a secession ordinance. Should this be permitted? How could it best be prevented? Ought the legislature to be arrested? Should it be dispersed by force? General Butler was at Annapolis, where it was expected that the session would be held, and signified his more than willingness to act in the matter. The plans were discussed in Cabinet with great contrariety of opinion. Some of the least belligerent of the President's councilors were by this time in hot blood over the repeated disasters and indignities which the Government had suffered, and began to indulge in the unreasoning temper and impatience of the irritated public opinion of the North, where one of the largest and most influential journals had already declared that the country needed a dictator. Mr. Bates filed a written opinion—in spirit a protest—declaring that the treasonable acts in Virginia and Maryland were encouraged by the fact that "we frighten nobody, we hurt nobody"; though he failed to suggest any other than merely vindictive remedies that were immediately feasible. Mr. Chase also partook of this frame of mind, and wrote the President a curt little note of querulous complaint, eminently prophetic of his future feelings towards and relations to Mr. Lincoln:

Let me beg you to remember that the disunionists have anticipated us in everything, and that as yet we

the delegates from Baltimore, a special election was held in that city on April 24. But one ticket was presented, and 9244 ballots were cast for Messrs. John C. Brune, Ross Winans, Henry M. Warfield, J. Hanson Thomas, T. Parkin Scott, H. M. Morfitt, S. Teackle Wallis, Charles H. Pitts, Wm. G. Harrison, and Lawrence Sangston, the States Rights candidates. —Scharf, "History of Maryland," Vol. III., p. 424.

have accomplished nothing but the destruction of our own property. Let me beg you to remember also that it has been a darling object with the disunionists to secure the passage of a secession ordinance by Maryland. The passage of that ordinance will be the signal for the entry of disunion forces into Maryland. It will give a color of law and regularity to rebellion and thereby triple its strength. The custom-house in Baltimore will be seized and Fort McHenry attacked—perhaps taken. What next? Do not, I pray you, let this new success of treason be inaugurated in the presence of American troops. Save us from this new humiliation. A word to the brave old commanding general will do the work of prevention. You alone can give the word.*

The bad taste and injustice of such language consisted in its assumption that the President was somehow culpable for what had already occurred, whereas Mr. Chase had in the beginning been more conciliatory towards the rebels than had Mr. Lincoln.

With a higher conception of the functions of the presidential office, Mr. Lincoln treated public clamor and the fretfulness of Cabinet ministers with the same quiet toleration. Again, as before, and as ever afterward, he listened attentively to such advice as his Cabinet had to give, but reserved the decision to himself. He looked over the Attorney-General's legal notes, weighed the points of political expediency, canvassed carefully the probabilities of military advantage, and embodied his final directions in a letter to General Scott:

MY DEAR SIR: The Maryland legislature assembles to-morrow at Annapolis, and not improbably will take action to arm the people of that State against the United States. The question has been submitted to and considered by me, whether it would not be justifiable, upon the ground of necessary defense, for you, as Commander-in-Chief of the United States Army, to arrest or disperse the members of that body. I think it would not be justifiable, nor efficient for the desired object. First, they have a clearly legal right to assemble; and we cannot know in advance that their action will not be lawful and peaceful. And if we wait until they shall have acted, their arrest or dispersion will not lessen the effect of their action.

Secondly, we cannot permanently prevent their action. If we arrest them, we cannot long hold them as prisoners; and, when liberated, they will immediately reassemble and take their action. And precisely the same if we simply disperse them. They will immediately reassemble in some other place.

I therefore conclude that it is only left to the commanding general to watch and await their action, which, if it shall be to arm their people against the United States, he is to adopt the most prompt and efficient means to counteract, even if necessary to the bombardment of their cities; and, in the extremest necessity, the suspension of the writ of *habeas corpus*.†

Thus directed, General Scott wrote to General Butler on the following day:

In the absence of the undersigned, the foregoing instructions are turned over to Brigadier-General B. F. Butler of the Massachusetts Volunteers, or other officer commanding at Annapolis, who will carry them out in a right spirit; that is, with moderation and firmness. In the case of arrested individuals notorious for their hostility to the United States, the prisoners will be safely kept and duly cared for, but not surrendered, except on the order of the commander aforesaid.‡

At the last moment, however, conscious of the offenses which some of their members were meditating against the Government, the Maryland legislature abandoned the idea of meeting at Annapolis, and induced the governor to convene their special session at the town of Frederick. Here Governor Hicks sent them his special message on the 27th, reciting the recent occurrences, transmitting his correspondence with the various Federal authorities, and expressing the conviction "that the only safety of Maryland lies in preserving a neutral position between our brethren of the North and of the South." At the same time he admitted the right of transit for Federal troops, and counseled "that we shall array ourselves for Union and peace."§ The lack of coherence and consistency in the message was atoned for by its underlying spirit of loyalty.

Meanwhile the plentiful arrival of volunteers enabled the Government to strengthen its hold upon Annapolis and the railroad.|| The military "Department of Annapolis" was created, and General Butler assigned to its command. This embraced twenty miles on each side of the railroad from Annapolis to Washington;¶ and all of Maryland not included in these limits was left in General Patterson's "Department of Pennsylvania." Measures were taken to concentrate sufficient troops at Harrisburg and at Philadelphia to approach Baltimore in force from those quarters and permanently to occupy the city; and to give the military ample authority for every contingency, the President issued the following additional order to General Scott:

You are engaged in suppressing an insurrection against the laws of the United States. If at any point on or in the vicinity of any military line which is now or which shall be used between the city of Philadelphia and the city of Washington you find resistance which renders it necessary to suspend the writ of *habeas corpus* for the public safety, you personally, or through the officer in command at the point at which resistance occurs, are authorized to suspend that writ.**

Having run its course about a week or ten days, the secession frenzy of Baltimore rapidly subsided. The railroad managers of that city once more tendered their services to the War Department; but Secretary Cameron, instead of giving them immediate encouragement, ordered that the Annapolis route be opened for public travel and traffic. Their isolation, first created by the bridge-burning, was thus continued and soon began to tell seriously upon their business interests, as well as upon the general industries and comfort of the city. On the 4th of May General Butler, under Scott's orders, moved forward and took post with two regiments at the Relay House, eight miles from Baltimore, where he could control the westward trains and cut off communication with Harper's Ferry. The significance of all these circumstances did not escape the popular observation and instinct. The Union newspapers took courage and once more printed bold leaders; the city government dismissed the rebel militia and permitted bridges and telegraphs to be repaired. Governor Hicks issued a proclamation for the election of members of Congress to attend the coming special session on the 4th of July; and also, by special message to the legislature and publication in the newspapers, repudiated the charge that he had consented to the bridge-burning. More than all, the Unionists of both city and State, gaining confidence with the strong evidences of reaction, began to hold meetings and conventions vigorously to denounce secession, and to demonstrate that they were in a decided majority.

Little by little loyalty and authority asserted themselves. About the 1st of May General Scott began preparing to reestablish the transit of troops through Baltimore, and on the 9th the first detachment since the riot of April 19 successfully made the journey. Some 1300 men in all, including Sherman's regular battery from Minnesota and 500 regulars from Texas, were brought in transports from Perryville and landed at Locust Point under the guns of the *Harriet Lane*, embarked in cars, and carried through South Baltimore. The city authorities, police, and a large concourse of people were present; and the precautions and arrangements were so thorough that not the slightest disturbance occurred. Four days after this (May 13) the railroad brought the first train from Philadelphia over its repaired track and restored bridges.

The Maryland legislature, finding its occupation gone, and yet nursing an obstinate secession sympathy, adjourned on May 14 to meet again on the 4th of June. About the same time the people of Baltimore underwent a surprise. Late on the evening of May 13,

under cover of an opportune thunder-storm, General Butler moved from the Relay House into the city with about a thousand men, the bulk of his force being the famous Massachusetts 6th, which had been mobbed there on the 19th of April. The movement was entirely unauthorized and called forth a severe rebuke from General Scott; but it met no opposition and was loudly applauded by the impatient public opinion of the North, which could ill comprehend the serious military risk it involved. The general carried his spirit of bravado still farther. He made his camp on Federal Hill, which he proceeded to fortify; and on the afternoon of the 14th sent a detachment of only thirty-five men to seize a lot of arms stored near the locality of the riot. The little squad of volunteers found the warehouse and were given possession of the arms,—2200 muskets sent from Virginia, and 4020 pikes of the John Brown pattern, made for the city by the Winans establishment during the riot week,—and loading them on thirty-five wagons and drays started for Fort McHenry over some of the identical streets where the Massachusetts men had been murdered by the mob. It was already late when this long procession got under way; large crowds collected, and riotous demonstrations of a threatening character were made at several points. Fortunately, the police gave efficient assistance, and what might easily have become an unnecessary sacrifice of life was by their vigilance averted.

Also coincident with this, the Union cause gained another signal advantage in Maryland. Governor Hicks's courage had risen with the ebb of disloyalty throughout the State; and as soon as the legislature was adjourned he issued his proclamation calling into the service of the United States the four regiments he originally promised under the President's call. These were rapidly formed, and became a part of the Union army under a new call. Amidst these fluctuations the more belligerent Maryland rebels also formed companies and went South—some to Richmond, some to the rebel camp at Harper's Ferry. But the fraction of military aid which Maryland finally gave to the rebellion rose to no special significance.

Out of these transactions, however, there arose a noteworthy judicial incident. A man named John Merryman, found recruiting as a lieutenant for one of these rebel companies, was arrested (May 25) and imprisoned in Fort McHenry. Chief-Justice Taney, then in Baltimore, being applied to, issued a writ of *habeas corpus* to bring the prisoner before him.* General Cadwalader, at this time in command, made a respectful reply to the writ, alleging

* Tyler, "Memoir R. B. Taney," pp. 640-642.

GOVERNOR T. H. HICKS. (FROM A PHOTOGRAPH BY BRADY.)

Merryman's treason, and stating further that the President had authorized him to suspend the writ in such cases; and requested the Chief-Justice to postpone further action till the matter could be referred to the President.* This avowal aroused all the political ire of the Chief-Justice; he was struck with a judicial blindness which put disloyalty, conspiracy, treason, and rebellion utterly beyond his official contemplation. He saw not with the eye of a great judge the offended majesty of the law commanding the obedience of all citizens of the republic, but only, with a lawyer's microscopic acuteness, the disregard of certain technical forms and doubtful professional dicta. The personal restraint of one traitor in arms became of more concern to him than the endangered fate of representative government to the world.

The Chief-Justice immediately ordered an attachment to issue against General Cadwalader for contempt; upon which the marshal made return that he was unable to serve it, being denied entrance to Fort McHenry. Thereupon the Chief-Justice admitted the existence of a superior military force, but declared "that the President, under the Constitution of the United States, cannot suspend the privilege of the writ of *habeas corpus*, nor authorize a military officer to do it," and

that Merryman ought therefore to be immediately discharged; and went on to say "that he should cause his opinion when filed, and all the proceedings, to be laid before the President, in order that he might perform his constitutional duty to enforce the laws by securing obedience to the process of the United States."

To this general purport the Chief-Justice filed his written opinion on the 1st of June,† and caused a copy to be transmitted to the President.

Of that opinion it will not be irrelevant to quote the criticism of one of the profoundest and most impartial jurists of that day:

Chief-Justice Taney's opinion in Merryman's case is not an authority. This, of course, is said in the judicial sense. But it is not even an argument, in the full sense. He does not argue the question from the language of the clause, nor from the history of the clause, nor from the principles of the Constitution, except by an elaborate depreciation of the President's office, even to the extent of making him, as Commander-in-Chief of the army, called from the States into the service of the United States, no more than an assistant to the marshal's posse—the deepest plunge of judicial rhetoric. The opinion, moreover, has a tone, not to say a ring, of disaffection to the President, and to the Northern and Western side of his house, which is not comfortable to suppose in the person who fills the central seat of impersonal justice.‡

To this estimate of the spirit of Chief-Justice Taney's view we may properly, by way of anticipation, here add President Lincoln's own official answer to its substance. No attention was of course paid to the transmitted papers; but the President at the time of their receipt was already engaged in preparing his message to the coming special session of Congress, and in that document he presented the justification of his act. The original draft of the message, in Lincoln's autograph manuscript, thus defines the executive authority with that force of statement and strength of phraseology of which he was so consummate a master:

Soon after the first call for militia, I felt it my duty to authorize the commanding general, in proper cases, according to his discretion, to suspend the privilege of the writ of *habeas corpus*—or, in other words, to arrest and detain, without resort to the ordinary processes and forms of law, such individuals as he might deem dangerous to the public safety. At my verbal request, as well as by the general's own inclination, this authority has been exercised but very sparingly. Nevertheless, the legality and propriety of what has been done under it are questioned; and I have been reminded from a high quarter that one who is sworn to "take care that the laws be faithfully executed" should not himself be one to violate them. Of course I gave some consideration to the questions of power and

* Tyler, "Memoir R. B. Taney," pp. 643, 644.

† Ibid., pp. 644-659.

Vol. XXXVI.—9.

‡ Horace Binney, "The Privilege of the Writ of Habeas Corpus," Part I., p. 36.

GOVERNOR CLAIBORNE F. JACKSON.

propriety before I acted in this matter. The whole of the laws which I have sworn to take care that they be faithfully executed were being resisted, and failing to be executed, in nearly one-third of the States. Must I have allowed them to finally fail of execution, even had it been perfectly clear that by the use of the means necessary to their execution some single law, made in such extreme tenderness of the citizen's liberty, that practically it relieves more of the guilty than the innocent, should, to a very limited extent, be violated? To state the question more directly, are all the laws but one to go unexecuted, and the Government itself go to pieces, lest that one be violated? Even in such a case I should consider my official oath broken, if I should allow the Government to be overthrown, when I might think the disregarding the single law would tend to preserve it. But in this case I was not, in my own judgment, driven to this ground. In my opinion, I violated no law. The provision of the Constitution that "The privilege of the writ of *habeas corpus* shall not be suspended unless when, in cases of rebellion or invasion, the public safety may require it," is equivalent to a provision—is a provision—that such privilege may be suspended when, in cases of rebellion or invasion, the public safety does require it. I decided that we have a case of rebellion, and that the public safety does require the qualified suspension of the privilege of the writ of *habeas corpus*, which I authorized to be made. Now it is insisted that Congress, and not the executive, is vested with this power. But the Constitution itself is silent as to which, or who, is to exercise the power; and as the provision plainly was made for a dangerous emergency, I cannot bring myself to believe that the framers of that instrument intended that in every case the danger should run its course until Congress could be called together, the very assembling of which might be prevented, as was intended in this case by the rebellion.*

The alterations and corrections from this first draft into the more impersonal form as finally sent to Congress and officially printed,

* Lincoln, Special Message, July 4, 1861. Autograph MS. of original draft.

but nowise changing its argument or substance, are also entirely in Lincoln's handwriting. That second and corrected form better befits the measured solemnity of a State paper. But in the language quoted above we seem brought into direct contact with the living workings of Lincoln's mind, and in this light the autograph original possesses a peculiar biographical interest and value.

MISSOURI.

THE governor of Missouri, Claiborne F. Jackson, was early engaged in the secession conspiracy, though, like other border-State executives, he successfully concealed his extreme designs from the public. There was an intolerant pro-slavery sentiment throughout the State; but, unlike other border States, it contained a positive and outspoken minority of equally strong antislavery citizens in a few localities, chiefly in the great commercial city of St. Louis, and made up mainly of its German residents and voters, numbering fully one-half the total population, which in 1860 was 160,000. This was the solitary exception to the general pro-slavery reaction in the whole South during the decade. Here, in 1856, a young, talented, courageous leader and skillful politician, Francis P. Blair, Jr., though himself a slaveholder, had dared to advocate the doctrine and policy of gradual emancipation, and on that issue secured an election to Congress. The same issue repeated in 1858 brought him sufficiently near an election to entitle him to contest his opponent's seat. In 1860 Blair and his followers, now fully acting with the Republican party, cast 17,028 votes for Lincoln, while the remaining votes in the State were divided as follows: Douglas, 58,801; Bell, 58,372; Breckinridge, 31,317. Blair was also again elected to Congress. The combined Lincoln, Douglas, and Bell vote showed an overwhelming Union majority; but the governor elected by the Douglas plurality almost immediately became a disunionist and secession conspirator.

With Blair as a leader, and such an organized minority at his call, the intrigues of Governor Jackson to force Missouri into secession met from the outset with many difficulties, notwithstanding the governor's official powers, influential following, and the prevalent pro-slavery opinion of the State. The legislature was sufficiently subservient; it contained a majority of radical secessionists, and only about fifteen unconditional Union members, who, however, were vigilant and active, and made the most of their minority influence. The same general expedients resorted to in other States by the conspirators were used in

Missouri — visits and speeches from Southern commissioners; messages and resolutions of "Southern" rights and sympathy and strong enunciation of the doctrine of non-coercion; military bills and measures to arm and control the State; finally, a "sovereign" State Convention. Here they overshot their mark. A strong majority of Union members was elected. The convention met at Jefferson City, the State capital, adjourned to the healthier atmosphere of St. Louis, and by an outspoken report and decided votes condemned secession and took a recess till December following.

The secession leaders, however, would not accept their popular defeat. In the interim Sumter fell, and Lincoln issued his call for troops. Governor Jackson, as we have seen, insultingly denounced the requisition as "illegal, unconstitutional, revolutionary, inhuman, and diabolical," and again convened his rebel legislature in extra session to do the revolutionary work which the "sovereign" Missouri convention had so recently condemned.

It was an essential feature of Governor Jackson's programme to obtain possession of the St. Louis arsenal, and as early as January he had well-nigh completed his intrigue for its surrender to the State by a treacherous officer. But suspicion was aroused, the commandant changed, and the arsenal reënforced; by the middle of February the garrison had been increased to 488 regulars and recruits. In the mean time local intrigue was active. The secessionists organized bodies of "Minute men" to capture it, while the Union men with equal alertness formed a safety committee, and companies of Home Guards to join in its defense. These latter were largely drawn from the German part of the city, to which the arsenal lay contiguous, and their guardianship over it was therefore more direct and effective. Lincoln was inaugurated, and making Montgomery Blair his postmaster-general and Edward Bates his attorney-general, Missouri had virtually two representatives in the Cabinet. Francis P. Blair, Jr., brother of Montgomery, therefore found no great difficulty in having the command of the arsenal given to Captain Nathaniel Lyon, not only a devoted soldier, but a man of thorough anti-slavery convictions. Lyon was eager to forestall the secession conspiracy by extensive preparation and swift repression; but the depart-

ment commander, General Harney, and the ordnance officer, Major Hagner, whom Lyon had displaced, both of more slow and cautious temper, and reflecting the local political conservatism, thwarted and hampered Lyon and Blair, who from the beginning felt and acted in concert. No great difficulty grew out of this antagonism till the President's call for troops; then it created discussion, delay, want of coöperation. Blair could not get his volunteers mustered into service, and Governor Yates of Illinois could get no arms. The President finally grew impatient. Harney was relieved and called to Washington, and Lyon

MAJOR-GENERAL FRANCIS P. BLAIR, JR. (FROM A PHOTOGRAPH BY BRADY.)

directed to muster-in and arm the four Missouri regiments of volunteers with all expedition, and to send the extra arms to Springfield, Illinois, while three Illinois regiments were ordered to St. Louis to assist in guarding the arsenal.

These orders were issued in Washington on April 20. By this time St. Louis, like the whole Union, was seething with excitement, except that public opinion was more evenly divided than elsewhere. There were Union speeches and rebel speeches; cheers for Lin-

coln and cheers for Davis; Union flags and rebel flags; Union headquarters and rebel headquarters. With this also there was mingled a certain antipathy of nationality, all the Germans being determined Unionists. The antagonism quickly grew into armed organizations. The Unionists were mustered, armed, and drilled at the arsenal as United States volunteers. On the other hand Governor Jackson, having decided on revolution, formed at St. Louis a nominal camp of instruction under the State militia laws. The camp was established at Lindell's Grove, was christened "Camp Jackson," in honor of the governor, and was commanded by Brigadier-General D. M. Frost, a West Point graduate. Two regiments quickly assembled, and a third was in process of formation. The flag of the United States still floated over it and many Unionists were in the ranks of the old holiday parade militia companies, but the whole leadership and animating motive were in aid of rebellion: it was already literally one of Jefferson Davis's outposts. As soon as Governor Jackson had avowed his treason, he dispatched two confidential agents to Montgomery to solicit arms and aid, by whom Jefferson Davis wrote in reply:

After learning as well as I could from the gentlemen accredited to me what was most needful for the attack on the arsenal, I have directed that Captains Green and Duke should be furnished with two 12-pounder howitzers and two 32-pounder guns, with the proper ammunition for each. These from the commanding hills will be effective, both against the garrison and to breach the inclosing walls of the place. I concur with you as to the great importance of capturing the arsenal and securing its supplies, rendered doubly important by the means taken to obstruct your commerce and render you unarmed victims of a hostile invasion. We look anxiously and hopefully for the day when the star of Missouri shall be added to the constellation of the Confederate States of America.*

In reality he already regarded the "star" as in the "constellation." Three days later the rebel Secretary of War wrote to the governor:

Can you arm and equip one regiment of infantry for service in Virginia to rendezvous at Richmond? Transportation will be provided by this Government. The regiment to elect its own officers, and must enlist for not less than twelve months, unless sooner discharged.†

In face of the overwhelming Union sentiment of Missouri, so lately manifested by the

BRIGADIER-GENERAL NATHANIEL LYON.
(FROM A PHOTOGRAPH BY BRADY.)

action of the State convention, Governor Jackson was not prepared for so bold a proceeding, and therefore wrote in reply:

Yours of the 26th ultimo, *via* Louisville, is received. I have no legal authority to furnish the men you desire. Missouri, you know, is yet under the tyranny of Lincoln's government—so far, at least, as forms go. We are woefully deficient here in arms and cannot furnish them at present; but so far as men are concerned we have plenty of them ready, willing, and anxious to march at any moment to the defense of the South. Our legislature has just met, and I doubt not will give me all necessary authority over the matter. If you can arm the men they will go whenever wanted, and to any point where they may be most needed. I send this to Memphis by private hand, being afraid to trust our mails or telegraphs. Let me hear from you by the same means. Missouri can and will put one hundred thousand men in the field if required. We are using every means to arm our people, and until we are better prepared must move cautiously. I write this in confidence. With my prayers for your success, etc.‡

* Davis to Jackson, April 23, 1861. War Records.

† Walker to Jackson, April 26, 1861. War Records.

‡ Jackson to Walker, May 5, 1861. War Records.

First to capture the arsenal and then to reënforce the armies of Jefferson Davis was doubtless the immediate object of Camp Jackson. It would be a convenient nucleus which at the given signal would draw to itself similar elements from different parts of the State. Already the arsenal at Liberty—the same one from which arms were stolen to overawe Kansas in 1855—had been seized on April 20 and its contents appropriated by secessionists in western Missouri. Jeff M. Thompson had been for some weeks drilling a rebel camp at St. Joseph, and threatening the neighboring arsenal at Leavenworth. The legislature was maturing a comprehensive military bill which would give the governor power to concentrate and use these scattered fractions of regiments. Until this was passed, Camp Jackson had a lawful existence under the old militia laws.

But the Union Safety Committee, and especially Mr. Blair and Captain Lyon, followed the governor's intrigue at every step, and reporting the growing danger to Washington received from President Lincoln extraordinary powers to overcome it. An order to Captain Lyon read as follows:

The President of the United States directs that you enroll in the military service of the United States the loyal citizens of St. Louis and vicinity, not exceeding, with those heretofore enlisted, ten thousand in number, for the purpose of maintaining the authority of the United States for the protection of the peaceable inhabitants of Missouri; and you will, if deemed necessary for that purpose by yourself and by Messrs. Oliver T. Filley, John How, James O. Broadhead, Samuel T. Glover, J. Witzig, and Francis P. Blair, Jr., proclaim martial law in the city of St. Louis, etc.*

It was upon this order, with certain additional details, that General Scott made the indorsement, "It is revolutionary times, and therefore I do not object to the irregularity of this."

The Union Safety Committee soon had indisputable evidence of the insurrectionary purposes and preparations. On the night of May 8 cannon, ammunition, and several hundred muskets, sent by Jefferson Davis, were landed at the St. Louis levee from a New Orleans steamer, and at once transferred to Camp Jackson. They had been brought from the arsenal at Baton Rouge, Louisiana, and were a part of the United States arms captured there in January by the governor of that State. The proceeding did not escape the vigilance of the Safety Committee, but the material of war was allowed to go unobstructed to the camp. The next day Captain Lyon visited Camp Jackson in disguise, and thus acquainting himself personally with its condition, strategical situation, and surroundings matured his plan for its immediate capture. All legal obstacles which had been urged

against such a summary proceeding were now removed by the actual presence in the camp of the hostile supplies brought from Baton Rouge.

At 2 o'clock in the afternoon of May 10 a strong battalion of regulars with six pieces of artillery, four regiments of Missouri Volunteers, and two regiments of Home Guards, all under command of Captain Lyon, were rapidly marching through different streets to Camp Jackson. Arrived there, it was but a moment's work to gain the appointed positions surrounding the camp, and to plant the batteries, ready for action, on commanding elevations. General Frost heard of their coming, and undertook to avert the blow by sending Lyon a letter denying that he or his command, or "any other part of the State forces," meant any hostility to the United States—though it was himself who had endeavored to corrupt the commandant of the arsenal in January,† and who, in a letter to the governor,‡ had outlined and recommended these very military proceedings in Missouri, convening the legislature, obtaining heavy guns from Baton Rouge, seizing the Liberty arsenal, and establishing this camp of instruction, expressly to oppose President Lincoln.

So far from being deterred from his purpose, Lyon refused to receive Frost's letter; and, as soon as his regiments were posted, sent a written demand for the immediate surrender of Camp Jackson, "with no other condition than that all persons surrendering under this demand shall be humanely and kindly treated." The case presented no alternative; and seeing that he was dealing with a resolute man, Frost surrendered with the usual protest. Camp and property were taken in possession; arms were stacked, and preparation made to march the prisoners to the arsenal, where on the following day they were paroled and disbanded.

Up to this time everything had proceeded without casualty, or even turbulent disorder; but an immense assemblage of the street populace followed the march and crowded about the camp. Most of them were peaceful spectators whose idle curiosity rendered them forgetful of danger; but among the number was the usual proportion of lawless city rowdies, of combative instincts, whose very nature impelled them to become the foremost elements of disorder and revolution. Many of them had rushed to the scene of expected conflict with such weapons as they could seize; and now as the homeward march began they pressed defiantly upon the troops, with cheers for Jeff Davis and

* Cameron to Lyon, April 30, 1861. War Records.

† Frost to Jackson, January 24, 1861. Peckham, "General Nathaniel Lyon," p. 43.

‡ Frost to Jackson, April 15, 1861. Ibid., p. 147.

insults and bitter imprecations upon the soldiers. It seems a fatality that when a city mob in anger and soldiers with loaded guns are by any circumstances thrown into close contact it produces the same incidents and results. There are insult and retort, a rush and a repulse; then comes a shower of missiles, finally a pistol-shot, and after it a return volley from the troops, followed by an irregular fusillade from both sides. Who began it, or how it was done, can never be ascertained. It so happened on this occasion, both at the head and rear of the marching column and during a momentary halt; and, as usual, the guilty escaped, and innocent men, women, and children fell in their blood, while the crowd fled pell-mell in mortal terror. Two or three soldiers and some fifteen citizens were killed and many wounded.

As at Baltimore, the event threw St. Louis into the excitement of a general riot. Gun stores were broken into and newspaper offices threatened; but the police checked the outbreak, though public tranquillity and safety were not entirely restored for several days.

Aside from its otherwise deplorable results, the riot produced, or rather magnified, a military and political complication. On the day after the capture of Camp Jackson, General Harney returned from Washington, and once more assumed command. His journey also was eventful. Arrested by the rebels at Harper's Ferry, he had been sent to Richmond; there the authorities, anxious to win him over to secession by kindness, set him at liberty. Proof against their blandishments, however, he merely thanked them for their courtesy, and, loyal soldier as he was, proceeded to his superiors and his duty at Washington. This circumstance greatly aided his explanations and excuses before General Scott, President Lincoln, and the Cabinet, and secured his restoration as Department Commander.

But his return to St. Louis proved ill timed. His arrival there in the midst of the excitement over the capture of Camp Jackson and the riot emphasized and augmented the antagonism between the radical Unionists, led by Blair and Lyon, and the pro-slavery and conservative Unionists, who now made the general their rallying point. Paying too much attention to the complaints and relying too blindly upon the false representations and promises of secession conspirators like Frost, and greatly underrating the active elements of rebellion in Missouri, Harney looked coldly upon the volunteers and talked of disbanding the Home Guards. This brought him into conflict with the Union Safety Committee and President Lincoln's orders. Delegations of equally influential citizens representing both sides went to

Washington, in a stubborn mistrust of each other's motives. In their appeal to Lincoln, Lyon's friends found a ready advocate in Mr. Blair, Postmaster-General, and Harney's friends in Mr. Bates, the Attorney-General; and the Missouri discord was thus in a certain degree, and at a very early date, transplanted into the Cabinet itself. This local embitterment in St. Louis beginning here ran on for several years, and in its varying and shifting phases gave the President no end of trouble in his endeavor from first to last to be just to each faction.

Harney was strongly intrenched in the personal friendship of General Scott; besides, he was greatly superior in army rank, being a brigadier-general, while Lyon was only a captain. On the other hand, Lyon's capture of Camp Jackson had shown his energy, courage, and usefulness, and had given him great popular éclat. Immediately to supersede him seemed like a public censure. It was one of the many cases where unforeseen circumstances created a dilemma, involving irritated personal susceptibilities and delicate questions of public expediency.

President Lincoln took action promptly and firmly, though tempered with that forbearance by which he was so constantly enabled to extract the greatest advantage out of the most perplexing complications. The delegations from Missouri with their letters arrived on May 16, a week after the Camp Jackson affair. Having heard both sides, Lincoln decided that in any event Lyon must be sustained. He therefore ordered that Harney should be relieved, and that Lyon be made a brigadier-general of volunteers. In order, however, that this change might not fall too harshly, Lincoln did not make his decision public, but wrote confidentially to Frank Blair, under date of May 18:

MY DEAR SIR: We have a good deal of anxiety here about St. Louis. I understand an order has gone from the War Department to you, to be delivered or withheld in your discretion, relieving General Harney from his command. I was not quite satisfied with the order when it was made, though on the whole I thought it best to make it; but since then I have become more doubtful of its propriety. I do not write now to countermand it, but to say I wish you would withhold it, unless in your judgment the necessity to the contrary is very urgent. There are several reasons for this. We had better have him a friend than an enemy. It will dissatisfy a good many who otherwise would be quiet. More than all, we first relieve him, then restore him, and now if we relieve him again the public will ask, "Why all this vacillation?" Still, if in your judgment it is indispensable, let it be so.

Upon receipt of this letter both Blair and Lyon, with commendable prudence, determined to carry out the President's suggestion. Since Harney's return from Washington his words and acts had been more in conformity

with their own policy. He had published a proclamation defending and justifying the capture of Camp Jackson, and declaring that "Missouri must share the destiny of the Union," and that the whole power of the United States would be exerted to maintain her in it. Especially was the proclamation unsparing in its denunciation of the recent military bill of the rebel legislature.

This bill cannot be regarded in any other light than an indirect secession ordinance, ignoring even the forms resorted to by other States. Manifestly its most material provisions are in conflict with the Constitution and laws of the United States. To this extent it is a nullity, and cannot, and ought not to, be upheld. . . . Within the field and scope of my command and authority the supreme law of the land must and shall be maintained, and no subterfuges, whether in the form of legislative acts or otherwise, can be permitted to harass or oppress the good and law-abiding people of Missouri. I shall exert my authority to protect their persons and property from violations of every kind, and I shall deem it my duty to suppress all unlawful combinations of men, whether formed under pretext of military organizations, or otherwise.*

He also suggested to the War Department the enlistment of Home Guards and the need of additional troops in Missouri. So far as mere theory and intention could go, all this was without fault. There can be no question of Harney's entire loyalty, and of his skill and courage as a soldier dealing with open enemies. Unfortunately, he did not possess the adroitness and daring necessary to circumvent the secret machinations of traitors.

Governor Jackson, on the contrary, seems to have belonged by nature and instinct to the race of conspirators. He and his rebel legislature, convened in special session at Jefferson City, were panic-stricken by the news of the capture of Camp Jackson. On that night of May 10 the governor, still claiming and wielding the executive power of the State, sent out a train to destroy the telegraph and to burn the railroad bridge over the Osage River, in order to keep the bayonets of Lyon and Blair at a safe distance. At night the legislature met for business, the secession members belted with pistols and bowie-knives, with guns lying across their desks or leaning against chairs and walls, while sentinels and soldiers filled the corridors and approaches. The city was in an uproar; the young ladies of the female seminary and many families were moved across the river for security.† All night long the secession governor and his secession majority hurried their treasonable legislation through the mere machinery of parliamentary forms. It was under these conditions that the

famous military bill and kindred acts were passed. It appropriated three millions; authorized the issue of bonds; diverted the school fund; anticipated two years' taxes; made the governor a military dictator, and ignored the Federal Government. It was in truth, as Harney called it, "an indirect secession ordinance."

Armed with these revolutionary enactments, but still parading his State authority, Governor Jackson undertook cautiously to consolidate his military power. Ex-Governor Sterling Price was appointed Major-General commanding the Missouri State Guard; who, more conveniently to cloak the whole conspiracy, now sought an interview with Harney, and entered with him into a public agreement, vague and general in its terms, "of restoring peace and good order to the people of the State in subordination to the laws of the general and State governments."

General Price, having by commission full authority over the militia of the State of Missouri, undertakes, with the sanction of the governor of the State, already declared, to direct the whole power of the State officers to maintain order within the State among the people thereof, and General Harney publicly declares that, this object being thus assured, he can have no occasion, as he has no wish, to make military movements which might otherwise create excitements and jealousies, which he most earnestly desires to avoid.‡

Blinded and lulled by treacherous professions, Harney failed to see that this was evading the issue and committing the flock to the care of the wolf. Price's undertaking to "maintain order" was, in fact, nothing else than the organization of rebel companies at favorable points in the State, and immediately brought a shower of Union warnings and complaints to Harney. Within a week the information received caused him to notify Price of these complaints, and of his intention to organize Union Home Guards for protection.§ More serious still, reliable news came that an invasion was threatened from the Arkansas border. Price replied with his blandest assurances, denying everything. The aggressions, he said, were acts of irresponsible individuals. To organize Home Guards would produce neighborhood collision and civil war. He should carry out the agreement to the letter. Should troops enter Missouri from Arkansas or any other State he would "cause them to return instantanely."||

Harney, taking such declarations at their surface value, and yielding himself to the suggestions and advice of the St. Louis conservatives who disliked Lyon and hated Blair, remained inactive, notwithstanding a sharp

admonition from Washington. The Adjutant-General wrote:

The President observes with concern that notwithstanding the pledge of the State authorities to coöperate in preserving peace in Missouri, loyal citizens in great numbers continue to be driven from their homes. . . . The professions of loyalty to the Union by the State authorities of Missouri are not to be relied upon. They have already falsified their professions too often, and are too far committed to secession, to be entitled to your confidence, and you can only be sure of their desisting from their wicked purposes when it is out of their power to prosecute them. You will therefore be unceasingly watchful of their movements, and not permit the clamors of their partisans and opponents of the wise measures already taken to prevent you from checking every movement against the Government, however disguised, under the pretended State authority. The authority of the United States is paramount, and whenever it is apparent that a movement, whether by color of State authority or not, is hostile, you will not hesitate to put it down.*

Harney had announced this identical policy in his proclamation of May 14. The difficulty was that he failed to apply and enforce his own doctrines, or rather that he lacked penetration to discern the treachery of the State authorities. He replied to the War Department:

My confidence in the honor and integrity of General Price, in the purity of his motives, and in his loyalty to the Government remains unimpaired. His course as President of the State Convention that voted by a large majority against submitting an ordinance of secession, and his efforts since that time to calm the elements of discord, have served to confirm the high opinion of him I have for many years entertained.†

Lyon and Blair were much better informed; and the latter wrote to Lincoln:

. . . I have to-day delivered to General Harney the order of the 16th of May above mentioned relieving him, feeling that the progress of events and condition of affairs in this State make it incumbent upon me to assume the grave responsibility of this act, the discretionary power in the premises having been given me by the President.‡

The President and the Secretary of War duly sustained the act.

This change of command soon brought matters in Missouri to a crisis. The State authorities were quickly convinced that Lyon would tolerate no evasion, temporizing, or misunderstanding. They therefore asked an interview; and Lyon sent Governor Jackson

and General Price a safeguard to visit St. Louis. They on the one part, and Lyon and Blair on the other, with one or two witnesses, held an interview of four hours on June 11. The governor proposed that the State should remain neutral; that he would not attempt to organize the militia under the military bill, on condition that the Union Home Guards should be disarmed and no further Federal troops should be stationed in Missouri. Lyon rejected this proposal, insisting that the governor's rebel "State Guards" should be disarmed and the military bill abandoned, and that the Federal Government should enjoy its unrestricted right to move and station its troops throughout the State, to repel invasion or protect its citizens. This the governor refused.

So the discussion terminated. Jackson and Price hurried by a special train back to Jefferson City, burning bridges as they went. Arrived at the capital, the governor at once published a proclamation of war. He recited the interview and its result, called fifty thousand militia into the active service of the State, and closed his proclamation by coupling together the preposterous and irreconcilable announcements of loyalty to the United States and declaration of war against them — a very marvel of impudence, even among the numerous kindred curiosities of secession literature.§

This sudden announcement of active hostility did not take Lyon by surprise. Thoroughly informed of the conspirators' plans, he had made his own preparations for equally energetic action. Though Jackson had crippled the railroad, the Missouri River was an open military highway, and numerous swift steamboats lay at the St. Louis wharf. On the afternoon of June 13 he embarked one of his regular batteries and several battalions of his Missouri Volunteers, and steamed with all possible speed up the river to Jefferson City, the capital of the State, leading the movement in person. He arrived on the 15th of June, and, landing, took possession of the town without resistance, and raised the Union flag over the State-house. The governor and his adherents hurriedly fled, his Secretary of State carrying off the great seal with which to certify future pretended official acts.

But it is equally my duty to advise you that your first allegiance is due to your own State, and that you are under no obligation whatever to obey the *unconstitutional* edicts of the military despotism which has enthroned itself at Washington, nor to submit to the infamous and degrading sway of its wicked minions in this State. No brave and true-hearted Missourian will obey one or submit to the other. Rise, then, and drive out ignominiously the invaders who have dared to desecrate the soil which your labors have made fruitful, and which is consecrated by your homes. [Jackson, Proclamation, June 12, 1861. Peckham, "General Nathaniel Lyon," p. 252.]

* Thomas to Harney, May 27, 1861. War Records.

† Harney to Thomas, June 5, 1861. War Records.

‡ F. P. Blair, Jr., to the President, May 30, 1861. Peckham, "General Nathaniel Lyon," p. 223.

§ In issuing this proclamation I hold it to be my solemn duty to remind you that Missouri is still one of the United States; that the Executive Department of the State government does not arrogate to itself the power to disturb that relation; that that power has been wisely vested in a convention which will at the proper time express your sovereign will; and that meanwhile it is your duty to obey all *constitutional* requirements of the Federal Government.

There had been no time for the rebellion to gather any head at the capital; but at the town of Boonville, fifty miles farther up the river, General Price was collecting some fragments of military companies. This nucleus of opposition Lyon determined also to destroy. Leaving but a slight guard at the capital, he reëmbarked his force next day, and reaching Boonville on the 17th landed without difficulty, and put the half-formed rebel militia to flight after a spirited but short skirmish. General Price prudently kept away from the encounter; and Governor Jackson, who had come hither, and who witnessed the disaster from a hill two miles distant, once more betook himself to flight. Two on the Union and fifteen on the rebel side were killed.

This affair at Boonville was the outbreak of open warfare in Missouri, though secret military aggression against the United States Government had been for nearly six months carried on by the treasonable State officials, aided as far as possible by the conspiracy in the cotton-States.

The local State government of Missouri, thus broken by the hostility of Governor Jackson and subordinate officials, was soon regularly restored. It happened that the Missouri State convention, chosen, as already related, with the design of carrying the State into rebellion, but which, unexpectedly to the conspirators, remained true to the Union, had, on adjourning its sessions from March to December, wisely created an emergency committee with power to call it together upon any necessary occasion. This committee now issued its call, under which the convention assembled in Jefferson City on the 22d of July. Many of its members had joined the rebellion, but a full constitutional quorum remained, and took up the task of reconstituting the disorganized machinery of civil administration. By a series of ordinances it declared the State offices vacant, abrogated the military bill and other treasonable legislation, provided for new elections, and finally, on the 31st of July, inaugurated a provisional government, which thereafter made the city of St. Louis its official headquarters. Hamilton R. Gamble, a conservative, was made governor. He announced his unconditional adherence to the Union, and his authority was immediately recognized by the greater portion of the State. Missouri thus remained through the entire war, both in form and in substance, a State in the Union.

Nevertheless a considerable minority of its population, scattered in many parts, was strongly tinctured with sympathy for the rebellion. The conspiracy so long nursed by Governor Jackson and his adherents had taken

deep and pernicious root. An anomalous condition of affairs suddenly sprung up. Amidst a strongly dominant loyalty there smoldered the embers of rebellion, and during the whole civil war there blazed up fitfully, often where least expected, the flames of neighborhood strife and guerrilla warfare to an extent and with a fierceness not equaled in any other State. We shall have occasion to narrate how, under cover of this sentiment, the leaders of secession bands and armies made repeated and desolating incursions; and how, some months later, Governor Jackson with his perambulating State seal set up a pretended legislature and State government, and the Confederate authorities at Richmond enacted the farce of admitting Missouri to the Southern Confederacy. It was, however, from first to last, a palpable sham; the pretended Confederate officials in Missouri had no capital or archives, controlled no population, permanently held no territory, collected no taxes; and Governor Jackson was nothing more than a fugitive pretender, finding temporary refuge within Confederate camps.

KENTUCKY.

THE three States of Ohio, Indiana, and Illinois, forming McClellan's department, were bounded south of the Ohio River by the single State of Kentucky, stretching from east to west, and occupying at least four-fifths of the entire Ohio line. Kentucky was a slave State. This domestic institution allied her naturally to the South, and created among her people a pervading sympathy with Southern complaints and demands. Her geographical position and her river commerce also connected her strongly with the South. On the other hand, the traditions of her local politics bound her indissolubly to the Union. The fame of her great statesman, Henry Clay, rested upon his lifelong efforts for its perpetuity. The compromise of 1850, which thwarted and for ten years postponed the Southern rebellion, was his crowning political triumph. But Henry Clay's teaching and example were being warped and perverted. A feeblener generation of disciples, unable, as he would have done, to distinguish between honorable compromise and ruinous concession, undertook now to quell war by refusing to take up arms; desired an appeal from the battlefield to moral suasion; proposed to preserve the Government by leaving revolution unchecked.

The legislature, though appealing to the South to stay secession, and though firmly refusing to call a State convention, nevertheless protested against the use of force or

coercion by the General Government against the seceding States. John J. Crittenden took similar ground, counseling Kentucky to stand by the Union and correctly characterizing secession as simple revolution. Nevertheless he advised against the policy of coercion, and said of the seceded States, "Let them go on in peace with their experiment."* A public meeting of leading citizens at Louisville first denounced secession and then denounced the President for attempting to put down secession. They apostrophized the flag and vowed to maintain the Union, but were ready to fight Lincoln.† It makes one smile to read again the childish contradictions which eminent Kentucky statesmen uttered in all seriousness.

A people that have prospered beyond example in the records of time, free and self-governed, without oppression, without taxation to be felt, are now going to cut each other's throats; and why? Because Presidents Lincoln and Davis could not settle the etiquette upon which the troops were to be withdrawn from Fort Sumter.‡

This was the analysis of one. Another was equally infelicitous:

Why this war? . . . Because Mr. Lincoln has been elected President of the country and Mr. Davis could not be, and therefore a Southern Confederacy was to be formed by Southern demagogues, and now they are attempting to drag you on with them. . . . Let us not fight the North or South, but, firm in our position, tell our sister border States that with them we will stand to maintain the Union, to preserve the peace, and uphold our honor and our flag, which they would trail in the dust. . . . If we must fight, let us fight Lincoln and not our Government.§

The resolutions of the meeting were quite as illogical. They declared that

the present duty of Kentucky is to maintain her present independent position, taking sides not with the Administration, nor with the seceding States, but with the Union against them both; declaring her soil to be sacred from the hostile tread of either; and, if necessary, to make the declaration good with her strong right arm.||

The preposterous assumption was also greatly strengthened in the popular mind by the simultaneous publication of an address of the same tenor in Tennessee, from John Bell and others. He had been one of the four candidates for President in the election of 1860—the one for whom both Kentucky and Tennessee cast their electoral votes; and as the standard-bearer of the "Constitutional Union" party had in many ways reiterated his and their devotion to "the Union, the

Constitution, and the enforcement of the laws." The address distinctly disapproved secession; it condemned the policy of the Administration; it unequivocally avowed the duty of Tennessee to resist by force of arms the subjugation of the South.¶ What shall be said when men of reputed wisdom and experience proclaim such inconsistencies? All these incidents are the ever-recurring signs of that dangerous demoralization of public sentiment, of that utter confusion of political principles, of that helpless bewilderment of public thought, into which portions of the country had unconsciously lapsed.

Governor Magoffin of Kentucky and his personal adherents seem to have been ready to rush into overt rebellion. His official message declared that Kentucky would resist the principles and policy of the Republican party "to the death, if necessary"; that the Union had practically ceased to exist; and that she would not stand by with folded arms while the seceded States were being "subjugated to an anti-slavery Government." With open contumacy he replied to President Lincoln's official call, "Kentucky will furnish no troops for the wicked purpose of subduing her sister Southern States."** He applied to Jefferson Davis for arms, and to the Louisville banks for money, but neither effort succeeded. The existing legislature contained too many Union members to give him unchecked control of the public credit of the State. He was therefore perforce driven to adhere to the policy of "neutrality," as the best help he could give the rebellion. Nevertheless, he was not without power for mischief. The militia of Kentucky had recently been reorganized under the personal influence and direction of S. B. Buckner, who, as inspector-general, was the legal and actual general-in-chief. Buckner, like the governor, ex-Vice-President Breckinridge, and others, was an avowed "neutral" but a predetermined rebel, who in the following September entered the military service of Jefferson Davis. For the present his occupation was rather that of political intrigue to forward the secession of Kentucky, which he carried on under pretense of his formal and assumed instructions from the governor to employ the "State Guard," or rather its shadow of authority, to prevent the violation of "State neutrality" by either the Southern or the Northern armies.

The public declarations and manifestations in Kentucky were not reassuring to the people

north of the Ohio line. Governor Morton of Indiana wrote:

The country along the Ohio River bordering on Kentucky is in a state of intense alarm. The people entertain no doubt but that Kentucky will speedily go out of the Union. They are in daily fear that marauding parties from the other side of the river will plunder and burn their towns.*

Even after the lapse of some weeks this fear was not dissipated. General McClellan wrote:

The frontier of Indiana and Illinois is in a very excited and almost dangerous condition. In Ohio there is more calmness. I have been in more full communication with the people. A few arms have been supplied, and all means have been taken to quiet them along the frontier. Special messengers have reached me from the governors of Indiana and Illinois, demanding heavy guns and expressing great alarm. I sent Lieutenant Williams to confer with Governor Morton, to tell him that I have no heavy guns, and to explain to him the impropriety of placing them in position along the frontier just at the present time. I have promised Governor Yates some heavy guns at Cairo as soon as I can get them.

McClellan himself was not free from apprehension:

I am very anxious to learn the views of the General [Scott] in regard to western Virginia, Kentucky, and Missouri. At any moment it may become necessary to act in some one of these directions. From reliable information I am sure that the governor of Kentucky is a traitor. Buckner is under his influence, so it is necessary to watch them. I hear to-night that one thousand secessionists are concentrating at a point opposite Gallipolis. Cairo is threatened.†

He proposed, therefore, to reënforce and fortify Cairo, place several gunboats on the river, and in case of need to cross into Kentucky and occupy Covington Heights for the better defense of Cincinnati.

This condition of affairs brought another important question to final decision. The governor of Illinois had ordered the summary seizure of war material at Cairo, and President Lincoln formally approved it. Ordinary river commerce was more tenderly dealt with. Colonel Prentiss wrote:

No boats have been searched unless I had been previously and reliably informed that they had on board munitions of war destined to the enemies of the Government, and in all cases where we have searched we have found such munitions. My policy has been such that no act of my command could be construed as an insult, or cause to any State for secession.‡

But the threatening demonstrations from the South were beginning to show that this was a dangerous leniency. McClellan there-

fore asked explicitly whether provisions destined for the seceded States or for the Southern army should longer be permitted to be sent, § to which an official order came on May 8: "Since the order of the 2d, the Secretary of War decides that provisions must be stopped at Cairo."||

In reality matters in Kentucky were not quite so bad as they appeared to the public eye. With sober second thought, the underlying loyalty of her people began to assert itself. Breckinridge and his extreme Southern doctrines had received only a little more than one-third the votes of the State.¶ Mr. Lincoln was a Kentuckian by birth, and had been a consistent Whig; their strong clanship could not quite give him up as hopelessly lost in abolitionism. Earnest Unionists also quickly perceived that "armed neutrality" must soon become a practical farce; many of them from the first used it as an artful contrivance to kill secession. The legislature indeed declared for "strict neutrality," and approved the governor's refusal to furnish troops to the President.** Superficially, this was placing the State in a contumacious and revolutionary attitude. But this official action was not a true exponent of the public feeling. The undercurrent of political movement is explained by a letter of John J. Crittenden, at that time the most influential single voice in the State. On the 17th of May he wrote to General Scott:

The position of Kentucky, and the relation she occupies toward the government of the Union, is not, I fear, understood at Washington. It ought to be well understood. Very important consequences may depend upon it and upon her proper treatment. Unfortunately for us, our governor does not sympathize with Kentucky in respect to the secession. His opinions and feelings incline him strongly to the side of the South. His answer to the requisition for troops was in its terms hasty and unbecoming, and does not correspond with usual and gentlemanly courtesy. But while she regretted the language of his answer, Kentucky acquiesced in his declining to furnish the troops called for, and she did so, not because she loved the Union the less, but she feared that if she had parted with those troops, and sent them to serve in your ranks, she would have been overwhelmed by the secessionists at home and severed from the Union; and it was to preserve, substantially and ultimately, our connection with the Union that induced us to acquiesce in the partial infraction of it by our governor's refusal of the troops required. This was the most prevailing and general motive. To this may be added the strong indisposition of our people to a civil war with the South, and the apprehended consequences of a civil war within our State and among our own people. I could elaborate and strengthen all this, but I will leave the subject to your own reflection; with this only remark, that I think Kentucky's excuse

¶ The vote of Kentucky in 1860 was: Lincoln, 1364; Douglas, 25,651; Breckinridge, 53,143; Bell, 66,058. ["Tribune Almanac," 1861.]

is a good one, and that, under all the circumstances of the complicated case, she is rendering better service in her present position than she could by becoming an active party in the contest.*

In truth, Kentucky was undergoing a severe political struggle. The governor was constantly stimulating the revolutionary sentiment. The legislature had once more met, on May 6, being a second time convened in special session by the governor's proclamation. The governor's special message now boldly accused the President of usurpation, and declared the Constitution violated, the Government subverted, the Union broken. He again urged that the State be armed and a convention be called. It was these more radical and dangerous measures which the Union members warded off with a legislative resolution of "neutrality." So also the military bill which was eventually passed was made to serve the Union instead of the secession cause. A Union Board of Commissioners was provided to control the governor's expenditures under it. A "Home Guard" was authorized, to check and offset Buckner's "State Guard" of rebellious proclivities. Privates and officers of both organizations were required to swear allegiance to both the State and the Union. Finally, it provided that the arms and munitions should be used neither against the United States nor against the Confederate States, unless to protect Kentucky against invasion. Such an attitude of qualified loyalty can only be defended by the plea of its compulsory adoption as a lesser evil. But it served to defeat the conspiracy to assemble a "sovereignty convention" to inaugurate secession; and the progress of the Kentucky legislature, from its "anti-coercion" protest in January to its merely defensive "neutrality" resolutions and laws in May, was an immense gain.

From the beginning of the rebellion, Lincoln felt that Kentucky would be a turning weight in the scale of war. He believed he knew the temper and fidelity of his native State, and gave her his special care and confidence. Though Governor Magoffin refused him troops, there came to him from private sources the unmistakable assurance that many Kentuckians were ready to fight for the Union. His early and most intimate personal friend, Joshua F. Speed, was now an honored and influential citizen of Louisville. At Washington also he had taken into a cordial acquaintanceship a characteristic Kentuckian, William Nelson, a young, brave, and energetic lieutenant of the United States Navy. Nelson saw his usefulness, and perhaps also his opportunity, in an effort to redeem his State, rather than in active service on the quarter-deck. He possessed the social gifts, the free manners, the

impulsive temperament peculiar to the South. Mr. Lincoln gave him leave of absence, and sent him to Kentucky without instructions. At the same time the President brought another personal influence to bear. Major Anderson was the hero of the hour, and being a Kentuckian, that State rang with the praise of his prudence and valor in defending Sumter. On the 7th of May, Lincoln gave him a special commission, "To receive into the army of the United States as many regiments of volunteer troops from the State of Kentucky, and from the western part of the State of Virginia, as shall be willing to engage in the service of the United States,"† etc., and sent him to Cincinnati, convenient to both fields of labor. These three persons, Speed and Nelson at Louisville, and Anderson within easy consulting distance, formed a reliable rallying-point and medium of communication with the President. The Unionists, thus encouraged, began the formation of Union Clubs and Home Guards, while the Government gave them assurance of protection in case of need. Wrote General McClellan:

The Union men of Kentucky express a firm determination to fight it out. Yesterday Garrett Davis told me: "We will remain in the Union by voting if we can, by fighting if we must, and if we cannot hold our own, we will call on the General Government to aid us." He asked me what I would do if they called on me for assistance, and convinced me that the majority were in danger of being overpowered by a better-armed minority. I replied that if there were time I would refer to General Scott for orders. If there were not time, that I would cross the Ohio with 20,000 men. If that were not enough, with 30,000; and if necessary, with 40,000; but that I would not stand by and see the loyal Union men of Kentucky crushed. I have strong hopes that Kentucky will remain in the Union, and the most favorable feature of the whole matter is that the Union men are now ready to abandon the position of "armed neutrality," and to enter heart and soul into the contest by our side.‡

In a short time Nelson quietly brought five thousand Government muskets to Louisville, under the auspices and control of a committee of leading citizens. Wrote Anderson to Lincoln:

I had the pleasure to receive yesterday your letter of the 14th [May] introducing Mr. Joshua F. Speed, and giving me instructions about issuing arms to our friends in Kentucky. I will carefully attend to the performance of that duty. Mr. Speed and other gentlemen for whom he will vouch, viz., Hon. James Guthrie, Garrett Davis, and Charles A. Marshall, advise that I should not, at present, have anything to do with the raising of troops in Kentucky. The committee charged with that matter will go on with the organization and arming of the Home Guard, which they will see is composed of reliable men.§

* Unpublished MS.

† War Records.

‡ McClellan to Townsend, May 17, 1861. War Records.

§ Anderson to Lincoln, May 19, 1861. Unpublished MS.

Under date of May 28 Lincoln received further report of these somewhat confidential measures to counteract the conspiracy in his native State:

The undersigned, a private committee to distribute the arms brought to the State of Kentucky by Lieutenant William Nelson, of the United States Navy, among true, reliable Union men, represent to the Executive Department of the United States Government that members of this Board have superintended the distribution of the whole quantity of five thousand muskets and bayonets. We have been reliably informed and believe that they have been put in the hands of true and devoted Union men, who are pledged to support the Constitution of the United States and the enforcement of the laws; and, if the occasion should arise, to use them to put down all attempts to take Kentucky, by violence or fraud, out of the Union.*

The committee added that this had greatly strengthened the cause, that twenty thousand more could be safely intrusted to the Union men, who were applying for them and eager to get them, and recommended that this system of arming Kentucky be resumed and widely extended.†

The struggle between treason and loyalty in the Kentucky legislature had consumed the month of May, ending, as we have seen, by decided advantages gained for the Union, and attended by the important understanding and combination between prominent Kentucky citizens and President Lincoln whereby the loyalists were furnished with arms and assured of decisive military support. The Kentucky legislature adjourned *sine die* on May 24, and the issue was thereupon transferred to the people of the State. The contest took a double form: first an appeal to the ballot in an election for members of Congress, which the President's call for a special session on the 4th of July made necessary. A political campaign ensued of universal and intense excitement. Whatever the Union sentiment of the State had hitherto lacked of decision and boldness was largely aroused or created by this contest. The Unionists achieved a brilliant and conclusive triumph. The election was held on the 20th of June, and nine out of the ten Congressmen chosen were outspoken loyalists.

The second phase of the contest was, that it evoked a partial show of military force on both sides of the question. The military bill passed on the last day of the May session provided for organizing "Home Guards" for local defense. Whether by accident or design, Buckner's old militia law to organize the "State Guards" had required an oath of allegiance from the officers only. The new law

required all the members to swear fidelity to both Kentucky and the United States, and a refusal terminated their membership.‡ This searching touchstone at once instituted a process of separating patriots from traitors. The organization of Home Guards and the reorganization of the State Guards went on simultaneously. It would perhaps be more correct to say disorganization of the State Guards; for many loyal members took advantage of the requirement to abandon the corps and to join the Home Guards, while disloyal ones seized the same chance to go to rebel camps in the South; and under the action of both public and private sentiment the State Guards languished and the Home Guards grew in numerical strength and moral influence.

Meanwhile, as a third military organization, Kentuckians were enlisting directly in the service of the United States. Even before the already mentioned commission to Anderson, Colonels Guthrie and Woodruff had established "Camp Clay," on the Ohio shore above Cincinnati, where a number of Kentuckians joined a yet larger proportion of Ohioans, and were mustered into the three-months' service as the 1st and 2d regiments Kentucky Volunteer Infantry.§ These regiments were afterward reorganized for the three-years' service; and this time, mainly filled with real Kentuckians, were on the 9th and 10th of June remustered under their old and now entirely appropriate designations. About this time also State Senator Rousseau, who had made a brilliant Union record in the legislature, obtained authority to raise a brigade. On consulting with the Union leaders, it was resolved still to humor the popular "neutrality" foible till after the congressional election; and to this end he established "Camp Joe Holt," on the Indiana shore, where he gathered his recruits.|| The same policy kept the headquarters of Anderson yet in Cincinnati.

With the favorable change of public sentiment, and the happy issue of the congressional election, the Union men grew bolder. Nelson had all this while been busy, and had secretly appointed the officers and enrolled the recruits for four regiments from central Kentucky. At the beginning of July he threw off further concealment, and suddenly assembled his men in "Camp Dick Robinson," which he established between Danville and Lexington. His regiments were only partly full and indifferently armed, and the transmission of proper arms to his camp was persist-

* The report was signed by C. A. Wickliffe, Garrett Davis, J. H. Garrard, J. Harlan, James Speed, and Thornton F. Marshall; and also indorsed by J. F. Robinson, W. B. Houston, J. K. Goodloe, J. B. Brunner, and J. F. Speed.

ently opposed by rebel intrigue, threats, and forcible demonstrations. Nevertheless the camp held firm, and by equal alertness and courage secured its guns, and so far sustained and strengthened the loyal party that at the general election of the 5th of August a new legislature was chosen giving the Union members a majority of three-fourths in each branch.

Thus in a long and persistent contest, extending from January to August, the secession conspirators of Kentucky, starting with the advantage of the governor's coöperation, military control, and general acceptance of the "neutrality" delusion, were, nevertheless, outgeneraled and completely baffled. Meanwhile the customary usurpations had carried Tennessee into active rebellion; and now, despairing of success by argument and intrigue, and inspired by the rebel success at Bull Run, the local conspiracy arranged to call in the assistance of military force. On the 17th of August the conspirators assembled in caucus in Scott county,* and, it is alleged, arranged a three-fold programme: first, the governor should officially demand the removal of Union camps and troops from the State; secondly, under pretense of a popular "peace" agitation, a revolutionary rising in aid of secession should take place in central Kentucky; thirdly, a simultaneous invasion of rebel armies from Tennessee should crown and secure the work.

Whether or not the allegation was literally true, events developed themselves in at least an apparent conformity to the plan. Governor Magoffin wrote a letter to the President, under date of August 19, urging "the removal from the limits of Kentucky of the military force now organized and in camp within the State." In reply to this, President Lincoln, on August 24, wrote the governor a temperate but emphatic refusal:

I believe it is true that there is a military force in camp within Kentucky, acting by authority of the United States, which force is not very large, and is not now being augmented. I also believe that some arms have been furnished to this force by the United States. I also believe this force consists exclusively of Kentuckians, having their camp in the immediate vicinity of their own homes, and not assailing or menacing any of the good people of Kentucky. In all I have done in the premises I have acted upon the urgent solicitation of many Kentuckians, and in accordance with what I believed, and still believe, to be the wish of a majority of all the Union-loving people of Kentucky. While I have conversed on this subject with many eminent men of Kentucky, including a large majority of her members of Congress, I do not remember that any one of them or any other person, except your Excellency and the bearer of your Excellency's letter, has urged me to remove the military force from Kentucky, or to disband it. One other very worthy citizen of Kentucky did solicit me to have the augmenting of the force suspended for a time. Taking all the means within my reach to form a judgment, I do not believe it is the popular wish of Kentucky that this

force shall be removed beyond her limits, and with this impression I must respectfully decline to so remove it. I most cordially sympathize with your Excellency in the wish to preserve the peace of my own native State, Kentucky. It is with regret I search and cannot find in your not very short letter any declaration or intimation that you entertain any desire for the preservation of the Federal Union.

The other features of the general plot succeeded no better than Magoffin's application to Lincoln. Three public demonstrations were announced, in evident preparation and prompting of a popular rebel uprising in central Kentucky. Under pretense of an ovation to Vallandigham, an Ohio congressman and Democratic politician, who had already made himself notorious by speeches of a rebel tendency, a meeting was held in Owen county on September 5. On September 10 a large "peace" mass meeting was called at Frankfort, the capital, to overawe the newly assembled loyal legislature. Still a third gathering, of "States Rights" and "peace" men, was called at Lexington on September 20, to hold a camp drill of several days, under supervision of leading secessionists.†

The speeches and proceedings of these treacherous "peace" meetings sufficiently revealed their revolutionary object. They were officered and managed by men whose prior words and acts left no doubt of their sympathies and desires, and the most conspicuous of whom were soon after in important stations of command in the rebel armies. The resolutions were skillfully devised: though the phraseology was ambiguous, the arrangement and inference led to one inevitable conclusion. The substance and process were: Firstly, that peace should be maintained; secondly, to maintain peace we must preserve neutrality; thirdly, that it is incompatible with neutrality to tax the State "for a cause so hopeless as the military subjugation of the Confederate States"; fourthly, that a truce be called and commissioners appointed to treat for a permanent peace.

At the larger gatherings, where the proceedings were more critically scanned, prudence dictated that they should refrain from definite committal; but at some of the smaller preliminary meetings the full purpose was announced "that the recall of the invading armies, and the recognition of the separate independence of the Confederate States, is the true policy to restore peace and preserve the relations of fraternal love and amity between the States."

While these peace meetings were in course of development, the second branch of the plot was not neglected. In the county of Owen an

* "Danville Quarterly Review," June, 1862.

† "Danville Quarterly Review," June and September, 1862, pp. 245, 381, 385, and 388.

insurrectionary force was being organized by Humphrey Marshall. There was no concealment of his purpose to march upon Frankfort, where the legislature of the State had lately met, and by force of arms to scatter it and break up the session. Senator Garrett Davis of Kentucky related the attendant circumstances in a speech in the United States Senate:

I reached there to attend a session of the Court of Appeals on the very evening that it was said Humphrey Marshall was to make his incursion into Franklin county, and to storm the capital. Some members, especially secession members of the legislature, and some citizens of the town of Frankfort, and one or two judges of our Court of Appeals, left Frankfort hurriedly in the expectation that it was to be sacked that night by Humphrey Marshall's insurgent hosts. I myself, with other gentlemen, provided ourselves with arms to take part in the defense of the legislature and the capital of the State. We sent to Lexington, where there were encamped three to five hundred Union troops, who had been enlisted in the Union service for the defense of the legislature and the capital of our State, and had them brought down at 3 o'clock in the morning.*

As events progressed, both these branches of the plot signally failed. The peace meetings did not result in a popular uprising; they served only to show the relative weakness of the secession conspiracy. Such manifestations excited the Union majority to greater vigilance and effort, and their preparation and boldness overawed the contemplated insurrectionary outbreak. A decisive turn of affairs had indeed come, but armed conflict was avoided. Instead of the Union legislature being driven from the capital and dispersed, Vice-President Breckinridge, General Buckner, William Preston, and other leaders of the conspiracy soon after hurriedly left Kentucky with their rebellious followers and joined the Confederate army, just beyond the Tennessee border, to take part in the third branch of the plot,—a simultaneous invasion of Kentucky at three different points.

THE CONFEDERATE MILITARY LEAGUE.

It was constantly assumed that secession was a movement of the entire South. The fallacy of this assumption becomes apparent when we remember the time required for the full organization and development of the rebellion. From the 12th of October, when Governor Gist issued his proclamation convening the South Carolina legislature to inaugurate secession, to January 26, when Louisiana passed her secession ordinance, is a period of three and a half months. In this first period, as it may be called, only the six cotton-States reached a positive attitude of insurrection; and they,

as is believed, by less than a majority of their citizens. Texas, the seventh, did not finally join them till a week later. During all this time the eight remaining slave States, with certainly as good a claim to be considered the voice of the South, earnestly advised and protested against the precipitate and dangerous step. But secession had its active partisans in them. As in the cotton-States, their several capitals were the natural centers of disunion; and, with few exceptions, their State officials held radical opinions on the slavery question. With the gradual progress of insurrection therefore in the extreme South four of the interior slave States gravitated into secession. Their change was very gradual; perhaps principally because a majority of their people wished to remain in the Union, and it was necessary to wait until by slow degrees the public opinion could be overcome.

The anomalous condition and course of Virginia has already been described—its Union vote in January, the apparently overwhelming Union majority of its convention, its vacillating and contradictory votes during February and March, and its sudden plunge into a secession ordinance and a military league with Jefferson Davis immediately after the Sumter bombardment. The whole development of the change is explained when we remember that Richmond had been one of the chief centers of secession conspiracy since the Frémont and Buchanan campaign of 1856.

In the other interior slave States the secession movement underwent various forms, according to the greater obstacles which its advocates encountered. North Carolina, it will be remembered, gave a discouraging answer to the first proposal, and the earliest demonstrations of the conspiracy elicited no popular response. On the 9th and 10th of January an immature combination of State troops and citizens seized Forts Caswell and Johnston, but the governor immediately ordered their restoration to the Federal authorities. The governor excused the hostile act by alleging the popular apprehension that Federal garrisons were to be placed in them, and earnestly deprecated any show of coercion.† He received a conciliatory response from the War Department (January 15, 1861) that no occupation of them was intended unless they should be threatened.‡

Nevertheless conspiracy continued, and, as usual, under the guise of solicitude for peace; and in a constant clamor for additional guarantees, the revolutionary feeling was augmented little by little. There seems to have

‡ Holt to Ellis, Jan. 15, 1861. *Ibid.*

been great fluctuation of public opinion. A convention was ordered by the legislature and subsequently voted down at the polls. Commissioners were sent to the peace convention at Washington, and also to the provisional rebel Congress at Montgomery, with instructions limiting their powers to an effort at mediation. At the same time the North Carolina House passed a unanimous resolution that if reconciliation failed, North Carolina must go with the slave States. Next a military bill was passed to reorganize the militia, and arm ten thousand volunteers.* In reality it seems to have been the same struggle which took place elsewhere; the State officials and radical politicians favoring secession, and the people clinging to the Union, but yielding finally to the arts and intrigues of their leaders. When Sumter was bombarded and President Lincoln called for troops, the governor threw his whole influence and authority into the insurrectionary movement. He sent an insulting refusal to Washington,† and the next day ordered his State troops to seize Forts Caswell and Johnston. A week later (April 22) he seized the Fayetteville arsenal, containing 37,000 stands of arms, 3000 kegs of powder, and an immense supply of shells and shot. We may also infer that he was in secret league with the Montgomery rebellion; for the rebel Secretary of War at once made a requisition upon him, and he placed his whole military preparation at the service of Jefferson Davis, sending troops and arms to Richmond and elsewhere. It was a bold usurpation of executive power. Neither legislature nor convention had ordered rebellion; but from that time on the State was arrayed in active hostility to the Union. It was not till the 1st of May that the legislature for the second time ordered a convention, which met and passed an ordinance of secession on the 20th of that month, also formally accepting the Confederate States Constitution.

In the State of Arkansas the approaches to secession were even slower and more difficult than in North Carolina. There seems to have been little disposition at first, among her own people or leaders, to embark in the disastrous undertaking. The movement appears to have been begun when, on December 20, 1860, a commissioner came from Alabama, and by an address to the legislature invited Arkansas to unite in the movement for separation. No direct success followed the request, and the deceitful expedient of a convention to ascertain the will of the people was resorted to. All parties joined in this measure; the fire-eaters to promote secession, the Unionists to thwart it. An election for or against a convention took place February 18, 1861, resulting in

27,412 votes for and 15,826 votes against it; though as compared with the presidential election it was estimated that at least 10,815 voters did not go to the polls. At a later election for delegates the returns indicated a Union vote of 23,626 against a secession vote of 17,927. When the convention was organized, March 4, 1861, the delegates are reported to have chosen Union officers by a majority of six;‡ many of the delegates must have already betrayed their constituents by a change of front. Revolutionary tricks had been employed, the United States arsenal at Little Rock had been seized (February 8), and the ordnance stores at Napoleon (February 12), while no doubt the insurrectionary influences from the neighboring cotton-States were indefinitely multiplied. With all this the progress of the conspirators was not rapid. A conditional secession ordinance was voted down by the convention, 39 to 35. This ought to have effectually killed the movement; but it shows the greater aggressiveness and persistence of the secession leaders, that, instead of yielding to their defeat, they kept alive their scheme, by the insidious proposal to take a new popular vote on the question in the following August. Meanwhile there were a continual loss of Union sentiment and growth of secession excitement; and, as in other States, when the Sumter catastrophe occurred, the governor and his satellites placed the State in an attitude of insurrection by the refusal to comply with Lincoln's call for troops, and by hostile military organization. Thereafter disunion had a free course. The convention was hastily called together April 20, and, meeting on the 6th of May, immediately passed the customary ordinance of secession.

In no other State did secession resort to such methods of usurpation as in Tennessee. The secession faction of the State was insignificant in numbers, but its audacity was perhaps not equaled in any other locality; and it may almost be said that Governor Harris carried the State into rebellion single handed. The whole range of his plottings cannot, of course, be known. He called a session of the legislature January 7, 1861, and sent them a highly inflammatory message. A convention bill was passed and approved January 19, 1861, which submitted the question of "convention" or "no convention," and which also provided that any ordinance of disunion should be ratified by popular vote before taking effect. At the election held on February 9 there appeared on the vote for delegates a Union majority of 64,114, and

‡ "Annual Cyclopaedia," 1861, p. 22.

against holding the convention a majority of 11,875. This overwhelming popular decision for a time silenced the conspirators. The fall of Fort Sumter and Lincoln's call for troops afforded the governor a new pretext to continue his efforts. He sent the President a defiant refusal, and responded to a requisition from Montgomery for troops, being no doubt in secret league with the rebellion. In the revolutionary excitement which immediately followed, the governor's official authority, and the industrious local conspiracy of which he was the head, carried all before them. Since it was evident that he could not obtain a convention to do his bidding, he resolved to employ the legislature, which he once more called together. In secret sessions he was able to manipulate it at his will. On the 1st of May the legislature passed a joint resolution directing the governor to appoint commissioners "to enter into a military league with the authorities of the Confederate States," placing the whole force of the State at the control of Jefferson Davis, and on the 7th of the month a formal military league or treaty to this effect was signed.* Even after this the governor had difficult work. Eastern Tennessee was pervaded by so strong a Union sentiment that it continued to labor and protest against being dragged into rebellion contrary to its will, but the opposition was of little direct avail. Military organization had its grasp on the whole State, and citizens not in arms had no choice but to submit to the orders issued from Montgomery and Nashville.

It will be seen from this recital that the secession movement divides itself into two distinct periods. The first group, the cotton-States, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Florida, and Texas, took action mainly between the 12th of October, 1860, and February 4, 1861, a period of a little more than three and a half months. The second group, the interior slave States, Virginia, North Carolina, Tennessee, and Arkansas, was occupied by the struggle about three months longer, or a total of six months after Lincoln's election. So also these two periods exhibited separate characteristics in their formative processes. The first group, being more thoroughly permeated by the spirit of revolt, and acting with greater vigor and promptness, shows us the semblance at least of voluntary confederation, through its Provisional Congress at Montgomery. On the other hand, the action of the four interior slave States

was, in each case, with more or less distinctness at first, merely that of joining the original nucleus in a military league, in which the excitement of military preparation and allurements of military glory, not the consideration of political expediency, turned the scale.

There remained still the third group, consisting of the border slave States of Delaware, Maryland, Kentucky, and Missouri. The efforts of the conspirators to involve Maryland in secession have already been detailed, as well as the persistence they employed to gain control of Kentucky and Missouri. In these three States, however, the attempt failed because of the direct and indirect military support which the Government was able to give immediately to the Union sentiment and organizations. Had it been possible to extend the same encouragement and help to Arkansas and Tennessee, they also might have been saved. This becomes more apparent when we remember how quickly half of Virginia was reclaimed and held steadfastly loyal during the war. The remaining slave State, Delaware, was so slightly tainted with treason that her attitude can scarcely be said to have been in doubt; moreover, her geographical position threw her destiny inseparably with the free States.

The adhesion which we have described of the four interior slave States of Virginia, North Carolina, Tennessee, and Arkansas to the Confederate States at once wholly changed the scope and resources of the rebellion. It extended its territorial area nearly one-third, and almost doubled its population and resources. It could now claim to be a compact nation of eleven States, with a territory more than double the size of any European nation except Russia, and with a population of five and a half millions of whites and three and a half millions of blacks. It had a long sea-coast, several fine harbors, and many navigable rivers. It contained a great variety of lands, important diversities of climate, and a wide range of agricultural products. Its country was as yet sparsely inhabited, and was known to include very considerable mineral wealth, while its manufacturing capabilities were almost wholly untouched. The exultation and enthusiastic prophecies of the rebel chiefs at the successful beginning of their daring project were perhaps not unnatural when we reflect that their mischievous design and reprehensible cause had secured the support of such fair and substantial elements of national greatness and power.

THE GRAYSONS: A STORY OF ILLINOIS.*

BY EDWARD EGGLESTON,

Author of "The Hoosier Schoolmaster," "The Circuit Rider," "Roxy," etc.

XX.

LINCOLN AND BOB.

LAST by the "City Hotel" in Moscow stood a beech-tree, as we have said, and under this tree were two or three benches. This umbrageous spot was the cool and favorite loafing-place of the villagers, the trysting-place for making bargains or meeting friends. The ground was beaten by many feet to the hardness of a floor, and the village boys delighted to play marbles in this convenient spot. Their cries of "rounses," "taw," "dubs," "back licks," and "vent" might often be heard there before and after school hours. On one of these benches under the beech-tree Bob McCord had an interview with Tom Grayson's lawyer, according to appointment, on the day of Lincoln's return from court at Perrysburg.

"What's this about lynching Tom?" Lincoln inquired. "A lot of fellows rode into Perrysburg looking for him last Thursday night."

"Yes," said Bob, with a hearty chuckle; "I put 'em onto that air track myself. They wuz comin' down h-yer, but I made 'em think 't Tom wuz moved to Perrysburg."

"Are they going to try it again?" asked Lincoln.

"Not right off; they're sort-uh discairaged like. A few uv 'em wuz cocked up primed to come a Sunday night,—sech uv 'em as had n't gin it up arter ridin' over to Perrysburg,—but we fooled 'em ag'in. Pete Markham, the dep-itty sher'f, jes sidled over to camp-meetin' un let on 't he wuz a-lookin' fer somebody what knowed sumpin about a young feller weth red whiskers un one eye a leetle crossed-like. Magill, the clerk, went over to camp-meetin' un down onto the Run, un gin it out on the sly like zif he could n' keep it in, that they 'd dis-kivered the tracks uv a young feller from another k-younty weth red whiskers, un so on, that had done the shootin'. The story run like a perrary fire in a high wind un sort-uh mixed 'em up in the'r minds, like. I've got it fixed

so as they can't come down unbekownst to me; un ef wust *comes* to wust, w'y, I've got my eye sot onto a crowbar."

"A crowbar? What could you do with a crowbar, Bob?" asked Lincoln, with a puzzled contraction of the brows. "You would n't try to whale the whole crowd with it, would you?"

"W'y, Abe, I 'low, ef a rale tight pinch comes, to try a tussle weth that air jail. I don't know 's I could prize out one uv them air iron grates, but ef 't wuz to *come* to that, I 'd try to git Tom out uv harm's way. You say the word un I 'll find some way to let 'im out anyhow."

"No, no; don't do that. If he runs away he 'll be caught, and then he 'll be sure to be lynched, or hanged. Let me try the law first, and then it 'll be time enough to use crow-bars afterward if I fail. Do you know Dave Sovine?"

"When I see 'im. He's an ornery kind uv a cuss. I don't know 's he rickollecks me."

"So much the better if he does n't. You must get him to tell you all about the shooting—his story of it. Get him to tell more than was brought out at the inquest. Make him explain it, and find out if he's going to clear out before the trial."

"I heern tell 't he won't talk," said Bob. "The prosecutin' attorney's shut 'im up tight 'z bees-wax, they say."

Lincoln mused awhile. "If the prosecuting attorney has shut him up, you must open him. Contrive some way to get his story and find out what he means to do."

But it was not easy to encounter Dave in these days. Since he had acquired notoriety, as the only witness of the murder, he had been seized with an unprecedented diffidence, and kept himself out of public gaze. The boys about the village conjectured that he was "laying low for big game." Bob, however, had no objection to waiting for Sovine's coming. He liked this lurking for prey as a cat likes the watching at a mouse-hole. Besides, loafing of any sort suited Big Bob's genius. He could sit astride a barrel on the shady side of a grocery for hours with no sense of exhaustion. More than one day McCord had passed in

this way, when at last Dave Sovine came in sight, walking rather hurriedly and circumspectly toward the center of the village. Bob was in the middle of a hunting yarn which he was lazily telling to another loafer on the next barrel as he whittled a bit of hickory stripped from one of the hoops in front of him. Without betraying any excitement, he astonished his companion by bringing the story to an abrupt conclusion. Then dismounting from his barrel he sauntered across the street in such a way as to encounter Dave and to fall in with the direction in which the latter was going.

"Hot day!" Bob said, as he intersected Dave's course at an acute angle.

"Yes," answered the other.

"How 's the corn crap out your way?"

"Dunno," said Dave.

"Goin' to be in town long?" Bob persisted.

To this Dave made no response. He only turned off abruptly at the street-corner and left Bob behind.

"A feller might as well try to git sugar-water by tappin' a dead sycamore as to git anything out uv him," Bob said to himself, as he turned and took the road toward Hubbard Township.

As he walks homeward over the level prairie, which westwardly has no visible limit, Bob can only think of one way to persuade Sovine to talk, and that way is out of the reach of a man so impecunious as he. It is in vain that you thrust your great fists down into the pockets of your butternut trousers, Bob. You know before you grope in them that there is no money there. You have felt of them frequently to-day and found them empty; that is why you are going home thirsty. Money will not be persuaded to remain in those pockets. Nevertheless, all the way home Bob mechanically repeats the search and wonders how he will get money to carry out his plan. He might go to Lincoln, but he has an instinctive feeling that Lincoln is what he calls "high-toned," and that the lawyer might see an impropriety in his new plan. By the time he passes into his own cabin he knows that there is no other way but to get the money from Mrs. Grayson. No easy task, Bob reflects. Mrs. Grayson has never shown any readiness to trust Bob McCord's business skill.

But the next morning he takes the path to the Grayson house, walking more and more slowly as he approaches it, with head dropped forward and fists rammed hard into his pockets, while he whistles doubtfully and intermittently. Now and then he pauses and looks off scrutinizingly. These are the ordinary physical signs of mental effort in this man. In seeking a solution of any difficulty he follows his habits. He searches his pockets, he looks for tracks on the ground, he scans the woods.

He approaches the back of the Grayson house and is relieved to see Barbara alone in the kitchen, spinning.

"You see, Barb'ry," he said, as he half ducked his head in entering the door,—"you see, I'm in a fix."

"Won't you take a chair, Mr. McCord?" said Barbara, as she wound the yarn she had been spinning on the spindle and then stopped the wheel.

"No, I'm 'bleeged to yeh, I won't sed down," he replied, holding himself awkwardly as with a sense that indoors was not a proper or congenial place for him.

"Abe Lincoln sot me a sum un I can't no ways git the answer. He wanted me to git out uh that Dave Sovine a full account uh the lie he 's a-goin' to tell agin Tommy. But I can't git at it no ways. The feller won't talk to me. I 've thought uv ketchin' 'im by myself un lickin' 'im till 'e 'd let it out, but I 'm afeerd Abe 'u'd think ut that 'u'd flush his game afore he wuz ready to shoot. They ain't on'y jest one other way, un that 's to gamble weth Dave un coax his secret that away. But you see I 'm so uncommonly pore this year 't I could n't gamble at a cent a game 'thout he 'd trust me, un he would n't do that, I 'low."

After cross-questioning Bob a little, Barbara went into the sitting-room to her mother and Bob went to the outer door to breathe the open air while he waited. Barbara's mother positively refused to let go of a dollar of her money.

"D' you think, Barb'ry, 't I 'd let a shif'less kind uv a man like Big Bob have my money to gamble it away to that Sovine? No, I won't, and that 's all there is about it. Dave got a lot uv my money a-gamblin' with Tommy, an' he don't git no more uv it, that 's as shore as my name 's Marthy Grayson. They don't no good come uv gamblin' no ways, an' I can't bear that Dave Sovine should git some more uv our money, an' him a-tryin' to take Tommy's life."

Barbara stood still a minute to give her mother's indignation time to spend itself. Then she said:

"Well, poor Tom 'll have to die, I suppose, if you can't bring yourself to give Bob something to help Abraham to save him."

Mrs. Grayson stood for several seconds in self-conflict. Then she replied, "Well, Barb'ry, you always will have your way." Saying this she turned irresolutely toward her money-drawer. "I s'pose I 'd jest as well give up first as last. How much does Bob want?"

"Ten dollars 'll be enough, he thinks."

"Ten dollars! Does he think I 'm made out of money? Now, looky here, Barb'ry; I 'm not a-goin' to give him no sech amount."

Here's five, an' you tell him I won't spare another red cent."

Barbara took the silver pieces and went out to Bob.

Possessed of funds, Bob again set out to meet Dave. This time he could not wait for Dave to come to town, but boldly sallied out along the road past the house of Sovine's father. How could he wait? His pockets and his fingers were burned by the possession of so much hard cash. He felt obliged to take it out and count it once or twice, and to make an inspection of his pockets, which had a treacherous way of coming into holes under the strain of the big, muscular hands, so often rammed into their depths for purposes of meditation.

After walking past the Sovine house once or twice without encountering Dave, he sat down by a prairie brook, the gentle current of which slipped noiselessly along, dragging its margins softly against the grass, whose seed-laden heads at this season of the year hung over into the water, the matted blades lying prone upon the unbroken surface:—their tips all curved in one way mark the direction of the stream. Bob reclined on the low bank, where he was concealed from the road by a little yellow-twigged water-willow, the only thing within a mile or two that could be called a tree.

After a while Dave Sovine, sauntering, ruminating tobacco, and looking warily about, as was his way, came slowly along the road. When he caught sight of Bob he started, and paused irresolutely as though about to retreat. But seeing that Bob was looking at him, he recovered himself and came toward the reclining figure. Truth to tell, Dave was lonesome in retirement, and the sight of Bob had awakened a desire to talk.

"Have you seed a man go a-past h-yer weth a bag of wheat on his hoss?" queried Bob. "I'm a-waitin' h-yer to buy a half-bushel uv seed wheat fer fall sowin', f'om a feller what's a-comin' in f'om t' other eend uv the k-younty."

The story was impromptu, and Bob had no time to fill in details. Dave looked at him suspiciously, and only replied by shaking his head. By way of confirming his theory of the reason for his waiting, Bob idly jingled the silver coins in his pocket as he talked about the craps and the relative advantage of living in the timber, where you can raise winter wheat, or on the perrary. The sound of tinkling silver caught Dave's ear, as it was meant to.

"Play a game of seven-up?" said Dave, languidly.

"You're too good a hand fer me," answered Bob, with affected wariness.

"Oh! we'll only try small stakes. Luck's ag'inst me here lately"; and he pulled out a well-worn pack of cards without waiting for Bob to reply.

"No; ef I play, I want to play weth my k-yards," said Bob, who had a lurking hope of winning, notwithstanding Dave's reputation.

"I don't mind where the cards come from," said Dave, as he took Bob's pack, which was in a worse state than his own. Then, with habitual secretiveness, he said, "Let's go into the corn-field."

They crossed the road and climbed into the corn-field, seating themselves on the edge of the unplowed grassy balk between the corn and the fence. Here they were hidden and shaded by the broad-leaved horse and trumpet weeds in the fence-row. As was to be expected, Bob won rather oftener than he lost at first. After a while the luck turned, and Bob stopped playing.

"You'd better go on," said Dave.

"I d' know," answered Bob; "I'm about as well off now as I wuz in the beginnin'. I 'low I'd better hold up."

"Aw, no; let's go on. You might make sumpin'."

"Well," said Bob, running the ends of the cards through his fingers, "ef you'll tell me jest how that air shootin' tuck place, I will."

"I don't keer to talk about that," said Dave, with a nonchalant air, that hardly concealed his annoyance. "The prosecuting attorney thought I'd better not."

"I wuz n't at the eenques'," Bob pleaded, "un they's so many stories a-goin' that I want to h-yer it f'om you."

"Oh, I know *you*," said Dave. "You think I have n't got my eye-teeth cut yet. You've been a-layin' for me and I know what you are here fer. Do you think I don't see through your winter wheat? I know you're on Tom's side."

"Well, in course I am," said Bob, roused to audacity by his failure to deceive. "But it mout be jest as well fer you to tell me. Un maybe a leetle better. It mout be the very k-yard fer you to throw at this p'int in the game." And Bob's face assumed a mysterious and suggestive look as he laid his cards on the grass and leaned forward regarding Dave.

"Well," said Dave, in a husky half-whisper, letting his eyes fall from Bob's, "I'll tell you what: I don't really keer to have Tom hung, un I've been feelin' bad un wishin' I could git out uv it. Ef I had anuff money to go to New Orleans like a gentleman, I'd just light out some night, and give Tom a chance for his life."

"Maybe you mout git the money," said

McCord, picking up his cards. "But your story would n' hang him nohow, I 'low." Here Bob laid down half a dollar for a new game, and Dave covered it.

"Of course, if I stay he's *got* to swing," said Dave; and by way of proving this to Bob, he told his story of the shooting with some particularity, while he proceeded to win one half-dollar after another almost without interruption. "Now," he said, when he had told the story and answered Bob's questions, "you can see that 's purty tolerable bad. I sh'd think they'd ruther I'd clear out. An' if somebody'd give you a hundred dollars an' you'd let me play three or four games of poker with you some fine day I'd make tracks, an' the prosecuting attorney 'd have to get along without me."

By this time all of the five dollars that Barbara had furnished, except the last twenty-five-cent piece, had passed from Bob's reluctant hands to Dave Sovine's greedy pockets. This one quarter of a dollar Bob had prudently placed in the great pocket of his hunting-shirt, that he might have something to fill his stone jug with. For though he was devoted to the Graysons' side of the controversy, Bob McCord could hardly be called a disinterested philanthropist; and he held that even in serving one's friends one must not forget to provide the necessities of life.

"You're awful good on a game," said Bob, with a rueful face. "You've cleaned me out, by hokey; I 'll see ef I can't git you that hundred dollars, so 's you kin win it. But it 'll take time for the Widder Grayson to raise it, I 'low."

"Oh! they ain't no *partik'lar* hurry," said Dave, cheerfully counting over his winnings and stowing the silver about in his pockets as a ship-master might distribute his ballast. "Only if I don't get the money I 'll have to stay h-yer an' go to court, I guess." And Dave hitched up his trousers and walked off with the air of a man who has a master-stroke of business in view.

Lincoln came to town the next week and Bob told him the story, while Lincoln made careful notes of Dave's account of the shooting.

"He says ef Widder Grayson 'll let me have a hundred dollars, un I 'll let him play draw poker for it, he 'll light out fer parts unknown."

"Oh! he wants pay, does he?" And the young lawyer sat and thought awhile. Then he turned full on Bob and said:

"Could I depend on you to be in court at the trial without fail, and without my sending a subpoena?"

"Oh, I 'll be there un nowheres else," said Bob. "You need n't soopeeny me. I 'll come 'thout callin', foller 'thout tollin', un stan' 'thout hitchin'."

"Now if Dave Sovine comes after you for that hundred dollars, you 'd better put him off, as easy as you can. If we should buy him off we would n't want to give the prosecution time to fetch him back."

Bob thought he saw a twinkle in Lincoln's eye as he said this; a something in his expression that indicated more than he said. But though he looked at the lawyer curiously, he got no further light. That evening, as Bob passed the Grayson farm-house, he told the anxious Barbara something about it, and added: "Abe Lincoln's powerful deep. He's got sumpin ur nuther in 'is head 't I can't noways see into. I don't half believe 't 'e means to buy up that low-lived scoundrel arter all. He acts like a man that's got a deadfall all sot, un is a-tryin' to honey-fugle the varmint to git 'im to come underneath."

And Barbara took what comfort she could out of this assurance.

XXI.

HIRAM AND BARBARA.

To Barbara, indeed, the unrelieved apprehension and suspense of those long, hot, August days were almost intolerable. The frequent excursions to the Moscow jail, to carry some tidbits of home cookery, or some article for Tom's personal comfort, afforded a practical outlet to feeling and a relief from the monotony of passive suffering, but these journeys also brought sharp trials of their own to Barbara's courage and self-control. She might not betray to Tom or to her mother how much she suffered; it was for her to support both the one and the other.

Doubtless it would have been a relief could she have told Hiram Mason all the dreadful apprehensions that haunted her during the long, sleepless nights. But from the hour of Mason's entering the house he had avoided confidential relations with Barbara. Before and after school Hiram attended to all those small cares that about a farm-house usually fall to the lot of a man. Gentle and considerate to Mrs. Grayson and Barbara, he preserved toward the latter a careful reserve. He could not resume the subject discussed the evening they had peeled apples by the loom; it seemed out of the question that he should talk to Barbara of such things while her mind was engrossed with the curse of Cain impending upon her brother. He might have sought to renew the matter under cover of giving her a closer sympathy and a more cordial support in her sorrows, but he saw in her demureness only the same sensitive pride that had shrunk from his first advances; and he knew that this pride had been wounded

to the quick by the family disgrace. Moreover, to urge his claims as a lover at such a time would cover all his services to the family with a verdigris of self-interest; and he thought that such advances would add to Barbara's distress. In making them he would be taking an unfair advantage of the obligations she might feel herself under to him, and the more he thought of it the more he abhorred to put himself in such an attitude. So he daily strengthened his resolution to be nothing but Mrs. Grayson's next friend while he remained under her roof, and to postpone all the rest until this ordeal should be past.

In many ways he was able to be helpful to the two troubled women. He stood between them and the prying curiosity of strangers, answering all questions about the family, about Tom, and about the case. He was their messenger on many occasions, and he went with them every Saturday or Sunday to Moscow. But at other times Barbara saw little of him except at the table, and he avoided all conspicuous attentions to her. Even Mely McCord, though often at the house, could find no subject for chaff in the relations of the two. When the matter was under discussion among the young gossips at the Timber Creek school-house, Mely declared that she "did n' 'low they wuz anything in the talk about the master un Barbary,—he did n' pay Barbary no 'tention 't all, now 't 'e 'd got every chance." If Mason had been a person of less habitual self-repression he would not have been able to house his feelings so securely; but this man came of an austere stock; self-control was with him not merely habitual, it was hereditary.

Hiram had besides a battle of his own to fight. The Monday morning after the killing of Lockwood, as he went to the school-house, he was met in the road by Lysander Butts, next neighbor to the Graysons—a square-built man with a cannon-ball head. Butts was from the hill country of New Jersey, a man of narrow prejudices and great obstinacy.

"Looky here, Mr. Mason," he said, "d' you think now that a schoolmaster ought to take up for a rascal like Tom Grayson, that's a gambler, and I don' know what, and that 's killed another fellow, like a sneak, in the dark?"

"I have n't taken up for Tom any more than to want him to have fair play," said Mason. "But I thought that the poor old lady needed somebody to be her friend, and so I went there, and am going to do what I can for her."

"Well, I know the Graysons mighty well, first and last, this many a ye'r, and they 're all cut off of the same piece; and none of 'em is to be overly trusted, now you mind that."

"You have a right to your opinion," said

Hiram; "but I am Mrs. Grayson's friend, and that is my lookout."

"Mrs. Grayson's friend?" said Butts, with a sneer. "Mrs. Grayson, ainh? As if you could make me believe it was the mother you 're defending. It 's Barbary you 're after."

Mason colored as though accused of a crime. Then, recovering himself, he said: "It 's very impudent of you to be meddling, Mr. Butts. So long as I behave myself it 's none of your business." And he went on toward the school.

"None of my business, ainh? You 'll find out whose business it is mighty shortly," Butts called after Hiram.

The quarrel between the Buttses and the Graysons dated back to their first settlement in Illinois. Butts had regularly cut wild hay on the low-lying meadow between the two farms. Fond of getting something for nothing, he gave out among his neighbors that this forty acres was his own, but he put off entering it at the Land Office. When Tom Grayson's father entered his farm he found this piece blank and paid for it. From that time Butts had been his enemy, for there was no adjunct to a farm in the timber so highly prized as a bit of meadow. When once near neighbors in the country have quarreled their proximity is usually a guarantee that they will never be reconciled;—there are so many occasions of offense between people who must always be eating off the same plate. It was universally known that "the Buttses and the Graysons could n't hitch." Where two of their fields joined without an intervening road they had not been able even to build a line fence together; but each man laid up a rail fence on the very edge of his own land, and the salient angles of the two hostile fences stood so near together that a half-grown pig could not have passed between. This is what is called, in the phrase of the country, a "devil's lane," because it is a monument of bad neighborhood.

When Mason reached the school-house that morning Angeline Butts had her books and those of her younger brother and two younger sisters gathered in a heap, and the rest of the scholars were standing about her, while she did her best to propagate the family antagonism to the master. The jealousy of Lysander Butts's family had been much inflamed by Barbara's swift success in study. Angeline had never been able to get beyond the simple rules of arithmetic; her feeble bark had quite gone ashore on the sandy reaches of long division. The Buttses were therefore not pleased to have Barbara arrive at the great goal of the Rule of Three, and even become the marvel of the neighborhood by

passing into the mysterious realm of algebraic symbols. For Angeline's part she "could n't see no kind-uv good, noways you could fix it, in cipherin' with such saw-bucks." Figgers was good enough for common folks, she said, and all this gimcrack work with x's and y's was only just a trick to ketch the master. For her part she would n' fool away time settin' her cap for such as him, not if he was the only man in the world.

When Tom was arrested for murder, the Buttses felt that their day had come. Folks would find out what sort of people the Graysons were now; and what would become of all Barbary's fine match with the master? Hey? But when, on the very day after the shooting, Angeline came home bursting with indignation, that the master 'd gone and took up his board and lodging at the Graysons', and had put John Buchanan into his place for a day and gone off down to the jail with the Graysons, their exasperation knew no bounds. Butts rose to the occasion, and resolved to take his children out of the school. It is the inalienable right of the free-born American citizen to relieve his indignation by taking his children from school, and by stopping his newspaper. No man that countenanced murder could teach Butts's children.

When Mason entered the school-room after his encounter with the father he was not surprised to find the whole battalion of Butts infantry drawn up in martial array, while Angeline held forth to the assembled pupils on the subject of the master's guilt in countenancing Tom Grayson, and the general meanness of the whole Grayson "click," living and dead. When the auditors saw Hiram come in they fell away to their seats; but Angeline, pleased to show her defiance of the master, who could no longer punish her, stood bolt upright with her bonnet on until the school had been called to order. The younger Buttses sat down from habitual respect for authority, and the brother pulled off his hat; but Angeline jammed it on his head again, and pulled him to his feet. She might have left before the school began; but she preferred to have a row, if possible. So when the school had grown quiet, she boldly advanced to the space in front of the master's desk, with the younger and more timid Buttses slinking behind her.

"Mr. Mason, father's goin' to take me out of school," she said.

"So he told me."

"He wants us to come right straight home this morning."

"Well, you know the road, don't you?" said Hiram, smiling. "If he's in a hurry for you, I should have thought you might have been there by this time."

This reply set the school into an audible smile. Angeline grew red in the face, but the master was standing in silence waiting for her to get out, and the scholars were laughing at her. There was nothing more to be said, and nothing for it but to be gone or burst. In her irritation she seized her youngest sister, who was shamefacedly sneaking into Angeline's skirts, and gave her a sharp jerk, which only gave a fresh impulse to the titter of the scholars, and Angeline and her followers were forced to scuffle out of the door in confusion.

Lysander Butts was not a man to give over a struggle. Conflict was his recreation, and he thought he could "spite the master" not only by refusing payment for the tuition his children had already received, but by getting the Timber Creek district to shut Mason out of their school-house. There were those in the district who resented Mason's friendship for the Graysons, but they were not ready to go so far as Butts proposed. And in asking Buchanan to teach school for him a single day Mason had unwittingly made friends against the time of trouble; for the old schoolmaster now took the young man's part, and brought over to his side the three Scotch families in the district, who always acted in unison, as a sort of clan. Butts was at a serious disadvantage in that he lived beyond the limits of the Timber Creek district. "What does he want to come a-maiddlin' wi' us fer?" Buchanan demanded of the Timber Creekers. "Let 'im attaind to the beesness of his own destrict, and not go to runnin' his wee crookit daivils' lanes down here." Such arguments, with the help of Mason's good nature, his popularity with the pupils, and his inflexible determination to keep his own gait, caused the opposition to weaken and die out gradually without doing serious damage to the school.

To this favorable issue the friendly influence of the Albaugh family, who were outside of the district on the other side from Butts, contributed something. With Rachel Albaugh Mason became better acquainted through her interest in Tom's fate. She sought a conversation with the master almost every day to gain information about the case. The placidity of her face was not ruffled by solicitude, the glory of her eyes was not dimmed by tears. But interest in Tom's fate there surely was. It did not greatly matter to her whether Tom had committed the deed or not: in any case he was a bold and daring fellow who had lifted himself out of the commonplace, and who was proportionately interesting to Rachel's imagination.

But the people generally did not see things through the eyes of a romantic young woman. They were for the most part dead against Tom,

and the adverse tide set more and more strongly against him when the long August days had worn themselves away and September with its bursts of storm had come in. If Tom had shot Lockwood in a street affray there would have been a disposition to condone the offense, seeing there was "a girl in the case," a circumstance that goes for much in the minds of pioneer people; for girls and horses are two things accounted well worth fighting for in a new country. Some philosophers explain this by saying that both the one and the other are means of ascent in the scale of civilization. But the fact is, that new-country people set much more store by their horses and their sweethearts than they do by civilization, for which, in the abstract, they care but little. They also esteem courage very highly. But to shoot a man in the dark as Lockwood had been shot was cowardly, and cowardice was in itself almost ground enough for hanging a man.

This increased momentum in the popular feeling against Tom could not escape the knowledge of Mason, to whom people talked with some freedom, but he managed to conceal it from Barbara and Mrs. Grayson. His own situation indeed was becoming more and more difficult. He foresaw that the maintenance of his present attitude toward Barbara might soon become impossible. To be always near to her, and yet to keep himself so aloof, was more than even his nature would bear. Above all, to see her consumed by sorrow and to be afraid to speak the tenderest word of sympathy was torment. The very aspect of her suffering face set his nerves in a tremor; it became difficult for him to say good-morning to her with composure. There is the uncontrollable in all of us; and self-contained as Hiram was, he came upon the uncontrollable in himself at last.

He had reached the closing days of his school term, though it yet lacked a fortnight of the September "court week" at Moscow. It was his purpose to remain and see the Graysons through their trouble: what would become of his own trouble, when Tom's fate should have been settled one way or the other, he could not foretell. And he was, moreover, filled with the worst forebodings in regard to the issue of the trial. He came home from school a little earlier than usual on the last day but one of his school session, and fearing to trust himself too much in Barbara's presence, he had gone past the house directly to the barn, to do those night and morning things which are classed as "chores," or "choores," according to the accent of the region in which you chance to hear the word. On entering the barn he was surprised to find Barbara sitting on the "draw-horse" or

shaving-bench. She had fled to the threshing-floor, with the belief that she was seeking for eggs, but really to find relief in tears that she could not shed in the house without opening the great deep of her mother's sorrows. She had remained longer than she intended, weeping heartily, with no witness but the chattering swallows in the rafters above, and old Blaze-face, who looked placidly at her from behind the bars of his hay-rack.

The sight of Barbara alone in the dusky light of the threshing-floor awakened in Hiram an inexpressible longing to tell her of all there was in his heart; the vision of Barbara in tears was too much for his resolution. He went forward and sat down by her; he involuntarily put his right arm about her shoulders, and drew her to him in a gentle embrace; he took her handkerchief in his left hand and wiped the tears from her cheeks and said softly:

"Dear Barbara, now don't cry any more; I'm so sorry for you."

Barbara sat still; whether displeased or not Hiram could not tell, for she did not say a word. She neither accepted nor refused his embrace. Hiram felt a powerful impulse to say more, but he suddenly remembered that Barbara's grief had no relation to him, and it seemed hateful that he should intrude his own feelings and hopes upon her in her all-engrossing sorrow, and he feared to offend again a pride so sensitive as he knew hers to be. But he allowed himself once more to draw the silent Barbara toward him with a gentle pressure; then, with a resolute effort at self-control, he climbed into the mow to pitch down some hay for old Blaze. This duty he performed as quickly as possible, blindly intent on returning to Barbara once more. But when he came down again Barbara had gone, and he sat down on the draw-horse where she had been, and remained there long, all alone but for the swallows flitting in and out through the openings between the lower ends of the rafters, and gossiping from one mud-built nest to another. In this time he asked himself questions about his conduct in the difficult days yet to come, and tried to reproach himself for the partial surrender he had made to his feelings; though now he had given so much expression to his affection, he could not for the life of him repent of it.

If he had known how much strength this little outbreak of sympathy on his part had given to Barbara, his conscience would have been quite at ease. Even Mrs. Grayson was sustained by the girl's accession of courage. In the darkest days that followed, Barbara liked to recall Hiram's voice soothing

her, and begging her not to weep; and with blushes she remembered the pressure of his gentle embrace about her shoulders. This memory was a check to the bitterness of her grief. But Hiram had lost confidence in himself. There were yet two more weeks to be passed, and unless he should desert Barbara in her trouble, he would have to spend these weeks in unceasing conflict.

The next day was the last of the school-term, and according to immemorial usage, the last Friday afternoon of a school-term was spent in a grand spelling-match, in which others than the regular pupils of the school were free to engage. It was while this orthographical scrimmage was going on that the county clerk, Magill, sprucely dressed, and ruddy-faced as ever, rode up to the school-house. He spent many of his days in riding about the county, palavering the farmers and flattering their wives and daughters, and, by his genial Irish manners, making friends against the time of need. Who could tell whether it might not also be worth while to make friends with the grown-up and growing-up pupils of the Timber Creek school; there would be elections after these boys came to vote. Besides, he remembered that Rachel Albaugh was one of Mason's post-graduate scholars, and it was not in such a connoisseur of fine women to miss an opportunity of seeing the finest in the county. So he went in and sat for an hour on the hard bench with his back against the stone jamb of the great empty fire-place, and smilingly listened to the scholars wrestling with the supreme difficulties of Webster's Elementary; such, for example, as "incomprehensibility," and other "words of eight syllables accented on the sixth." By the time the spelling-match was over and the school was ready to be dismissed he had evolved a new plan relating to his own affairs. In making friends and electioneering no one could excel Magill; but for attending to the proper work of his office he had neither liking nor aptitude, and the youth he kept there, though good enough at building fires and collecting fees, was not competent to transcribe a document. The records were behind, and he needed some one to write them up. He was too prudent to take into the office any man who in after years could use the experience that might be gained and the knowledge of his own dilatory habits that might be acquired there to supplant him. It occurred to him now that it would be a good stroke to engage Mason, who was not likely ever to be a resident of the county, and who could therefore never become a rival.

While these thoughts were in Magill's

mind, Hiram was indulging in a few words of that sort of sentiment to which schoolmasters are prone when the parting time comes. When the children were dismissed they formed themselves into two rows on the outside of the school-house door, according to an antique and, no doubt, Old-World custom still lingering in some rural places at that time. When the master made his exit the boys were on his right and the girls were on his left,—perhaps because of Eve's imprudence in the garden of Eden. Between the two rows Hiram marched slowly, with a quizzical look on his face, as the boys, to the best of their knowledge and ability, bowed to him, and the girls, with an attempt at simultaneousness, dropped "curchies" of respect. Magill stood in the door and smiled to see some of the boys bend themselves to stiff right angles on their middle hinges, while others grinned foolishly and bobbed their heads forward or sidewise, according to the string they chanced to pull. The performances of the other row were equally various; some of the girls bent their knees and recovered themselves all in one little jerk, while others dropped so low as to "make tubs" of their dress-skirts. When these last honors had been paid, the scholars broke ranks and started for their homes.

As Magill put one foot into the stirrup he said: "Mason, how would yeh like to come down to Moscow an' help me write up me books? I 'm a good dale behind; an' ef you like to come for a wake or two an' help me to ketch up, I 'll give yeh four bits a day an' yer board at the tavern."

Hiram's finances were so straitened that this offer of fifty cents a day was very welcome to him. How could he serve the Graysons better than to be where he could see Tom every day, and look after his interest in any contingency that might arise? This and the recollection of his embarrassing situation in the Grayson household quickly decided him; and as the condition of Magill's office was distressing, he promised to come to town in time to begin by 9 o'clock the next morning.

That evening he explained the matter to Barbara and her mother at the supper table; and before bedtime he had arranged with Bob McCord to look after the "critters," as Bob called them. The next morning, Hiram was off by daybreak. Bob McCord took him half-way with old Blaze,—for the rest, he "rode shank's mare," as the people say,—and by 9 o'clock he was trying to thread the labyrinth of confusion in Magill's office.

To Barbara it seemed the greatest good fortune to have Mason near to Tom, but the

table was intolerably lonely when only two sorrow-smitten women sat down together.

XXII.

THE FIRST DAY OF COURT.

THE eventful morning of the opening of the "fall term" of the court at Moscow came at length. Mrs. Grayson again put her house into the care of her neighbor Mely McCord, and she arranged that Bob McCord should stay at home so as to feed the cattle that night and the next morning. It was thought that Tom's trial would take place on the second day. Mrs. Grayson and Barbara drove into Moscow early on the first day of court that they might give Tom all the sympathy and assistance possible.

On that very first forenoon the grand jury heard such fragments of evidence as the public prosecutor thought necessary to bring before them, and found an indictment against Thomas Grayson, Junior, for murder in the first degree. In the prevailing state of public opinion a true bill would almost have been found if no evidence had been before them. Delay in such cases was not to be thought of in that time of summary justice; dilatory postponements were certainly not to be expected in a court presided over, as this one was, by Judge Watkins. He was a man approaching sixty years of age, with a sallow, withered face; a victim to hot biscuit and dyspepsia; arbitrary and petulant, but with deep-set, intelligent black eyes. Though his temper was infirm, his voice crabbed, and his administration of justice austere and unrelenting, he was eminently just, and full of the honorable if somewhat irascible pride of a Virginian with a superstitious reverence for his "family." Judge Watkins came of an ancestry who were famous only for courageously holding up their heads and doing nothing that they considered unworthy of gentlemen. Their greatest pride was that they had always been proud. The judge's coat hung loosely on his frame, and his trousers were generally drawn up in wrinkles so as to show the half of his boot-legs. His garments were, moreover, well-worn and rather coarse; like his planter ancestors, he never fancied that dress could add anything to the dignity of a gentleman. The substantial distinction of a gentleman, in his estimation, consisted in being of a "good family," and in preferring to lose one's life rather than to lie, and to take another man's life rather than to suffer the reproach of falsehood or cowardice. It was characteristic of a Virginian of this type to have something like a detestation for clothes, except in so far as they served for decency and warmth; all the great differ-

ence between a respected gentleman and a despised fop lay in this fierce contempt for appearances. Judge Watkins left fine coats and gold watches for those who needed such decorations; he clothed himself in homespun and family pride.

When the indictment was read, the judge, looking from under his overhanging, grizzled eyebrows, said, "When can we try this case?" The counsel on both sides knew that he intended to dispatch this disagreeable business promptly. As he put the question, Judge Watkins looked first at Allen, the prosecuting attorney, and then at Lincoln.

"We are ready, your Honor," said the prosecuting attorney, a little man with a freckled face and a fidgety desire to score a point on every occasion. "I hope there'll be no delay, your Honor. The defense knew six weeks ago that a true bill would be found. They've had time enough to prepare, and I hope we shall be able to go on."

The judge listened impatiently to this, with the air of a man who has heard so much clap-trap that it has become nauseous to him. Indeed, before Allen had completed his little speech Judge Watkins had turned quite away from him and fastened his deep-set eyes on young Lincoln, who rose to his feet without succeeding in getting himself quite straight,—this was always a matter of time with him,—and said in a grave, half-despondent way:

"Your Honor, we are ready."

"I'll set the case for to-morrow, then," said the judge, and added in a sharper key, "Sheriff, command silence!" This last injunction was prompted by an incontinent rustle of interest in the court-room when the time for the murder trial was fixed for the next day. The judge's high-strung, irascible nerves, and his sense of the sacred dignity of his court, made him take offense at the slightest symptom of popular feeling.

The sheriff, who sat at the judge's left a little lower than the judge, now stood up and rapped with a mallet on the plank desk in front of him, and cried lustily, "Silence in court!"

And all was still again.

The judge's dignity would not admit of his addressing the commonalty, who, since they were neither members of the bar, court officers, witnesses, nor criminals, were beyond official recognition, but he said to the sheriff in a severe tone:

"Sheriff, you will arrest any person who makes any kind of disturbance in the court."

Then the business of the court went on. One after another of the spectators, whose interest was centered in the next day's session, rose and tip-toed softly out of the room.

They did not all go at once, nor did any one of them go noisily. The judge had been known to fine a man for treading heavily, and those who wore squeaking boots were in misery until they were quite clear of the door.

XXIII.

BROAD RUN IN ARMS.

THE popular imagination had made Tom into something monstrous. Visitors to the village went to the jail window to look at him, as one might go to look at a wild beast. Confinement, solicitude, and uncertainty had worn upon him. He shrank nervously into the darker corners of the jail to avoid observation. His mind was a very shuttlecock between the battledores of hope and fear. He knew no more than the public of the purposes or expectations of his lawyer. All that Lincoln would say to Tom or his friends was that the case was a difficult one, and that it was better to leave the line of defense wholly to himself. But in proportion as Tom's counsel was uncommunicative about his plans rumor was outspoken and confident, though not always consistent in its account of them. It was reported that Tom was to plead guilty to manslaughter; that Lincoln would try to clear him on the ground of justifiable homicide in self-defense; and that the lawyer had found a man willing to swear that he was in company with Tom on another part of the ground at the very time of the shooting. In any case, it was decided that Lincoln would move for a change of venue, for it was well understood that in Moscow the accused did not stand "a ghost of a chance."

As the time of the court session drew on, a new and more exciting report had got abroad. It was everywhere said that Dave Sovine had been bought off, and that he was to get his money and leave the country in time to avoid testifying. How the story was set a-going, or who was responsible for it, no one could tell. Dave Sovine's conferences with Bob McCord may have raised surmises, for as the time of the trial approached, Dave grew more and more solicitous to get the hundred dollars and be off. He even hinted to Bob that he might refuse to accept it, if it did not come soon. Bob McCord had his own notions about the report. He thought that either Sovine had incontinently let the matter out, which was hardly probable, or that Abe Lincoln for some reason wanted such a belief to be spread abroad. Secretive and tricky as Bob was, there was a finesse about Lincoln's plans which he could not penetrate, and which

led him more than once to remark that Abe was "powerful deep for a young feller." Whether the rumor was launched for a purpose or not, it had had the effect of waking up Allen, the public prosecutor, who put a watch on Sovine's movements, and gave his chief witness to understand that any attempt of his to leave the country, by night or day, would bring about his immediate arrest.

The story that Sovine had been bought off produced another result which could not have been desired by either of the lawyers: it fanned to a blaze the slumbering embers of Broad Run. Jake Hogan's abortive expedition to Perrysburg had left resentment rankling in his manly bosom. He had reluctantly given over the attempt to redeem himself by making a raid on Moscow the Sunday night following, when Deputy Sheriff Markham had pretended to look up a hypothetical wall-eyed, red-whiskered man, who was believed to have had some reason for killing George Lockwood. It was, indeed, only by degrees that Broad Run came to understand that its dignity had been again trifled with. The first result of its indignation was that the Broad Run clan, attributing to Sheriff Plunkett all the humiliation put upon it, had unanimously resolved to compass his defeat at the next election. Plunkett, having heard of this, promptly took measures to avert the defection of his good friends on the Run. Markham, as the principal author of the difficulty, was dismissed from his place of deputy on some trifling pretext. It did not cost Sheriff Plunkett serious pain to let him go; Markham was becoming too conspicuous a figure. It is the way of shrewd small men to cut down in time an apprentice who is likely to overtop the master. Then Plunkett told his brother-in-law to go out to Broad Run and explain things. Greater diplomatists than he have prepared to make use of irresponsible ambassadors when they had that to say which it might be necessary to repudiate. The brother-in-law was one of those men who like to take a hand in local politics, not for the sake of holding office themselves, but for the pleasure of intrigue for its own sake. He first sought Jake Hogan at his cabin, and sat and whittled with him at his wood-pile in the most friendly way, laughing at Jake's lank jokes, flattering his enormous self-love, and by every means in his power seeking to appease Hogan's wrath against the sheriff. The sheriff had n't anything to do with running Tom off after the inquest, said the envoy,—Markham had done that. It was Markham who had peddled around the story of the man with red whiskers. Markham had got too big-feeling for his place. The sheriff saw that Markham was against the Broad Run boys, and so he

put him out — dropped him like a hot potato, you know.

"Just consider," the brother-in-law urged, "how much Plunkett's done for the boys. He's refused tee-totally to let Tom be taken to Perrysburg. Plunkett ain't going to be dictated to by rich men like ole Tom Grayson. He knows who elected him. And he don't feel obliged to protect a murderer after the coroner's jury says he's guilty."

"They's been talk of his shootin' if any reg'laters come around," said Jake.

"*Him* shoot?" answered the brother-in-law. "He's done everything he could not to put out the boys, and what 'u'd 'e shoot for? He ain't anxious to have the job of hangin' Tom Grayson. He's heard tell of sheriffs, 'fore now, that's felt themselves ha'nted as long 's they lived, because they 'd hanged a man. He ain't goin' to fight for the privilege of hangin' Tom, and he ain't the kind to do anythin' brash, and he ain't ag'inst good citizens like the boys on the Run — depend on that. Of course," — here the brother-in-law picked up a new splinter and whittled it cautiously as he spoke, — "of course you know 't the sheriff's give bonds. He's got to make a show of defending his prisoner. He's took 'n oath, you see, 'n' people expect him to resist. But if a lot of men comes, what can one man do? S'posin' they wuz to tie his hands, and then s'pose they was to say if he moved they 'd shoot. What *could* he do?"

The envoy stopped whittling and looked at Jake, giving the slightest possible wink with one eye. Jake nodded his head with the air of a man who is confident that he is not such a fool as to be unable to take a hint enforced by half a wink.

"What does 'n oath amount to with a pistol at your head?" the brother-in-law inquired; "an' what's the use of bonds if your hands are tied? You can *talk* strong; that don't hurt anybody."

Jake nodded again, and said, "In course."

"If you was to hear about the sheriff's sayin' he 'd ruther die than give up his prisoner, you can just remember that he's *got* to talk that way; he's under bonds, and he's sworn in, and the people expect him to talk about doin' his dooty. But you're too old a hand to set much store by talk."

"Well, I 'low I am," said Hogan, greatly pleased that his experience and astuteness were at length coming in for due recognition.

Then when Jake was pretty well mollified, the brother-in-law adjourned himself and Jake to the grocery, where he treated the crowd, and in much more vague and non-committal terms let all the citizens that resorted thither

understand that Sheriff Plunkett was their friend, and that Pete Markham was the friend of the rich men and the lawyers. But he took pains to leave the impression that Tom would certainly meet his deserts at the hands of the court, for the sheriff desired to avoid the embarrassment of a mob if he could.

The sweetness of Jake Hogan's spirit had been curdled by his disappointment and reverses, but these overtures from the sheriff to him as a high-contracting power were very flattering and assuring. When, a little later, the startling intelligence reached that center of social and intellectual activity, the Broad Run grocery, that Dave Sovine had been bought off, Broad Run was aroused, and Jake Hogan left off sulking in his tent and resumed his activity in public affairs.

"Did n't I tell you," he asked, leaning his back against the counter and supporting himself on his two elbows thrust behind him, while one of his legs, ending in a stogy boot, was braced out in front of him, "you can't hang the nephew 'v a rich man in such a dodrotted country as this yer Eelenoys? Dave Sovine's bought off, they say, by an ornery young lawyer un that air Bob McCord." Jake was too prudent to apply any degrading adjectives to a man of Bob's size and renown. "Dave 'll light out the day afore the trial with rocks in his pockets, un that air young coward 'll git clean off. Where's yer spunk, I 'd like to know? 'F you 're go'n' to be hornswoggled by lawyers like that air long-legged Abe Lincoln, un rich men like ole Seven-per-cent Tom Grayson, w'y, you *kin*, that's all."

Jake, with his head thrown forward, looked sternly around on the group about him, and they seemed to feel the reproach of his superior aggressiveness. Bijy Grimes was rendered so uneasy by Jake's regard that he shut his mouth; and then, not knowing what better to do, he ventured to ask humbly, "What kin we do about it, Jake?" letting his mouth drop open again in token that he waited for a reply.

"Do?" said Jake, contemptuously. "W'y, chain-lightin', Bijy, what a thing, now, to ax! Show me two dozen, ur even *one* dozen, men that 'll stan' at my back tell the blood runs, un I 'll show 'em 't folks can't take a change of venoo out-uh the k-younty that knows all about the rascality into one that don't. I 'll show 'em how to buy off witnesses, un I 'll larn these yer dodrotted lawyers un rich men how to fool weth the very bone un sinoo uv the land."

Notwithstanding the natural love of these men for a little excitement, they had been rendered somewhat unresponsive by Jake's failures. The most of them thought it best to go to town on the day of the trial and see

ZEKE AND S'MANTHY'S OLDEST SON.

how it would come out. But at 6 o'clock in the evening of the first day of court, Lew Baker, a farmer from the river valley beyond the Run, rode past the door of the grocery on his way home, and said a collective "Howdy" to the three or four who stood outside. Bijy Grimes, who was one of them, came out towards the middle of the road heading off the traveler.

"Hello, Lew! Any nooze about the trial?" he said, dropping his lower jaw from between his fat infantile cheeks and waiting for a reply, while the rest of the group moved up to hearing distance.

"Well, yes," said Baker, pulling up his horse and swinging himself round in the saddle so as to bring the most of his weight on the right stirrup, while he rested his left elbow on his

left knee and his right hand on the horse's mane. "I heern tell, jest as I come away, that Dave what-ye-may-call-'im, the witness, had sloped, liker 'n not. He hain't been seed aroun' for a right smart while, un they say he's gone off to New Orleans ur the Injun country. Moscow 's stirred up about it."

"Tu-lah!" said Bijy. "They 'low he 'll be got off, don't they?"

"They 're shore sumpin 's fixed, fer the young feller's lawyer hain't soopeenied a derned witness."

"Tu-lah!" said Bijy. "Is that a fack?"

"Shore 's shootin', they say. He 's to be got off somehow, I s'pose."

"Tu-laws-a-massy!" broke out Bijy; and turning to his fellow-loafers he said, "That 'll rile Jake purty consid'able, now won't it?"

It did stir up Jake when he heard of it. He promptly set to work to form a company to descend at once on Moscow and take the case out of the hands of the dodrotted lawyers. He could not at so late an hour get together more than twenty or twenty-five men from Broad Run and the regions within warning distance. Some of these joined him only because they could not endure to have anything very exciting take place in their absence: it would entail the necessity of their hearing for the rest of their lives the account given of the affair by the participators, who would always value themselves on it. Some of the larger boys, whose aid had been rejected in the previous excursion because they were not accounted mature enough for such public responsibilities, were now admitted: the company would be small, and a boy is better than nobody in a pinch.

(To be continued.)

S'manthy's oldest son, a tow-headed fellow of sixteen, was one of these, and he was sent over the hill to warn Zeke Tucker, who was still at Britton's, a mile away from the borders of what was distinctively called "the Run Neighborhood."

The September twilight was already fading when the lad arrived and communicated his message to Zeke, who was perched on the top rail of a fence, for rest and observation after his day's work. Mrs. Britton was making the house over-warm just now, and Zeke naturally preferred the fresh air. He was notified that the start was to be made three hours after dark, so as to have time to get home before dawn. He promised to come "jest as soon as possible," and sent word to Jake not to go without him, hoping to delay the expedition by this means.

Edward Eggleston.

THE PERSONALITY OF LEO XIII.

LEO XIII. is described by the Italian publicist Bonghi as "one of the most finely balanced and vigorous of characters." Without the brilliancy or the geniality of Pius IX., which attracted even his enemies to him personally, he has qualities which many Catholics believe of greater usefulness in the present time. He is little of an orator, but much of an author. He uses the pen *urbi et orbi* (to the city and to the world). He teaches by encyclicals; his predecessor taught by allocutions. To the culture of Leo X. he unites the spirituality of Pius IX. He possesses all that is good in the spirit of the Renaissance without that mixture of paganism which almost put the classics above the Scriptures and valued a variation in a line of Horace as much as the Gospel of St. John. He never forgets the weight of his burden as the spiritual ruler in matters of faith and morals of the Catholic world. When he speaks in his encyclicals, which are models of classic Latinity, when he teaches *ex cathedra* on subjects of faith or of those principles which touch faith, being of Christian morality, the elegant graces of the past are forgotten and his words flow solemnly, gravely, with such force that even those who reject him as a teacher recognize his knowledge, broad and deep, of the Scriptures, and his ardent desire for the welfare of society.

Joachim Vincent Raphael Louis Pecci was born on March 2, 1810, at Carpineto,—Carpineto Romagna, to be accurate. His brother, Cardinal Pecci, calls it "an eagle's nest." It is placed high in the Monte Lepini, in the Volscian range. Here, in this aerie-like town, much out of the course of the ordinary traveler, stands the country house of the Pecci family, its outlines softened by the boughs of well-grown trees. Carpineto is still, in appearance, a medieval town, and even the lumbering stage-coach hurrying through its streets, ancient as that vehicle is, seems painfully modern. The Pecci are of Siennese origin. The mother of Leo XIII. was Anna Prosperi Buzi, a descendant of a famous Volscian family. Count Domenico, his father,—of a race which had been forced to flee from Sienna for having taken sides with the Medici,—fought for a time under Napoleon I. But while Napoleon held Pius IX. in his clutches, Count Domenico lived quietly in his home at Carpineto, little dreaming that his son was to be the successor of the imprisoned Pope.

Vincent Pecci, as he was called during his mother's life, spent a happy childhood in "the eagle's nest," for he was the youngest of six children,—four boys and two girls,—and the memories of that peaceful time permeate his poetical work. Like most boys of his class, he was put in the care of the Jesuits. In their establishments at Viterbo and Rome he showed a marked taste for the classics. He resolved to be a priest. He did not allow himself, in

FROM A PHOTOGRAPH OF PAINTING BY LENBACH, IN MUNICH.

Leo XIII.

POPE LEO XIII.

spite of his bad health, many hours of rest. His life was absorbed in those studies which his friend Pope Leo XII. had done so much to revive in Rome.

In the Divinity School of the Roman College, in the College of Nobles, in the University of the Sapienza, during the outbreak of cholera in 1837, he showed his courage, Christian charity, and executive ability in assisting Cardinal Sala in fighting the scourge. On December 31, of the same year, he was ordained priest. He was marked at once by the papal authorities as a man of mind and power.

Appointed Governor of Benevento, a hot-bed of smuggling and brigandage, connived at by treacherous nobles, he virtually purged the place. He was next made delegate of Umbria, of which his beloved Perugia is the capital. Umbria was in a worse condition than Benevento. His practical and prompt reforms there gave the then reigning Pope, Gregory XVI., the greatest satisfaction. He was consecrated Archbishop of Damietta and appointed Nuncio to Belgium. His influence on the progress of higher education in Belgium was felt at once. But Perugia needed an archbishop, and the Perugians would have no one but Mgr. Pecci, if they could help it. He was sent from Belgium to London and Paris; and then recalled to Rome, he was made Archbishop of Perugia. Pius IX. succeeded Gregory XVI. It was not long before Pecci was created cardinal. His model was St. Charles Borromeo,—of that famous family which produced the Cardinal Frederico of “*I Promessi Sposi*,”—and his teacher of teachers, St. Thomas Aquinas. He believed that priests should be learned as well as virtuous. He enforced his belief so well that Perugia became known as “*admirable*.”

Pius IX. died. The conclave opened. Cardinal Pecci was elected Pope in the third ballot, by a vote of forty-four out of sixty-one. He assumed the name of Leo XIII. During his pontificate the Pope's one thought, iterated and reiterated, has been the salvation of society through Christian education.

He is now an old man. He has just celebrated the fiftieth anniversary of his ordination to the priesthood. This century was ten years

old when he entered it. He is not strong. He lives with the frugality and simplicity of a Spartan. This Pope, who in great functions wears the garments of a Roman patrician, a tiara more splendid than that of emperors, and moves, upborne by the arms of men, with more pomp than any potentate on earth, spends most of his time in a simple white robe, and engaged in active intellectual labor. He finds time to bless the little children that are brought to him; he is never hurried when an American Catholic, or non-Catholic, is introduced to him. The hardest work of his day is that done with the Cardinal Secretary of State. The problems which foreign governments offer him can only be solved by the keenest insight and the most consummate knowledge. Fortunately, he once ruled in Perugia with a firm hand, and he knows the difficulties of rulers. He also visited foreign courts, and he understands how to meet diplomacy with diplomacy. Sir Charles Dilke says that the diplomatic service of the Vatican is the most complete in Europe, and Sir Charles Dilke knows Europe very well. But Leo XIII., whose only recreation is a walk in the Vatican garden, a talk with an old friend, or the pleasure he finds in the Psalms of David, is the director of the policy of the Vatican in all matters. His days are happy when no diplomatic riddle vexes them. Secluded in his own palace, with no soldiers but an ornamental troop, helpless so far as physical force is concerned, he is an immense power in the world.

The poems of Leo XIII. are remarkable for their exquisite Latinity. They are the record of his feelings at various periods of his existence. In 1830 he wrote:

Scarce twenty years thou numberest, Joachim,
And fell diseases thy young life invade!
Yet pains, when charmed by verse, seem half allayed—
Record thy sorrows, then, in mournful hymn.

He anticipated death, but death has spared him longer than he spares most men. The elegance of the Pope's Latin and the sincerity of his sentiments—pure, warm, hearty, and in the cases of old scenes and old friends even homely—make his poems interesting. He writes lovingly of the past and hopefully of the future.

Maurice Francis Egan.

THE CHANCES OF BEING HIT IN BATTLE.

A STUDY OF REGIMENTAL LOSSES IN THE CIVIL WAR.

If a man enlist in time of war, what are the chances of his being killed? When a new regiment leaves for the front, how many of its men will probably lose their lives by violent deaths? What are the battle losses of regiments in active service—not in wounded and captured, but in killed and died of wounds? A very good answer to these or similar inquiries is found in the records of the Northern troops in the war of 1861-65. It was a war so great, so long and desperate, it employed so many men, that these records furnish of themselves a fair reply.

A soldier of the late civil war is often questioned as to how many men his regiment lost. His answer is always something like this: "We left our barracks 1000 strong; when we returned there were only 85 left." Few people have the hardihood to dispute the old veteran, who testily fortifies all of his assertions by the argument that he was there and ought to know. So the story of the 1000 who went and the 85 who returned is accepted without reply. Now this peculiar form of statement as made by the old soldier is apt to be correct so far as it goes, but the inferences are invariably wrong. So few are aware of the many causes which deplete a regiment, that these missing men are generally thought of as dead. A better way for the veteran to answer the question would be to state that in round numbers his regiment lost 100 men killed; that 200 died of disease; that 400 were discharged for sickness or wounds; that 100 deserted; that 100 were absent in hospital or on furlough; and so only 100 remained as present at the muster-out. Of course, there are many regiments whose brilliant records would require a different statement, but as regards three-fourths of the troops in the late war it would fairly approximate the truth. Of the 2000 regiments or more in the Union army, there were 45* only in which the number of killed and mortally wounded exceeded 200 men. Such statements must not be regarded as derogatory nor belittling; for the simple facts are such as need no exaggeration, and the truth only need be told to furnish records unrivaled in military history.

As regards the number killed in regiments, the prevailing ideas are indefinite or incorrect, seldom approaching the truth. Nor are these errors confined to civilians alone; they are

prevalent among the officers and men who were there and would be supposed to know. All this is largely due to the reckless and careless statements too often made regarding such losses. The error is a somewhat excusable one, as neither officers nor men have the means of knowing the actual loss in every engagement. They remember, perhaps, some of the official reports of their colonel as rendered at the close of certain battles, but not all of them. These casualty reports, as given in, are divided into killed, wounded, and missing, the latter term generally including the captured. Many of these wounded and missing return; some of them during their absence die in hospitals or military prisons; nothing is definitely known about them at the time; so the tendency is to consider only the total of these casualties, and in time to think of them as all killed or lost.

There is fortunately, however, one reliable source of information as to the number of men in a regiment who were killed in action, and that is the regimental muster-out rolls. Every regiment before disbanding was required to hand in company rolls, made out in triplicate, bearing the names of all who had ever belonged to the company from first to last. Opposite each name were remarks showing what became of the man, such as: "killed," "died of wounds," "died of disease," "transferred," "discharged," "deserted," or "present at muster-out." So these rolls, when properly made out, form a reliable basis for ascertaining the number killed in a regiment. Many of the rolls, however, were defective, and some were lost. But the various States, through their respective military bureaus, have regained the desired information, and, with few exceptions, have completed their rolls, although this involved in some States years of clerical research and large appropriations of money. Some of these final rolls have been put in print, while the others are on file in the various offices of the States' adjutants general. In some of the States there are a few rolls missing, but the duplicates are on file in the War Department at Washington. The remark has been made concerning muster-out rolls that they are not always accurate. This was true to a certain extent at the close of the war, but for twenty years a clerical force has been busy in correcting and perfecting them. Certainly but few errors can remain as regards the killed, for the pension claims soon called attention to nearly all of such omissions. Hence these rolls, together with certain other sources

* Does not include heavy artillery organizations.

of information, furnish a reliable source for ascertaining the relative losses of every regiment and battery in the Northern army.

The maximum losses possess the greatest interest, and so invite attention first. The greatest loss in battle of any one regiment in the late war fell to the lot of the 1st Maine Heavy Artillery, in which 423 were killed, or died of wounds, out of 2202 men enrolled. Just here it is necessary to state that, while an infantry regiment consists of 1000 men with 30 line officers, the heavy artillery organization has 1800 men with 60 line officers, there being 12 companies of 150 each, with a captain and four lieutenants to each company. The 2202 men mentioned here as enrolled indicates that about 400 recruits were received during its term of service. The heavy artillery regiments saw no active service while on duty in that line. They left their fortifications near Washington and took the field in 1864, being armed with rifles, drilled and manœuvred the same as infantry, the only difference being in their larger organization. By carefully counting and classifying each name on the rolls of the 1st Maine Heavy Artillery the following abstract is obtained:

1ST MAINE HEAVY ARTILLERY. Birney's Division,* Second Corps.			
(1) Colonel Daniel Chaplin (killed).			
(2) " Russell B. Shepherd, Bvt. Brigadier-General.

In their assault on Petersburg, June 18, 1864, they lost 604† killed and wounded in less than twenty minutes, out of about 900 engaged. This regiment sustained not only the greatest numerical loss, but its percentage of killed as based upon its enrollment is also among the highest. This matter of percentage is an important factor in the subject of regimental loss, especially so as claims to gallant conduct are very apt to be based upon the size of the casualty list. In many regiments the losses are apparently small, when an examination of their enrollment shows that their loss

* The divisions mentioned, in connection with regiments, are the ones with which the regiments were the most prominently identified.

was really heavy in proportion to their numbers. The 1st Maine Heavy Artillery is remarkable for holding a high place in the list, whether tabulated as to loss by percentage or loss numerically. Although this organization enlisted in 1862, it saw no fighting until May, 1864, all of its losses in action occurring during a period of less than a year. This is noteworthy, as forming a proper basis for comparison with regimental losses in certain foreign wars — the late Franco-Prussian, for instance, in which the duration of the fighting was about the same. The total enrollment of this regiment was larger than the number just stated, but the excess was caused by accessions in June, 1865, after the war had ended, the additions consisting of men with unexpired terms of enlistment, transferred from disbanded regiments. The actual number belonging to the 1st Maine Heavy Artillery during the war was as given in the preceding figures.

The next largest number of killed is found in the 8th New York Heavy Artillery, whose muster-out rolls, on file in the Adjutant-General's office at Albany, show, upon a careful examination of each name, the casualties upon which the following summary is based:

8TH NEW YORK HEAVY ARTILLERY. Gibbon's Division, Second Corps.			
(1)	Colonel	Peter A. Porter (killed).	
(2)	"	Willard W. Bates (killed).	
(3)	"	James M. Willett.	
(4)	"	Joel B. Baker.	
LOSSES.

Confederate prison-guard ..			3
Total of killed and died of wounds			361
Total of killed and wounded			1010
The loss by disease includes 102 deaths in Confederate prisons.			

There were only a few regiments in the heavy artillery service, and so the regiment which stands next in point of numerical loss is an infantry command. The infantry constituted the bulk of the army, more than four-fifths of the troops belonging to that arm of the service. After examining carefully the losses in each one of all the infantry regiments in the Northern army it appears that the one which sustained the greatest loss in battle was

† Maine Reports, 1866. The War Department's figures are 90 killed, 459 wounded (including mortally wounded), and 31 missing; total, 580.

the 5th New Hampshire, from whose muster-out rolls, after due correction of errors, the following summary is prepared:

5TH NEW HAMPSHIRE INFANTRY.

Barlow's Division, Second Corps.

With the killed are included a few who are recorded as, "Wounded and missing in action"; — men who never returned, were never heard from, were not borne on any of the Confederate prison lists, and were undoubtedly killed. They fell in some retreat, unobserved by any comrade, and, like wounded animals, crawled into some thicket to die; or else while sinking fast under their death hurt were removed by the enemy, only to die in some field hospital, barn, or tent, without leaving word or sign as to whom they were. They are now resting in some of the many thousand nameless graves in the battle-field cemeteries — graves with headstones bearing no other inscription than that shortest, and to soldiers the saddest, of all epitaphs, the one word "Unknown."

The infantry regiment which stands second as to numerical loss is the 83d Pennsylvania. It went out with the usual ten companies of one thousand men which constituted an infantry command, but as its ranks became depleted it received recruits, until from first to last over eighteen hundred men were carried on its rolls. With these, however, were included the non-combatants, the sick, wounded, and absentees. The muster-out rolls of this gallant regiment furnish the names from which the following abstract is made:

83D PENNSYLVANIA INFANTRY.

Griffin's Division, Fifth Corps.

- (1) Colonel John W. McLane (killed).
 (2) " Strong Vincent (killed), Brigadier-General.
 (3) " O. S. Woodward, Bvt. Brigadier-General.
 (4) " Chauncey P. Rogers.

Total of killed and died of wounds.....282
 Total of killed and wounded.....971

The 83d was present at several engagements in addition to those mentioned, sustaining at each a loss in wounded; but it does not appear from their rolls that any of the wounded died of their injuries. This applies also to the other regiments whose list of battles may be given here.

The following-named commands also sustained remarkable losses during their terms of service. They were all infantry organizations, and the loss mentioned represents those who were killed in action or died of wounds received there, the loss including both officers and men. This list embraces every regiment in the Northern army whose loss in killed was two hundred or more:

Regiment.	Corps.	Killed.*
5th New Hampshire.....	Second.....	295
83d Pennsylvania.....	Fifth.....	282
7th Wisconsin.....	First.....	281
5th Michigan.....	Third.....	263
20th Massachusetts.....	Second.....	260
69th New York.....	Second.....	259
28th Massachusetts.....	Second.....	250
16th Michigan.....	Fifth.....	247
109th Pennsylvania.....	Third.....	245
6th Wisconsin.....	First.....	244

81st Pennsylvania.....	Second.....	208
7th Michigan.....	Second.....	208
55th Pennsylvania.....	Tenth.....	208
17th Maine.....	Third.....	207

* Compiled from State records. The figures on file at Washington show: 7th Wisconsin, 280; 83d Pennsylvania, 278; 5th New Hampshire, 277; 5th Michigan, 262; 20th Massachusetts, 257; but these figures of the War Department do not include any of the missing.

Regiment.	Corps.	Killed.
3d Vermont.....	Sixth.....	206
145th Pennsylvania.....	Second.....	205
14th Connecticut.....	Second.....	205
36th Illinois.....	Fourth.....	204
6th Vermont.....	Sixth.....	203
49th Ohio.....	Fourth.....	202
51st New York.....	Ninth.....	202
20th Indiana.....	Third.....	201
57th Massachusetts.....	Ninth.....	201
53d Pennsylvania.....	Second.....	200

The following heavy artillery regiments also lost over two hundred killed in action or died of wounds during their term of service :

Regiment.	Corps.	Killed.
1st Maine.....	Second.....	423
2d Massachusetts.....	Second.....	241
2d Connecticut.....	Sixth.....	254
2d New York.....	Second.....	211
7th New York.....	Second.....	291
8th New York.....	Second.....	361
9th New York.....	Sixth.....	204
14th New York.....	Ninth.....	226
2d Pennsylvania.....	Ninth.....	240

It should be remembered that these heavy artillery commands were much larger organizations than the ordinary infantry regiment, and that their extended ranks rendered them liable to heavy loss. They all went into action for the first time in Grant's overland campaign. They entered that campaign with full ranks, the 1st Massachusetts Heavy Artillery going into the fight at Spotsylvania with 1617 men.

In giving figures here on the number killed, those who died of wounds received in action are included, and unless otherwise stated, it will, in each case, be so understood. The figures, as stated in connection with these leading regiments, should give a fair idea of the maximum killed in American regiments during the civil war. All of these troops belonged to the infantry, or to heavy artillery serving as infantry, and were three-years' regiments, many of them reenlisting when their term expired, and so were in service during the whole war. Still, as the active campaigning did not begin, to any extent, until 1862, the duration of the fighting was three years or less. The three-years' regiments, for the most part, lost about one hundred men killed in action. Some, of course, lost many more, and some considerably less, the smaller losses being represented by the tabulated figures which run in close gradations down to such commands as were fortunate enough to sustain no loss whatsoever in action.

The total of killed during the whole war was, on the Union side, 110,070, out of about 2,200,000 men. To be exact, there were 2,778,304 enlistments; but, after deducting the reenlistments and reducing the short-term numbers to a three-years' basis, the round numbers would not be very much in excess of the figures stated. This would indicate that the number killed during the war was, on the Northern side, very close to five per cent. of those engaged, and which is, by the way, a greater percentage than that of the Crimean or Franco-Prussian wars.

Although the average loss of the whole army was five per cent., it must be borne in mind that the percentage was very unevenly divided among the various regiments, ranging from twenty per cent. down to nothing. In most of the commands, the percentage of killed would naturally be the same as that of the whole army, but there were some in which the rate was necessarily large to offset that of those whose ranks sustained little or no loss. This increased percentage fell heavily on the Army of the Potomac, and on certain divisions in that army.

This subject of percentage is an interesting one, creating heroic records which might otherwise be overlooked, and adding fresh laurels when many would think the whole story had been told. There is something pathetic in the story of the Pennsylvania Reserves, when one studies the figures and thinks how thin were the ranks that furnished so many dead Pennsylvanians. The percentage list also shows plainly that the brunt of battle fell much heavier on some regiments than on others, and requires that such ones be known, so that the credit so justly due them may be fully acknowledged.

First of all, in this respect, stands the 2d Wisconsin Infantry, it having lost the most men, in proportion to its numbers, of any regiment in the whole Union army. The mortuary records of the State of Wisconsin furnish the information from which the following statement of their loss is made :

2D WISCONSIN INFANTRY.

Wadsworth's Division, First Corps.

- (1) Colonel S. Park Coon.
- (2) " Edgar O'Connor (killed).
- (3) " Lucius Fairchild, Brigadier-General.
- (4) " John Mansfield.

Killed and wounded, 753; missing and captured.....132

Another extraordinary percentage of killed occurred in the 57th Massachusetts Infantry, where 201 were killed out of an enrollment of 1052, or 19.1 per cent. This case cannot well be classed with the others, because the 57th went into action within a few days after leaving Boston, going into the thick of the

Wilderness fight with full ranks, while most regiments went into their first fight with ranks depleted by eight months' previous campaigning. The 57th was recruited largely from veteran soldiers, being known also as the "Second Veteran," and had the honor of being commanded by Colonel William F. Bartlett.

The next largest percentage of killed is found in the 140th Pennsylvania Infantry, whose muster-out rolls tell the following story; and, as in the instances previously cited, the names of each one of the dead could be given, were it necessary, in verification of the loss.

140TH PENNSYLVANIA INFANTRY.

Caldwell's Division, Second Corps.

- (1) Colonel Richard P. Roberts (killed).
(2) " John Fraser, Bvt. Brigadier-General.

Total of killed and died of wounds 198

Died of disease in Confederate prisons, 28 (included).

The following regiments were also remarkable for their percentage of killed in action; remarkable because the general average was five per cent. They were all infantry commands:

Regiment.*	Corps.	Enrolled.	Killed.	Per cent.
26th Wisconsin (Germans)...	Twentieth	1089	188	17.2
11th Pa. Reserves	Fifth	1179	196	16.6
142d Pennsylvania	First	935	155	16.5
141st Pennsylvania	Third	1037	167	16.1
36th Wisconsin	Second	1014	157	15.4
5th Kentucky	Fourth	1020	157	15.3

1st Michigan	Fifth	1346	187	13.8
73d Ohio	Twentieth	1267	174	13.7
6th Iowa	Sixteenth	1102	152	13.7
14th Indiana	Second	1134	152	13.4
44th New York	Fifth	1365	182	13.3
32d Indiana	Fourth	1285	171	13.3
22d Illinois	Fourth	1123	147	13.0

In these enrollments no account is taken of men transferred to a regiment after the war had closed.

But the above enrollments include the non-combatants and absentees. The maximum of effective strength was fully one-fifth less and the actual percentage of loss correspondingly greater. A new regiment may leave its barracks 1000 strong, and yet, within 30 days, go into action with less than 800 muskets. The process of depletion begins with the very first day of service. Men are detailed as cooks, teamsters, servants, and clerks; the sick-list then appears, and the thousand muskets are never seen together again. So the percentage of killed, as based on a total enrollment, does not render justice to the survivors. Still, it is the only definite basis for such figures, and is sufficient in estimating the comparative losses of the various commands. This point is better understood when the losses in certain actions are considered by themselves. There are many regiments which lost one-fourth of their men killed, or three-fourths, including the wounded, in some one engagement. The 69th Pennsylvania, of Gibbon's division, Second Corps, lost at Gettysburg 55 killed out of 258 present at morning roll-call. The 5th New York, Duryea Zouaves, of Fitz-John Porter's corps, at Manassas lost 117 killed out of 490 present for duty, and had 221 wounded besides. The 6th United States Colored Infantry at New Market Heights had 367 present at roll-call, of whom 6 officers and 55 enlisted men were killed, besides 8 officers and 134 men wounded. The 24th Michigan, of the Iron Brigade, went into the first day's fight at Gettysburg with 496 rank and file, losing 79 killed and 237 wounded, many of the latter mortally so. Among their killed were 8 officers and 4 color bearers.

On the field of Gettysburg there is a bronze tablet with this inscription:

FROM THE HILL BEHIND THIS MONUMENT
ON THE MORNING OF
JULY 3, 1863,
THE SECOND MASSACHUSETTS INFANTRY
MADE AN ASSAULT UPON THE
CONFEDERATE TROOPS
IN THE WORKS AT THE BASE OF CULP'S HILL,
OPPOSITE.
THE REGIMENT CARRIED TO THE CHARGE
22 OFFICERS AND 294 ENLISTED MEN.
IT LOST 4 OFFICERS
AND
41 ENLISTED MEN
KILLED AND MORTALLY WOUNDED,
AND
6 OFFICERS AND 84 MEN WOUNDED.

This inscription has a historical value, on account of the precision with which the loss is stated, the records on some of the Gettysburg field stones being very loose in this respect.

But the most remarkable instance of all is

* Each of the 45 regiments previously mentioned as having lost 200 or more in killed has a place in this table.

that of the 1st Minnesota Infantry, at Gettysburg. It was coming on the field alone, just at the time when General Hancock observed a Confederate column advancing through his line at a point where there were no Union troops to confront them. In order to delay the Confederate advance until some brigade could be brought up, Hancock ordered the 1st Minnesota alone to charge the enemy's line. This forlorn hope moved forward with only 252* officers and men, accomplished the purpose, forced back the Confederates, and captured their flag; but when it was over only 47 men clustered around their own colors, while 205 lay dead or wounded on the field. The muster-out rolls of this regiment bear the names of 75 men all marked as killed at Gettysburg, or died of wounds received there, a loss in killed of 29 per cent. of those engaged. Fifty-six of these men are buried in the Gettysburg cemetery; the others, dying of their wounds in hospitals at Philadelphia or York, were buried elsewhere.

The extent of these losses will be better understood if compared with some of the extraordinary cases cited in the histories of other wars. Take, for instance, the charge of the Light Brigade at Balaklava,—the charge of the Six Hundred. Lord Cardigan took 673 officers and men into that action; they lost † 113 killed and 134 wounded; total, 247, or 36.7 per cent. The heaviest loss in the late Franco-Prussian war occurred at Mars-la-Tour, ‡ in the 16th German Infantry (3d Westphalian), which lost 49 per cent. But the 141st Pennsylvania lost 76 per cent. at Gettysburg, while regimental losses of 60 per cent. were a frequent occurrence in both Union and Confederate armies. In the war for the Union there were scores of regiments, unknown or forgotten in history, whose percentage of killed and wounded in certain actions would far exceed that of the much praised Light Brigade; and nobody blundered either.

Company losses show still greater percentages in certain cases. In this same 1st Minnesota, one company lost, at Gettysburg, 13 killed and 17 wounded out of 35 engaged. The maximum of company losses, however, both numerically and by percentage, is reached in Company I of the 83d Pennsylvania Infantry. This company, during its term of service, carried 193 names on its rolls, including recruits, out of

which number 2 officers and 45 enlisted men were killed. With the killed bear in mind an additional number, of nearly three times as many more, who were wounded. As these 193 names embraced all the non-combatants, sick, and absentees, together with its many absent wounded, it will be seen that the percentage of loss in some of their battles must have been without an equal.

The following instances of excessive loss in particular actions may be of interest in connection with this topic. They represent the maximum of loss, and may be of interest to such historians as persist in telling of regiments that were all cut to pieces or completely annihilated.

* Includes a few missing ones; but they were, undoubtedly, killed or wounded.

† Includes 116 killed or mortally wounded.

‡ "Hawkins's Zouaves."

§ All killed or wounded; missing not included.

|| Includes 109 killed or mortally wounded.

The foregoing lists indicate fairly the limit of injury which a regiment will endure, and also the capacity of modern fire-arms for inflicting the same when used subject to the varying conditions of a battle-field.

Loss in action properly includes all of the wounded, and so where only the number of killed is stated, as in some instances here, there should be added a certain proportion of wounded, in order fully to comprehend what is implied in the statement. This proportion, after deducting from the wounded those fatally injured and adding their number to the killed, is something over two wounded to one killed and died of wounds. Before such deduction, the usual proportion is a fraction over four to one. The number of killed, as officially reported at the close

* Two of the companies were not engaged in this affair, having been detailed elsewhere on the field. The loss of the 1st Minnesota at Gettysburg for both days—July 2 and 3—was 50 killed, 173 wounded, and 1 missing; total, 224, or about 83 per cent. of the number engaged.

† Kinglake.

‡ Dr. Engel, Direktor der königlichen preussischen statistischen Bureaux.

of a battle, is generally increased over fifty per cent. by those who die of their wounds. This statement is based upon an extended and careful comparison of official reports with final muster-out rolls. It will always be found correct as to an aggregate loss of any large number of regiments, although it may not always hold true as to some particular one.

The battle losses of a regiment are always unevenly distributed among the various engagements in which it participates. There is generally some one battle in which its losses are unusually severe, some one which the men always remember as their Waterloo. The following are the heaviest losses sustained by regiments in any one battle, and, together with the instances mentioned elsewhere in this article, embrace all where the loss in killed exceeds eighty. Do not grow impatient at these statistics. They are no ordinary figures. They are not a census of population and products, but statistics every unit of which stands for the pale, upturned face of a dead soldier.

* Includes one company Andrew Sharpshooters.

In the preceding figures none of the wounded are counted, except the mortally wounded, who, in each case, are included with the killed. If there be added the many wounded ones who survived,—the maimed and crippled,—the record becomes appalling, and unsurpassed in all the annals of military heroism.

There may be some officers who will dispute the accuracy of certain figures given here, and will claim even a greater loss. If so, they should bear in mind that if their regiments did lose more men killed, they themselves failed so to state the fact when, twenty-three years ago,

at the close of the war, they made out their official statement of losses, and appended their signatures thereto.

The three-months' troops did not always have a safe pleasure excursion. For instance:

Regiment.	Battle.	Killed.	Wounded, including mortally.	Missing.
69th New York Infantry. . .	First Bull Run. . . .	38	59	95
1st Missouri Infantry. . . .	Wilson's Creek. . . .	76	208	11
1st Kansas Infantry.	Wilson's Creek. . . .	77	187	20

Their rolls bear the names of 101 men who are recorded as killed or died of wounds received at Wilson's Creek.

The Pennsylvania nine-months' troops, also, were in service long enough to do good work at Antietam, Fredericksburg, and Chancellorsville. The sound of the good-byes had hardly died away in their farm-houses when hundreds of them fell in that terrible crackling of musketry on the Sharpsburg pike.

CONFEDERATE LOSSES.

BUT how fared the Confederate regiments amidst all this fighting?

The official casualty lists of the Confederate forces are not so trustworthy as those of the Union side because they have not had the same careful revision since the war closed, but the tables, now accessible, show that the Northern aim was equally true, and that the Northern nerve was equally steady. The 26th North Carolina—Pettigrew's Brigade, Heth's Division—lost at Gettysburg 86 killed and 502* wounded; total, 588, not including the missing, of whom there were about 120. In one company, 84 strong, every man and officer was hit; and the orderly sergeant who made out the list did it with a bullet through each leg. This is by far the largest regimental loss on either side during the war. At Fair Oaks the 6th Alabama, John B. Gordon's regiment, sustained a loss of 91 killed, 277 wounded, and 5 missing; total, 373. One company in this regiment is officially reported as having lost 21 killed and 23 wounded out of 55 who were in action. The 1st South Carolina Rifles encountered the Duryea Zouaves at Gaines's Mill, and retired† with a loss of 81 killed and 225 wounded. The Zouaves, in turn, vacated their position at Manassas in favor of the 5th Texas, but not until they had dropped 261 of the Texans.

The following tabulation of remarkable losses

* Including mortally wounded. The official report states that the regiment "went in (July 1) with over 800 men."

† But not until they received a flank fire from disengaged regiments of the enemy.

is compiled from the Confederate official reports of regimental commandants:

<i>Regiment.</i>	<i>Battle.</i>	<i>Killed.</i>	<i>Wounded.*</i>	<i>Total.</i>

2d Louisiana.....	Malvern Hill.....	30	152	182

* Includes the mortally wounded. The missing are not included in these figures: there were but few of them, and in most of these instances there were none.

† This loss occurred at Gaines's Mill and Glendale.

There were other losses in the Confederate ranks which were equally severe if considered in connection with the number engaged, and the percentage of loss in their regiments appears to have been as large as that of their adversaries. In many instances the Confederate colonels in their official reports state, together with their loss, the number of men taken into action. In making a compilation from these reports, some heroic records are revealed. For instance:

<i>Regiment.</i>	<i>Battle.</i>	<i>"Present in action."</i>	<i>Killed and wounded.</i>	<i>Per cent.</i>
1st Texas.....	Antietam.....	226	186	82
21st Georgia.....	Manassas.....	242	184	76
8th Tennessee.....	Stone's River.....	444	306	69
17th South Carolina.....	Manassas.....	284	189	67
23d South Carolina.....	Manassas.....	225	149	66
44th Georgia.....	Mechanicsville.....	514	335	65
16th Mississippi.....	Antietam.....	228	144	63
15th Virginia.....	Antietam.....	128	75	58
18th Georgia.....	Antietam.....	176	101	57
10th Georgia.....	Antietam.....	147	83	56
12th Tennessee.....	Stone's River.....	292	164	56
16th Tennessee.....	Stone's River.....	377	207	55
3d Alabama.....	Malvern Hill.....	354	200	56
7th North Carolina.....	Seven Days.....	450	253	56
18th North Carolina.....	Seven Days.....	396	224	56
1st S. C. Rifles.....	Gaines's Mill.....	537	306	56
4th North Carolina.....	Fair Oaks.....	678	369	54
12th South Carolina.....	Manassas.....	270	146	54
4th Texas.....	Antietam.....	200	107	53
27th Tennessee.....	Chaplin Hills.....	210	112	53
1st South Carolina.....	Manassas.....	283	151	53
49th Virginia.....	Fair Oaks.....	424	224	52
12th Alabama.....	Fair Oaks.....	408	215	52
7th North Carolina.....	Antietam.....	268	140	52
7th Texas.....	Raymond.....	306	158	52
11th Alabama.....	Glendale.....	357	187	51

With these should be again mentioned the 26th North Carolina, whose official report shows a loss of over 85 per cent. at Gettysburg.

Many important instances are necessarily omitted from the preceding list, as the Confederates issued an order in May, 1863,* forbidding any further mention, in regimental battle-reports, "of the number of men taken into action," alleging as a reason "the impropriety of thus furnishing the enemy with the means of computing" their strength. The same order required "that in future the reports of the wounded shall only include those whose injuries, in the opinion of the medical officers, render them unfit for duty," and deprecated "the practice of including cases of slight injuries which do not incapacitate the recipient for duty."

The total number of killed in the Confederate armies, including deaths from wounds, will never be definitely known. From a careful examination of their official reports, or, in case of the absence of such reports, a consideration of the accepted facts, it appears that their mortuary loss by battle was not far from 94,000.

In 1866, General Fry, U. S. Provost Marshal General, ordered a compilation made from the Confederate muster-rolls, then in possession of the Government, from which it appears that they lost 2086 officers and 50,868 enlisted men, killed; 1246 officers and 20,324 enlisted men, died of wounds; total, 74,524.† Deaths from disease, 59,297. These rolls were incomplete; the rolls of two States were almost entirely missing; and none of them covered the entire period. Still they develop the fact that the number of killed could not have been less than the figures given above.

It does not follow that, because the Confederate armies were smaller, their losses were smaller. Their generals showed a remarkable ability in always having an equal number of men at the points of contact.

Upon tabulating the casualties of each battle, using official reports only,—and, in absence of such, allowing one loss to offset the other,—the aggregate casualties up to April, 1864, show that the Union loss in killed and wounded is about 11,500 in excess of the Confederate, a very small amount as compared with the totals. But this difference in favor of the Confederates would disappear if their official reports were subjected to a revision of the nominal lists, as has been done lately with the Union reports. For several years past the War Department has had a

* General Orders, No. 63, Headquarters Army of Northern Virginia, May 14, 1863.

† Message and Documents, Part 3, 1865-66.

clerical force at work in comparing the official battle-reports of Union generals with the regimental nominal lists of casualties, and in each case the total of casualties, as reported by the general, is largely increased.

Up to 1864 the losses on each side were, in the aggregate, substantially the same, with a slight difference, if any, in favor of the Confederates. Then came a frightful discrepancy.

From May 5 to June 30, in their operations against Richmond, the armies of the Potomac and the James lost 77,452* men,—a greater number than were in Lee's army. Of this number the Army of the Potomac lost 54,925 in its return to the Peninsula by the overland "line."

Whatever excess there may be in killed on the Union side during the war is chargeable to the campaigns of 1864-65.

It would be difficult to name the Confederate regiments which sustained the greatest losses during the war, as their rolls are incomplete. The loss in some, however, has been ascertained,† notably those in Gregg's South Carolina Brigade, A. P. Hill's Division. Their total losses during the war, in killed and mortally wounded, were :

	Officers.	En. Men.	Total.
1st South Carolina.....	21	260	281
12th South Carolina.....	17	213	230
13th South Carolina.....	17	203	220
14th South Carolina.....	16	208	224
1st S. C. Rifles.....	19	305	324

In addition, there were 3735 wounded in this brigade.

The loss in a Confederate regiment during the whole war would be large, as the Confederacy did not organize any new regiments after 1862, but distributed their successive levies among the old regiments. With these accessions came a corresponding increase in the regimental casualty lists.

In the North additional troops were raised for the most part by organizing new regiments, while veteran commands were allowed to become reduced below an effective strength.

The question is often asked, Which corps did the most fighting in the war? So far as the casualty lists are an indication, the Second Corps is the one that can fairly claim that honor. Of the 100 Northern regiments which lost the most men killed in action during the war, 35 belonged to the Second Corps, while 17 is the highest number belonging to any other corps.

It should be understood, however, that the Second was a very large corps, containing over 90 regiments, while, for instance, the Twelfth Corps (Slocum's) had only 28. Yet the Twelfth Corps (the Second Corps, Army of Virginia) rendered brilliant and effective service at Cedar Mountain, Antietam, Chancellorsville, Gettysburg, and Lookout Mountain—also, later on, in the Atlanta campaign, where it was commanded by Hooker and was known as the Twentieth Corps, although it still retained its badge and for the most part its organization. This depriving the Twelfth Corps of the name under which it had fought so long and well was a needless act of injustice, similar to the one which wiped out the names of the First and Third corps. In the latter cases it was a blunder, as subsequent events proved, as well as a heartless blow at the corps pride of the officers and men. It is evident that such a thing as *esprit de corps* was but slightly appreciated by the gentlemen who sat in the War Office at Washington in those days. In the Western armies, the Fourth Corps (Gordon Granger's) is deservedly prominent. The regiments whose losses indicate that their fighting was the hardest and most frequent are found in that corps more than in any other, although some hard fighting was done by them before their organization under that name.

The heaviest losses by brigades are credited to the Iron Brigade of the First Corps and the Vermont Brigade of the Sixth Corps, both having a continuous unbroken organization as brigades, which was a rare thing in the war. Their long list of killed was but the natural result of the courage with which they faced the musketry on so many fields.

It may be noticed by some that the regimental losses in killed, as stated here, are greatly in excess of the figures as given in the "Official Records of the Rebellion," now in course of publication by the War Department. But it should be understood that those official figures are the ones which were reported at the close of each action, and show only the nature of the casualties at that particular hour. Such reports were made up under the headings of "Killed," "Wounded," and "Missing." The number of those who died of wounds is not shown, but is covered up in each case under the general return of the wounded, although many of them die the same day. Again, the "missing" is an indefinite quantity, embracing, as it does, all those who were captured, together with a certain class which always turn up again within a few days. Official reports of wounded also were often far from correct, as in some commands men were not allowed to be considered as

* 10,242 killed, 52,043 wounded, 15,167 missing; total, 77,452 (Adjutant-General's office, Washington, 1888). Three-fourths of the missing were killed or wounded.

† "History South Carolina Brigade," J. F. Caldwell.

wounded unless the injury was a severe one, while in others orders were received to report every casualty, however slight. On account of this some are asking, How many of the regiment were actually killed, or died of their wounds? How many were buried as the result of the fight? They know that, however doubtful might be the classification of a slightly wounded or a missing man, there can be no question as to the definite allotment of one that is buried. The "Official Records" constitute a wonderful work, highly creditable to the officer in charge, and of a magnitude that will require many years before the last volumes can be printed. Its casualty lists so far as reached possess an intense interest and are tabulated in admirable form. Still, many will be interested in going farther, and noting the actual and largely increased number of killed as developed by the figures gleaned from the muster-out rolls.

The number of officers killed in battle was somewhat greater in proportion than that of the enlisted men, but often failed to bear any definite ratio to the loss of the regiment itself. In the 2d Vermont Infantry 223 were killed, of whom 6 were officers, while in the 12th Massachusetts (Colonel Fletcher Webster) 194 were killed, of whom 18 were officers. Again, the 19th Maine lost 192 killed, of whom 3 only were officers, while in the 22d Indiana, out of 153 killed, 14 were officers.

In the aggregate, the proportion of officers to enlisted men killed was 1 officer to 16 men, but certain regiments and certain States show a wide variation. The Connecticut and Delaware officers had either an excess of bravery or a lack of caution, as their proportionate loss in battle far exceeds the average.

The largest number of officers killed in any infantry regiment belongs to the 61st Pennsylvania of the Sixth Corps, it having lost 19 officers killed in battle. The 1st Maine Heavy Artillery lost 21 officers in action, but it had just twice as many line officers as an infantry command. The 8th New York Heavy Artillery lost 20 officers killed, but is also subject to the same remark when compared with the 61st Pennsylvania. It was seldom that an infantry regiment lost more than 6 officers killed in any one battle. The 7th New Hampshire, however, lost 11 officers killed in the assault on Fort Wagner, it being the greatest regimental loss of officers in any one engagement. The 22d New York lost 9 officers at Manassas; the 59th New York lost 9 at Antietam; and the 145th Pennsylvania lost 9 at Fredericksburg, the latter regiment taking only 8 companies into action there. Eight officers were killed in the 1st Michigan at Manassas; in the 14th New Hampshire at Opequon; in

the 87th Indiana at Chickamauga; and in the 43d Illinois at Shiloh. In some regiments the field and staff sustained severe losses during their term of service. The 95th Pennsylvania lost 2 colonels, 2 lieutenant-colonels, a major, and an adjutant killed in action. The 20th Massachusetts, "one of the very best regiments in the service,"* lost also 6 of its field and staff in battle, a colonel, lieutenant-colonel, 2 majors, adjutant, and a surgeon. But the most peculiar instance of loss in officers occurred in the 148th Pennsylvania, where, in one company (Company C) there were killed at different times 7 line officers. It must have required some nerve to accept a commission in that company.

The surgeons and chaplains, although regarded as non-combatants, were not exempt from the bloody casualties of the battle-field. The medical service sustained a loss of 40 surgeons killed in action or mortally wounded. There were 73 more who were wounded in action, and, as in the case of those killed, they were wounded while in the discharge of their duties on the field. Many of the chaplains were also killed or wounded in battle. Some of them were struck down while attending to their duties with the stretcher-bearers, while others, like Chaplain Fuller, fell dead in the front rank with a rifle in their hands.

Of the three principal arms of the service, the infantry loses the most men in action, the cavalry next, and the light artillery the least. The heaviest cavalry loss seems to have fallen on the 1st Maine Cavalry, it having lost 15 officers and 159 enlisted men killed. Next comes the 1st Michigan Cavalry, with 14 officers and 150 enlisted men killed. Of the 260 cavalry regiments in the Northern army, there were 15 others whose loss in killed exceeded 100. The percentages of killed are also less in this part of the service, the highest being found in the 5th Michigan Cavalry with its 8.9 per cent., and in the 6th Michigan Cavalry with 8.3 per cent,—both in Custer's brigade. Cavalrymen go into action oftener than infantrymen, and so their losses, being distributed among a larger number of engagements, do not appear remarkable as reported for any one affair. Still, in some of their fights the "dead cavalryman" could be seen in numbers that answered only too well the famous question of General Hooker.† At Reams's Station the 11th Pennsylvania Cavalry lost 27 men killed, and at Todd's Tavern the 1st New York Dragoons lost 24 killed, not including the additional casualty lists of wounded. The number of cavalry officers killed in some

* General Humphreys, Chief of Staff, Army of the Potomac.

† "Who ever saw a dead cavalryman?"

regiments was excessive, as in this arm of the service, more than in any other, the officers are expected to lead their men. Although the cavalry did not suffer in killed as badly as the infantry, still they participated in more engagements, were under fire much more frequently, and so were obliged to exhibit an equal display of courage. The 5th New York Cavalry lost 8 officers and 93 enlisted men killed in action, but it was present at over 100 engagements, and lost men, either killed or disabled, in 88 of them. The muster-out rolls of the various mounted commands show that there were 10,596 "dead cavalymen" who were killed in action during the war, of whom 671 were officers, the proportionate loss of officers being greater than in the infantry.

The casualties in the light artillery were less than in any other arm of the service, the engineers excepted. The light batteries, or horse artillery, which constituted the artillery proper for the field operations, were organized for the most part as independent batteries or commands. In some States twelve of them were connected by a regimental organization, but even then they operated as independent commands. A battery or company of light artillery consisted generally of 150 men, with 6 cannon and the necessary horses. There were some four-gun batteries, and towards the close of the war most of the old batteries were reorganized on that basis. The greatest numerical loss in any one of these organizations occurred in Cooper's battery of the Pennsylvania Reserves, in which 2 officers and 18 enlisted men, out of 332 names enrolled, were killed during its term of service. Weedon's Rhode Island battery also sustained a severe loss in its many engagements, 19 being killed out of 290 enrolled; while the Pennsylvania batteries of Ricketts, Easton, and Kerns were also prominent by reason of their frequent, effective, and courageous actions, with the consequent large loss in killed. The highest percentage of killed is found in Phillips's 5th Massachusetts battery, which lost 19 killed out of 194 members, or 9.7 per cent.; the enrollment taken being the one prior to the transfer of the 3d Battery near the close of the war.

The 11th Ohio Battery sustained the greatest loss in any one action. At the battle of Iuka it lost 16 killed and 39 wounded, the enemy capturing the battery, but the gunners, refusing to surrender, worked their pieces to the last and were shot down at the guns. The battery went into this action with 54 gunners, 46 of whom were killed or wounded, the remainder of the casualties occurring among the drivers or others.

A still more remarkable artillery fight was

that of Bigelow's battery, 9th Massachusetts, at Gettysburg; remarkable, not only for the exceptional loss, but also for the efficiency with which the guns were served and the valuable service rendered. When, on the afternoon of the second day, it was found that the Union batteries, on the cross-road near the Peach Orchard, could no longer hold their position, "it became necessary to sacrifice one of them" by leaving it there in action and working it to the last, so as to check the Confederate advance long enough to enable the other batteries to fall back to a better position. Major McGilvery selected Bigelow and his men for this duty, ordering him to fight with fixed prolonge, an arrangement which availed but little, for, although the canister from his light twelves kept his front clear for a long time and successfully detained the enemy, he could not check the swarm which finally came in on each flank and rear, some of whom, springing nimbly on his limber-chests, shot down his horses and then his men. Bigelow was wounded, and two of his lieutenants were killed; 9 of his gunners were killed, 14 were wounded, and 2 were missing. The battery then ceased firing, four of its guns being temporarily in the hands of the enemy. Lieutenant Milton, who brought the battery off the field, states in his official report that 45 horses were killed and 15 wounded in this affair; and that 5 more were killed in the action of the following day. This is the largest number of horses killed in any battery action of the war; at least, there are no official reports to the contrary.* A general once criticised a gallant but unnecessary charge which he happened to witness with the remark: "It is magnificent, but it is not war."† The fight of these Massachusetts cannoneers was not only magnificent, but it was war. There really was no sacrifice. There was a sad loss of life, considering how few there were of the battery men, but each man killed at those guns cost Kershaw and Barksdale a score. Doubleday quotes a statement of Mc-Laws', that "one shell from this artillery killed and wounded thirty men." If the shrapnel was so effective, what must have been the slaughter when Bigelow's smooth-bore Napoleons threw canister so rapidly into Kershaw's masses; for the gunners in this battery were not allowed side-arms, but had been carefully instructed that their safety lay in the rapidity with which they could work their guns. This battery held Barksdale's advance in check for a half-hour, from 6 to 6.30 P. M., after which McGilvery's second line, consisting of Dow's, Phillips's, and

* There may have been a greater number killed in a battery at Stone's River; but, as the battery was captured, the exact loss cannot be satisfactorily ascertained.

† "C'est magnifique, mais ce n'est pas la guerre."

Thompson's guns, confronted him from 6.30 to 7.15 P. M., at which time Willard and Stannard, with their brigades, made the advance which drove him back and regained Bigelow's guns. This is not put forward as history so much as an illustration of the losses suffered and inflicted by the light artillery when at its best.

The light artillery service lost during the war 1817 men killed and mortally wounded, of whom 116 were officers. Their smaller losses only emphasize the fact that it is a valuable arm of the service in its capability of inflicting so much more loss than it receives.

And yet the artillery are largely responsible for the oft-quoted remark that "It takes a man's weight in lead to kill him." This old saw has always been considered as needing more or less latitude, but, on the contrary, it expresses an absolute truth devoid of exaggeration. As regards the battles of modern warfare, it is a very fair way of stating the relative weight of metal thrown and men killed. The figures pertaining to this subject are attainable and make the matter very plain. To be just, we will pass by such actions as Fort Sumter and certain other artillery affairs in which not a man was killed, and turn to the field engagements where the loss of life was greatest; where, according to the rhetorical historians, the fields were swept by the storm of iron sleet and leaden hail; where the ranks of the enemy — always the enemy — were mowed down like grain before the reaper; where the charging masses were "literally" blown from the mouths of the guns; where, according to a statement in a report of the New York Bureau of Military Statistics, "legs, arms, and large pieces of bodies filled the air."

As the truth of the adage referred to is purely a matter of figures, we will turn to them, and, for the present, to those of the battle of Stone's River, a general engagement and one in which some of the best fighting of the war was done on both sides. In this battle the artillery fired 20,307 rounds of ammunition, as officially stated by General Barnett, Chief of Artillery, in his report, which was an exhaustive one in its details, and gives the exact number of rounds fired by each battery. The weight of these 20,307 projectiles was fully 225,000 pounds. The infantry at the same time are officially reported as having fired over 2,000,000 rounds, and which consisted mostly of conical bullets from .55 to .69 of an inch in diameter, and may have included some buck-and-ball. The weight of this lead fired by the infantry exceeded 150,000 pounds. Hence the combined weight of the projectiles fired by the artillery and infantry at Stone's River was 375,000 pounds, and

fully equal to that of the 2319 Confederates killed or mortally wounded by the same.

General Rosecrans, in his official report of this battle, goes into this curious matter also but in a somewhat different direction, and states that "of 14,560 rebels struck by our missiles, it is estimated that 20,000 rounds of artillery hit 728 men; 2,000,000 rounds of musketry hit 13,832 men; averaging 27.4 cannon shots to hit one man, 145 musket shots to hit one man." But in this statement the term "hit," as applied, includes the wounded, while the old saying refers only to the killed. Again, General Rosecrans makes the killed and wounded of the enemy too great, putting it at 14,560, while General Bragg reported officially only 9000. Still, Rosecrans need not complain of this, as Bragg, in turn, generously overestimates Rosecrans' loss. Any such error, however, would not affect the proportion of wounds inflicted by the two arms of the service, according to the report quoted. It seems strange that 20,000 artillery missiles should kill or wound only 728 men, and that of the cannon pointed at the Confederate columns it should take 27 shots to hit, kill, wound, or scratch one man. The discussion of this latter point will have to be left to the gallant old general and such of his veterans as wore the red trimming on their jackets. In the mean while it is fair to infer that the proportion of bullet wounds to shell wounds has been carefully noted in the hospital returns, and that the medical staff may have furnished this remarkable statement, with the statistics to back it up. Lack of space prevents the mention here of other field engagements in support of this old maxim, but further and ample proof is found in a mere reference to the noisy clatter on the picket lines; the long-range artillery duels so popular at one time in the war; the favorite practice known as shelling the woods; and the noisy Chinese warfare indulged in at some bombardments, where the combatants, ensconced within their bomb-proofs or casemates, hurled at each other a month's product of several foundries with scarcely a casualty on either side.

Many of the colored regiments sustained severe losses in battle, although there seems to be a popular impression to the contrary, influenced no doubt by the old sneering joke about them so common at one time. The 79th United States Colored Infantry lost 5 officers and 174 enlisted men killed in action during the short time that the colored troops were in service, and the 13th United States Colored Infantry lost 221 men, killed and wounded, in one fight at Nashville. The 54th Massachusetts (colored) lost 5 officers and 124 enlisted men in various actions, all killed,

or missing men who, never returning from that fierce assault on Wagner, were probably thrown into that historic trench where the enemy buried "the colonel with his niggers." The black troops were largely engaged in guard or garrison duty, but still saw enough active service to contribute 2751 men killed in battle. This does not include their officers, who were whites, and of whom 143 were killed.

The number of officers killed in the regular regiments was in excess of their due proportion, and argues plainly better selected material. On the other hand, the number of enlisted men killed in the regular service was less in proportion to enrollment than in the volunteer. This may be due to the larger number of deserters which encumbered their rolls, or it may be that the regulars, being better officered, accomplished their work with a smaller loss, avoiding the useless sacrifice, which occurred too often, as the direct result of incompetency. In alluding to the regulars as being better officered, they are referred to as a whole, it being fully understood that in many State regiments commissions were held by those equally competent. In fact, it is doubtful if the regular army has a regiment which ever had at any time a line of officers which could equal those of the 2d Massachusetts Volunteers. The number killed in action in the regular service was 144 officers and 2139 enlisted men, the heaviest loss occurring in the 18th Infantry.

In connection with the subject of regimental losses there is the important one of loss by disease. In our army there were twice as many deaths from disease as from bullets. In the Confederate army the loss from disease was, for obvious reasons, much less, being smaller than their loss in battle. This loss by disease was, in our Northern regiments, very unevenly distributed, running as low as 30 in some and exceeding 500 in others, while in some of the colored regiments it was still greater. There seems to be an impression that the regiments which suffered most in battle lost also the most from disease. This is an error, the direct opposite being the truth. The Report of the War Department for 1866 says, regarding this subject, that "it is to be noted, that those States which show large mortality on the battle-field likewise show large mortality by disease." This may be true of the State totals, but is wholly incorrect as to the regiments themselves; for, with but few exceptions, the regiments which sustained the heaviest loss in battle show the smallest number of deaths from disease. As an illustration, take the following commands, all of which were crack fighting regiments, and note the mortality from the two causes:

<i>Regiment.</i>	<i>Corps.</i>	<i>Killed or mortally wounded in battle.</i>	<i>Died of disease, accidents, in prisons, etc.</i>
2d Massachusetts.....	Twelfth..	191	98
12th Massachusetts.....	First....	193	83
21st Massachusetts.....	Ninth....	159	91
37th Massachusetts.....	Sixth....	169	92
5th N. Y. (Duryea Zouaves).....	Fifth....	177	31
61st New York.....	Second..	189	119
63d New York (Irish Brigade).....	Second..	161	88
70th N. Y. (Sickles's Brigade).....	Third....	190	64
82d N. Y. (2d N. Y. S. M.).....	Second..	176	78
84th N. Y. (14th Brooklyn).....	First....	162	69
124th N. Y. ("Orange Blossoms").....	Third....	151	89
12th New Jersey.....	Second..	177	99
62d Pennsylvania.....	Fifth....	169	89
72d Penn. (Baxter's Zouaves).....	Second..	193	71
95th Pennsylvania.....	Sixth....	182	73
102d Pennsylvania.....	Sixth....	181	82
5th Ohio.....	Twelfth..	151	50
7th Ohio.....	Twelfth..	184	89
19th Indiana.....	Fourth..	179	117
32d Indiana (First German).....	Fourth..	171	97
26th Wisconsin (German Regiment).....	Eleventh	188	77
37th Wisconsin.....	Ninth....	156	89
1st Minnesota.....	Second..	187	99

In addition to these, there are the forty-five leading regiments previously mentioned,—leading ones as regards greatest loss in action,—whose aggregate of killed is one-third greater than that of their loss by disease. Then there might be cited the Pennsylvania Reserve Corps, an effective and hard fighting division, in which every regiment sustained a greater loss in battle than by disease, with the exception of the 7th Reserves, in whose case the excess from disease was caused by seventy-four deaths in Andersonville. The 1st Jersey Brigade, the 2d Jersey Brigade, and the Iron Brigade were all hard fighters, with the consequent heavy losses, and yet each regiment in those brigades lost less by disease than by battle.

Still, in the whole army the aggregate loss by disease was double the loss in action, and the question arises, Where, then, did it occur?

In reply, a long list could be offered, in which regiments with a comparatively small loss in action would show a startling mortality from sickness; also many commands which performed garrison or post duty, and which show a long death-roll without having been engaged in any battle. The troops in the Departments of the Gulf and the Mississippi were exposed to a fatal climate, but participated in few battles, the fighting there, aside from a few minor engagements, being over by August, 1863. Though but few battle names were inscribed upon their colors, it should be remembered that they went and came in obedience to orders; that the service they rendered was an important one; and that their comrades' lives were also lost while in the line of duty.

Still, the inference is a fair one that the fighting regiments owed their exemption from disease to that same pluck which made them famous, and which enabled them to withstand its encroachments without tamely giving up and lying down under its attack. It was a question of mental as well as bodily stamina, and hence there is found in certain black regiments a mortality from disease exceeding by far that of any white troops, a fact which cannot be accounted for by climatic reasons, because the particular regiments referred to were recruited from blacks who were born and raised along the Mississippi, where these troops were stationed, and where the loss occurred.

Throughout the whole army, the officers were far less apt to succumb to the fatalities of disease than were their men. While the proportionate loss of enlisted men in battle was 16 men to one officer, the loss by disease was 82 men, and in the colored troops 214 men — facts with ethnological features worth noting.

In addition to deaths from battle and disease there were other prolific sources of mortality, over 4000 being killed by accidents, resulting mostly from a careless use of fire-arms or from fractious horses, while 3000 more were drowned while bathing or boating. By the explosion of the steamer *Sultana*, loaded with exchanged prisoners, homeward bound after the war, 1400 Union soldiers were killed — a loss exceeded in only a few battles of the war.

A regiment's greatest loss did not always occur in its greatest battle. The heaviest blows were often received in some fight which history scarcely mentions — some reconnoissance, ambuscade, or wagon-guard affair, entirely disconnected with any general engagement. With many commands this has been a misfortune and a grievance; something akin to that of the oft-quoted aspirant for glory who was slain in battle, but whose name was mis-

spelled in the newspapers. The 107th New York went through Gettysburg with a trivial loss, only to have 170 men struck down at Pumpkin Vine Creek, Ga. This regiment erected a monument, on the pedestal of which is chiseled a long list of battle names, remarkable for their euphony as well as their historic grandeur. The hand of the stone-cutter paused at Pumpkin Vine Creek, and the committee substituted New Hope Church, the name by which the Confederates designate the same fight.

The word Gettysburg is not a musical combination, but many will thank fortune that the battle was fought there instead of at Pipe Creek, the place designated in the general's orders. As it is, the essayist and historian will delight in referring to the grand victory as one which preserved unbroken the map and boundaries of the nation, but they would hardly care to do so if they were obliged to add that all this took place at Pipe Creek.

Soldiers love to point to the battle names inscribed upon their colors, and glory in the luster that surrounds them. It is natural that they should prefer well-known names or pleasant-sounding ones. The old soldier is something of a romancer in his way, and is alive to the value of euphony as an adjunct to his oft-told tale. The Michigan cavalymen find willing ears for the story of their fight at Falling Waters, while the Jersey troopers find it difficult to interest hearers in their affair at Hawes' Shop. The veterans of the West find it easier to talk of Atlanta and Champion's Hill than of the Yazoo or Buzzard's Roost. Through coming years our rhyming bards will tell of those who fought at the Wilderness, or Malvern Hill, but cadence and euphony will ignore the fallen heroes of Pea Ridge and Bermuda Hundred.

William F. Fox.

THE MASK.

WHY am I still unscarred when agony,
Repeated oft, has burnt both heart and brain,
Till all my being seems a quivering pain
That custom but renews unceasingly?
Abroad, I shrink, dreading lest misery
Have so defaced my face that once again
Men turn, and look, and shuddering be fain
To say with Dante's Florentines, "There, see
One who, though living, hath known death and hell."
So, when thy glance has glorified my face,
And joy, transfigured, all in life seems well,
Methinks my mirror then will show no trace
Of my old self, but one supremely fair.
Insensate flesh! I find no beauty there!

Elyot Weld.

THE CHURCH OF ENGLAND IN THE COLONIES.

IN VIRGINIA AND MARYLAND.

SEAL OF THE SOCIETY FOR THE PROPAGATION
OF THE GOSPEL.

THE Church of England took root in America with the first colony. Among its earliest ministers were some men of ability and unselfish devotion; such men, for example, as Robert Hunt, Alexander Whitaker, and Thomas White. The church had the advantages of a traditional

hold on the English mind, the sympathy and support of the home government, and the social prestige conferred by the adhesion of governors and other crown officers. In Virginia, Maryland, North and South Carolina, and Georgia it was established by law; while in New York it had always a legal advantage over its rivals. Yet the history of the Church of England in the American Colonies, though not quite a history of failure, is far from being a story of success. Its ultimate influence upon the character of the colonists was probably less than that of Puritanism or Quakerism, perhaps hardly greater than that of the Presbyterianism chiefly brought in by Irish and Scotch settlers after 1700. This partial default of the English Church in America was largely due to the fact that a main persuasive to emigration in the time of the Stuarts had been English laws for the enforcement of conformity: the stately liturgy lost some of its beauty and dignity when propagated by constables and jailers. But even in the colonies settled chiefly by adherents of the establishment, the church in most places sank into apathy, while unresting, dissenting sects drew life and prosperity from its dissolving elements.

At the time of the planting of the James River settlements, the impulse given by the Reformation to religious devotion in the English Church had not spent itself. There were many men in its priesthood who combined a

Puritan strictness in morals with a sentiment of reverence that had a medieval origin. This religious party had from the first laid hold of the scheme of English planting in America as a sort of new crusade for the extension of Christendom and the overthrow of heathenism. Clergymen like Hakluyt and Purchas and Symonds ardently promoted the colony; noble-hearted laymen like the Ferrars and their friends gave time and money with unstinted liberality to the religious interests of the plantation; and there were those, both of the clergy and laity, who, from religious motives, "left their warm nests" in England "and under took the heroical resolution to go to Virginia," sharing the hardships, and even losing their lives in the perils, of the enterprise.

The line of demarcation between the Puritan and the old-fashioned churchman was not yet sharply drawn, so that the Virginia church long retained some traits which in England had come to be accounted as belonging to the Puritans or Presbyterians. Indeed, some of the parish clergy, in 1647, were so touched with Puritanism as to refuse to "read the common prayer upon the Sabbath dayes." For more than a hundred years after the first settlement of Virginia the surplice appears to have been quite unknown; "both sacraments" were performed "without the habits and proper ornaments and vessels" required; parts of the liturgy were omitted "to avoid giving offense"; marriages, baptisms, and churchings of women were held and funeral sermons preached in private houses; and in some parishes, so late as 1724, the Lord's Supper was received by the communicants in a sitting posture. If we add to these the opposition to visitations and all ecclesiastical courts, the claim of the parishes to choose and dismiss their own ministers, the employment of unordained lay readers or "ministers" in a majority of the parishes, and the general neglect of most of the church festivals, we shall understand how peculiar were the traits of the Virginia church. These had their origin partly in the transitional state in which the Anglican body found itself at the birth of the church of Virginia, and were partly the result of isolation. But while the Church of England in the first half of the seventeenth century drew religious life at the same time from ancient and medieval sources, and from the fresh impulses of the Reformation period, she still suffered from unre-

formed abuses. There were still "dumb parsons" in some of her poorer parishes, who never essayed to preach, and who were incapable of any other functions than those of mumbling the liturgy and receiving the tithes. Many of the clergy were men whose morals were of the most debauched character: a manuscript preserved in the Duke of Manchester's papers gives a horrible description of the state of the clergy in the county of Essex in 1602. One of these Essex parsons carried his diabolism to such an extreme that he was familiarly called "Vicar of Hell," a title which he good-naturedly accepted in lieu of his proper name. During all of the seventeenth and much of the eighteenth century, notwithstanding the learning and virtue of many of the clergy, the altars of the Church of England were in many places beset by men of despicable attainments and depraved morals thrust into the priest's office merely that they might eat of the shew-bread.

From this state of things the colonies adhering to the Church of England were the greatest sufferers. Sometimes a clergyman's abilities and education were so mean, or the ill fame of his bad living was so rank, that even the very tolerant public opinion of the day in England could no longer abide him. In this case his friends would seek for him the chaplaincy of a man-of-war, or pack him off to the colonies. The debauched sons of reputable families, incapable of any other use in the wide world, were deemed good enough to read prayers and christen children in Virginia parishes for sixteen thousand pounds of tobacco a year, with forty shillings for every funeral sermon and the wedding-fees to boot. The cry against the bad lives of some of these emigrant parsons was heard as early as the middle of the seventeenth century. "Many came," says Hammond, in 1656, "such as wore black coats and could habble in a pulpit, swear in a tavern, exact from their parishioners, and rather by their dissoluteness destroy than feed their flocks."

But in the rising against the despotism of Sir John Harvey, the Virginia clergy of 1635 appear to have had virtue enough to take the popular side under the lead of the Rev. Antony Panton, who also, in 1641, appeared in London as "Agent of the Church of England in Virginia." By protests, first to the Commons and then to the Lords, Panton contrived to delay for months the sailing of Sir William Berkeley, who had been appointed governor at the instance of Harvey and his clique. During the Commonwealth time some ministers of a better class sought Virginia as a refuge, and some of the most dissolute of the parish clergy were silenced by the Assembly.

There was a general improvement in manners at this time. The pioneer Virginians had been noted from the outset for excess in drinking; but growing prosperous, they now became, "not only civil, but great observers of the Sabbath, and to stand upon their reputations and to be ashamed of that notorious manner of life they had formerly lived and wallowed in." These reformed colonists in 1656 offered a bonus of twenty pounds to every one who should import "a sufficient minister." But with the return of Berkeley to power at the restoration, the governmental influence on the clergy must have been depressing. "The king's old courtier" that he was, Sir William evidently liked best the "dumb parsons," who gave the people no ideas and tyrants no trouble. He expresses his regret that Virginia ministers would not "pray oftener and preach less." When Bacon's rebellion brought Berkeley's career to an infamous close there was no Panton left to take the side of the people; all the parsons in Virginia appear to have been partisans of the governor.

Compton, who came to the see of London in 1675, made the jurisdiction of the Bishop of London over the colonies something more than a name. He appointed Blair commissary of Virginia, and Bray to a like office in Maryland; under his auspices William and Mary College was founded, and the Propagation Society instituted; his influence with his former pupils, Queen Mary and Queen Anne, enabled him to secure at court whatever was desirable for the colonial church, and more than one governor seems to have lost his place through Bishop Compton's displeasure. But in Compton's time, and long after, the lives of many of the colonial clergy were disreputable, even when judged by the standards of that day. The law of the market ruled in these things: what could find no purchaser in England was put off upon the colonies. Morgan Godwyn declares that the meanest curate in England had "far more considerable hopes" than a Virginia clergyman about 1675. Some of the least acceptable of the parish clergy in Virginia were Scotch and Irish adventurers, who thought it better to get an out-of-the-world parish, with or without orders, than to work hard and live precariously as school-masters. The case was rendered worse in Maryland, since, by the constitution of the church in that province, there was for a long time no power on earth that could legally deprive a clergyman when once inducted. "As bad as a Maryland parson," was one of the earliest of indigenous American proverbs. One incumbent of a Maryland parish was described as, "like St. Paul, all things to all men; he swears with

REV. JONATHAN BOUCHER OF MARYLAND.

those who swear, and drinks with those who drink." But swearing and drinking were but the minor faults of these "tithe-pig parsons"; drunkenness was proverbially called the "clergyman's vice." In 1718 Commissary Wilkinson, of the eastern shore of Maryland, forbade weddings in private houses, because of clergymen "being drunk at such times and places." Two Virginia clergymen, in 1723, were given to "fighting and quarreling publicly in their drink" to such an extent that it was said, "The whole country rings with the scandal." It was charged that some of the clergy of this province were "so debauched that they are foremost in all manner of vices." "One Holt, a scandalous and enormous wretch," was deprived by the commissary of Virginia, but he went to Maryland, where he secured one of the best parishes. Another Virginia parson had brought a servant-maid aboard ship, and passed her off as his wife; yet another was an habitual drunkard, who "kept an idle hussy he brought over with him." Clergymen were scarce in a new country, and discipline must needs be lax if any considerable number were to be retained. In the case last mentioned the woman was packed aboard ship and sent home, and the parson was "reformed"; apparently without any interruption of his clerical duties. When, however, we read of two Virginia parishes that, in 1740, had been vacated by the lewdness of the ministers, we have some pain to conceive of the degree of profligacy that had been sufficient to drive these men from the altar. Even in Maryland one man lost his place by adding bigamy to habitual

inebriety. Polygamy was, indeed, on more than one occasion the charge brought against a Maryland parson. Commissary Bray found one Maryland incumbent who had forged a certificate of ordination, as a Virginia writing-master had done at an earlier period. This writing-master wore a scarlet hood in the pulpit and called himself a doctor of divinity. The forging of orders seems, indeed, a superfluous villainy when one considers with what facility wretches like these were able in that day to get genuine ordination. At a later period, no man from the colonies was admitted to orders unless he had secured a title to a parish. But shrewd adventurers, who had been brought over sometimes as indentured servants or schoolmasters, would contrive to get a recommendation and a title from a parish that was not even vacant, the vestry taking defeasance bonds from the candidate that he would not claim possession under a bogus title—meant only to deceive the Bishop of London. Discipline was not easy, even in flagrant cases. Brunskill, a Virginia clergyman, was deposed with difficulty, in 1757, though he was, in the words of Governor Dinwiddie, "almost guilty of every sin except murder," and he must have had a stomach even for murder, since he tied his wife to a bedpost and cut her with knives; yet, notwithstanding all, he found two or three of his order to defend him. It was recognized at the time that the rapid growth of dissent and religious skepticism in the Church of England colonies was largely due to the repulsive morals of some of the clergy and the sloth and neglect of others. One good clergyman in Virginia cries out in 1724, that "even miracles could not maintain the credit of the church where such lewd and profane ministers are tolerated or connived at."

But this is only the dark side of the picture. There were always in the Chesapeake colonies clergymen of another stamp, whose character shone the brighter by their proximity to sluggards and drunkards. Bartholomew Yates, of Christ Church parish, in Middlesex county, Virginia, who died in 1734, would have won praise for his virtues anywhere. Anthony Garvin, about the same period, exchanged an easy parish for a destitute one on the frontier, where he preached in widely separated places. He laments that ministers are so much absorbed in farming and buying slaves, "which latter, in my humble opinion, is unlawful for any Christian." Speaking thus, in 1738, in opposition to the doctrine of the pastoral letter of the learned Bishop Gibson, his own diocesan, Garvin showed that in moral judgment he was a century ahead of his time. Thomas Bacon,

the editor of the Maryland laws, and William Stith, the painstaking historian of Virginia, are examples of clergymen of distinction in literature. One should add to this list the names of Clayton the naturalist, of Blair the theologian, of the diarist Fontaine, and of the versatile Boucher. Devereux Jarratt, a native Virginian of humble birth, was ordained in 1762, and was long illustrious for his useful labors. He was a sort of connecting link between what was best in the colonial church

was felt to be very burdensome, and in 1760 it was reduced to thirty pounds of inspected tobacco. Under this system of payment by a capitation tax, the increase of population rendered some of the parishes valuable; that of All Saints was estimated at one thousand pounds sterling a year. A more desirable class of clergymen sought these good livings, and the proverbial Maryland parson was for the most part driven to the wall by competition. As early as 1718 there was among the "missionaries" of the Society for the Propagation of the Gospel a proneness to leave their Northern missions for the tempting tobacco parishes of Maryland. Fear was expressed by the impetuous Talbot, of Burlington, that the newly built churches in New Jersey and Pennsylvania would soon be quite deserted by the missionaries, and would become "stalls and stables for the Quakers' horses when they come to market or meeting." Although this catastrophe never befell the mission churches,

CHRIST CHURCH, SHREWSBURY, NEW JERSEY.

of Virginia and the religious life of our own time. His autobiography is a reflection of the simplicity and disinterested goodness of his nature.

In the later colonial period the character of the Maryland clergy was raised merely by the action of the law of the market. Instead of providing, as in Virginia, a definite salary in tobacco for each incumbent, the law of Maryland gave the clergyman forty pounds of tobacco for every person of tithable age and condition, whether white or black. This tax

the character of the Maryland clergy was so far advanced that Edmund Burke, in 1757, could speak of them as "the most decent and the best of the clergy of North America."

In Virginia even "the sweet-scented parishes," as they were called,—those where the minister's salary was paid in high-priced, sweet-scented tobacco,—yielded only about a hundred pounds sterling, and the parishioners sometimes refused to settle a clergyman unless he would consent to serve two parishes

for one salary. The salary was rendered precarious by the prevalent custom of "hiring" a clergyman for a year at a time. Blair, the able Scotchman who was for many years the Bishop of London's commissary for this province, complained that the insecurity of the livings rendered it impossible for the clergy to "match so much to their advantage as if they were settled by induction." A wife with a dower seems to have been regarded as one of the natural and legitimate resources of a settled clergyman.

CANOPIED PEW IN THE OLD CHURCH AT SHREWSBURY, NEW JERSEY.

THE CHURCH IN THE CAROLINAS.

THE proprietors of Carolina declared at the outset of their enterprise that they were moved to it by their great zeal to propagate the Christian faith; but once their charter had passed the seals, their zeal enjoyed a peaceful slumber for forty years. They accomplished the settlement of their provinces under the broadest and most solemn promises of religious toleration; but, in 1704, with characteristic bad faith, and by the use of shameless trickery in the elections, their governor procured the passage, by a majority of one, of an act establishing the Church of England and disabling dissenters — who were about two-thirds of the population — from sitting in the assembly. By the same act it was sought to wrest the ecclesiastical power from the Bishop of London and put it into the hands of a subservient lay commission of twenty members, a majority of whom were not even habitual communicants. The Carolinian dissenters promptly petitioned the House of Lords against the bill on account of its proscription of the greater part of the inhabitants, the Bishop of London and the Propagation Society detested and opposed it on account of the lay commission, the House of Lords addressed the Queen against it on both heads, and the law was repealed by the alarmed proprietors and declared null by royal

authority, while the Lords of Trade even took steps looking to the vacating of the lords proprietors' charter. But the matter was so managed by the assembly that their church establishment was retained, though the proscriptive features of the bill and the lay commission for ecclesiastical affairs were given up.

It was the good fortune of the Church of England in South Carolina that nearly all its early ministers were sent out under the auspices of the Society for the Propagation of the Gospel, for the missionaries of this society were carefully selected and were the most reputable clergymen that came to the colonies. Besides the aid which this body continued to give until 1766, the South Carolina clergy received salaries from the provincial treasury and from money raised by a tax on exported furs and deerskins. They also had glebes, which were in some instances stocked with cows, and even in a few cases with household slaves. South Carolina clergy were thus tolerably independent, their election by the people gave some security for their character, and they had besides the good fortune, after 1726, to be, for about thirty years, under the supervision of Alexander Garden, an efficient commissary. The province thus escaped, for the most part, the church scandals of Maryland and Virginia; and though the adherents of the establishment never constituted a majority of the people, the church was able to hold its own against "the meetners," as dis-

senters were called. Eliza Lucas testifies, about 1740, that the "generality of people" in Charleston were "of a religious turn of mind," a statement sustained by the large congregations that a little later attended even week-day lectures of favorite preachers. But in a society so rich and gay and lax re-

PULPIT OF KING'S CHAPEL, BOSTON.

ligion among the upper classes was probably never very intense. Josiah Quincy, who visited Charleston in 1774, was accustomed to the superabounding amplitude of length and breadth and depth of New England ministrations, and he did not estimate highly "the young coxcomb," as he calls him, whom he heard "preach flippantly for seventeen and a half minutes" in a Charleston pulpit. But the South Carolina clergy were not generally flippant, and there were instances of noble disinterestedness and public spirit among them. One of them refused the portion of his salary promised by the Society for the Propagation of the Gospel, and three others left money to public uses. The clergy of South Carolina manifested a genuine interest in the religious welfare of the slaves, whose very multitude made their lot harder than that of the negroes in any other continental colony. Early efforts were made to Christianize them, and an address to the Bishop of London from the South Carolina clergy on the subject was the occasion of Bishop Gibson's pastoral letter and the deliverances of the attorney and solicitor-gen-

eral, all of which were meant to facilitate the conversion of the negroes.

North Carolina was long a barren field for the Church of England. A church establishment found congenial soil among the landed aristocracy of the Chesapeake colonies and South Carolina; but the early North Carolinians were a rather turbulent democracy, fond of their liberty, holding most of the conventions of society in detestation, and regarding with some impatience almost every sort of restraint. The Propagation Society made some early but not very vigorous efforts to secure a lodgment in North Carolina, but the ministers whom they sent suffered much from their uncongenial environment. The vivacious Colonel Byrd sneeringly declared that North Carolina was "a climate where no clergyman can breathe any more than spiders in Ireland." Large numbers of the people grew up without baptism, and this was regarded in that day as a relapse to heathenism. It was specially lamented by Governor Eden that so many hundreds of the children slain by the Tuscaroras were unbaptized. In 1728 the Virginia commissioners who ran the dividing line between that province and Carolina were accompanied by a chaplain, and whole families of North Carolina people intercepted their march, seeking to be "made Christians" by baptism. Stories were current of reckless Virginia clergymen making junketing trips through the neighboring province, and defraying their expenses by baptizing the people at so much a head. Notwithstanding the laws for the establishment of the church that had been on the statute-book for many years, there was not one clergyman of the English Church regularly settled in North Carolina in 1732. The province was not, however, wholly without religious service. Schoolmasters read the liturgy and Tillotson's Sermons in some places, and the law of the market which was adverse to the Anglican Church acted otherwise upon the over-supply of Puritan divines. "Some Presbyterian or rather independent ministers from New England," says Governor Burrington, "have got congregations"; and he explains that others are likely to come, since there are some out of employment in New England, "where a preacher is seldom paid more than the value of twenty pounds sterling." Even earlier than the Puritans the Quakers had gained a hold among the North Carolina settlers, George Fox himself having visited the province as early as 1672. "The Quakers of this government," says Burrington, "are considerable for their numbers and substance, the regularity of their lives, hospitality to strangers, and kind offices to new settlers inducing many to be of their persua-

sion." But 1732 marked the lowest point in the fortunes of the English Church in North Carolina. In that year Boyd, a resident of the province, went to England and took orders. His six years of ministration made a deep impression. In 1743 Clement Hall, who had been a justice of the peace and a lay-reader in the colony, took orders and returned as a missionary to win for himself, by his self-denying toils, his evangelizing journeys, and his popular eloquence, the title of the "Apostle of North Carolina." Notwithstanding the earlier acts on the subject, several new laws were passed in 1745 and later for the better establishment of the church; for though the adherents of the Church of England were always a minority of the people in both the Carolinas, the maintenance of an established form of religious worship seems to have been generally regarded as an essential part of a fixed and orderly government.

THE EPISCOPAL PROPAGANDA.

ALTHOUGH the Church of England appeared to have lost her moral courage and her spiritual aspirations in the reaction against Puritanism, and even against morality and decency, at the restoration of the Stuarts, there set in afterward a movement that was at first as small as a mustard-seed, and so well hidden that its ultimate importance has hitherto failed, so far as I know, to excite the attention of any student of the religious history of that age. About 1679 there sprang up in England what were known as the "religious societies," and though a great part of the religious history of England and her colonies in the eighteenth century lay in embryo in that movement, we cannot now tell the name of its originator or the source of his inspirations. It is possible that some stray seed from Spener's pietistic meetings in Germany had been wafted across the Channel, but it is more probable that the English societies were indigenous. The members of these obscure associations stirred up one another to devotion, and resorted to the communion of the parish churches in a body. It was the phenomenon so often seen in the world's religious his-

tory,—*Ecclesia in Ecclesiâ*,—a church growing within a church that had lost the power to satisfy the aspirations of the human spirit. About 1691, a dozen years after their beginning, some of these associations came under the influence of the reformatory impulse set a-going by the revolution of 1688; and by this means losing their merely pietistic character, they undertook to coöperate for the suppression of the prevalent vices of the time. Three or four years later the hidden leaven of the societies began to make itself felt as a force to be reckoned with, and Queen Mary and Archbishop Tillotson thought it worth while to lend their approval to this new movement, which had grown while sovereigns and prelates slumbered and slept. By 1701 there were twenty allied societies for the reformation of manners in the British

INTERIOR OF CHRIST CHURCH, BOSTON.

Islands, besides forty "devout societies" of the original kind.* The reformatory societies

* The most conspicuous outgrowth of the devout societies was the Methodist movement of the eighteenth century, though I do not know that the connection has ever before been pointed out. The so-called "Holy Club" of Oxford, from which issued the Wesleys and Whitefield, appears to have been merely one of the religious

societies which had already flourished for fifty years, and some of which were still in existence thirty years later. From this same familiar model Wesley doubtless borrowed the outlines of the plan that resulted in the more highly organized Methodist societies out of which in time have come the great Methodist bodies.

spread as far as to New York, and put a new weapon into the hands of waning Puritanism in New England, where they obtained a vogue, even in the country towns, in the early part of the eighteenth century. Meantime, in spite of much unwisdom and misdirected effort, they

societies found a new development. Bray had a mind of great acuteness, inventive rather than original: he was one of those men whose destiny it is to give an organic body to ideas already in the air. One-sided in matters of opinion, as becomes a propagandist, he was

SAMUEL JOHNSON, D.D., FIRST PRESIDENT OF KING'S COLLEGE.

had acquired such influence in England as to be able to suppress a great number of disorderly houses, and drive many lewd characters from the kingdom. More than a thousand convictions for vice were secured in 1701. The fame of the movement spread over Europe, and the published accounts of the societies were translated into other languages. In England great opposition was awakened, and the promoters of the societies met with the common fate of reformers; they were "balladed in the streets" and "ridiculed in plays and on the theaters."

But in the closing years of the seventeenth century there rose up the Rev. Dr. Thomas Bray, in whose hands the voluntary religious

singularly bold and comprehensive in practical affairs. The English Church entirely filled his intellectual horizon; all the rest was in the outer darkness of heresy, schism, apostasy, or damnable infidelity. He combated Romanism and he detested dissent. The regions settled by Quakers were to him hardly better than "so many heathen nations," and he joyfully announced in one of his publications that "many Quakers have returned to the Christian faith." This unsympathetic narrowness gave concentration to his exertions, which for the rest were sincere and disinterested. When he accepted the office of Commissary to Maryland he sold his effects and borrowed money to reach the province, at the same

time refusing eligible benefices at home. But knowing the ignorance of many of the clergy and their destitution of books, he organized, before he set out for Maryland, a society for furnishing the clergy in the colonies and in the provinces with libraries; borrowing his fundamental idea, no doubt, from Tenison, then Archbishop of Canterbury, who, when Vicar of St. Martin's, had founded a library with the view of keeping the thirty or forty young clergymen resident in that court parish as tutors, and in other capacities, from spending their time in taverns. This society, at first merely a new kind of voluntary association, was chartered in 1698 as "The Society for Promoting Christian Knowledge." But the schemes of such a man as Bray enlarge as he advances; and every project was swiftly transmuted into an organized association. After his return from Maryland he developed another private society, which had been "formed to meet and consult and contribute toward the progress of Christianity," into the Venerable Society for the Propagation of the Gospel, for which a royal charter was secured in 1701. The chief work of this corporation in the eighteenth century was in the American colonies. To these Dr. Bray added another association, for the special work of promoting the conversion of Indians and negroes. He not only influenced the early history of American religious life, but his societies became patterns and forerunners of all those propagandist and philanthropic associations by which Protestant bodies of every sort have supplied the place of the religious orders of the Roman Church.

The Propagation Society selected for its first missionary George Keith, perhaps one of the most disputatious religionists that ever vexed the souls of his fellow-men. Born in Aberdeen, he left the Scotch Kirk to join the Society of Friends, the most aggressive and the most sorely beset by foes of all the sects of the seventeenth century. He threw himself into the fray for years as their apologist, and endured long imprisonments for the sake of his opinions. While teaching the Friends' School in Philadelphia, he won notoriety by out-quaking the Quakers, assailing the leading members of the society for their sins in keeping slaves, in accepting public office, and in making laws, as well as for divers other departures from what he deemed the primitive Quaker way. He managed to make himself pestiferous, and to rend the little newly planted Pennsylvania world into two parties, leading out in 1691 a sect of those who modestly distinguished themselves as the *Christian* Quakers, but who were popularly known as Keithian Quakers. These he de-

serted in turn to take orders in the Church of England. Returning as an itinerant missionary of the Venerable Society, he had the satisfaction of bedeviling his old enemies to his heart's content. Thoroughly acquainted with the writings and usages of the Quakers, he thrust himself into their assemblies with the thick-skinned indelicacy of a hardened polemic, assailing their most cherished doctrines and denouncing their most revered leaders in their own meeting-houses. This, it is true, was only rendering measure for measure to the contentious Quakers of that day; but it was a mode of warfare to which the later and more dignified Church of England missionaries would not have resorted, and it is to the credit of the Society for Propagating the Gospel that Keith made but a single brief and bitter campaign. On his return to England he published a narrative of his travels, wherein he related his doughty combats with illiterate preachers, ill-fitted to answer an assailant whose expertness had been gained in warfare on so many sides of the question. Then after all these stormy years of restless disputations, Keith settled down in an obscure English vicarage, where, besides petty religious disputes, he employed his leisure in writing a work on longitude. Some of the "Keithians" in Pennsylvania followed him into the Church of England; many others became Baptists.

One of the chief disadvantages of the English Church in the colonies arose from

ANCIENT SILVER COMMUNION SERVICE BELONGING TO CHRIST CHURCH, PHILADELPHIA.

the fact that many of its ministers held English notions of the church's position and rights. In their view the dissenters could at best claim only the barest tolerance: the church, where it was not established, was the heir-at-law unjustly kept out of an entailed inheritance by usurpers. From their standpoint there was no reason to scruple over the appropriation to their use of meeting-houses

put into their hands by force, as by Andros in Boston. When, in 1702, Lord Cornbury fled to Jamaica, on Long Island, from an epidemic, he accepted from the Presbyterian minister the loan of the parsonage built by the town; but when Cornbury left Jamaica, he politely returned the house, not to its former occupant, but to the Church of England missionary, alleging that since the house had been built by a public tax it ought to belong to the Established Church. He also by mere force, without process of law, put the Episcopal party into possession of the new stone meeting-house of this Puritan town; this they held for twenty-five years. Bigotry was common to all parties in that age: it was not surprising that churchmen should regard Cornbury's transaction as nothing more than the giving back to the church of its own again; but the complicity of clergymen in such acts of arbitrary injustice begot a prejudice against the church.

The "missioners" of the Society for the Propagation of the Gospel were generally chosen with care, and there were few scandals among them. The Propagation Society, indeed, was the principal agent in raising the character of the English Church clergy in America. A large proportion of the missionaries of the society were of American birth,

BISHOP BERKELEY'S FLAGON, NOW IN POSSESSION OF DANIEL BERKELEY UPOKE, ESQ.

and these had a far stronger hold on the colonists than an equal number of men born in England could have gained. There were among them men of distinguished ability and high character. Such divines as Cutler and Johnson and Chandler could not but make the Church of England respected even where it was not loved. To the missionaries of the

society is due the great and perennial honor of having been first to undertake, in any systematic way, the education of negro slaves. The very first missionary sent to South Carolina promptly began it, and it was carried forward by those who came after him in most of the parishes in that province. In 1742 Commissary Garden founded a negro school in Charleston, in which slaves were taught by slave teachers; these last, curiously enough, were the property of the Venerable Society, trained for the purpose. That no great result could come among thousands of slaves from the teaching of reading and the catechism to a few house-servants is evident, but the persistent efforts to do what could be done were most commendable. More hopeful was the work of "honest Elias Neau," the society's catechist in New York. Before he engaged in teaching negroes he bore the nickname of "the new reformer," because he was the leader of a little society of eight people "for the reformation of manners," in the rather immoral and very polyglot town at the south end of Manhattan Island. Catechists were afterward employed among the slaves in Philadelphia and elsewhere, but Neau was without doubt the most successful teacher of negroes in the colonies. In order to stir up the planters to instruct their slaves, especially to teach them the rudiments of the Christian religion, the society circulated many thousand copies of a sermon preached by Bishop Fleetwood in 1711, and of Bishop Gibson's letters on the subject, issued in 1727. To this exertion for the slaves must be added, in any summary of the work of this excellent society, the missions to the Indians, which cannot be treated here.*

DEAN BERKELEY'S PROJECT.

THE most curious episode in the history of the Church of England in America is the attempt set on foot by the famous Dean Berkeley, afterward Bishop of Cloyne, to convert the Indians and to better the religious condition of the continent. This he proposed to do by founding a college in Bermuda for the education of American savages and clergymen. The proposition, coming from a man of his eminence, attracted much attention; for at the age of twenty-five Berkeley had made a permanent and important contribution to scientific speculation in his "Theory of Vision," and at twenty-six he had printed his "Principles of Human Knowledge," in which

* I am much indebted to the Rev. H. W. Tucker, the present able Secretary of the Propagation Society, for giving me the opportunity to examine the manuscript records of the society and the White-Kennett library.

he pushed idealism to its logical extreme, and placed himself among the founders of philosophic systems. He was not only a philosopher of world-wide fame, but a poet of true inspiration and graceful expression. His renown, his handsome person, and his amiable temper, as well as his wide knowledge and delightful gift for conversation, made him sought after in society and a favorite at court, while the purity and manly disinterestedness of his character gave him a lustrous singularity among the wits of his time. Fortune treated him kindly; he inherited four thousand pounds by the caprice of a lady with whom he had but slight acquaintance, and at forty years of age he was promoted to the best deanery in Ireland. But in the height of his prosperity he published in 1724 his "Proposal for better supplying of Churches in our Foreign Plantations." His plan was to raise up clergymen and educate Indians by means of a training college in the Bermudas, and he offered to resign his deanery and accept a paltry hundred pounds a year as the head of this enterprise. Nothing could have surprised the world of that day more than such an act of self-abnegation on the part of a churchman who saw the highest promotions thrown in his way by the favor of the great. No impulse could well have been nobler than this to plant the seeds of learning and virtue in a new continent, while few schemes were ever so utterly visionary as this one elaborated by Berkeley without any reckoning with the tremendous difficulties and untoward conditions of his task. But it was a "bubble period" in philanthropy as well as in finance; the English world was in a state of hopefulness, and a project was rendered plausible to the imagination of that time merely by its largeness and the ingenuity with which it was constructed. All kinds of social and agricultural projects for America were rife. English felons were to be reformed by filling a Virginia county with them and setting them to raising hemp for a livelihood; proposals had already appeared for planting the extreme south of Carolina with stranded debtors from English jails; Dr. Bray and his associates, and the dissenters as well,

DEAN BERKELEY, AFTERWARD BISHOP OF CLOYNE.
(FROM A PAINTING BY JOHN SMYBERT, IN POSSESSION OF YALE UNIVERSITY.)

were for converting the negroes to Christianity out of hand; Oglethorpe, with his bundle of strange socialistic and agricultural projects, was only just below the horizon; Wesley and

THE GREAT FIRE IN 1776.

his quixotic Indian mission, and Whitefield and his expensive orphanage, were soon to appear. Even in an age less susceptible, the contagion of Berkeley's refined enthusiasm, supported by his eloquence, might have won over cool heads to such a project. The cynical Swift laughed at him but helped him; the wits of the Scriblerus Club, after rallying him, surrendered to the captivating eloquence with which he defended his scheme and confessed to a momentary impulse to go with him. Statesmen listened to him, and George I. granted him a charter, and, with the assent of parliament, set apart twenty thousand pounds of the proceeds of lands in St. Christopher for the benefit of the new college in the Bermudas. Berkeley also received considerable sums in private gifts for his enterprise.

In order to show to all the sincerity of his intentions, he prepared to set out for America without waiting to receive the public funds promised to him. But he regarded his enterprise rather in the spirit of a poet than in that of a missionary. Along with his first proposals, set forth in plain prose, he had sent to Lord Perceval as early as 1725 a draft of his noble prophetic poem on America, and he persuaded Pope to translate Horace's description of the Fortunate Islands, which he considered applicable to the Bermudas. With these islands he had become enamored without so much as ever having a sight of them. To his bride, who sailed with him in 1728, he presented a spinning-wheel as a token that she was to lead the life of a plain farmer's wife, "and wear stuff of her own spinning."

Instead of going direct to Bermuda he set out for Rhode Island, touching at Virginia. It was only on arriving in America that the absurdity of a scheme of propagandism constructed in thin air, by a speculative thinker in his closet, became apparent. In England, Berkeley had been surrounded by people whose ignorance of America was more dense than his own. He might

silence the raillery of the wits of the Scriblerus Club by his eloquent talk, but the wits of Virginia knew the Indians too well to be for a moment beguiled. The attempt to educate young savages at William and Mary under the patronage of Governor Spotswood had but recently proved a failure. Most of the Indian students had died from the change of habit; the rest had relapsed to savagery on their return to their tribes, or remained as menials or vicious idlers in the settlement. Byrd, the brightest of the Virginians, laughed at Berkeley for another Quixote, and wrote to Berkeley's friend, Lord Perceval, that the dean would "need the gift of miracles to persuade" the savages "to leave their country and venture themselves on the great ocean on the temptation of being converted." Colonel Byrd declared his belief that it was Waller's poetic description of the islands that had "kidnaped" Berkeley "over to Bermuda." And indeed Berkeley himself, by the time he was fairly settled for a sojourn at Newport, had begun to see the doubtfulness of the Bermuda part of the project, and to consider the question of translating his college to Rhode Island.

During his residence of two or three years at Newport he made many friends, as a matter of course, for more lovable a man could not well be. Such of the Church of England missionaries as were near enough met from time to time in a sort of synod at his house and came strongly under his influence, but the friendships of a soul so catholic were not confined to his own communion. He waited in vain for the twenty thousand pounds from the Government. When at last his patience was exhausted, Gibson, the Bishop of London,

THE OLD NARRAGANSETT CHURCH IN RHODE ISLAND.

demanding on his behalf a categorical reply from Walpole, and the Prime Minister, in diplomatic but unmistakable words, declared that the money would never be paid.

The refusal of Walpole gave Berkeley a pretext to return to England and take up his own proper career once more. It is hard to believe that he regretted it, for his stay in America must have brought him many cruel disenchantments. He found the once comparatively dense Indian population of Rhode Island already in 1730 dwindled to one thousand, and these were "servants and laborers for the English," doomed to extermination by their hopeless proclivity for drink. The rivalry and polemical collisions between the Anglican missionaries and the established Puritan clergy were doubtless repulsive to him; he certainly appears to have done much to soften the religious asperities growing out of the situation. With his prestige, he easily might have secured from private munificence sufficient money to begin his college and to carry it to such success as was possible, had he been made of missionary stuff. Indeed, he afterward wrote to the first head of King's College in New York: "Colleges from small beginnings grow great by subsequent bequests and benefactions." But there had probably come to him in these years of retirement that disillusion which is hardest of all to bear—the discovery that in following an impulse entirely generous, one has misunderstood his vocation, wasted his best years, and spent the never-to-be-recovered forces of his prime. Even while he was at Newport, Berkeley had relapsed into philosophy and passed his time for the most part not as the missionary he wished to be, but as the thinker nature had made him. At Newport he wrote his "Alciphron," and his letters thence show that his chief interest lay in discussing, not the aborigines or the rival ecclesiastical systems of the colonists, but Newton's ideas of space and Locke's notions of matter. It could not have been Walpole's refusal alone that sent him back to Europe, "touched" in "health and spirits." He no doubt felt keenly his mistake, and perhaps recognized some justice in that "raillery of European wits" which he would liked to have desisted.

The real value of Berkeley's visit to America he himself probably never fully understood. The simple presence of a man of renown consecrated to intellectual pursuits and inspired by the most genuine philanthropy was of inestimable value in a sordid provincial society where the leaders had been chiefly rich speculators, successful cod-fishermen, Guinea traders in slaves, and rum-distillers,—or at best religious disputants and provincial politicians. To

the religious life of the northern colonies the Dean of Derry was a sort of dove from the skies. He impressed upon the church mission-

aries the loveliness of charity and forbearance, and he embraced in his affections those for whom he invented the title, "Brethren of the Separation." When he left he gave a noble pledge of his good feeling toward those who differed from him, in making liberal gifts in books and land to Yale and Harvard colleges. This was propagating a sort of Christianity that had never been revealed to America before. In a sermon preached before the Venerable Society after his return, he praises its missionaries particularly in that they were at that time "living on a more friendly foot with their brethren of the separation, who on their part are very much come off from that narrowness of spirit which formerly kept them at such a distance from us." Berkeley, by his mere presence, did better for the colonies than he could have done with a college six hundred miles off the coast.

AN EPISCOPAL CHURCH
WITHOUT A BISHOP.

THE most salient fact in the history of the Church of England in America is that in the whole period of its existence—about a century and three-quarters—no bishop of its communion ever set foot in this hemisphere, no church building was ever episcopally consecrated, no catechumen ever received confirmation, and no resident of America was ever ordained without making the tedious voyage to England, exposed to the dangers of the sea and to the tolerable certainty of taking the small-pox upon his arrival in Europe. In 1638 Archbishop Laud, with characteristic directness, proposed to send a bishop to America, and to support him “with some forces to compel if he could not otherwise persuade obedience.” But all the means of persuasion at Laud’s disposal were soon after in requirement to compel obedience in England and Scotland. Laud’s scheme, in its spirit and perhaps in some of its details, was revived in the first years after the restoration, when, in 1662, Sir Robert Carr was thought of for a general governor of all the colonies. He was to be accompanied by a major-general and a bishop with a suffragan; * but this dangerous procession of formidable authorities, by whomsoever proposed, was prudently laid aside after the arrival of delegates who brought the humble, not to say cringing, submission of Massachusetts to the king. In 1672 an attempt was made to establish the episcopate in Virginia with Dr. Alexander Murray for bishop.

In the numerous later efforts to secure a

CARICATURE ON THE PROPOSITION TO ESTABLISH AN AMERICAN EPISCOPATE.
(FROM A COPY IN POSSESSION OF BISHOP POTTER.)

bishop many devices were suggested for overcoming the difficulty about his support. Long before Dean Berkeley applied for part of the proceeds of lands in St. Christopher others had thought of the availability of this source of supply, and it was Queen Mary’s design that these should be devoted to the support of four American bishops. Quit rents in that rogue’s refuge, the debatable land between Virginia and North Carolina, the rents and revenues from the sale of lands in the Dela-

* This statement is made on the authority of Hutchinson, who cites a letter of Norton’s. Dr. Hawks ventured the curious suggestion that 1662 was a mistake for 1672; and Bishop Perry, in his “History of the American Episcopal Church,” copies Hawks’s suggestion without investigation. It seems strange that a writer

so well informed as Hawks should not have known that the famous John Norton’s mission to England was in 1662, and equally strange that he should suppose a letter to have been written in 1672 by Norton, who died in 1663.

ware counties, and those derivable from the disputed gore between New York and Connecticut were all suggested. A very considerable fund was raised by private contributions and bequests made at various times for the endowment of bishoprics in America.

From the time of the organization of the Propagation Society, in 1701, the contention for American bishops was almost without intermission. At one time Dean Swift had hopes of receiving such an appointment; if his expectations had been met, the biting pen that wrote the "Proposal for the Universal Use of Irish Manufactures" and the Drapier letters might have found in the abuses of the colonial administration occasions for tormenting more than one government at London. At another time the Bishop of London proposed to take the matter into his own hands and ordain as a suffragan Colebatch, who had been selected by the clergy of Maryland; but the provincial authorities sued out a writ of *ne exeat regno*, and prevented the bishop-elect from going to London for consecration.

The fatal obstacle to the development of the English Church in America was the lien of Siamese twinship that bound it to the prevalent system of colonial government. Religious or moral considerations had small weight with cabinet ministers. "Damn their *souls*, let them make tobacco," said one of these, when appealed to in behalf of the Virginians. "A very great lord," when addressed in favor of Berkeley's project, frankly expressed his belief that it would be impolitic for the English government to do anything to remove the ignorance which made the red men inferior, or the sectarian divisions which weakened the colonists. There were certain political forces always opposed to the setting up of bishops in America. Colonial governors and their friends dreaded it, partly from that jealousy of any rival authority which involved so many governors in quarrels with the Bishop of London's commissaries, and partly because English precedents gave to bishops the fees of marriage license and probate, which were considerable perquisites of the governors. There was also an objection of state-craft: it was believed by English ministers of that time that to give the jurisdiction of the American churches into the hands of resident bishops would tend to unite the colonies and lessen their dependence on the mother-country. But perhaps the most formidable obstacle of all was offered by the untiring opposition of non-conformists in America and their friends in England.

It is impossible not to sympathize with devout and zealous adherents of the English Church who desired to complete its organization in the colonies according to its proper

and essential principles. While it had no bishops, there was, as Bishop Sherlock intimated, only "the appearance of an Episcopal Church in the plantations." Fair-minded dissenters, such as President Davies in America and Dr. Doddridge in England, conceded the justice of the demand for American bishops. On the other hand there is much to be said for those who so zealously opposed an American episcopate. The Episcopal Church never renounced its claim to be established by law and supported by taxation in all the English dominions; and there were not wanting clergymen in America imprudent enough to suggest that the English parliament should fix the stipend of incumbents even in dissenting colonies like Pennsylvania. So long as parliament insisted on its paramount right to legislate for the American provinces, no safeguard or proviso could be devised by human ingenuity strong enough to allay the apprehensions of non-conformists that the ordination of American bishops would add another to the authorities in America responsible only to England, and thus add another to the powers adverse to the liberties of the colonists. Bishops Sherlock, Secker, and Butler gave the most solemn, and doubtless sincere, assurances of the harmlessness of their intentions; but there was no way by which they could go bail for those who should come after them. It was urged that the common law of England vested a great deal of power in the bishops, and that if bishops should be set up in America without limitations of their powers by statutory enactment of parliament they would be a perpetual menace to liberty.

It must be confessed that the heavy and aggressive hand of the church, where it had power, did not tend to quiet the fears of the colonists. The non-churchmen in the province of New York greatly outnumbered the churchmen: they claimed to be fourteen-fifteenths of the population; but the assembly strove in vain to release the dissenters of New York City and its neighborhood from paying taxes for the support of the English churches. The Episcopalians in Connecticut complained, with reason, that they paid tithes to support the Puritan clergy, and in later times they were able to evade it; but the Episcopal clergy in New York resisted every effort of the members of other religious bodies to relieve themselves from a like injustice, and the dominance of churchmen in the governor's council enabled them to defeat the will of the representative assembly. Propositions to allow Presbyterians to make oath without kissing the Bible, and laws to enable one and another of the non-Episcopal bodies to hold property, were at different times defeated in the same

way. The dissenting churches could not even gain the power to hold their burying-grounds. Against a law to enable the Presbyterian churches to hold real estate, the rector and wardens of Trinity Church appeared by counsel in 1720; and when another act of the same kind was sent to England for confirmation, in 1766, the Bishop of London appeared twice before the Board of Trade to compass its rejection. Even the charter of a Boston missionary society intended to propagate Christianity among the Indians was defeated in 1762, as was alleged, by the influence of the primate; and the Archbishop of Canterbury's objection to the liberality of the scheme overthrew Whitefield's project for getting a charter in England for a college at Bethesda. All the assurances, solemnly and repeatedly given, that bishops in America would meddle with nobody but their own clergy went for nothing, so long as prelates in England and churchmen in America used the authority of the crown to prevent dissenters, even where they were in an overwhelming majority, as in New York, from attaining an equality of legal standing with the English Church. When the Episcopal clergy in the Northern and Middle colonies combined to secure a bishop, they were confronted with a union between the Presbyterians of Pennsylvania and the Puritans of Connecticut, who opposed their request unless the appointment should be accompanied by a statute strictly limiting the power of American bishops. Some were unwilling that bishops should come even under restrictions. There was much bigotry, no doubt, but there was also, under the circumstances, an appearance of reason in the resolutions of the more violent dissenters to keep bishops "from getting their feet into the stirrup at all."

The protracted struggle over this question at length became part of that great conflict which was formed by the confluence of many tributary rills of minor exasperation, and which resulted in precipitating the independence of the British settlements in America. When once party passions were inflamed to a white heat by the aggressions of the British parliament, every proposition for the establishment of bishops in the colonies added to the violence of the convulsion that was soon to overthrow not only the English Church, but the English power in America.

There were prudent churchmen who saw that the times were inauspicious. Dr. Terrick, Bishop of London, sent a paper to the Board

of Trade, in which he intimated a doubt that it might not be "consistent with the principles of true policy" to appoint a bishop for America under the existing circumstances; and he suppressed the addresses to the throne sent to him by the English Church clergy of Connecticut, New York, and New Jersey. In these exigent times political considerations came to outweigh religious preferences, and Whig churchmen looked on the American episcopate as a Tory measure. Many even of the Episcopal clergy in the Southern colonies, sympathizing with the struggle for liberty, were opposed to the establishment of an American episcopate. In 1771 few of the Virginia clergy could be persuaded to advocate the appointment of bishops for America; four of them signed a declaration that the establishment of an episcopate so unseasonably "would tend greatly to weaken the connection between the mother-country and her colonies, . . . and to give ill-disposed persons occasion to raise such disturbances as may endanger the very existence of the British Empire in America." For this the patriotic clergymen received the thanks of the Virginia assembly, which was largely composed of churchmen.

One of the most grievous of the evils resulting from the lack of bishops was that every American who would have orders must go to London for them, and it was estimated that about a fifth of all who crossed the sea for this purpose lost their lives by disease or shipwreck. The preponderance of Englishmen, or rather of Scotchmen and Irishmen, among the clergy; the dependence of a part of them on English contributions for support; as well as the derivation of ecclesiastical authority from a "bishop at one end of the world and his church at the other," as Bishop Sherlock forcibly put it, prevented the church from becoming rooted in America. In the Southern colonies one of the results of the Revolution was the disestablishment of the church. In the Middle and Northern colonies, where the clergymen were missionaries sustained from England, and always on the defensive against the dominant religion, churchmen in disproportionate numbers were driven to side with England in the Revolution, and clergymen were expelled from their cures by violence, or forced to close their churches because they could not in conscience omit the prayers for the king. So that what befell the Anglican Church in America at the outbreak of the Revolution was little less than sheer ruin.

Edward Eggleston.

THE LIAR.

BY HENRY JAMES.

IN TWO PARTS. PART I.

HE train was half an hour late and the drive from the station longer than he had supposed, so that when he reached the house its inmates had dispersed to dress for dinner, and he was conducted straight to

his room. The curtains were drawn in this asylum, the candles were lighted, the fire was bright, and when the servant had quickly put out his clothes, the comfortable little place became suggestive — seemed to promise a pleasant house, a various party, talks, acquaintances, affinities, to say nothing of very good cheer. He was too occupied with his profession to pay many country visits, but he had heard people who had more time for them speak of establishments where "they do you very well." He foresaw that the proprietors of Stayes would do him very well. In his bedroom, at a country house, he always looked first at the books on the shelf and the prints on the walls; he considered that these things gave a sort of measure of the culture, and even the character, of his hosts. Though he had but little time to devote to them on this occasion, a cursory inspection assured him that if the literature, as usual, was mainly American and humorous, the art did n't consist either of the water-color studies of the children, or of "goody" engravings. The walls were adorned with old-fashioned lithographs, principally portraits of country gentlemen with high collars and riding-gloves; this suggested — and it was encouraging — that the tradition of portraiture was held in esteem. There was the customary novel of Mr. Le Fanu, for the bedside (the ideal reading, in a country house, for the hours after midnight). Oliver Lyon could scarcely forbear beginning it while he buttoned his collar.

Perhaps that is why he not only found every one assembled in the hall when he went down, but perceived, from the way the move to dinner was instantly made, that they had been waiting for him. There was no delay, to introduce him to a lady, for he went out, in a group of unmatched men, without this appendage. The men straggling behind

sidled and edged, as usual, at the door of the dining-room, and the dénouement of this little comedy was that he came to his place last of all. This made him think that he was in a sufficiently distinguished company, for if he had been humiliated (which he was not), he could not have consoled himself with the reflection that such a fate was natural to an obscure, struggling young artist. He could no longer think of himself as very young, alas, and if his position were not as brilliant as it ought to be, he could no longer justify it by calling it a struggle. He was something of a celebrity, and he was apparently in a society of celebrities. This idea added to the curiosity with which he looked up and down the long table as he settled himself in his place.

It was a numerous party — five and twenty people; rather an odd occasion to have proposed to him, as he thought. He would not be surrounded by the quiet that ministers to good work; however, it had never interfered with his work to see the spectacle of human life before him in the intervals. And though he did n't know it, it was never quiet at Stayes. When he was working well he found himself in that happy state — the happiest of all for an artist — in which things in general contribute to the particular idea and fall in with it — help it on and justify it, so that he feels, for the hour, as if nothing in the world can happen to him, even if it come in the guise of disaster or suffering, that will not be a sort of addition to his subject. Moreover, there was an exhilaration (he had felt it before) in the rapid change of scene — the jump, in the dusk of the afternoon, from foggy London and his familiar studio to a center of festivity in the middle of Hertfordshire and a drama half acted, a drama of pretty women, and noted men, and wonderful orchids in silver jars. He observed, as a not unimportant fact, that one of the pretty women was beside him; a gentleman sat on his other hand. But he did n't go into his neighbors much as yet; he was busy looking out for Sir David, whom he had never seen and about whom he naturally was curious.

Evidently, however, Sir David was not at dinner, a circumstance sufficiently explained

by the other circumstance which constituted our friend's principal knowledge of him — his being ninety years of age. Oliver Lyon had looked forward with great pleasure to the chance of painting a nonagenarian, and though the old man's absence from table was something of a disappointment (it was an opportunity the less to observe him before going to work), it seemed a sign that he was rather a sacred, and perhaps therefore an impressive, relic. Lyon looked at his son with the greater interest — wondered whether the glazed bloom of his cheek had been transmitted from Sir David. That would be jolly to paint, in the old man — the withered ruddiness of a winter apple, especially if the eye were still alive and the white hair carried out the frosty look. Arthur Ashmore's hair had a midsummer glow, but Lyon was glad his commission had been to delineate the father rather than the son, in spite of his never having seen the one, and the other being seated there before him now in the happy expansion of successful hospitality. Arthur Ashmore was a good, fresh-colored, thick-necked English gentleman, but he was just not a subject; he might have been a farmer, and he might have been a banker — he failed of homogeneity. Mrs. Ashmore did n't make up the deficiency; she was a large, bright, negative woman, who had the same air as her husband of being somehow tremendously new; a sort of appearance of fresh varnish (Lyon could n't tell whether it came from her complexion or from her clothes), so that one felt she ought to sit in a gilt frame, suggesting reference to a catalogue or a price-list. It was as if she were already rather a bad, though expensive, portrait, knocked off by an eminent hand, and Lyon had no wish to copy that work. The pretty woman on his right was engaged with her neighbor, and the gentleman on his other side looked shrinking and scared, so that he had time to lose himself in his favorite diversion of watching face after face. This amusement gave him the greatest pleasure he knew, and he often thought it a mercy that the human mask did interest him, or that it was not less successful than it was (sometimes it ran its success very close), since he was to make his living by reproducing it. Even if Arthur Ashmore would not be inspiring to paint (a certain anxiety rose in him lest if he should make a hit with her father-in-law, Mrs. Arthur should take it into her head that he had now proved himself worthy to *aborder* her husband); even if he had looked a little less like a page (fine as to print and margin) without punctuation, he would still be a refreshing, iridescent surface. But the gentleman four persons off — what was he? Would he be

a subject, or was his face only the legible door-plate of his identity, burnished with punctual washing and shaving — the least thing that was decent that you would know him by? This face arrested Oliver Lyon; it struck him at first as very handsome. The gentleman might still be called young, and his features were regular: he had a plentiful, fair mustache that curled up at the ends; a brilliant, gallant, almost adventurous air; and a big shining breastpin in the middle of his shirt. He appeared a fine, satisfied soul, and Lyon perceived that wherever he rested his friendly eye there fell an influence as pleasant as the September sun — as if he could make grapes and pears, or even human affections, ripen by looking at them. What was odd in him was a certain mixture of the correct and the extravagant; as if he were an adventurer imitating a gentleman with rare perfection, or a gentleman who had taken a fancy to go about with hidden arms. He might have been a dethroned prince or the war correspondent of a newspaper; he represented both enterprise and tradition, good manners and bad taste. Lyon at length fell into conversation with the lady beside him — they dispensed, as he had had to dispense at dinner parties before, with an introduction — by asking who this personage might be.

"Oh, he's Colonel Capadose, don't you know?" Lyon did n't know, and he asked for further information. His neighbor had a sociable manner, and evidently was accustomed to quick transitions; she turned from her other interlocutor with a methodical air, as a good cook looks into the next saucepan. "He has been a great deal in India — is n't he rather celebrated?" she inquired. Lyon confessed he had never heard of him, and she went on, "Well, perhaps he is n't; but he says he is, and if you think it, that's just the same, is n't it?"

"If *you* think it?"

"I mean if he thinks it — that's just as good, I suppose?"

"Do you mean that he says that which is not?"

"Oh dear, no — because I never know. He is exceedingly clever and amusing — quite the cleverest person in the house, unless, indeed, you are more so. But that I can't tell yet, can I? I only know about the people I know; I think that's celebrity enough!"

"Enough for them?"

"Oh, I see you're clever. Enough for me! But I have heard of you," the lady went on. "I know your pictures; I admire them. But I don't think you look like them."

"They are mostly portraits," Lyon said; "and what I usually try for is not my own resemblance."

"I see what you mean. But they have more color. And now you are going to do some one here?"

"I have been invited to do Sir David. I'm rather disappointed at not seeing him this evening."

"Oh, he goes to bed at some unnatural hour — 8 o'clock, or something of that sort. You know he's rather an old mummy."

"An old mummy?" Oliver Lyon repeated.

"I mean he wears half a dozen waistcoats, and that sort of thing. He's always cold."

"I have never seen him, and never seen any portrait or photograph of him," Lyon said.

"I'm surprised at his never having had anything done — at their waiting all these years."

"Ah, that's because he was afraid, you know; it was a kind of superstition. He was sure that if anything were done he would die directly afterward. He has only consented to-day."

"He's ready to die, then?"

"Oh, now he's so old, he does n't care."

"Well, I hope I sha'n't kill him," said Lyon. "It was rather unnatural in his son to send for me."

"Oh, they have nothing to gain — everything is theirs already!" his companion rejoined, as if she took this speech quite literally. Her talkativeness was systematic — she fraternized as seriously as she might have played whist. "They do as they like — they fill the house with people — they have *carte blanche*."

"I see — but there's still the title."

"Yes, but what is it?"

Our artist broke into laughter at this, whereat his companion stared. Before he had recovered himself she was scouring the plain with her other neighbor. The gentleman on his left at last risked an observation, and they had some fragmentary talk. This personage played his part with difficulty; he uttered a remark as a lady fires a pistol, looking the other way. To catch the ball Lyon had to bend his ear, and this movement, after some minutes, led to his observing a lady who was seated on the same side, beyond his interlocutor. Her profile was presented to him, and at first he was only struck with its beauty; then it produced an impression still more agreeable — a sense of undimmed remembrance and intimate association. He had not recognized her on the instant, only because he had so little expected to see her there; he had not seen her anywhere for so long, and no news of her ever came to him. She was often in his thoughts, but she had passed out of his life. He thought of her twice a week; that may be called often in relation to a person one has not seen for twelve years. The moment after

he recognized her he felt how true it was that it was only she who could look like that; of the most charming head in the world (and this lady had it) there could never be a replica. She was leaning forward a little; she remained in profile, apparently listening to some one on the other side of her. She was listening, but she was also looking, and after a moment Lyon followed the direction of her eyes. They rested upon the gentleman who had been described to him as Colonel Capadose — rested, as it appeared to him, with a certain serene complacency. This was not strange, for the colonel was unmistakably formed to attract the sympathetic gaze of woman; but Lyon was slightly disappointed that she could let *him* look at her so long without giving him a glance. There was nothing between them to-day, and he had no rights, but she must have known he was coming (it was of course not such a tremendous event, but she could n't have been staying in the house without hearing of it), and it was n't natural that that should absolutely not affect her.

She was looking at Colonel Capadose as if she were in love with him — a queer accident for the proudest, most reserved of women. But doubtless it was all right, if her husband liked it, or did n't notice it; he had heard, indefinitely, years before, that she was married, and he took for granted (as he had not heard that she had become a widow) the presence of the happy man on whom she had conferred what she had refused to *him*, the poor art-student at Munich. Colonel Capadose appeared to be aware of nothing, and this circumstance, incongruously enough, rather irritated Lyon than gratified him. Suddenly the lady turned her head, showing her full face to our hero. He was so prepared with a greeting that he instantly smiled, as a shaken jug overflows; but she gave him no response, turned away again, and sank back in her chair. All that her face said in that instant was, "You see I'm as handsome as ever." To which he mentally subjoined, "Yes, and as much good it does me!" He asked the young man beside him if he knew who that beautiful woman was — the fifth person beyond him. The young man leaned forward, considered, and then said, "I think she's Mrs. Capadose."

"Do you mean his wife — that fellow's?" And Lyon indicated the subject of the information given him by his other neighbor.

"Oh, is *he* Mr. Capadose?" said the young man, who appeared very vague. He admitted his vagueness, and explained it by saying that there were so many people, and he had only come the day before. What was definite to Lyon was that Mrs. Capadose was in love

with her husband, and he wished more than ever that he had married her.

"She 's very faithful," he found himself saying, three minutes later, to the lady on his right. He added that he meant Mrs. Capadose.

"Ah, you know her then?"

"I knew her once upon a time — when I was living abroad."

"Why, then, were you asking me about her husband?"

"Precisely for that reason. She married after that — I did n't even know her present name."

"How, then, do you know it now?"

"This gentleman has just told me — he appears to know."

"I did n't know he knew anything," said the lady, glancing forward.

"I don't think he knows anything but that."

"Then you have found out for yourself that she is faithful. What do you mean by that?"

"Ah, you must n't question me — I want to question you," Lyon said. "How do you all like her here?"

"You ask too much! I can only speak for myself. I think she 's hard."

"That 's only because she 's honest and straightforward."

"Do you mean I like people in proportion as they deceive?"

"I think we all do, so long as we don't find them out," Lyon said. "And then there's something in her face — a sort of Roman type, in spite of her having such an English eye. In fact, she 's English down to the ground; but her complexion, her low forehead, and that beautiful close little wave in her dark hair make her look like a kind of glorified *contadina*."

"Yes, and she always sticks pins and daggers into her head, to increase that effect. I must say I like her husband better; he is so clever."

"Well, when I knew her there was no comparison that could injure her. She was altogether the most delightful thing in Munich."

"In Munich?"

"Her people lived there; they were not rich — in pursuit of economy, in fact, and Munich was very cheap. Her father was the younger son of some noble house; he had married a second time, and had a lot of little mouths to feed. She was the child of the first wife, and she did n't like her stepmother, but she was charming to her little brothers and sisters. I once made a sketch of her as Werther's Charlotte, cutting bread and butter while they clustered all round her. All the artists in the place were in love with her, but she would n't look at 'the likes' of us. She

was too proud — I grant you that; but she was n't stuck up, or young ladyish; she was simple, and frank, and kind about it. She used to remind me of Thackeray's Ethel Newcome. She told me she must marry well; it was the one thing she could do for her family. I suppose you would say that she *has* married well?"

"She told *you*?" smiled Lyon's neighbor.

"Oh, of course I proposed to her too. But she evidently thinks so herself!" he added.

When the ladies left the table, the host, as usual, bade the gentlemen draw together, so that Lyon found himself opposite to Colonel Capadose. The conversation was mainly about the "run," for it had apparently been a great day in the hunting-field. Most of the gentlemen communicated their adventures and opinions, but Colonel Capadose's pleasant voice was the most audible in the chorus. It was a bright and fresh but masculine organ, just such a voice as, to Lyon's sense, such a "fine man" ought to have had. It appeared from his remarks that he was a very straight rider, which was also very much what Lyon would have expected. Not that he swaggered, for his allusions were very quietly and casually made; but they were all to dangerous experiments and close shaves. Lyon perceived after a little that the attention paid by the company to the colonel's remarks was not in direct relation to the interest they seemed to offer; the result of which was that the speaker, who noticed that *he* at least was listening, began to treat him as his particular auditor, and to fix his eyes on him as he talked. Lyon had nothing to do but to look sympathetic and assent — Colonel Capadose appeared to take so much sympathy and assent for granted. A neighboring squire had had an accident; he had come a cropper in an awkward place — just at the finish — with consequences that looked grave. He had struck his head; he remained insensible, up to the last accounts; there had evidently been concussion of the brain. There was some exchange of views as to his recovery — how soon it would take place, or whether it would take place at all; which led the colonel to confide to our artist, across the table, that *he* should n't despair of a fellow even if he did n't come round for weeks — for weeks and weeks and weeks — for months. He leaned forward; Lyon leaned forward to listen, and Colonel Capadose mentioned that he knew from personal experience that there was really no limit to the time one might lie unconscious without being any the worse for it. It had happened to him in Ireland, years before; he had been pitched out of a dog-cart, had turned a sheer somersault and landed on his head.

They thought he was dead, but he was n't; they carried him first to the nearest cabin, where he lay for some days with the pigs, and then to an inn in a neighboring town—it was a near thing they did n't put him under ground. He had been completely insensible—without a ray of recognition of any human thing—for three whole months; had not a glimmer of consciousness of any blessed thing. It was touch and go to that degree that they could n't come near him, they could n't feed him, they could scarcely look at him. Then one day he had opened his eyes—as fit as a flea!

"I give you my honor it had done me good—it rested my brain." He appeared to intimate that, with an intelligence so active as his, these periods of repose were providential. Lyon thought his story very striking; such a prodigy of suspended animation reminded him of the sleeping beauty in the wood. He hesitated, however, to make this comparison—it seemed to savor of irreverence, especially when Colonel Capadose said that it was the turn of a hair that they had n't buried him alive. That had happened to a friend of his in India—a fellow that was supposed to have died of jungle fever—they clapped him into a coffin. He was going on to recite the further fate of this unfortunate gentleman, when Mr. Ashmore made a move and every one got up to adjourn to the drawing-room. Lyon noticed by this time no one was heeding what he said to him. They came round on either side of the table and met, while the gentlemen dawdled, before going out.

"And do you mean that your friend was literally buried alive?" asked Lyon, in some suspense.

Colonel Capadose looked at him a moment, as if he had already lost the thread of the conversation. Then his face brightened—and when it brightened it was doubly handsome. "Upon my soul, he was chucked into the ground!"

"And was he left there?"

"He was left there till I came and hauled him out."

"You came?"

"I dreamed about him—it's the most extraordinary story; I heard him calling to me in the night. I took upon myself to dig him up. You know there are people in India—a kind of beastly race, the ghouls—who violate graves. I had a kind of presentiment that they would get at him first. I rode straight, I can tell you; and, by Jove, a couple of them had just broken ground! Crack—crack, from a couple of barrels, and they showed me their heels, as you may believe. Would you credit that I took him out myself? The air brought him to, and he was none the worse. He has

got his pension—he came home the other day; he'd do anything for me."

"He called to you in the night?" said Lyon, much impressed.

"That's the interesting point. Now, *what was it?* It was n't his ghost, because he was n't dead. It was n't himself, because he could n't. It was something or other! You see India's a strange country—there's an element of the mysterious; the air is full of things you can't explain."

They passed out of the dining-room, and Colonel Capadose, who went among the first, was separated from Lyon; but a minute later, before they reached the drawing-room, he joined him again. "Ashmore tells me who you are. Of course I have often heard of you—I'm very glad to make your acquaintance; my wife used to know you."

"I'm glad she remembers me. I recognized her at dinner, and I was afraid she did n't."

"Ah, I dare say she was ashamed," said the colonel, with indulgent humor.

"Ashamed of me?" Lyon replied, in the same key.

"Was n't there something about a picture? Yes; you painted her portrait."

"Many times," said the artist; "and she may very well have been ashamed of what I made of her."

"Well, I was n't, my dear sir; it was the sight of that picture, which you were so good as to present to her, that made me first fall in love with her."

"Do you mean that one with the children—cutting bread and butter?"

"Bread and butter? Bless me, no—vine-leaves and a leopard skin—a kind of Bacchante."

"Ah, yes," said Lyon; "I remember. It was the first decent portrait I painted. I should be curious to see it to-day."

"Don't ask her to show it to you—she'll be mortified!" the colonel exclaimed.

"Mortified?"

"We parted with it—in the most disinterested manner," he laughed. "An old friend of my wife's—her family had known him intimately when they lived in Germany—took the most extraordinary fancy to it: the Grand Duke of Silberstadt-Schreckenstein, don't you know? He came out to Bombay while we were there, and he spotted your picture (you know he's one of the greatest collectors in Europe), and he made such eyes at it that, upon my word—it happened to be his birthday—she told him he might have it, to get rid of him. He was perfectly enchanted, but we miss the picture."

"It is very good of you," Lyon said. "If

it's in a great collection — a work of my incompetent youth — I am infinitely honored."

"Oh, he has got it in one of his castles; I don't know which — you know he has so many. He sent us, before he left India, — to return the compliment, — a magnificent old vase."

"That was more than the thing was worth," Lyon remarked.

Colonel Capadose gave no heed to this observation; he seemed to be thinking of something. After a moment he said, "If you'll come and see us in town, she'll show you the vase." And as they passed into the drawing-room, he gave the artist a friendly push. "Go and speak to her; there she is — she'll be delighted."

Oliver Lyon took but a few steps into the wide saloon; he stood there a moment, looking at the bright composition of the lamplit group of fair women, the single figures, the great setting of white and gold, the panels of old damask, in the center of each of which was a single celebrated picture. There was a subdued luster in the scene and an air as of the shining trains of dresses tumbled over the carpet. At the furthest end of the room sat Mrs. Capadose, rather isolated; she was on a small sofa, with an empty place beside her. Lyon could n't flatter himself she had been keeping it for him; her failure to respond to his recognition at table contradicted that, but he felt an extreme desire to go and occupy it. Moreover, he had her husband's sanction; so he crossed the room, stepping over the tails of gowns, and stood before his old friend.

"I hope you don't mean to repudiate me," he said.

She looked up at him with an expression of indubitable pleasure. "I am so glad to see you. I was delighted when I heard you were coming."

"I tried to get a smile from you at dinner — but I could n't."

"I did n't see — I did n't understand. Besides, I hate smirking and telegraphing. Also I'm very shy — you won't have forgotten that. Now we can communicate comfortably." And she made a better place for him on the little sofa. He sat down and they had a talk that he enjoyed, while the reason for which he used to like her so came back to him, as well as a good deal of the very same old liking. She was still the least spoiled beauty he had ever seen, with an absence of coquetry, or any insinuating art, that seemed almost like an omitted faculty; there were moments when she struck her interlocutor as some fine creature from an asylum — a surprising deaf-mute, or one of the operative blind. Her noble pagan head gave her privileges that she neglected, and when people were admir-

ing her brow she was wondering whether there were a good fire in her bedroom. She was simple, kind, and good; inexpressive, but not inhuman or stupid. Now and again she said something that had a sort of sifted, selected air — the sound of an impression at first hand. She had no imagination, but she had added up her feelings. Lyon talked of the old days in Munich, reminded her of incidents, pleasures, and pains, asked her about her father and the others; and she told him, in return, that she was so impressed with his own fame, his brilliant position in the world, that she had n't felt very sure he would speak to her, or that his little sign at table was meant for her. This was plainly a perfectly truthful speech — she was incapable of any other — and he was affected by such humility on the part of a woman, whose grand line was unique. Her father was dead; one of her brothers was in the navy, and the other on a ranch in America; two of her sisters were married, and the youngest was just coming out, and very pretty. She did n't mention her stepmother. She asked him about his own personal history, and he said that the principal thing that had happened to him was that he had never married.

"Oh, you ought to," she answered. "It's the best thing."

"I like that — from you!" he returned.

"Why not from me? I am very happy."

"That's just why I can't be. It's cruel of you to praise your state. But I have had the pleasure of making the acquaintance of your husband. We had a good bit of talk in the other room."

"You must know him better — you must know him really well," said Mrs. Capadose.

"I am sure that the further you go the more you find. But he makes a fine show, too."

She rested her good gray eyes on Lyon. "Don't you think he's handsome?"

"Handsome, and clever, and entertaining. You see I'm generous."

"Yes; you must know him well," Mrs. Capadose repeated.

"He has seen a great deal of life," said her companion.

"Yes, we have been in so many places. You must see my little girl. She is nine years old — she's too beautiful."

"You must bring her to my studio some day — I should like to paint her."

"Ah, don't speak of that," said Mrs. Capadose. "It reminds me of something so disagreeable."

"I hope you don't mean when *you* used to sit to me — though that may well have bored you."

"It's not what you did—it's what we have done. It's a confession I must make—it's a weight on my mind! I mean about that beautiful one you gave me—it used to be so much admired. When you come to see me in London (I count on your doing that very soon), I shall see you looking all round. I can't tell you I keep it in my own room because I love it so, for the simple reason"—And she paused a moment.

"Because you can't tell wicked lies," said Lyon.

"No, I can't. So before you ask for it"—

"Oh, I know you parted with it—the blow has already fallen," Lyon interrupted.

"Ah, then you have heard? I was sure you would! But do you know what we got for it? Two hundred pounds."

"You might have got much more," said Lyon, smiling.

"That seemed a great deal at the time. We were in want of the money—it was a good while ago, when we first married. Our means were very small then, but fortunately that has changed rather for the better. We had the chance, it really seemed a big sum, and I am afraid we jumped at it. My husband had expectations which have partly come into effect, so that now we do well enough. But meanwhile the picture went."

"Fortunately the original remained. But do you mean that two hundred was the value of the vase?" Lyon asked.

"Of the vase?"

"The beautiful old Indian vase—the grand duke's offering."

"The grand duke?"

"What's his name?—Silberstadt-Schreckenstein. Your husband mentioned the transaction."

"Oh, my husband," said Mrs. Capadose; and Lyon saw that she colored a little.

Not to add to her embarrassment, but to clear up the ambiguity, which he perceived the next moment he had better have left alone, he went on: "He tells me it's now in his collection."

"In the grand duke's? Ah, you know its reputation? I believe it contains treasures." She was bewildered, but she recovered herself, and Lyon made the mental reflection that for some reason, which would seem good when he knew it, the husband and the wife had prepared different versions of the same incident. It was true that he did not exactly see Everina Brant preparing a version; that was not her line of old, and indeed it was not in her eyes to-day. At any rate they both had the matter too much on their conscience. He changed the subject, said Mrs. Capadose must really bring the little girl. He sat with her some time longer,

and thought—perhaps it was only a fancy—that she was rather absent, as if she were annoyed at their having been even for a moment at cross-purposes. This did not prevent him from saying to her at the last, just as the ladies began to gather themselves together to go to bed, "You seem much impressed, from what you say, with my renown and my prosperity, and you are so good as greatly to exaggerate them. Would you have married me if you had known that I was destined to success?"

"I did know it!"

"Well, I did not!"

"You were too modest."

"You did not think so when I proposed to you."

"Well, if I had married you I could not have married *him*—and he's so nice," Mrs. Capadose said. Lyon knew she thought it,—he had learned that at dinner,—but it vexed him a little to hear her say it. The gentleman designated by the pronoun came up, amid the prolonged handshaking for good-night, and Mrs. Capadose remarked to her husband, as she turned away, "He wants to paint Amy."

"Ah, she's a charming child, a most interesting little creature," the colonel said to Lyon. "She does the most remarkable things."

Mrs. Capadose stopped, in the rustling procession that followed the hostess out of the room. "Don't tell him, please don't," she said.

"Don't tell him what?"

"Why, what she does. Let him find out for himself." And she passed on.

"She thinks I brag about the child—that I bore people," said the colonel. "I hope you smoke." He appeared ten minutes later in the smoking-room, in a brilliant equipment, a suit of crimson foulard, covered with little white spots. He gratified Lyon's eye, made him feel that the modern age has its splendor too, and its opportunities for costume. If his wife was an antique, he was a fine specimen of the period of color; he might have passed for a Venetian of the sixteenth century. They were a remarkable couple, Lyon thought, and as he looked at the colonel standing in bright erectness before the chimney-piece, while he emitted great smoke-puffs, he did not wonder that Everina could not regret she had not married *him*. All the gentlemen collected at Stayes were not smokers, and some of them had gone to bed. Colonel Capadose remarked that there probably would be a smallish muster, they had had such a hard day's work. That was the worst of a hunting-house—the men were so sleepy after dinner; it was devilish stupid for the ladies, even for those who hunted themselves—for women were so extraordinary, they never showed it. But most

fellows revived under the stimulating influences of the smoking-room, and some of them, in this confidence, would turn up yet. Some of the grounds of their confidence — not all of them — might have been seen in a cluster of glasses and bottles on a table near the fire, which made the great salver and its contents twinkle most sociably. The others lurked, as yet, in various improper corners of the minds of the most loquacious. Lyon was alone with Colonel Capadose for some moments before their companions, in varied eccentricities of uniform, straggled in, and he perceived that this wonderful man had but little loss of vital tissue to repair.

They talked about the house, Lyon having noticed an oddity of construction in the smoking-room; and the colonel explained that it consisted of two distinct parts, one of which was of very great antiquity. They were two complete houses, in short, the old one and the new, each of great extent, and each very fine in its way. The two formed together an enormous structure — Lyon must make a point of going all over it. The modern portion had been erected by the old man, when he bought the property; oh, yes, he had bought it, forty years before — it had n't been in the family; there had n't been any particular family for it to be in. He had had the good taste not to spoil the original house — he had n't touched it beyond what was just necessary for joining it on. It was very curious indeed — a most irregular, rambling, mysterious pile, where they every now and then discovered a walled-up room or a secret staircase. To his mind it was essentially gloomy, however; even the modern additions, splendid as they were, did n't make it cheerful. There was some story about a skeleton having been found, years before, during some repairs, under a stone slab of the floor of one of the passages; but the family were rather shy of its being talked about. The place they were in was, of course, in the old part, which contained, after all, some of the best rooms; he had an idea it had been the primitive kitchen, half modernized at some intermediate period.

"My room is in the old part too, then — I'm very glad," Lyon said. "It's very comfortable, and contains all the latest conveniences, but I observed the depth of the recess of the door, and the evident antiquity of the corridor and staircase — the first short one — after I came out. That paneled corridor is admirable; it looks as if it stretched away, in its brown dimness (the lamps did n't seem to me to make much impression on it), for half a mile."

"Oh, don't go to the end of it!" exclaimed the colonel, smiling.

"Does it lead to the haunted room?" Lyon asked.

His companion looked at him a moment. "Ah, you know about that?"

"No, I don't speak from knowledge, only from hope. I have never had any luck — I have never staid in a dangerous house. The places I go to are always as safe as Charing Cross. I want to see — whatever there is, the regular thing. Is there a ghost here?"

"Of course there is — a rattling good one."

"And have you seen him?"

"Oh, don't ask me what I've seen — I should tax your credulity. I don't like to talk of these things. But there are two or three as bad — that is, as good! — rooms as you'll find anywhere."

"Do you mean in my corridor?" Lyon asked.

"I believe the worst is at the far end. But you would be ill-advised to sleep there."

"Ill-advised?"

"Until you've finished your job. You'll get letters of importance the next morning, and you'll take the 10:20."

"Do you mean I will invent a pretense for running away?"

"Unless you are braver than almost any one has ever been. They don't often put people to sleep there, but sometimes the house is so crowded that they have to. The same thing always happens — ill-concealed agitation at the breakfast-table, and letters of the greatest importance. Of course it's a bachelor's room, and my wife and I are at the other end of the house. But we saw the comedy three days ago — the day after we got here. A young fellow had been put there — I forget his name — the house was so full; and the usual consequence followed. Letters at breakfast — an awfully queer face — an urgent call to town — so very sorry his visit was cut short. Ashmore and his wife looked at each other, and off the poor devil went."

"Ah, that would n't suit me; I must paint my picture," said Lyon. "But do they mind your speaking of it? Some people who have a good ghost are very proud of it, you know."

What answer Colonel Capadose was on the point of making to this inquiry our hero was not to learn, for at that moment their host had walked into the room, accompanied by three or four gentlemen. Lyon was conscious that he was partly answered by the colonel's not going on with the subject. This, however, on the other hand, was rendered natural by the fact that one of the gentlemen appealed to him for an opinion on a point under discussion, something to do with the everlasting history of the day's run. To Lyon himself Mr. Ashmore began to talk, expressing his regret at

having had so little direct conversation with him as yet. The topic that suggested itself was naturally that most closely connected with the motive of the artist's visit. Lyon remarked that it was a great disadvantage to him not to have had some preliminary acquaintance with Sir David—in most cases he found that so important. But the present sitter was so far advanced in life that there was doubtless no time to lose. "Oh, I can tell you all about him," said Mr. Ashmore; and for half an hour he told him a good deal. It was very interesting, as well as very eulogistic, and Lyon could see that he was a very nice old man to have endeared himself to a son who was evidently not a sentimentalist. At last he got up; he said he must go to bed, if he wished to be fresh for his work in the morning. To which his host replied, "Then you must take your candle; the lights are out; I don't keep my servants up."

In a moment Lyon had his glimmering taper in hand, and as he was leaving the room (he did n't disturb the others with a good-night; they were absorbed in the lemon-squeezer and the soda-water cork) he remembered other occasions on which he had made his way to bed, alone, through a darkened country house; such occasions had not been rare, for he was almost always the first to leave the smoking-room. If he had not staid in houses conspicuously haunted, he had, none the less (having the artistic temperament), sometimes found the great black halls and staircases rather "creepy"; there had been often a sinister effect, to his imagination, in the sound of his tread in the long passages, or the way the winter moon peeped into tall windows on landings. It occurred to him that if houses without supernatural pretensions could look so wicked at night, the old corridors of Stayes would certainly give him a sensation. He did n't know whether the proprietors were sensitive; very often, as he had said to Colonel Capadose, people enjoyed the impeachment. What determined him to speak, with a certain sense of the risk, was the impression that the colonel told queer stories. As he had his hand on the door he said to Arthur Ashmore, "I hope I sha'n't meet any ghosts."

"Any ghosts?"

"You ought to have some—in this fine old part."

"We do our best, but *que voulez-vous?*" said Mr. Ashmore. "I don't think they like the hot-water pipes."

"They remind them too much of their own climate? But have n't you a haunted room—at the end of my passage?"

"Oh, there are stories—we try to keep them up."

"I should like very much to sleep there," Lyon said.

"Well, you can move there to-morrow if you like."

"Perhaps I had better wait till I have done my work."

"Very good; but you won't work there, you know. My father will sit to you in his own apartments."

"Oh, it is n't that; it's the fear of running away, like that gentleman three days ago."

"Three days ago? What gentleman?" Mr. Ashmore asked.

"The one who got urgent letters at breakfast, and fled by the 10:20. Did he stand more than one night?"

"I don't know what you are talking about. There was no such gentleman—three days ago."

"Ah, so much the better," said Lyon, nodding good-night and departing. He took his course, as he remembered it, with his wavering candle, and, though he encountered a great many gruesome objects, safely reached the passage out of which his room opened. In the complete darkness it seemed to stretch away still further, but he followed it, for the curiosity of the thing, to the end. He passed several doors, with the name of the room painted upon them, but he found nothing else. He was tempted to try the last door—to look into the room of evil fame; but he reflected that this would be indiscreet, since Colonel Capadose handled the brush—as a *raconteur*—with such freedom. There might be a ghost, and there might not; but the colonel himself, he inclined to think, was the most incalculable figure in the house.

II.

LYON found Sir David Ashmore a capital subject, and a very comfortable sitter into the bargain. Moreover, he was a very agreeable old man, tremendously puckered but not in the least dim; and he wore exactly the furred dressing-gown that Lyon would have chosen. He was proud of his age, but ashamed of his infirmities, which, however, he greatly exaggerated and which did n't prevent him from sitting there as submissive as if portraiture had been a branch of surgery. He demolished the legend of his having feared the operation would be fatal, and gave an explanation which pleased our friend much better. He held that a gentleman should be painted but once in his life—that it was eager and fatuous to be hung up all over the place. That was good for women, who made a pretty wall-pattern; but the male face did n't lend itself to decorative repetition. The proper time for the like-

ness was at the last, when the whole man was there — you got the totality of his experience. Lyon could n't reply that that period was not a real compendium — you had to allow so for leakage; for there had been no crack in Sir David's crystallization. He spoke of his portrait as a plain map of the country, to be consulted by his children in a case of uncertainty. A proper map could be drawn up only when the country had been traveled. He gave Lyon his mornings, till luncheon, and they talked of many things, not neglecting, as a stimulus to gossip, the people in the house. Now that he did n't "go out," as he said, he saw much less of the visitors at Stayes; people came and went whom he knew nothing about, and he liked to hear Lyon describe them. The artist sketched with a fine point, and did n't caricature, and it usually befell that when Sir David did n't know the sons and daughters he had known the fathers and mothers. He was one of those terrible old gentlemen who are a repository of antecedents. But in the case of the Capadose family, at whom they arrived by an easy stage, his knowledge embraced two, or even three, generations. General Capadose was an old crony, and he remembered his father before him. He was rather a smart soldier, but in private life of too speculative a turn — always sneaking into the city to throw his money away. He married a girl who brought him something, and they had half a dozen children. He scarcely knew what had become of the rest of them, except that one was in the Church and had found preferment — was n't he Dean of Rockingham? Clement, the fellow who was at Stayes, had some military talent; he had served in the East, he had married a pretty girl. He had been at Eton with his son, and he used to come to Stayes in his holidays. Lately, coming back to England, he had turned up with his wife again; that was before he — the old man — had been put to grass. He was a taking dog, but he had a monstrous foible.

"A monstrous foible?" said Lyon.

"He's a thumping liar."

Lyon's brush stopped short, while he repeated, for somehow the formula startled him, "A thumping liar?"

"You're very lucky not to have found it out."

"Well, I confess I have noticed a romantic tinge —"

"Oh, it is n't always romantic! He'll lie about the time of day, about the name of his hatter. It appears there are people like that."

"Well, they are precious scoundrels," Lyon declared, his voice trembling a little with the

thought of what Everina Brant had done with herself.

"Oh, not always," said the old man. "This fellow is n't in the least a scoundrel. There is no harm in him, and no bad intention; he does n't steal, or cheat, or gamble, or drink; he's very kind — he sticks to his wife, is fond of his children. He simply can't give you a straight answer."

"Then everything he told me last night, I suppose, was mendacious; he delivered himself of a series of crams! They stuck in my gizzard at the time, but I never thought of so simple an explanation."

"No doubt he was in the vein," Sir David went on. "It's a natural peculiarity — as you might limp, or stutter, or be left-handed. I believe it comes and goes, like intermittent fever. My son tells me that his friends usually understand it, and don't haul him up, for the sake of his wife."

"Oh, his wife — his wife!" Lyon murmured, painting fast.

"I dare say she's used to it."

"Never in the world, Sir David. How can she be used to it?"

"Why, my dear sir, when a woman's fond! — And don't they mostly handle the long bow themselves? They are connoisseurs, and have a sympathy for a fellow-performer."

Lyon was silent a moment; he had no ground for denying that Mrs. Capadose was attached to her husband. But after a little he rejoined: "Oh, not this one! I knew her years ago — before her marriage; knew her well and admired her. She was as clear as a bell."

"I like her very much," Sir David said, "but I have seen her back him up."

Lyon considered Sir David for a moment, not in the light of a model. "Are you very sure?"

"The old man hesitated; then he answered, smiling, 'You're in love with her.'"

"Very likely. God knows I used to be!"

"She must help him out — she can't expose him."

"She can hold her tongue!" Lyon remarked.

"Well, before you probably she will."

"That's what I'm curious to see." And Lyon added, privately, "Good Heaven, what he must have made of her!" He kept this reflection to himself, for he considered that he had sufficiently betrayed his state of mind with regard to Mrs. Capadose. None the less it occupied him now immensely, the question of how such a woman would arrange herself in such a predicament. He watched her with a deeply quickened interest when he mingled with the company; he had had his own trouble

in life, but he had rarely been so anxious about anything as he was now to see what the loyalty of a wife and the infection of an example would have made of an absolutely truthful mind. Oh, he held it as immutably established that whatever other women might be prone to do, she, of old, had been perfectly incapable of a deviation. Even if she had not been too simple to deceive, she would have been too proud; and if she had not had too much conscience, she would have had too little eagerness. It was the last thing she would have endured or condoned — the particular thing she would n't have forgiven. Did she sit in torment while her husband turned his somersaults, or was she now, too, so perverse that she thought it a fine thing to be striking at the expense of one's honor? It would have taken a wondrous alchemy — working backwards, as it were — to produce this latter result. Besides these two alternatives (that she suffered tortures in silence and that she was so much in love that her husband's humiliating idiosyncrasy seemed to her only an added richness — a proof of life and talent), there was still the possibility that she had n't found him out, that she took his fiction at his own valuation. A little reflection, however, rendered this hypothesis untenable; it was too evident that the account he gave of things must repeatedly have contradicted her own knowledge. Within an hour or two of his meeting them Lyon had seen her confronted with that perfectly gratuitous invention about the disposal they had made of his early picture. Even then, indeed, she had not, so far as he could see, smarted, and — but for the present he could only contemplate the case.

Even if it had not been interfused, through his uneradicated tenderness for Mrs. Capadose, with an element of suspense, the question would still have presented itself to him as a very curious problem, for he had not painted portraits during so many years without becoming something of a psychologist. His inquiry was limited, for the moment, to the opportunity that the following three days might yield, as the colonel and his wife were going on to another house. It fixed itself largely, of course, upon the colonel too — this gentleman was such a rare anomaly. Moreover, it had to go on very quickly. Lyon was too scrupulous to ask other people what they thought of the business — he was too afraid of exposing the woman he once had loved. It was probable, too, that light would come to him from the talk of the rest of the company; the colonel's queer habit, both as it affected his own situation and as it affected his wife, would be a familiar theme in any

house in which he was in the habit of staying. Lyon had not observed, in the circles in which he visited, any marked abstention from comment on the singularities of their members. It interfered with his progress that the colonel hunted all day, while he plied his brushes and chatted with Sir David; but a Sunday intervened, and that partly made it up. Mrs. Capadose fortunately did n't hunt, and when his work was over she was not inaccessible. He took a couple of longish walks with her (she was fond of that), and beguiled her, at tea, into a friendly nook in the hall. Regard her as he might, he could n't make out to himself that she was consumed by a hidden shame; the sense of being married to a man whose word had no worth was not, in her spirit, so far as he could guess, the canker within the rose. Her mind appeared to have nothing on it but its own placid frankness, and when he looked into her eyes (deeply, as he occasionally permitted himself to do), they had no uncomfortable consciousness. He talked to her again, and still again, of the dear old days — reminded her of things that he had not (before this reunion) the least idea that he remembered. Then he spoke to her of her husband, praised his appearance, his talent for conversation, professed to have felt a quick friendship for him, and asked (with an inward audacity at which he trembled a little) what manner of man he was. "What manner?" said Mrs. Capadose. "Dear me, how can one describe one's husband? I like him very much."

"Ah, you have told me that already!" Lyon exclaimed, with exaggerated ruefulness.

"Then why do you ask me again?" She added in a moment, as if she were so happy that she could afford to take pity on him, "He is everything that's good and kind. He's a soldier — and a gentleman — and a dear! He has n't a fault. And he has great ability."

"Yes; he strikes one as having great ability. But of course I can't think him a dear."

"I don't care what you think him," said Mrs. Capadose, looking, it seemed to him, as she smiled, handsomer than he had ever seen her. She was either deeply cynical or still more deeply inscrutable, and he had little prospect of winning from her the intimation that he longed for — some hint that it had come over her that, after all, she had better have married a man who was not a by-word for the most contemptible, the least heroic, of vices. Good God! had n't she seen — had n't she felt — the smile go round when her husband threw off some especially characteristic improvisation? How could a woman of her quality endure that, day after day, year after year, except by her quality's altering?

But he would believe in the alteration only when he should have heard *her* lie. He was fascinated by his problem, and yet half exasperated, and he asked himself all kinds of questions. Did n't she lie, after all, when she let his falsehoods pass without a protest? Was n't her life a perpetual complicity, and did n't she aid and abet him by the simple fact that she was not disgusted with him? Then again, perhaps she *was* disgusted, and it was the mere desperation of her pride that had given her an impenetrable mask. Perhaps she protested in private, passionately; perhaps every night, in their own apartments, after the day's hideous performance, she made him the most scorching scene. But if such scenes were of no avail and he took no more trouble to cure himself, how could she regard him, and after so many years of marriage too, with that perfectly artless complacency that Lyon had surprised in her in the course of the first day's dinner? If our friend had not been in love with her he could have taken the diverting view of the colonel's delinquencies; but as it was they turned to the tragical in his mind, even while he had a sense that his solicitude might also have been laughed at.

The observation of these three days showed him that if Capadose was an abundant he was not a malignant liar, and that his fine faculty exercised itself mainly on subjects of small direct importance. "He is the liar Platonic," he said to himself; "he is disinterested, he does n't operate with a hope of gain, or with a desire to injure. It is art for art, and he is prompted by the love of beauty. He has an inner vision of what might have been, of what ought to be, and he helps on the good cause by the simple substitution of a *nuance*. He paints, as it were, and so do I!" His manifestations had a considerable variety, but a family likeness ran through them, which consisted mainly of their singular uselessness. It was this that made them offensive; they encumbered the field of conversation, took up valuable space, converted it into a sort of brilliant sun-shot fog. For a fib told under pressure a convenient place can usually be found, as for a person who presents himself with an author's order at the first night of a play. But the uninvoked lie is the gentleman without a voucher or a ticket who accommodates himself with a stool in the passage.

In one particular Lyon acquitted his successful rival; it had puzzled him that, irrepresible as he was, he had not got into a mess in the service. But he perceived that he respected the service—that august institution was sacred from his depredations. Moreover, though there was a great deal of swagger in his talk, it was, oddly enough, rarely swagger about

his military exploits. He had a passion for the chase, he had followed it in far countries, and some of his finest flowers were reminiscences of lonely danger and escape. The more solitary the scene, the bigger of course the flower. A new acquaintance, with the colonel, always received the tribute of a bouquet; that generalization Lyon very promptly made. And this extraordinary man had inconsistencies and unexpected lapses—lapsés into dull veracity. Lyon recognized what Sir David had told him, that his aberrations came in fits or periods—that he would sometimes keep the beaten path for a month at a time. The muse breathed upon him at her pleasure; she often left him alone. He would neglect the finest openings and then set sail in the teeth of the breeze. As a general thing he affirmed the false rather than denied the true; yet this proportion was sometimes strikingly reversed. Very often he joined in the laugh against himself—he admitted that he was trying it on and that a good many of his anecdotes had an experimental character. Still he never completely retracted or retreated—he dived and came up in another place. Lyon divined that he was capable, at intervals, of defending his position with violence, but only when it was a very bad one. Then he might easily be dangerous—then he would hit out and become calumnious. Such occasions would test his wife's equanimity—Lyon would have liked to see her there. In the smoking-room, and elsewhere, the company, so far as it was composed of his familiars, had an hilarious protest always at hand; but among the men who had known him long his rich tone was an old story, so old that they had ceased to talk about it, and Lyon did n't care, as I have said, to elicit the judgment of those who might have shared his own surprise.

The oddest thing of all was that neither surprise nor familiarity prevented the colonel's being liked; his largest drafts on a skeptical attention passed for an overflow of life and gayety—almost of good looks. He was fond of portraying his bravery, and used a very big brush, and yet he was unmistakably brave. He was a capital rider and shot, in spite of his fund of anecdote illustrating these accomplishments; in short, he was very nearly as clever, and his career had been very nearly as wonderful, as he pretended. His best quality, however, remained that indiscriminate sociability, which took interest and credulity for granted, and about which he bragged least. It made him cheap, it made him even in a manner vulgar; but it was so contagious that his listener was more or less on his side, as against the probabilities. It was a private reflection of Oliver Lyon's that he not only lied but made one

feel also like a liar, even (or especially) if one contradicted him. In the evening, at dinner, and afterward, our friend watched his wife's face, to see if a faint shade or spasm did n't pass over it. But she showed nothing, and the wonder was that when he spoke she almost always listened. That was her pride; she wished not to be even suspected of not facing the music. Lyon had none the less an importunate vision of a veiled figure coming the next day, in the dusk, to certain places, to repair the colonel's ravages, as the relatives of kleptomaniacs punctually call at the shops that have suffered from their pilferings.

(To be concluded in the next number.)

"I must apologize, of course it was n't true, I hope no harm is done, it is only his incorrigible —" Oh, to hear that woman's voice in that deep abasement! Lyon had no nefarious plan — he did n't consciously wish to practice upon her sensibility; but he did say to himself that he should like to bring her round to feel that there would have been more dignity in a union with a certain other person. He even dreamed of the hour, when, with a burning face, she should ask *him* not to take it up. Then he should be almost consoled, he would be magnanimous.

Henry James.

FOODS AND BEVERAGES.

THE CHEMISTRY OF FOODS AND NUTRITION. VI.

IN addition to what has been said in former articles, I ought perhaps to explain a little more fully about some of the ingredients of foods and add a few statements concerning some of the more common beverages, as tea, coffee, and alcohol.

GELATINE AS FOOD.

WHEN we boil bones, or scraps of meat, or fish to make a soup we extract considerable of gelatinoids, fats, and other substances of them. The gelatine in the soup thus made, like the dried gelatine we buy in packages and use for jellies, is of course very valuable. It will not take the place of meat, because it cannot do all that is done by the albuminoids which the meat contains. But it does part of their work; and if it cannot make flesh it does what is next best in that it saves flesh-forming material from being used up. One moral of this is that bones are worth saving for food. In experimenting to find how much nutritive material is extracted from bones in making soup, as it is ordinarily prepared in the household, Dr. König found that beef bones, from which the flesh had been removed, yielded from 6 to $7\frac{1}{4}$ per cent. of their weight of material, of which about $4\frac{1}{3}$ per cent. was fat and the rest nitrogenous matter. That is to say, from a pound of bone about an ounce of nutritive material was obtained, of which three-fourths was fat and the rest gelatinoids and the like. But it must be remembered that the bones which the butcher trims out of meat, or which are left on our tables or in our kitch-

ens, usually have a good deal of adhering flesh. This is apt to amount to several times as much as the material extracted from the bone itself.

MEAT EXTRACT.

ANOTHER class of food ingredients which contain nitrogen, and are hence commonly included with the protein compounds, are the so-called "extractives," known to chemists by the names "creatin," "creatinin," etc. These are very remarkable substances. I spoke of them at some length in a former article, explaining that they make up the active principles of beef-tea and of meat extract. Meats and fish always contain a small amount of these extractives along with their albuminoids and gelatinoids. They impart flavor to meats. The savory odor of steak and roast beef is due to them. When lean meat or fish is chopped fine and soaked in water they dissolve out. They take their name of extractives from being thus extracted from meat. It is in this way that they are dissolved from meat in making beef-tea. The meat extract of commerce, which is made in enormous quantities where meat is cheap, as in South America, and is used all over the world, is prepared by boiling down such a solution until the extractive matters are left in a nearly solid form.

Just what the extractives do in helping to nourish the body has long been a physiological puzzle. At times they appear to aid digestion. It is certain that they have some effect upon the nervous system. When one is

weakened by illness or exhausted by hard work they are wonderfully invigorating. They were formerly supposed to furnish actual nutriment, but the tendency of opinion in later years has been to make them simply stimulants, and the experiments within a short time past have indicated very clearly that they neither form tissue nor yield energy; that, indeed, they practically pass through the body unchanged, and are not food at all in the sense in which we use the word.* In other words, when a convalescent invalid drinks his beef-tea, or a tired brain-worker takes meat extract with his food, though he is greatly refreshed thereby and really benefited, the extractives neither repair his tissues nor furnish him warmth or strength. But in some unexplained way they help him to utilize the other materials of his body and of his food to an extent which without them he could not do. Beef-tea and meat extract are strengthening, not by what they themselves supply, but by helping the body to get and to use strength from other materials which it has. Such is the interpretation of the latest experimental research.

If we leave the extractives in the meat and fish instead of making beef-tea or meat extract of them; in other words, if we eat our meat in the ordinary way, they still appear to have similar effect. Dogs that with vegetable food are quiet and listless become lively and sometimes fierce when fed on meat. Some people find meat very stimulating. But the doctrine which we frequently see in print, and which is even taught at times from the pulpit, that this stimulating property of meat is responsible for a large part of the physical evil and injury to character we see about us, seems to me gross exaggeration.

TEA, COFFEE, COCOA, CHOCOLATE.

TEA and coffee are not foods in the sense in which we use the word. They contain, it is true, very small quantities of materials similar to the nutrients of ordinary foods, but so few of these get into the decoctions which we drink that they are not worth taking into account.

The aroma of tea and coffee is mainly, and the taste largely, due to minute quantities of oily substances—essential oils, as they are called. The effect of tea and coffee upon the nerves and the brain seems to be chiefly due to a substance called caffeine when it comes from coffee, and thein when it comes from tea. It is the same chemical compound in both, and belongs to the class called alkaloids. Like the extractives of meat, it has, in moderate quantities, an invigorating effect, and may

at times aid digestion. The expression, which long usage has applied to tea and coffee, "The cups that cheer but not inebriate," is a true statement of fact.

Tea contains tannic acid, or tannin, the substance which, in the bark of trees, like oak and hemlock, is used to tan leather. The skins of animals contain gelatinoid substances with which the tannin unites, giving it the properties of leather. Tannin may likewise unite with albuminoid substances, such as occur in meats, fish, milk, eggs, and so on. The natural inference is that if we take tea with albuminous foods, the tannin will unite with them and form indigestible compounds. The newspaper statements we sometimes see about tea making leather in the stomach are grossly exaggerated. But experiments imply that it may sometimes interfere with the digestion of some albuminous foods; and I have heard of people, though I have never met a case, with whom tea taken along with fresh meat hinders digestion. It is said, however, not to interfere at all with the digestion of dry meats, such as ham and tongue.

One objection to steeping tea for a long time is that the longer it is infused the more tannic acid is extracted. Coffee contains tannic acid, but less than tea.

It seems a bit odd that so many people, either from lack of understanding of what gives the odor and flavor to coffee and tea, or from carelessness, prepare them in just the way that is calculated to get rid of the volatile matters whose aroma and taste are so highly prized. The chief part of the art of making good coffee or tea is to dissolve the soluble matters, and at the same time not lose those that are volatile. The long steeping at high temperature, commonly practiced in making tea and coffee, is an effective way for expelling the volatile oils. To keep them in hot water just long enough to dissolve out the alkaloids and other soluble compounds, and in a tightly closed vessel, so as to prevent the escape of the volatile substances, are very important factors in the making of a good cup of tea or coffee.

I well remember my first realization of the true flavor of well-prepared tea. It was at a hotel in Heidelberg. The waiter, who told me he had learned the art in Russia, steeped the tea at the table by pouring hot water upon it in a pot made for the purpose. It was not over-steeped; there was neither boiling to drive the volatile matters off nor long lapse of time for them to escape. They were dissolved out and served at once, and made the decoction delicious. The guests at the table of an acquaintance of mine, not long since, were unusually pleased with the tea, and surprised to

* Rubner, "Zeitschrift für Biologie," XX., 265.

learn that it was bought at the same store, and was, in fact, the same that some of them were using at home. It transpired that the tea had been kept in a tight box until used, and had been prepared by a process which one of the family had learned in Germany. This consisted simply in pouring boiling water upon the tea, covering the pot tightly with a cloth, setting it upon a part of the stove where it would not boil, and serving after a very short time. The towel helped to keep the water warm and the aroma from escaping, and the tea, when brought to the table, was most excellent. Of course things of this sort are of no great consequence. Perhaps most of us would be better off if we did not drink either tea or coffee; but if we are going to use them we might as well have the flavor, which, I suppose, is the least injurious part.

Cocoa and chocolate contain theobromin and, as it appears, another alkaloid, similar to the alkaloid of tea and coffee. With these are fatty matters, a kind of starch, and other substances which occur in the cacao bean from which cocoa and chocolate are made. In preparing them for the market, part of the fat is extracted and other substances are added. For chocolate considerable sugar is used. Thus made it has a little less nitrogen, more fat, and a trifle more nutritive matter than flour. Accordingly, the beverage prepared from cocoa or chocolate supplies considerable nutriment in addition to the alkaloids, which serve as stimulants, and the flavoring substances, which are highly prized.

IS ALCOHOL FOOD?

To this question the answer of the latest and most reliable experimental research is, I think, clearly, yes. But its action as food is so limited, and so outbalanced by its effects upon the nerves and the brain, that, except in certain abnormal conditions of the body, the food value of alcohol is of scarcely enough consequence to be taken into account.

In the light of our present knowledge, we

* Nearly thirty years ago a series of experiments were conducted by Lallemand, Perrin, and Duroy in France, which have been claimed by them, and by numerous writers since, to show that alcohol taken into the body is not consumed like ordinary food, but is eliminated by the lungs, kidneys, and skin. Other experiments have seemed to favor this view. For many years the theory that alcohol is not consumed has served as a stable argument against its use, not only by the less thoughtful physiologists and temperance agitators, but also in text-books and even in the later official publications of temperance organizations.

Not only were the experiments of Lallemand, Perrin, and Duroy made by very imperfect methods, but the quantities of alcohol used were very large. Dr. J. W. Warren of the Medical School of Harvard University,

regard food as that which either builds tissue, or protects tissue or other food from consumption, or supplies energy to the body. Our ordinary food-materials do all these. Alcohol does not form tissue, either flesh (protein) or fat; but it does serve as fuel to yield energy, and in so doing probably protects protein and fat from being consumed. Such, at any rate, are the inferences from the best evidence at hand, and that evidence is such as to leave little doubt. But the quantity of alcohol that the system will ordinarily endure is small; not all that is taken is always consumed; its potential energy is relatively little and its nutritive effect slight—the equivalent of a small fragment of bread, for instance. Furthermore, as a consequence of its action upon the nerves, alcohol tends to promote the radiation of heat from the body and thus to counteract the nutritive effect it does have. In a very cold day a glass of brandy may make a man feel warmer for a time, but his sensations deceive him; the real effect of the alcohol is to make his body colder. In like manner alcohol may temporarily stimulate the tired muscles and brain for work, but it cannot take the place of rest. It is a stimulus, and as such it is like the spur to the wearied horse; instead of giving new strength, it makes new drafts upon the already reduced supply.

The alcohol which is taken into the body appears to be burned, like sugar and other nutritive materials; but a portion, instead of being consumed, is given off again by the lungs, skin, and kidneys. The quantity thus eliminated has been the subject of no little discussion and experiment. The theory has been held that the larger part escapes and but little is consumed for fuel. The latest and most accurate experiments, however, decidedly oppose this view, and lead to the conclusion that, although when alcohol is taken in large doses a considerable portion may be eliminated, as is likewise the case with sugar, yet in the amounts which people ordinarily drink very nearly the whole is oxidized.*

who has given an admirable résumé of the whole subject in the "Boston Medical and Surgical Journal," July 7 and July 14, 1887, has taken the pains to calculate the amounts of alcohol given to the dogs in the experiments just named, and what would be corresponding quantities for an average man, taking into account the difference in size. He finds that "the amount of alcohol equivalent to a whole bottle of brandy for the average man was a common dose for the dogs. In one experiment the equivalent was as much as two and one-half bottles, and in another case three bottles of brandy." The experiments of Subbotin in Munich, which were made by more accurate methods, are sometimes quoted as showing considerable secretion of alcohol. They were made with rabbits, which likewise received enormous doses. Even sugar and albumen,

As food, the only use of alcohol is to serve as fuel. The exact fuel value of alcohol, its capacity to supply the body with heat and muscular energy, cannot be stated with entire confidence. In the case of the principal nutritive ingredients of food, the protein, fats, and carbohydrates, the potential energy, which is taken as the measure of their fuel value, is proportioned to the heat produced when they are burned with oxygen, and is learned by use of an apparatus for the purpose called the calorimeter. It is found by experiments with animals that these nutritive materials yield energy to the body, in the forms of heat and muscular energy, in the proportion to the heats produced by their combustion in the calorimeter. The natural inference is that the same will be the case with the alcohol burned in the body. Bodländer's and other accurate experiments confirm this view.

The potential energy of the fats is about double that of the protein or carbohydrates, which latter are about equal to one another in this respect. That is to say, a given weight—for instance, an ounce of myosin of lean meat or albumen of egg—would, if burned in the calorimeter, yield just about the same amount of heat as an ounce of sugar or starch; while an ounce of the fat of meat or butter would yield twice as much. The best evidence implies that when these substances are burned in the body they yield heat and muscular energy in the same proportions. The heat of combustion of alcohol is about midway between that of the fats and that of the carbohydrates or protein, and it is natural to suppose that the energy it would yield in the body would be of corresponding amount. In other words, if the fuel value of an ounce of protein or an ounce of sugar or starch is one, and that of an ounce of fats, two, the fuel value of an ounce of alcohol would be one and a half. But, as al-

ready explained, a small part of the alcohol which is taken into the body leaves it unconsumed, and the action of the alcohol upon the nerves may counteract part of its nutritive effect. Since, furthermore, we are not absolutely certain as to the ways in which the body uses it, we should be hardly justified in saying positively that the energy yielded by alcohol in the body is in exact proportion to the heat of combustion. But it seems extremely probable that alcohol stands somewhere between carbohydrates and fats in fuel value.

Perhaps these facts may at least help towards explaining the nutritive effect of alcohol in some cases of disease and exhaustion. When the body is quiet and in warm surroundings, the demand for protein to replace muscle used up and for material to serve as fuel is small. Alcohol does not require the action of digestive juices; it is ready to be assimilated without digestion, and its fuel value appears to be considerable. It would seem that it might thus, at times, serve a useful purpose in sustaining life, when the bodily functions are at a low ebb. I make this suggestion with some hesitancy, realizing very fully the unwisdom of a chemist's attempting to urge theories which it is outside his province to verify. But I have often heard physicians say that wine, for instance, is very helpful in some cases of sickness, when but little other food can be taken; and when asked the chemical explanation they could think of no better one than this.

Distilled spirits, such as whisky, brandy, gin, and rum, have from forty to sixty per cent. of alcohol, but no carbohydrates or other nutrients.

As whisky is ordinarily sold in this country by the drink, a gallon is said to make about sixty glasses,* which would make, roughly speaking, about an ounce of alcohol to the

when taken into the body in large doses, may in part escape unconsumed. When we consider how soluble alcohol is, and how easily it might be expected to make its way through the body, it is not strange that when so much is taken a portion should escape.

Soon after the experiments of Lallemand, Perrin, and Duroy were published, Dr. Anstie, in England, began a series of careful experiments upon this question. They were continued through a number of years, and showed very clearly that when alcohol was taken in moderate amounts the quantity secreted was very small. His results have been confirmed by other investigators. Within a short time past extended researches have been carried out by Professor Binz, Bodländer, and others at the University of Bonn, Germany. Appropriate apparatus and the refinements of modern research were used to insure accuracy. The conclusion is that when alcohol is not taken in excessive doses it is almost wholly consumed, and extremely little is secreted. In experiments with himself, Bodländer took enough absolute alcohol, diluted with water, to be equal to from two-thirds to four-thirds of a bottle

of claret; in experiments with dogs, the equivalent of from one and a half to four bottles of claret was used for a dose. The average quantity given off through kidneys, skin, and lungs, as indicated by experiments, was three and a half per cent. of the whole by the dogs, and two and nine-tenths per cent. by himself. Making a very liberal allowance for errors of experimenting, the total quantity of alcohol eliminated could not exceed five per cent. of the amount taken. It is interesting to note that the proportions of alcohol which were thus given off unconsumed were about the same as the proportions of meats, milk, bread, and vegetables which ordinarily escape digestion. (See article on "The Digestibility of Food" in *THE CENTURY* for September, 1887.)

Alcohol, in the quantities which people ordinarily take who use it, appears to be consumed just about as completely as our ordinary foods.

* See article on "The Nation's Liquor Bill," by Mr. F. N. Barrett, in *Quarterly Report*, No. 2, of the Chief of the Bureau of Statistics, Treasury Department.

glass. If we were at liberty to estimate the fuel value from the potential energy, this ounce of alcohol would be equal in this respect to a little more than an ounce of sugar, or starch, or protein, or to less than an ounce of fat. But we are uncertain as to the actual amount of energy which alcohol yields when burned in a body, and its influence upon the body through the nervous system is generally such as to counteract more or less of its nutritive effect. In the present state of our knowledge, therefore, it is impossible to say that the food value of a glass of whisky would be at all considerable. The same would be true of brandy, gin, rum, and other distilled liquors.

Malt liquors — porter, ale, and lager beer — contain usually from four to five or six per cent. of alcohol. Ordinary white wines and claret commonly contain eight or nine per cent., and champagne nearly ten per cent.; while the stronger wines, such as sherry, will average as much as seventeen per cent. A pint (pound) of ale or beer would, therefore, contain about three-quarters of an ounce, and the same quantity of wine from one to two and a half ounces of alcohol.

Ale, beer, and wine contain small quantities of nutritive material in addition to their alcohol and other constituents. That of wines consists mainly of compounds akin to carbohydrates, and averages a trifle over three per cent. of the whole weight. That of ale and beer includes, on the average, a little over a half of one per cent. of protein and other nitrogenous compounds, and six or seven per cent. of carbohydrates and allied substances. A pint (pound) of ale or beer would contain, roughly speaking, about as much of these nutritive substances as one and one-fifth ounces of bread; and a pint of wine about as much as three-quarters of an ounce of bread.

In all this discussion we should remember that the alcohol of ordinary liquors, distilled spirits, wine, etc., is not all the common ethyl alcohol. In speaking of the effects of alcohol I have referred to ordinary alcohol; or, as it is called in the chemical laboratory, ethyl alcohol. But there are other kinds of alcohol, some of which, like those contained in the fusel oil of commercial alcohol and whisky, appear to be even more deleterious to health than ethyl alcohol. These alcohols are formed in the process of fermentation, and are often very imperfectly separated from brandy, whisky, and other spirits in the process of distillation by which the latter are prepared. It is said that the materials used for adulterating wine often contain considerable quantities of these especially deleterious alcohols. The injury to health from the use of spirituous liquors containing these is believed to be much

greater than would come from liquors containing only ethyl alcohol.

From the evidence at hand regarding the use of alcohol, the following, by Dr. E. A. Parkes, the eminent English hygienist, seems to me a fair and judicious statement of the facts, although I should be inclined to lay a little more stress upon the principle that, in health at any rate, it is superfluous or worse, and to insist more strongly upon the importance, in this country especially, of general abstinence from its use.

The facts now stated make it difficult to avoid the conclusion that the dietetic value of alcohol has been much overrated. It does not appear to me possible at present to condemn alcohol altogether as an article of diet in health; or to prove that it is invariably hurtful, as some have attempted to do. It produces effects which are often useful in disease, and sometimes desirable in health; but in health it is certainly not a necessity, and many persons are much better without it. As now used by mankind, it is infinitely more powerful for evil than for good; and though it can hardly be imagined that its dietetic use will cease in our time, yet a clearer view of its effects must surely lead to a lessening of the excessive use which now prevails.

Among the curious side issues of the current temperance discussion is the question whether alcohol is a natural product. This is, I believe, vigorously denied in some quarters. Alcohol, like bread, is manufactured artificially from a natural product. In each case fermentation, a natural process, is made use of. But while bread is known only as a product of manufacture, alcohol appears to be very widely distributed in nature, though in extremely minute quantities. Nor is this at all surprising. If grapes or apples, or their juice, be exposed to the air, fermentation sets in and the sugar and other carbohydrates are changed to alcohol. The ferments which cause the change are afloat in the air all about, and might not unnaturally attack similar compounds in other vegetable substances. Professor Müntz of the National Agronomic Institute in Paris has, by refined chemical tests, discovered evidences of alcohol in cultivated soils, in rain water, in sea and river water, and in the atmosphere. He finds that vegetable molds may contain considerable quantities, and it appears probable that the alcohol "originates in the soil, from the fermentation of the organic matters in it, and is thence diffused as vapor in the atmosphere."

Another side issue of our temperance discussion is the so-called "Bible wine" theory, which maintains that the wine used in Palestine in the time of Christ was not alcoholic. I have been unable to find evidence that the composition of the juice of the grape, the laws of fermentation, or the practice in the making and using of wine, were different in that coun-

try at that time from those in other countries, or in that country at other times; and believe it safe to say that the theory that Bible wine was different from other wine, that it had not the alcohol which other wines contain, is without any basis to support it, in the opinion of the student of science.

Of the inexpressibly baneful effects of alcohol, that have made its excessive use one of the worst of the evils of our modern civilization, this is not the place to speak. But there is one matter in this connection about which, I trust, a word may not be out of place. It is that, great as is the physical evil of alcohol, the moral evil is incomparably greater; that true temperance reform is moral reform; and that, like every other moral reform, it will be best furthered by the closest alliance with the truth.

The moral argument against alcohol seems to me invincible. Is it not certainly strong enough when the facts are adhered to, without the exaggerations into which earnest reformers, in the intensity of their convictions, are sometimes led? Is it not best to accept the doctrine, with which the tests of science as interpreted by the consensus of specialists and the experience of mankind, beginning cent-

uries before the miracle at Cana and reaching until now, alike agree that beverages containing alcohol may have a decided value for nourishment, and that, in moderate quantities, they are not always of necessity harmful, but may at times be positively useful?

We wish to help the drunkard to reform; but is it necessary to tell him that no man can touch alcohol without danger? To build up the public sentiment upon which the reform of the future must rest we wish our children to understand about alcohol and its terrible effects; but when we teach them, in the name of science, shall we not teach them the simple facts which science attests and which they can hereafter believe, rather than exaggerated theories, whose errors, when they learn them, will tend to undo the good we strive to do? In short, is not temperance advisable even in the teaching of the temperance doctrine?

These questions are asked in a spirit not of unkind criticism, but of deep interest in the cause. Are they not worthy of thoughtful consideration?

In the great effort to make men better, there is one thing that we must always seek, one thing that we need never fear—the truth.

W. O. Atwater.

THE CITY.

THEY do neither plight nor wed
In the City of the dead,
In the city where they sleep away the
hours;
But they lie, while o'er them range
Winter-blight and summer-change,
And a hundred happy whisperings of
flowers.
No, they neither wed nor plight,
And the day is like the night,
For their vision is of other kind than ours.

They do neither sing nor sigh,
In that burgh of by and by
Where the streets have grasses growing cool
and long;
But they rest within their bed,
Leaving all their thoughts unsaid,
Deeming silence better far than sob or song.
No, they neither sigh nor sing,
Though the robin be a-wing,
Though the leaves of autumn march a million
strong.

There is only rest and peace
In the City of Surcease
From the failings and the wailings 'neath the Sun,
And the wings of the swift years
Beat but gently o'er the biers,
Making music to the sleepers every one.
There is only peace and rest;
But to them it seemeth best,
For they lie at ease and know that life is done.

Richard E. Burton.

THE LOCOMOTIVE CHASE IN GEORGIA.*

HE railroad raid to Georgia, in the spring of 1862, has always been considered to rank high among the striking and novel incidents of the civil war. At that time General O. M. Mitchel,

under whose authority it was organized, commanded Union forces in middle Tennessee, consisting of a division of Buell's army. The Confederates were concentrating at Corinth, Mississippi, and Grant and Buell were advancing by different routes towards that point. Mitchel's orders required him to protect Nashville and the country around, but allowed him great latitude in the disposition of his division, which, with detachments and garrisons, numbered nearly seventeen thousand men. His attention had long been strongly turned towards the liberation of east Tennessee, which he knew that President Lincoln also earnestly desired, and which would, if achieved, strike a most damaging blow at the resources of the rebellion. A Union army once in possession of east Tennessee would have the inestimable advantage, found nowhere else in the South, of operating in the midst of a friendly population, and having at hand abundant supplies of all kinds. Mitchel had no reason to believe that Corinth would detain the Union armies much longer than Fort Donelson had done, and was satisfied that as soon as that position had been captured the next movement would be eastward towards Chattanooga, thus throwing his own division in advance. He determined, therefore, to press into the heart of the enemy's country as far as possible, occupying strategical points before they were adequately defended and assured of speedy and powerful

reënforcement. To this end his measures were vigorous and well chosen.

On the 8th of April, 1862,—the day after the battle of Pittsburg Landing, of which, however, Mitchel had received no intelligence,—he marched swiftly southward from Shelbyville and seized Huntsville, in Alabama, on the 11th of April, and then sent a detachment westward over the Memphis and Charleston Railroad to open railway communication with the Union army at Pittsburg Landing. Another detachment, commanded by Mitchel in person, advanced on the same day seventy miles by rail directly into the enemy's territory, arriving unchecked with two thousand men within thirty miles of Chattanooga,—in two hours' time he could now reach that point,—the most important position in the West. Why did he not go on? The story of the railroad raid is the answer. The night before breaking camp at Shelbyville, Mitchel sent an expedition secretly into the heart of Georgia to cut the railroad communications of Chattanooga to the south and east. The fortune of this attempt had a most important bearing upon his movements, and will now be narrated.

In the employ of General Buell was a spy named James J. Andrews, who had rendered valuable services in the first year of the war, and had secured the full confidence of the Union commanders. In March, 1862, Buell had sent him secretly with eight men to burn the bridges west of Chattanooga; but the failure of expected coöperation defeated the plan, and Andrews, after visiting Atlanta and inspecting the whole of the enemy's lines in that vicinity and northward, had returned, ambitious to make another attempt. His plans for the

* By the author of "Daring and Suffering."

second raid were submitted to Mitchel, and on the eve of the movement from Shelbyville to Huntsville Mitchel authorized him to take twenty-four men, secretly enter the enemy's territory, and, by means of capturing a train, burn the bridges on the northern part of the Georgia State Railroad and also one on the East Tennessee Railroad where it approaches the Georgia State line, thus completely isolating Chattanooga, which was virtually ungarrisoned.

The soldiers for this expedition, of whom the writer was one, were selected from the three Ohio regiments belonging to General J. W. Sill's brigade, being simply told that they were wanted for secret and very dangerous service. So far as known, not a man chosen declined the perilous honor. Our uniforms were exchanged for ordinary Southern dress, and all arms except revolvers were left in camp. On the 7th of April, by the roadside about a mile east of Shelbyville, in the late evening twilight, we met our leader. Taking us a little way from the road, he quietly placed before us the outlines of the romantic and adventurous plan, which was: to break into small detachments of three or four, journey eastward into the Cumberland Mountains, then work southward, traveling by rail after we were well within the Confederate lines, and finally, the evening of the third day after the start, meet Andrews at Marietta, Georgia, more than two hundred miles away. When questioned, we were to profess ourselves Kentuckians going to join the Southern army.

On the journey we were a good deal annoyed by the swollen streams and the muddy roads consequent on three days of almost ceaseless rain. Andrews was led to believe that Mitchel's column would be inevitably delayed; and as we were expected to destroy the bridges the very day that Huntsville was entered, he took the responsibility of sending word to our different groups that our attempt would be postponed one day—from Friday to Saturday, April 12. This was a natural but a most lamentable error of judgment.

One of the men detailed was belated and did not join us at all. Two others were very soon captured by the enemy; and though their true character was not detected, they were forced into the Southern army, and two reached Marietta, but failed to report at the rendezvous. Thus, when we assembled very early in the morning in Andrews's room at the Marietta Hotel for final consultation before the blow was struck we were but twenty, including our leader. All preliminary difficulties had been easily overcome and we were in good spirits. But some serious obstacles had been revealed on our ride from Chattanooga to Marietta the previous evening.* The railroad was found to

be crowded with trains, and many soldiers were among the passengers. Then the station—Big Shanty—at which the capture was to be effected had recently been made a Confederate camp. To succeed in our enterprise it would be necessary first to capture the engine in a guarded camp with soldiers standing around as spectators, and then to run it from one to two hundred miles through the enemy's country, and to deceive or overpower all trains that should be met—a large contract for twenty men. Some of our party thought the chances of success so slight, under existing circumstances, that they urged the abandonment of the whole enterprise. But Andrews declared his purpose to succeed or die, offering to each man, however, the privilege of withdrawing from the attempt—an offer no one was in the least disposed to accept. Final instructions were then given, and we hurried to the ticket office in time for the northward bound mail-train, and purchased tickets for different stations along the line in the direction of Chattanooga.

Our ride, as passengers, was but eight miles. We swept swiftly around the base of Kennesaw Mountain, and soon saw the tents of the Confederate forces camped at Big Shanty gleam white in the morning mist. Here we were to stop for breakfast and attempt the seizure of the train. The morning was raw and gloomy, and a rain, which fell all day, had already begun. It was a painfully thrilling moment. We were but twenty, with an army about us, and a long and difficult road before us, crowded with enemies. In an instant we were to throw off the disguise which had been our only protection, and trust our leader's genius and our own efforts for safety and success. Fortunately we had no time for giving way to reflections and conjectures which could only unfit us for the stern task ahead.

When we stopped, the conductor, the engineer, and many of the passengers hurried to breakfast, leaving the train unguarded. Now was the moment of action. Ascertaining that there was nothing to prevent a rapid start, Andrews, our two engineers, Brown and Knight, and the fireman hurried forward, uncoupling a section of the train consisting of three empty baggage or box cars, the locomotive, and the tender. The engineers and the fireman sprang into the cab of the engine, while Andrews, with hand on the rail and foot on the step, waited to see that the remainder of the party had gained entrance into the rear box-car. This seemed difficult and slow, though it really consumed but a few seconds, for the car stood on a considerable

* The different detachments reached the Georgia State Railroad at Chattanooga, and traveled as ordinary passengers on trains running southward.—EDITOR.

bank, and the first who came were pitched in by their comrades, while these in turn dragged in the others, and the door was instantly closed. A sentinel, with musket in hand, stood not a dozen feet from the engine, watching the whole proceeding; but before he or any of the soldiers or guards around could make up their minds to interfere all was done, and Andrews, with a nod to his engineer, stepped on board. The valve was pulled wide open, and for a moment the wheels slipped round in rapid, ineffective revolutions; then, with a bound that jerked the soldiers in the box-car from their feet, the little train darted away, leaving the camp and the station in the wildest uproar and confusion. The first step of the enterprise was triumphantly accomplished.

According to the time-table, of which Andrews had secured a copy, there were two trains to be met. These presented no serious hindrance to our attaining high speed, for we could tell just where to expect them. There was also a local freight not down on the time-table, but which could not be far distant. Any danger of collision with it could be avoided by running according to the schedule of the captured train until it was passed; then at the highest possible speed we could run to the Oostenaula and Chickamauga bridges, lay them in ashes, and pass on through Chattanooga to Mitchel, at Huntsville, or wherever eastward of that point he might be found, arriving long before the close of the day. It was a brilliant prospect, and so far as human estimates can determine it would have been realized had the day been Friday instead of Saturday. On Friday every train had been on time, the day dry, and the road in perfect order. Now the road was in disorder, every train far behind time, and two "extras" were approaching us. But of these unfavorable conditions we knew nothing, and pressed confidently forward.

We stopped frequently, and at one point tore up the track, cut telegraph wires, and loaded on cross-ties to be used in bridge burning. Wood and water were taken without difficulty, Andrews very coolly telling the story to which he adhered throughout the run, namely, that he was one of General Beauregard's officers, running an impressed powder train through to that commander at Corinth. We had no good instruments for track-raising, as we had intended rather to depend upon fire; but the amount of time spent in taking up a rail was not material at this stage of our journey, as we easily kept on the time of our captured train. There was a wonderful exhilaration in passing swiftly by towns and stations through the heart of an enemy's country in this manner. It possessed just enough of the spice of danger, in

this part of the run, to render it thoroughly enjoyable. The slightest accident to our engine, however, or a miscarriage in any part of our programme, would have completely changed the conditions.

At Etowah we found the "Yonah," an old locomotive owned by an iron company, standing with steam up; but not wishing to alarm the enemy till the local freight had been safely met, we left it unharmed. Kingston, thirty miles from the starting-point, was safely reached. A train from Rome, Georgia, on a branch road, had just arrived and was waiting for the morning mail—our train. We learned that the local freight would soon come also, and, taking the side-track, waited for it. When it arrived, however, Andrews saw, to his surprise and chagrin, that it bore a red flag, indicating another train not far behind. Stepping over to the conductor, he boldly asked: "What does it mean that the road is blocked in this manner when I have orders to take this powder to Beauregard without a minute's delay?" The answer was interesting but not reassuring: "Mitchel has captured Huntsville and is said to be coming to Chattanooga, and we are getting everything out of there." He was asked by Andrews to pull his train a long way down the track out of the way, and promptly obeyed.

It seemed an exceedingly long time before the expected "extra" arrived, and when it did come it bore another red flag. The reason given was that the "local," being too great for one engine, had been made up in two sections, and the second section would doubtless be along in a short time. This was terribly vexatious; yet there seemed nothing to do but to wait. To start out between the sections of an extra train would be to court destruction. There were already three trains around us, and their many passengers and others were all growing very curious about the mysterious train, manned by strangers, which had arrived on the time of the morning mail. For an hour and five minutes from the time of arrival at Kingston we remained in this most critical position. The sixteen of us who were shut up tightly in a box-car,—personating Beauregard's ammunition,—hearing sounds outside, but unable to distinguish words, had perhaps the most trying position. Andrews sent us, by one of the engineers, a cautious warning to be ready to fight in case the uneasiness of the crowd around led them to make any investigation, while he himself kept near the station to prevent the sending off of any alarming telegram. So intolerable was our suspense, that the order for a deadly conflict would have been felt as a relief. But the assurance of Andrews quieted the crowd until

the whistle of the expected train from the north was heard; then, as it glided up to the depot, past the end of our side-track, we were off without more words.

But unexpected danger had arisen behind us. Out of the panic at Big Shanty two men emerged, determined, if possible, to foil the unknown captors of their train. There was no telegraph station, and no locomotive at hand with which to follow; but the conductor of the train, W. A. Fuller, and Anthony Murphy, foreman of the Atlanta railway machine shops, who happened to be on board of Fuller's train, started on foot after us as hard as they could run. Finding a hand-car they mounted it and pushed forward till they neared Etowah, where they ran on the break we had made in the road and were precipitated down the embankment into the ditch. Continuing with more caution, they reached Etowah and found the "Yonah," which was at once pressed into service, loaded with soldiers who were at hand, and hurried with flying wheels towards Kingston. Fuller prepared to fight at that point, for he knew of the tangle of extra trains, and of the lateness of the regular trains, and did not think we should be able to pass. We had been gone only four minutes when he arrived and found himself stopped by three long, heavy trains of cars, headed in the wrong direction. To move them out of the way so as to pass would cause a delay he was little inclined to afford — would, indeed, have almost certainly given us the victory. So, abandoning his engine, he with Murphy ran across to the Rome train, and, uncoupling the engine and one car, pushed forward with about forty armed men. As the Rome branch connected with the main road above the depot, he encountered no hindrance, and it was now a fair race. We were not many minutes ahead.

Four miles from Kingston we again stopped and cut the telegraph. While trying to take up a rail at this point we were greatly startled. One end of the rail was loosened, and eight of us were pulling at it, when in the distance we distinctly heard the whistle of a pursuing engine. With a frantic effort we broke the rail, and all tumbled over the embankment with the effort. We moved on, and at Adairsville we found a mixed train (freight and passenger) waiting, but there was an express on the road that had not yet arrived. We could afford no more delay, and set out for the next station, Calhoun, at terrible speed, hoping to reach that point before the express, which was behind time, should arrive. The nine miles which we had to travel were left behind in less than the same number of minutes. The express was just pulling out, but, hearing our whistle, backed before us until we were able to take the

side-track. It stopped, however, in such a manner as completely to close up the other end of the switch. The two trains, side by side, almost touched each other, and our precipitate arrival caused natural suspicion. Many searching questions were asked, which had to be answered before we could get the opportunity of proceeding. We in the box-car could hear the altercation, and were almost sure that a fight would be necessary before the conductor would consent to "pull up" in order to let us out. Here again our position was most critical, for the pursuers were rapidly approaching.

Fuller and Murphy saw the obstruction of the broken rail in time, by reversing their engine, to prevent wreck; but the hindrance was for the present insuperable. Leaving all their men behind, they started for a second foot-race. Before they had gone far they met the train we had passed at Adairsville, and turned it back after us. At Adairsville they dropped the cars, and with locomotive and tender loaded with armed men, they drove forward at the highest speed possible. They knew that we were not many minutes ahead, and trusted to overhail us before the express train could be safely passed.

But Andrews had told the powder story again with all his skill, and added a direct request in peremptory form to have the way opened before him, which the Confederate conductor did not see fit to resist; and just before the pursuers arrived at Calhoun we were again under way. Stopping once more to cut wires and tear up the track, we felt a thrill of exhilaration to which we had long been strangers. The track was now clear before us to Chattanooga; and even west of that city we had good reason to believe that we should find no other train in the way till we had reached Mitchell's lines. If one rail could now be lifted we would be in a few minutes at the Oostentaula bridge; and that burned, the rest of the task would be little more than simple manual labor, with the enemy absolutely powerless. We worked with a will.

But in a moment the tables were turned. Not far behind we heard the scream of a locomotive bearing down upon us at lightning speed. The men on board were in plain sight and well armed. Two minutes — perhaps one — would have removed the rail at which we were toiling; then the game would have been in our own hands, for there was no other locomotive beyond that could be turned back after us. But the most desperate efforts were in vain. The rail was simply bent, and we hurried to our engine and darted away, while remorselessly after us thundered the enemy.

Now the contestants were in clear view, and a race followed unparalleled in the annals of

war. Wishing to gain a little time for the burning of the Oostenaula bridge, we dropped one car, and, shortly after, another; but they were "picked up" and pushed ahead to Resaca. We were obliged to run over the high trestles and covered bridge at that point without a pause. This was the first failure in the work assigned us.

The Confederates could not overtake and stop us on the road; but their aim was to keep close behind, so that we might not be able to damage the road or take in wood or water. In the former they succeeded, but not in the latter. Both engines were put at the highest rate of speed. We were obliged to cut the wire after every station passed, in order that an alarm might not be sent ahead; and we constantly strove to throw our pursuers off the track, or to obstruct the road permanently in some way, so that we might be able to burn the Chickamauga bridges, still ahead. The chances seemed good that Fuller and Murphy would be wrecked. We broke out the end of our last box-car and dropped cross-ties on the track as we ran, thus checking their progress and getting far enough ahead to take in wood and water at two separate stations. Several times we almost lifted a rail, but each time the coming of the Confederates within rifle range compelled us to desist and speed on. Our worst hindrance was the rain. The previous day (Friday) had been clear, with a high wind, and on such a day fire would have been easily and tremendously effective. But to-day a bridge could be burned only with abundance of fuel and careful nursing.

Thus we sped on, mile after mile, in this fearful chase, round curves and past stations in seemingly endless perspective. Whenever we lost sight of the enemy beyond a curve, we hoped that some of our obstructions had been effective in throwing him from the track, and that we should see him no more; but at each long reach backward the smoke was again seen, and the shrill whistle was like the scream of a bird of prey. The time could not have been so very long, for the terrible speed was rapidly devouring the distance; but with our nerves strained to the highest tension each minute seemed an hour. On several occasions the escape of the enemy from wreck was little less than miraculous. At one point a rail was placed across the track on a curve so skillfully that it was not seen till the train ran upon it at full speed. Fuller says that they were terribly jolted, and seemed to bounce altogether from the track, but lighted on the rails in safety. Some of the Confederates wished to leave a train which was driven at such a reckless rate, but their wishes were not gratified.

Before reaching Dalton we urged Andrews to turn and attack the enemy, laying an ambush so as to get into close quarters, that our revolvers might be on equal terms with their guns. I have little doubt that if this had been carried out it would have succeeded. But either because he thought the chance of wrecking or obstructing the enemy still good, or feared that the country ahead had been alarmed by a telegram around the Confederacy by the way of Richmond—Andrews merely gave the plan his sanction without making any attempt to carry it into execution.

Dalton was passed without difficulty, and beyond we stopped again to cut wires and to obstruct the track. It happened that a regiment was encamped not a hundred yards away, but they did not molest us. Fuller had written a dispatch to Chattanooga, and dropped a man with orders to have it forwarded instantly, while he pushed on to save the bridges. Part of the message got through and created a wild panic in Chattanooga, although it did not materially influence our fortunes. Our supply of fuel was now very short, and without getting rid of our pursuers long enough to take in more, it was evident that we could not run as far as Chattanooga.

While cutting the wire we made an attempt to get up another rail; but the enemy, as usual, were too quick for us. We had no tool for this purpose except a wedge-pointed iron bar. Two or three bent iron claws for pulling out spikes would have given us such incontestable superiority that, down to almost the last of our run, we should have been able to escape and even to burn all the Chickamauga bridges. But it had not been our intention to rely on this mode of obstruction—an emergency only rendered necessary by our unexpected delay and the pouring rain.

We made no attempt to damage the long tunnel north of Dalton, as our enemies had greatly dreaded. The last hope of the raid was now staked upon an effort of a different kind from any that we had yet made, but which, if successful, would still enable us to destroy the bridges nearest Chattanooga. But, on the other hand, its failure would terminate the chase. Life and success were put upon one throw.

A few more obstructions were dropped on the track, and our own speed increased so that we soon forged a considerable distance ahead. The side and end boards of the last car were torn into shreds, all available fuel was piled upon it, and blazing brands were brought back from the engine. By the time we approached a long, covered bridge a fire in the car was fairly started. We uncoupled it in the middle of the bridge, and with painful suspense waited the issue. Oh for a few minutes till the work of conflagration.

gration was fairly begun! There was still steam pressure enough in our boiler to carry us to the next wood-yard, where we could have replenished our fuel by force, if necessary, so as to run as near to Chattanooga as was deemed prudent. We did not know of the telegraph message which the pursuers had sent ahead. But, alas! the minutes were not given. Before the bridge was extensively fired the enemy was upon us, and we moved slowly onward, looking back to see what they would do next. We had not long to conjecture. The Confederates pushed right into the smoke, and drove the burning car before them to the next side-track.

With no car left, and no fuel, the last scrap having been thrown into the engine or upon the burning car, and with no obstruction to drop on the track, our situation was indeed desperate. A few minutes only remained until our steed of iron which had so well served us would be powerless.

But it might still be possible to save ourselves. If we left the train in a body, and, taking a direct course towards the Union lines, hurried over the mountains at right angles with their course, we could not, from the nature of the country, be followed by cavalry, and could easily travel—athletic young men as we were, and fleeing for life—as rapidly as any pursuers. There was no telegraph in the mountainous districts west and north-west of us, and the prospect of reaching the Union lines seemed to me then, and has always since seemed, very fair. Confederate pursuers with whom I have since conversed freely have agreed on two points—that we could have escaped in the manner here pointed out, and that an attack on the pursuing train would likely have been successful. But Andrews thought otherwise, at least in relation to the former plan, and ordered us to jump from the locomotive one by one, and, dispersing in the woods, each endeavor to save himself. Thus ended the Andrews railroad raid.

It is easy now to understand why Mitchel paused thirty miles west of Chattanooga. The Andrews raiders had been forced to stop eighteen miles south of the same town, and no flying train met him with the expected tidings that

all railroad communications of Chattanooga were destroyed, and that the town was in a panic and undefended. He dared advance no farther without heavy reinforcements from Pittsburg Landing or the north; and he probably believed to the day of his death, six months later, that the whole Andrews party had perished without accomplishing anything.

A few words will give the sequel to this remarkable enterprise. There was great excitement in Chattanooga and in the whole of the surrounding Confederate territory for scores of miles. The hunt for the fugitive raiders was prompt, energetic, and completely successful. Ignorant of the country, disorganized, and far from the Union lines, they strove in vain to escape. Several were captured the same day on which they left the cars, and all but two within a week. Even these two were overtaken and brought back when they supposed that they were virtually out of danger. Two of those who had failed to be on the train were identified and added to the band of prisoners.

Now follows the saddest part of the story. Being in citizens' dress within an enemy's lines, the whole party were held as spies and closely and vigorously guarded. A court-martial was convened, and the leader and seven others out of the twenty-two were condemned and executed.|| The remainder were never brought to trial, probably because of the advance of Union forces and the consequent confusion into which the affairs of the Departments of East Tennessee and Georgia were thrown. Of the remaining fourteen, eight succeeded by a bold effort—attacking their guard in broad daylight—in making their escape from Atlanta, Georgia, and ultimately in reaching the North. The other six who shared in this effort, but were recaptured, remained prisoners until the latter part of March, 1863, when they were exchanged through a special arrangement made with Secretary Stanton. All the survivors of this expedition received medals and promotion. The pursuers also received expressions of gratitude from their fellow-Confederates, notably from the governor and the legislature of Georgia.

William Pittenger.

|| Below is a list of the participants in the raid:

James J. Andrews,* leader; William Campbell,* a civilian who volunteered to accompany the raiders; George D. Wilson,* Company B, 2d Ohio Volunteers; Marion A. Ross,* Company A, 2d Ohio Volunteers; Perry G. Shadrack,* Company K, 2d Ohio Volunteers; Samuel Slavens,* 33d Ohio Volunteers; Samuel Robinson,* Company G, 33d Ohio Volunteers; John Scott,* Company K, 21st Ohio Volunteers; Wilson W. Brown,† Company F, 21st Ohio Volunteers; William Knight,† Company E, 21st Ohio Volunteers; Mark Wood,† Company C, 21st Ohio Volunteers; James A. Wilson,† Company C, 21st Ohio Volunteers; John

Wollam,† Company C, 33d Ohio Volunteers; D. A. Dorsey,† Company H, 33d Ohio Volunteers; Jacob Parrott,† Company K, 33d Ohio Volunteers; Robert Buffum,† Company H, 21st Ohio Volunteers; William Bensinger,† Company G, 21st Ohio Volunteers; William Reddick,† Company B, 33d Ohio Volunteers; E. H. Mason,† Company K, 21st Ohio Volunteers; William Pittenger,† Company G, 2d Ohio Volunteers.

J. R. Porter, Company C, 21st Ohio, and Martin J. Hawkins, Company A, 33d Ohio, reached Marietta, but did not get on board of the train. They were captured and imprisoned with their comrades.—EDITOR.

BIRD MUSIC: PARTRIDGES AND OWLS.

PARTRIDGES.

HE peculiar interest in the partridge is owing to its close kinship with our domestic fowls.

The wild and the tame hens look alike and act alike; their habits are similar, their eggs differ only in

size, and both prefer nests on the ground; both gather their chickens under their wings, and both call them with like clucks.

The partridge seems to have an appreciation of all this, and delights in coming near our buildings; even lighting upon them and on the well-curb, and flying down into the door-yard. Not long since, a young miss of the village where I dwell drove one into a shed, and caught it in her hands.

Living for more than thirty years in a grove, I have had interesting experiences with these birds. One evening last summer, on going, just at dark, to see what disturbed a hen grouping her chickens out-of-doors, I found a partridge sitting in her nest, refusing to be driven out by the proprietor, who was both picking it and striking it with her wings. I took it up, carried it into the house, examined it, and placed it on the floor. It was full grown and plump, but appeared to be unable to stand, lying quite motionless, as is the habit of the young in time of danger. The next morning, when I opened the door of the wood-house, where it had spent the night, instantly it hummed by my head and disappeared. The partridge has a rapid flight, and no bird surpasses it in swift sailing. What caused this particular one to seek the nest of the brooding hen at that hour is something of a mystery; it may have been hotly pursued by an owl.

But it is of the musical powers of the partridge that I wish to speak. One spring the neighboring children came in companies to see a partridge on her nest close by my barn. The novel sight was highly entertaining, but their eyes opened wider still when they saw and heard the performances of her mate on his favorite log. During the time the hen was laying her eggs and sitting, he often gave us the "stormy music of his drum." It was small trouble to arrange bushes on a fence near by so that one could creep up unseen, and get a

full view of the gallant thunderer perched on a knotty old hemlock log, mossy, and half buried in the ground; and "children of a larger growth," as well as the boys and girls, availed themselves of the opportunity. Of the many who saw him in the act of drumming, I do not recall one who had a correct idea beforehand of the way in which the "partridge thunder" is produced. It was supposed to be made by the striking of the bird's wings either against the log or against his body; whereas it was now plainly to be seen that the performer stood straight up, like a junk bottle, and brought his wings in front of him with quick, strong strokes, smiting nothing but the air—not even his "own proud breast," as one distinguished observer has suggested.

Wilson thinks the drumming may be heard nearly half a mile. He might safely have doubled the distance; though, when we consider the low pitch, B flat, second line in bass staff, the fact is surprising. The tones somewhat

resemble those of any deep drum, being very deceptive as to distance, often sounding near when far off, and far off when near. I would describe the drumming as a succession of thumps, the first dozen of which may be counted.

The first two or three are soft and comparatively slow; then they increase rapidly in force and frequency, rushing onward into a furious whirl, the whirl subsiding into a sudden but graduated diminish. The entire power of the partridge must be thrown into this exercise. His appearance immediately afterwards attests this, as well as the volume of sound; for he drops into the forlornest of attitudes, looking as if he would never move again. In a few minutes, however, perhaps five, he begins to have nervous motions of the head; up, up it goes, and his body with it, till he is perfectly erect—legs, body, neck, and all. And then for the thunder once more:

Thump, thump, thump, " " " " Whir.....

The partridge, as the bass drummer, is an important member of the feathered orchestra.

OWLS.

"Who ever heard an owl sing? is asked in derision," says a delightful writer on natural subjects; and he himself seems almost willing to acknowledge that the owl does not sing, and even to doubt his hoot. However it may be elsewhere, up here among the Green Mountains owls hoot, and hoot well, with deep, strong voices that may be heard distinctly, of a calm evening, for a mile or more.

One winter, after six weeks of cold, perhaps the severest in fifteen years, the weather moderated, and the 3d of March was, comparatively, a mild day. An owl felt the change, and in his gladness sent down ponderous vespere notes from the mountain, which, as they came booming across the valley, bore joy to all that heard them.

The owl did not change the weather, but the weather changed the owl. After all that has been said for and against the ability of inferior creatures to foretell changes of weather, the sum of our knowledge amounts to about this: the senses of these beings are keener than our own, enabling them to feel the changes sooner than we can, and consequently to get a little before us with their predictions. On the present occasion, though it was almost dark, the guinea hens chimed in with their rasping voices, and the turkeys added their best gobbles in happy proclamation of the warm time coming. The owl gave three distinct hoots in succession, repeating them at intervals of about two minutes at first, afterwards with longer pauses. The first of these tones was preceded by a grace note; the second was followed by a thread-like slide down a fourth; and at the close of the third was a similar descent of an octave:

Neither slide, however, ended in a firm tone.

White of Selborne says that one of his musical friends decided that "all owls hoot in B flat"; another, that "they vary some, almost a half-note below A"; another still, that "the owls about the village hoot in three different keys—in G flat, in F sharp, in B flat, and in A flat." This Yankee owl, true to the instincts of the soil, hooted in a key of his own, E flat. Though all owls undoubtedly indulge in vocal expression, the little screech-owl is probably their best musical representative. Indeed, in point of individuality of style, this artist stands alone, and must be ranked as a singer. To be sure, he has nothing of the spontaneous joy of the robin, of the frolic flow of the bobolink, nothing of the clear, clean vigor of the

oriole; but he surpasses them all in tender, dulcet sentiment. Never attempting a boisterous strain, his utterances are pensive and subdued, often like a faint cry of despair. Chary of his powers, the screech-owl cuts his programme tormentingly short: and it is only after many trials that one is able to collect the disjointed strains that make his medley entire. Just at dark, some pleasant evening, you will hear his low, faint tremors. At first they may be heard perhaps every other minute, then the interim gradually lengthens, until by 9 o'clock his pauses become intolerably long. The tremors or trills are given with a swell, the *crescendo* being longer than the *diminuendo*:

This is repeated and repeated each evening without variation; but after long waiting and many disappointments comes a change that is at once a surprise and a delight:

This owl ascends the scale generally not more than one or two degrees; the charm lies in his manner of descent, sometimes by a third, again by a fourth, and still again by a sixth. At the outset one is inclined to decide that the descent is according to the chromatic scale; then the steps will seem too short, sounding not more than half so long as those of this scale. I can best describe it as a sliding *tremolo*—a trickling down, like water over pebbles:

So rapidly and neatly is it done that an expert violinist could not easily reproduce it. Perhaps the descent of the whinny of a horse comes the nearest to it of any succession of natural sounds; and this, Gardner says, conforms to the chromatic scale.

One September morning something woke me at 2 o'clock. My head was soon out of the window, and just in time to hear what I had waited for for more than a year. My little screech-owl had come to make amends for his tantalizing delays. I had heard the strains

before, but had not secured them. They were as follows:

It is hard to believe that so gentle pleadings can accompany thoughts intent on plunder and blood. I do not know where to look again for so painful a contradiction as exists between the tones of this bird and his wicked work. Wilson, noticing the inconsistency between his utterances and his actions, says of

one he had in confinement, that at twilight he "flew about the room with the silence of thought, and, perching, moaned out his melancholy notes with many lively gesticulations not at all in accordance with the pitiful tone of his ditty, which reminded one of a half-frozen puppy."

The naturalist is glad to be a "companion of owls" for a season, willingly taking the risk of their making night hideous and keeping him awake with their "snoring."

Owls have always been hooted at as well as hooting. "As stupid as an owl," "tough as a b'iled owl"—these expressions of reproach are still in vogue. But let us give the owl his due. An intelligent and apparently honest man tells me that he once ate of an owl—fattened on chickens, by the way, filched from him with surpassing cunning—and found it as sweet and tender fowl as he had ever tasted. So, it seems, the owl is not always stupid, nor always tough. Few birds are clad in finer raiment, and no other inhabitants of the air fly with so velvet-like, so silent wings.

Simeon Pease Cheney.

TOPICS OF THE TIME.

An Issue that cannot be Ignored.

NOTHING is more encouraging to the advocates of civil service reform than the constantly increasing sensitiveness of the public mind upon this question. This is shown with striking force whenever a violation of the law is reported in any quarter, and especially in Washington. Only a few weeks ago, for example, a report was published that a circular had been sent from Washington, with the knowledge and approval of the Assistant Secretary of the Treasury and of the Public Printer, calling upon the postmasters of New York State to furnish lists of voters to whom political documents could be sent. Instantly there was an outcry from all parts of the country against this proposal as a violation of the civil service law. The two officials who were charged with giving their approval hastened to say that they had done so only in the most informal way, that they had not signed the circular, and that they had no intention of sanctioning any violation either of the letter or the spirit of the law. The circular itself was summarily suppressed.

To realize the progress which has been made, we have only to contrast the spirit in which the public received this news of an attempt to use the post office for political purposes with that which it would have shown towards a similar effort a few years ago. There would have been no protest heard then, save from a few persons and newspapers with whom civil service reform was a "hobby" or "fad," advocated with such persistency as to be in danger of becoming a public bore. Now the mere suspicion of a violation of the

law, either in the appointment of a person to office or in the administration of a department, is sufficient to set the whole country a-talking.

The political managers who are mapping out the next campaign will do well to give more than perfunctory notice to this new attitude of public sentiment. A mere plank of approval and sympathy in the party platforms will not be sufficient. There must be a specific and hearty pledge to carry forward and extend the scope of the reform, and there must be put on the platforms candidates whose characters and public records will be such as to give promise that their efforts will be earnestly devoted to the fulfillment of the pledge in case of election. For great and encouraging as is the progress which has been made, the reform is really only in its first stage. Only a very small proportion of the public service is yet within the limits of our civil service rules. The country will not be freed from the evils of the spoils system till the whole public service is so completely removed from the reach of the politicians that we can hold a presidential election with the certainty that, whatever may be the result, not a single subordinate in the employ of our Government need to fear that he will lose his place so long as he does his duty faithfully and efficiently.

It will be a great mistake for the political managers to think that the tariff issue, important and absorbing as it is in public interest, can be depended upon to overshadow that of civil service reform. The sensitiveness of the public mind, to which we have alluded, is due in great measure to the knowledge that at heart the mere politicians of both parties have never had any

sympathy with the reform, and are ready now, as they always have been, to desert it if they think they can do so safely. Some of them may think that the looked-for opportunity has arrived this year, but they will make a serious mistake if they act upon that supposition. The American people, with their quick intelligence, have caught a glimpse, from what has been accomplished by the partial application of the reform principles, of the immeasurable gain to the political health of the country which would follow from their full application. They detest the spoils system as they have never detested it before, and the political party which ventures at this late day to attempt to stay the work of that system's destruction will simply be trifling with its own fortunes.

We say this deliberately and confidently. The golden time of the mere politician—that is, of the man who is in politics simply for the money that is in it—has passed in this country. We are entering upon an era in which he must necessarily play a minor part. We have saved our Union, and are now turning our attention to the problem of how best to govern it. There can be no doubt about the fact of this transition. The questions to which the public mind turn most readily are conclusive evidence upon this point. Proposals for reform in our election methods, for the regulation, restriction, or suppression of the liquor-traffic and its portentous train of evils, and for intelligent and thoughtful consideration of the tariff problem command universal attention. In every State in the Union these, with that of the elimination of the public service from politics, are the absorbing topics. They show that the Parliament of Ghosts in which we have been wrangling so long has at last been dissolved, and the Parliament of Living Issues has been opened in its stead. In this new field of discussion the intelligence of the country must take the lead and hold it; that intelligence will force forward the work of civil service reform at the same time that it discusses other vital questions, and the politicians cannot hinder its progress.

The Newspaper Side of Literature.

THE student of our first half-century of national history can hardly fail to be impressed by the nervous directness, exactness, and consequent force of the American state papers of that time. While diplomatic documents in every other part of the world were marked by circuitousness, tergiversation, and a style too vicious to be classed even as slovenly, the American proclamation, petition, or diplomatic or political argument was quite certain to be marked by clear-cut purpose, masculine vigor of expression, and close adaptation of words to ideas. All this was undoubtedly due to long and intense thinking on subjects of the highest importance to the thinkers, and to a somewhat narrow field of reading: restricted to the study of the greater masters of English style, the great American writers were able to wing every word with an exact understanding of its purport, and of its strongest use.

It can hardly be possible to overestimate the educational influence which must have been exerted on the American people by the constant reading of their own political literature at a time when there was little or no native drama, poetry, or history, and when the attention of the newspaper reader was concentrated

on politics and state papers. If the American's reading matter was limited, it was marked by dignity, by a freedom from meanness of conception or treatment, and by a copious supply of sound English words and an evident power of discrimination in the use of them. If Massachusetts Bay had a controversy with her governor, the case of the commonwealth was stated with a precision and a completeness which the great Greek orator could hardly have surpassed; and documents of this sort fashioned popular discussion in every town-meeting and around every hearthstone from Boston to the Connecticut River. The contemporary reader of the American Declaration of Independence could not well help seeing that those phrases which were blistering in their intensity owed much of their force to their contrast with the cold exactness with which words were used elsewhere in the document. The finest specimen of those political pamphlets which depend on their simplicity for their effectiveness with the people is Tom Paine's "Common Sense," but it is a masterpiece of rhetoric: there is not a flaw in the design, nor an imperfection in the workmanship, to make it a bad literary influence upon the people to whom it was addressed. And, on the other hand, the immediate practical effect of that far more ambitious effort, the "Federalist," shows that long previous training had produced a type of reader of very high mental caliber: the work is now a profound treatise on our constitutional law, a fair appreciation of which must be confined to a comparatively small and specially educated class; but in 1787-88 it was no more than a series of newspaper appeals to the legal voters of the State of New York. Common schools may have been few, colleges poor, and universities non-existent; but the documents which the scanty newspaper literature of the time gave to the people were in themselves an education. Even those writings in which a lack of thorough early training is occasionally betrayed by an over-fondness for long words or labored efforts, though they may thereby become ponderous, do not become turgid or inexact. The rule was that the American diplomatic or political writer said what he meant to say, and said it in the fittest words.

Such a process of popular education ought to go far to explain the completeness with which all departments of American literature finally blossomed forth. The people had been versed for years in that which, if it was only one branch of literature, had been handled in a manner little short of perfection. If the popular literary standards were few, they were of a very high order and of a kind particularly serviceable in the detection of mere show and pretense; and the men who, in other departments of literary work, were at last able to come fully up to these standards, were necessarily men of such power that their work at once took a permanent place in the literature of the race.

But not all the credit should be given to the ability of the writers; a large part of it is due to the existence of a class of readers, trained to high demands by the quality of their current reading, furnished mainly by the newspapers. If the strength of the new American literature was drawn from Shakspeare, from the prose of Milton, from the English translators of the Bible, it had come through the declarations of colonial rights and the petitions of the Continental Congress to the king, through the Declaration of Independence, the

speeches of Patrick Henry and Fisher Ames, the pamphlet wars of "Helvidius" and "Pacificus," the protests against search and impressment: narrow as the newspaper channels had been, they had carried into the new American literature its full share of Shakspeare's exactness and of Milton's power.

How much of an improvement have we in Hoe's wonderful presses, in the steam which drives them, and in the electricity which makes the modern newspaper "the history of the world for a day"? Its reader has his ten pages a day and perhaps thirty-two pages on Sundays; he has hundreds of thousands of advertisements a year, and is himself numbered among hundreds of thousands of readers; he has daily news of the passing illnesses of crowned heads, the daily happenings of every corner of his own and other countries, everything that may be called "new," no matter how inane or evil. He lays his newspaper down and rises bewildered by a phantasmagoria of unconnected facts relating to every part of the universe, with his taste vitiated by slang, bad English, loose information, everything which can dissipate his mental energies, and with his heart, it may be, corrupted by grosser evils. Is he a clearer-headed, a wiser, or a better man than the New Yorker of just a hundred years ago, who, folding up his "Independent Gazetteer" and not caring a jot that he had not heard from Boston in two days or from North Carolina in two weeks, went quietly home to meditate on or discuss an essay of Hamilton, Madison, or Jay? Does the "successful" modern newspaper make its readers better critics than were made by its predecessors of years ago? The newspaper of the past gave us, in the fullness of time, a literature whose names, from Bryant to Prescott and Motley, are classic. What sort of literature is our popular modern newspaper likely to give us?

It would be unfair to ignore the fact that some of our newspapers do exert the best literary influence on their readers, and conscientiously subordinate other features of their work to their duties as educators. But the typical modern newspaper, to meet the taste which it has created, must surrender whole columns to writers who aim only at being amusing, and often succeed only in being pert, slangy, or scandalous; and it must find or invent "news" items which have about as lofty an influence on the minds of readers as the wonders of the fair had on the mind of Moses Primrose. A continual flood of such matter is not to be offset or corrected by an occasional brilliant editorial, or a half-column speech by a public man, or a "syndicate" story by a good writer. And the effects are cumulative: such newspapers are steadily training a large number of readers to false standards in the only literature of which they have close and daily experience; and the newspapers themselves are as steadily being forced to an adoption of these false standards. In brief, the newspaper of the past, by reason of its lack of opportunity, was compelled to restrict its readers to matter of permanent educational value; the newspaper of the present, through its superabundance of opportunity, is too often training its readers out of all knowledge of or care for educational standards.

The only remedy which can be suggested is in that which will naturally work itself out of a general recognition of the evils to be corrected. As the sense of public duty grows keener, as it comes to be seen that

public office is not the only public trust, the journalist will cease to think or act as if his profession had no mission; as if circulation were its highest good, and advertisements the noblest result of it. It cannot but be that the American newspaper shall become again an educating force, higher and nobler than its prototype, whose virtue was based in impotence. Notwithstanding all the evil tendencies of current journalism,—the disregard of accuracy, the irreverence, the cruel and impertinent gossip,—there are indications which are highly encouraging.

The fact must be recognized that not all the successful methods of the immense dailies are bad methods. There is a certain thoroughness and enterprise about them that impresses, and which will be a feature of the management of the ideal "newspaper of the future." We notice, also, a tendency in some of the most sensational of these papers towards better things—towards a certain legitimate "sensationalism." Manners and methods have been modified under an increasing sense of responsibility and in the endeavor to reach a solid as well as numerous circulation. We have spoken recently of the growing independence of the political press, of which independence examples accumulate. The sensational newspaper's editorial page already often shows a gravity and pith of style evidencing ability and conscience. There is a growing tendency towards the fearless, generous, and public-spirited discussion of living questions. Let us hope that these signs indicate a reaction against a state of things that is deprecated by the best men engaged in the profession of daily journalism.

With all its faults the newspaper of to-day is a tremendous power for good; for the perpetuation of freedom; for the criticism and reform of government; for the betterment of social conditions. The daily press has reformed many things, and ought to be, and is, fully able to reform itself.

* New England Defending States Rights.

ONE of the most interesting features of our national development since the restoration of the Union is the manner in which the two sections are contributing to the preservation of our common inheritance. It is a very striking and suggestive fact that a conspicuous Union soldier from New England should now come to the rescue of the South in defense of a sound constitutional principle, which, although always associated in the popular mind with the South, has seemed of late years to be losing its proper hold upon Southern men. The debate on the Blair bill in the Senate a few weeks ago was rendered notable by a most vigorous States rights speech from General Joseph R. Hawley, one of Connecticut's representatives in the upper branch of Congress. It is true that General Hawley opposed the scheme of Federal aid to schools in the South upon other grounds, especially on the theory that such aid from Washington would prove demoralizing to the spirit of self-help; but the burden of his speech was the contention that the proposed system would involve an encroachment by the General Government upon the rights of the States, and would thus pave the way for an ultimate revolution in the relations between them.

The necessities of the war and the exigencies of the reconstruction period vastly strengthened the authority

and power of the Federal Government, and correspondingly weakened the influence of the States. After that anomalous period ended, two other motives conspired to assist these tendencies. On the one hand, the proper and reasonable prerogatives of the State suffered from having a bad name in the victorious section. Northern people remembered that "States rights" had been the plea upon which secession was based, and consequently they felt a not unnatural impatience whenever they heard the term again used. On the other hand, Southern people found that a firm adherence to a strict theory of the rights of the States, so far from being "money in their pockets," might mean the loss of appropriations from the Federal treasury which they could get by waiving it. The province of the State was thus assailed by Northerners enamored of Federal power, while its traditional defenders in the South were tempted to forego resistance by the advantages in the shape of dollars and cents which would follow their surrender.

The layman may hesitate to express an opinion as to whether or not the Blair bill is constitutional when he finds distinguished constitutional lawyers at variance regarding it; but the layman cannot fail to recognize the fact that the arguments urged in defense of the measure, if pushed to their logical conclusion, threaten accessions to Federal power, and inroads upon the just bounds of State authority, which eventually must disturb the harmony of our dual system of government. The difficulty in resisting this tendency was twofold. In the first place, too many people in the North resented such resistance when offered by Southerners as only another manifestation of the "States rights" idea, towards which, in its ante-bellum form, they had conceived a violent aversion; in the second place, too many people in the South were inclined to give over a resistance based on theory in order to grasp a practical advantage.

In such a situation there was needed a bold, vigorous, and convincing assertion and defense of just States

rights by a Northern man, who, as a Union soldier, had fought against an unjust theory of States rights, and whose political relations relieved him from the imputation of seeking personal or partisan ends in making such a deliverance. General Hawley was exactly the man needed. He had been a prominent officer on the Northern side in the civil war; he has been a prominent leader in the Republican party since the war; he has been often enough suggested as a candidate for President to be free from the charge of trying to make capital by a speech which was altogether too pronounced to fit the modern standards of non-committal "availability."

The speech was worthy of the occasion, and there are abundant signs that it has produced a marked effect. It is especially noteworthy and encouraging to find evidence that this defense of States rights by a Union soldier from the North is strengthening in the faith of self-government those Southern men who, having once carried the theory of State authority too far, had seemed of late in danger of not carrying it far enough. All the circumstances which attended the delivery of the speech combined to secure for it the attention of thoughtful men throughout the country, and especially in the South, and a candid consideration of its arguments could not fail to secure a wide acceptance of its conclusions.

A quarter of a century ago nothing could have seemed more absurd than the idea that the South would ever waver in its devotion to "States rights," unless it were the idea that it would need the appeal of a Northern man to recall it to its senses. Yet we have seen both of these things come to pass. We have heard men who tried to secede from the Union, because they thought their States could not get their alleged rights in the Union, return to the Union and avow their readiness to surrender the actual rights of their States; and then we have heard one of the men who fought to overthrow secession protesting against such surrender of State rights by the men who had tried to establish secession.

OPEN LETTERS.

Make your Daughters Independent.

IT is the refinement of cruelty to educate girls in the aimless fashion of to-day. Boys are trained to look forward to a career of usefulness while girls grow up without any fixed purpose in life, unless indeed their hopes and ambitions center upon marriage, as is most often the case.

While it is natural and right for girls to look forward to marriage, it will be well for them all when they fully appreciate the undeniable fact that marriage is a remoter possibility now than it was in the days of their grandmothers, and that even those whose fondest dreams may one day be realized have much to do and to learn before they are ready for the life upon which they will enter with such high and happy hopes. No woman is qualified for marriage until she understands domestic economy in all its branches; the management of servants and the care of the sick and children; is proficient in needle-work; and be-

sides all this possesses a thorough knowledge of some business, profession, trade, or calling which will insure her independence on occasion. Now, as a rule, none of these things are taught in school. It is obvious, therefore, that if they are to be learned it must be done after school life is over.

How often one hears a married woman, the mother of a young family who would look to her for support if suddenly deprived of their natural protector, deplore her ignorance of any one accomplishment that would afford her a competence. It is not too much to say that such a one had no right to marry. It was assuming too great a risk; for no more cruel fate can befall a woman than to be cast upon a cold and heartless world without the means of earning a livelihood for herself and those who may be dependent upon her.

A time is liable to come in every life when the all-important question will arise, What can I do to make money? The possession of wealth is one of the most

uncertain things in life, especially in this country. On the other side of the water, where estates remain in the same family from one generation to another, there is more stability in riches. But here a man may be rich to-day, poor to-morrow, and in a few short months or years his children may see want: witness the series of financial crashes that have lately visited this country. There is many a one suffering to-day for the common necessities of life whose future seemed radiant with the light of assured prosperity when the New Year dawned.

Upon none does the weight of such sore trials fall more heavily than upon the women who, having been reared in the lap of luxury, are thus suddenly forced by cruel necessity to turn their attention to something that will keep the wolf from the door. But why did they not anticipate misfortune and make provision for it in more prosperous days? Simply because they had not the courage to defy public opinion.

There is a class of women who need more sympathy and get less than their share. They are those who in girlhood, through no fault of their own, led the listless, aimless life already described, but who in late years, by some untoward circumstance, are brought face to face with the sad realities of life. Cultured, refined women, who have seen better days, find the struggle for life far more bitter than their more fortunate sisters whose position in life has always been such as to necessitate their earning their own livings. It is for such this plea is made.

Domestic servants are well off in America; they are the most independent class of women-workers. The great army of shop girls, factory girls, sewing girls, those engaged in trades of all kinds, may congratulate themselves upon their comparatively happy lot. They often look with envy upon those who, they fancy, are better off than themselves. Let them cultivate a spirit of contentment. There are trials—bitter, bitter trials—in the lives of some of those they are foolish enough to envy, of which they know nothing. There are miseries of which they never dream.

An accomplished lady, daughter of an army officer who some score or more of years ago served his country nobly in her hour of peril, is to-day learning the art of telegraphy in one of our Western cities, in the hope that she may be enabled thereby to support her little children. In the happy home of her youth no expense was spared upon this lady's education. She was exceptionally talented and won an enviable reputation as a skillful pianist. It was not surprising that this petted favorite of fortune contracted a brilliant marriage. Her pathway seemed strewn with roses, and for years not a cloud of care or sorrow shadowed her young life. But trouble came at last. Death robbed her, at one stroke, of her noble husband and a much loved child. Then financial troubles followed, and in a few short months this delicately nurtured gentlewoman found herself bereft of fortune also.

Grief-stricken as she was, she felt that there was something still left to live for; and, for the sake of her two little ones, she took up the burden of life and faced the future bravely. Naturally she thought her knowledge of music would afford her the needed means of support. But, alas! she soon found that accomplishments are of small avail in the struggle for a living, and that teaching music was too precarious a

means of earning money to be depended upon with any degree of certainty for the support of a family. Although so costly a thing to acquire, an education cannot always be made to yield proper returns for the time and money expended upon it. The bitter truth soon forced itself upon this unfortunate woman's mind that a servant in anybody's kitchen was better off, financially, than she. She must therefore learn something at once that will be of more marketable value than the accomplishments of which, until now, she has all her life been justly proud. Hence we find her laboring to master a new and difficult art at an age when study is not an easy matter. Her children, meanwhile, are being cared for by kind friends.

Would it not be wiser far to induce young girls in thousands of happy, prosperous homes to make ample provision for any and all emergencies that the future may have in store for them? Could a better use be found for some of the years that intervene between the time a girl leaves school and the time she may reasonably hope to marry? The field for woman's work has been opened up of late years in so many different directions that a vocation can easily be found, outside the profession of teaching, that will be quite as congenial to refined tastes, and considerably more lucrative. Book-keeping, type-writing, telegraphy, stenography, engraving, dentistry, medicine, nursing, and a dozen other occupations might be mentioned. Then, too, industrial schools might be established, where the daughters of wealthy parents could be trained in the practical details of any particular industry for which they displayed a special aptitude. If it is not beneath the sons and daughters of a monarch to learn a trade, it ought not to be beneath the sons and daughters of republican America to emulate their good example, provided they possess the requisite ability to do so.

Two years will suffice to make any bright, quick girl conversant with all the mysteries of the art of housekeeping, especially if she be wise enough to study the art practically as well as theoretically. The management of servants and the care of the sick and children will be incidentally learned in most homes, and can be supplemented by a more extended study of physiology, hygiene, etc. than was possible at school. Sewing need not be neglected either, while leisure will readily be found for reading or any other recreation that may suit individual tastes. Another year, or longer, may be added to the time devoted to these pursuits, if desired. But, above all, let two or three years be conscientiously set apart for the express purpose of acquiring a thorough experimental knowledge of some art or vocation which would render its possessor self-supporting and, consequently, independent.

If the tide of public opinion favoring such a course would but set in, many a one would be spared untold suffering and misery in after life. Let the rich set the example in this matter. They can afford to do whatever pleases them, and, therefore, have it in their power to mold public opinion. Be not afraid, girls, that you will find your self-imposed task irksome. Remember that occupation is necessary to happiness, and that there is no reason why you should not dream while you work.

The cry will be raised that there is danger that such a plan as the one advocated here will tend to

give girls a distaste for the quiet retirement of home, but there is little cause for fear. Not one girl in twenty will voluntarily choose a business life in preference to domestic happiness. Indeed, it is absolutely certain that happy marriages would be promoted by this very independence among women. Not being at leisure to nurse every passing fancy, girls would elect to wait patiently until the light of true love came into their lives.

G. Andrews.

Manual Training in the Toledo Schools.

THE manual-training branch of the Toledo city schools, organized over five years ago, has steadily grown in popularity and usefulness. It was looked upon at its beginning with suspicion and distrust, but its projectors determined to give it a fair trial. The manual-training work began in a humble way in a small room with sixty boys and girls in the classes. These were pupils of the public schools, and did their regular school work in connection with free-hand and mechanical drawing, and carpentry in the manual department. The school began to make friends of its enemies. Those who had indulged in hostile criticism of the enterprise gradually grew silent. The second year a large four-story brick building was erected, and equipped with steam power, benches, tools, lathes, and forges. Ample room was provided for free-hand and mechanical drawing, special prominence being given to architectural and perspective work. A domestic economy department was added, in which girls study the chemistry of foods and their preparation for the table. A sewing class has been organized, in which the cutting and fitting of garments is taught. A class in clay modeling mold the forms and designs used in the arts. The students have increased to about three hundred in all departments, and from the beginning have manifested the greatest interest and enthusiasm for the work. This intense interest in the new work had at first to be so modified as not to interfere with the regular prosecution of the intellectual or class-room work proper. After some experimenting, the two lines of work were harmoniously adjusted to each other. Boys and girls pass from their algebra and history to their drawing, wood-carving, or clay modeling, and from these again to geometry and English literature, with a hearty zest for all. The girls in the domestic economy department con their Vergils or don their cooking suits, and prepare with ease and grace such savory and palatable food as would mollify the most radical opponent of industrial training. In short, there is such a harmonious blending of the useful and the practical with the higher intellectual culture, that the unprejudiced observer needs but to inspect the work to be convinced of the reasonableness and great utility of such training. The advantages of the manual department are open to none except pupils of the public schools. Those who take the manual work do the same amount of mental work in the regular class-room studies as those who have no work in the industrial department.

The objection was raised by many in the beginning that the manual work would impede the pupils' mental progress. I cannot see that it does, and no one here now believes that it does. On the contrary, I am convinced by a comparison of pupils' records in the dif-

ferent departments that if the two lines of work are properly adjusted to each other the manual work stimulates and quickens the intellectual development, and promotes the mental progress of the students. The opposition to manual training manifested in various quarters arises largely from the lamentable ignorance which prevails as to its aims and results. Many seem to think that the sole object of industrial training is to make mechanics and train them to mere manual dexterity. This is an utterly erroneous idea. The manual work is to train the senses, to quicken the perceptive power, and to form the judgment by furnishing the pupil an opportunity to study at the bench, forge, lathe, and engine the nature of matter and the manifestations of force. It is purely educational in its object. It first teaches the pupils to portray in the drawing a variety of beautiful and useful forms, and then to embody these forms in wood, clay, and metals. It teaches how to express thought, not in words alone, but in things. It produces nothing for the market except well-trained minds, seeing eyes, and skillful hands. In the ordinary factory, which produces for the market, the individual is nothing, the article is everything. In the manual-training school the articles made are of no moment, the boys and girls are all-important. As soon as a pupil makes one thing well, he is led on to something higher and better. The pupils make many useful and beautiful things, but these are of no value compared with the knowledge gained, the symmetrical mental development acquired. Some of the advantages, other than those named, apparent from the manual work combined in this way with the public school studies, are: the industrial work holds a far greater proportion of pupils throughout the entire course of study, and thus gives them the benefits of a more complete education; it conduces to their moral welfare, not that it gives them "a passport to heaven," but employs all their time in a pleasant and healthful way, thus preventing idleness and crowding out impure conceptions that might find a harbor in the young mind; it dignifies and exalts labor, and teaches respect for the laboring man; it teaches no special trade and yet lays the foundation for any trade, and gives the youth such knowledge and skill that he becomes a sounder and better judge of men and things in whatever business or profession he may engage. Manual training is a successful and satisfactory branch of study in the Toledo schools, not because it is theoretically a good thing, nor because it is given undue prominence and special advantages, but because it is in harmony with the nature of things, has a noble purpose in view, has been well managed, has good instructors, and has proved itself of great value to the pupils.

H. W. Compton,
Superintendent of Schools, Toledo, Ohio.

Emerson's Message.

MR. BURROUGHS remarks that the main ground of kinship between Emerson and Carlyle is "the heroic sentiment" which both convey to their readers. The comparison suggests a contrast. Every reader of the two feels this essential difference: Carlyle rouses courage, but Emerson inspires the sense of triumph. In Carlyle's pages man seems battling against the universe; in Emerson's company we feel that man is

victorious because the universe is his friend. This difference is very deep,—it is almost the difference between a gospel and no gospel. It is indeed a grand thing to say, "Gospel or no gospel, God or no God, immortals or ephemerals, let us still be true and brave." The whole force of that message Carlyle gives us. But Emerson gives something more. He brings *glad tidings*,—the sense of victory; the sense that life and death are man's friends and servants; the sense of serene and radiant joy. The essential difference between the two may be summed up by saying that Emerson has a God, and Carlyle has none.

I have not the least disposition to hold a brief as "devil's advocate" against Carlyle in this matter, but he seems never to have been reconciled with life; never to have clearly recognized a beneficent order through its seeming chaos, or felt himself at home and at rest. He seems always shut up in his own hungerings, ambitions, achievements, megrims, and dyspepsia. His own personality shut him in like a prison-house; and looking out from its windows, he saw the universe as only a vast phantasmagoria. Perhaps I misunderstand or underrate him. But as regards Emerson, it seems to be this consideration alone which brings out his true greatness—that he discerned the universe as divine to its inmost core. We rightly call him a seer. And what did he see? God, everywhere. It is the sight of God that he helps us to,—the sense of God that he wakes in us. The truest lover of Emerson loves him best for making an access into heaven,—a heaven both present and eternal; and it is not Emerson's personality, dear though that be, on which his thought most rests, but that vision of the heavenly reality to which the poet has helped him.

A legend relates that when the followers of Mahomet stood mourning beside his bier one of them roused the other by the question, "Is it then Mahomet that you have believed in, or the God of Mahomet?" It is not himself merely that Emerson makes us believe in; nor is it himself,—but something infinitely greater.

Emerson did not speak the speech or think the thoughts of what we commonly call Christianity. Yet Christianity instinctively recognizes him as its friend. Its message and his message are at heart the same. Both are favorable answers to the one supreme question always confronting man: "Is the universe my friend, or my foe, or indifferent to me?" While so many are answering the question mournfully or carelessly by "Not proven," the strong uplifting answer of faith is spoken by the older language of Christianity, and in new tongues of to-day.

It is the newness of the tongue that gives occasion to point out and enforce the substance of Emerson's message. How far his opinions were from the theology of Christianity is clear enough. Of his attitude towards its dogmas Dr. Holmes has said, "He was an iconoclast without a hammer, who took down our idols so tenderly that it seemed like an act of worship." But the positiveness and greatness of his faith may at first elude full recognition, because of the unfamiliarity of its forms of expression. The divine reality came home to him with such freshness and power that it coined new names and phrases for itself.

It is always through some mediator, something directly appreciable to its human faculties, that the soul learns to discern the infinite. The mediator whom

Christianity offers is a single man, so human that every man may feel his kinship, so lovely that all must love him, so visibly manifesting a divine power that through him we see God. The power, the genuineness of this revelation through Christ, as an experience of human souls, must affect with inexpressible reverence and tenderness even those to whom it is not a personal experience. But to another class of minds, whom Emerson represents, the revelation comes in a different channel. The mediums through which Emerson sees God are nature and humanity. Through nature, beauty; through humanity, love. It is a wonderful, newly awakened sense in the human mind, by which the majesty of the external world is felt as the manifestation of a spiritual presence. As a friend's face expresses to us the friend, so earth and sea and sky express the divine soul within,—the "over-soul," as Emerson called it. This revealing, sacramental significance of nature seems in its fullness a new birth of recent times. Wordsworth voices it, Emerson voices it, but they and such as they are only the highest peaks that catch the sunrise first. The response which their words waken comes because in other minds the same mystic power is working.

It is by another kind of insight that in the world of mankind—so strange, so troubled, so chaotic, as it often seems to us—Emerson sees as in a mirror perpetual glimpses and reflections of the divine. It is because of the sympathy with which he regards men—a sympathy born of largeness of perception and sweetness of feeling—that he discerns in them such sacred worth, such hint of divinity. It is at this point that he seems especially near to Christianity's founder. The sentiment we see in Christ towards erring men is not abhorrence of their guilt, but pity, and infinite faith in their possibilities, and closest identification with them. Just as he says, "My Father," he teaches the people about him to say "Our Father"; of those who seek to do the will of God he says, "Behold my mother and my sisters and my brethren"; of service done to the wretched he declares, "Ye have done it unto me"; looking upon young children he exclaims, "In heaven their angels do always behold the face of my Father." Who of us has not sometimes seen heaven reflected in the face of a little child? To catch the divine likeness in the older faces—care-worn, haggard, perhaps sin-stained—demands a finer insight than most of us possess.

In one of the finest passages of Faust, Goethe gives grand expression to a poetic conception of God, in the lines beginning, "Who dare express Him?" But in what follows there is a fatal omission; the ethical element is wholly absent. There is in the vision of that high-wrought moment not one trait which shall rise in awful forbidding between Faust and the victim of his selfish desire. There is no such defect in Emerson. The crystalline atmosphere of his soul is purified by ever-present sense of right. The highest place among his deities belongs to justice, purity, love. The sense of arduous moral combat, indeed, he rarely stirs within us; with him we are in the atmosphere not of battle fought, but of victory serenely enjoyed. If Carlyle gives us any gospel it is, as has been well said, the gospel of combat. But Emerson seems to have been one of the rarely happy souls to whom ancestral inheritance, temperament, health, and circumstances make greatness easy and natural.

There is a wonderful combination in him of homely reality and the highest ideality. He has a keen eye for all details. He looks over an engine like a mechanic, and on crops like a farmer. In every nook and cranny of the world he is familiarly at home. And it is all a divine world to him. In his devotion there is none of that feverish and hectic exaltation to which one is liable whose visits to the upper ether are rare and transient. There is no passion in his affirmations. — he is too certain to be passionate. Each aspect of affairs in turn — nature, science, art, literature, labor — confides to him its inner, spiritual secret. Science is to him the investigation of the divine order. Art is the creation of beauty by man working under a divine impulse and towards a divine model. So of all things.

The most distinctive attribute of Emerson among other religious teachers is his cheer. He is as cheerful as nature. To induce sober submission to the inevitable, to breed stoic fortitude, to assuage sorrow with the gleam of a distant hope, — these are not his functions; rather, to vivify the soul with the thrilling sense of infinite triumph. Through him again the voice breaks upon the world, heard now and again through the ages, each time with a larger hope, a nearer promise: "The Spirit of the Lord God is upon me; because the Lord hath anointed me to preach good tidings unto the meek; he hath sent me to bind up the broken-hearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound."

Deepest, subtlest, hardest to express is the soul's sense of Divinity within itself, — a Power one with the soul's own highest self; drawing gradually with intensest energy the whole of self into harmony with that higher self and with its source; acting outwardly upon other lives; promising something of future attainment, of which all our phrases about immortality seem but meager hints. Says Emerson (I quote imperfectly from memory), "Alone, original, and pure, the soul opens itself to the Lonely, the Original, the Pure, who on that condition gladly enters it, abides in it, acts through it." Said Jesus, "My Father and I are one."

Great authors beggar their commentators. In trying to re-state the central thoughts of Emerson one feels how the master is his own best interpreter; to what poor shifts of expression, what reemployment of outgrown language, one is driven to body forth the truth which glows new-born and majestic in his pages. To illustrate by quotation seems almost superfluous; one has only to open him at random to find copious illustration. Yet I may transcribe here a few lines from his poetry, in instance of some of these remarks. The revelation through nature is expressed in almost every poem. Read "Monadnoc," and "May-Day," and "Woodnotes." This is the close of the apostrophe to spring, at the end of "May-Day":

For thou, O Spring! canst remove
All that high God did first create —
Purge alpine air by snows defiled,
Bring to her mother's foster child;
Not less renew the heart and brain,
Scatter the slush, wash out the stain,
Make the aged eye sun-clear,
To parting soul bring grandeur near.
Under gentle ropes, my Spring
Masks the might of Nature's king,
An energy that searches through
Frost Chains to the dawning morn;
Into all our human plight,
The soul's pilgrimage and fight:
Is cry or is salute,

Step by step, lifts bad to good,
Without halting, without rest,
Lifting better up to best:
Planting seeds of knowledge pure,
Through earth to ripen, through heaven endure.

For Divinity revealed in man, and for a great deal besides, read "Saadi."

Nor scour the seas, nor sift mankind,
A poet or a friend to find:
Behold, he wanches at the door!
Behold his shadow on the floor!
Open innumerable doors
The heaven where unveiled Allah pours
The flood of truth, the flood of good,
The seraph's and the cherub's food.
Those doors are men: the Pariah hind
Admits thee to the perfect Mind.

For the sovereignty of the ethical sense, it may be enough to cite two familiar stanzas:

So near to grandeur is our dust,
So nigh is God to man,
When Duty whispers low, *thou seest*,
The youth replies, *I can*.

Though Love repine, and Reason chafe,
There came a voice without reply, —
'T is man's perdition to be safe,
When for the truth he ought to die.

For simple and pure delight in Nature's familiar companionship, take "Waldeinsamkeit." An exultant joy in the survey of the long service of time and matter to man finds voice in the Song of Nature. The sense of a universal, indwelling Deity inspires the final strain of "Woodnotes."

And conscious Law is King of kings,
As the bee through the garden ranges,
From world to world the Godhead changes:
As the sheep go feeding in the waste,
From farm to farm he maketh haste:
This vank which glows immense with light
Is the inn where he lodges for a night.
What reck'st such Traveler if the bowers
Which bloom and fade like meadow flowers
A bunch of fragrant flies be,
Or the stars of evening?
Alike to him the better, the worse, —
The glowing angel, the outcast oose.
Thou markest him by centuries,
And lo! he passes like the breeze;
Thou seek'st in globe and galaxy,
He hides in pure transparency:
Thou ask'st in fountains and in fires, —
He is the essence that inquires.
He is the axis of the star,
He is the sparkle of the spar.
He is the heart of every creature,
He is the meaning of each feature:
And his mind is the sky,
Thou all it holds more deep, more high.

Emerson is not to be prisoned by theological definitions; epithets have no terrors for him.

Denounce who will, who will deny,
And pile the hills to scale the sky:
Let those, atheist, pantheist,
Define and wrangle how they list,
Fence conservator, fierce destroyer, —
But thou, joy-giver and enjoyer,
Unknowing war, unknowing crime,
Gentle Saadi, mind thy rhyme:
Heed not what the braveries say,
Heed thou only Saadi's lay.

His is a religion, not alone for the supreme emergencies of life, not alone for sorrow's exigency, not solely for moral conduct. — it is religion blending, unnamed and unconscious, with all the cheerful everyday activities of mankind.

It seemeth not to me
That the high gods love tragedy:
For Saadi sat in the sun,
And thanks was his crucifixion
For haircloth and for bloody whips,

Had active hands and smiling lips;
And yet his runes he rightly read,
And to his folk his message sped;
Sunshine in his heart transferred,
Lighted each transparent word.

The sense of personal communion with Deity is expressed, though not in that familiar language of devotion which has come to have a certain conventional stamp in poems such as "Worship."

He is the oldest and best known,
More near than aught thou call'st thy own,
Yet, greeted in another's eyes,
Disconcerts with glad surprise.
This is Jove, who, deaf to prayers,
Floods with blessings unawares.
Draw if thou can'st the mystic line
Severing rightly his from thine,
Which is human, which divine.

The tenderest and most human of his poems is the "Threnody"; it is fit to comfort a bereaved mother.

"Recovering of sight to the blind,"—that word best describes the mission of Emerson. He recalls men from their wearisome effort to think out a way to God, to the direct and happy consciousness of him. For that mission he was equipped by a rare natural endowment, and a most felicitous environment. To very few is given the possibility of such abiding serenity as his. But the secret of his method—that seed-truth to which his circumstances only gave soil and air—is free to all. It is the open eye, the open heart, the open hand. It is the temper of reverence, of sympathy, of noble action. Emerson's genius is intellect permeated by love.

George S. Merriam.

The Garth Fund.

A SUGGESTION TO THE LIBERAL RICH.

A STATEMENT in THE CENTURY to the effect that many people of means would do large acts of beneficence, if they knew of ways of applying their wealth, leads me to give a practical illustration of one method that may find its field in every community in the Union.

In 1860 there was lost, together with his wife and sister, by the burning of the *Lady Elgin*, William Garth, a citizen of Paris, Kentucky, a childless gentleman, who left a will which directed that the income of his fortune should, to quote his homely language, be used in giving an education to the "poor, worthy, sprightly young men" of his native (Bourbon) county. This property, about \$40,000, invested in

bank stock, yields yearly some \$3500, whose distribution is intrusted to three commissioners, appointed by the county court, who meet in August to examine applicants, and pass upon their recommendations, needs, and worth, and, in the case of previous beneficiaries, note their vouchers for expenditures and test their progress. The income is distributed in sums of from \$50 to \$250, varying as the boy is at home or away, and, in the case of the studious and promising, the aid is continued till graduation. This Garth Fund, as it is called, can now point to its score of alumni of various Kentucky and Virginia colleges, its graduate of Harvard, and representative at Yale, and many eminent physicians, ministers, professors, lawyers, journalists, and legislators, who without this assistance would have walked in much humbler paths. Many a young man knows how much more difficult it is to prepare for college than to maintain himself when there, where he may do tutoring or secure a scholarship. The great merit, then, of this quiet munificence is its doing this preparatory work. Every beneficiary of this fund has frequent occasion to say, "God bless the memory of Mr. Garth, and raise up many more like him." Another citizen of Bourbon county, stirred by this good example, has in contemplation a similar disposition of his property, in providing for her deserving young women.

I may add that a crying need, especially of the West and the South, is good schools preparatory to college. There are perhaps *three colleges to one good preparatory school*, a proportion preposterous and without reason, and our Croesuses are yearly adding to the number of colleges. We don't need any more colleges; those we have are, with their under departments, giving one-third their time and teaching force to preparing fourteen-year-old boys and girls for the freshman class. South of the latitude of the Ohio River, the country across, there are perhaps not four schools that can properly prepare a boy for Harvard. One hundred thousand dollars would, in places of from 10,000 to 25,000 people, provide suitable grounds, buildings, and a moderate income which would be amply supplemented by tuition fees. A liberal citizen of Lexington is about to do this for his city. Here, then, are two avenues for doing good.

"I speak as to wise men; judge ye what I say."

James Wallace Fox.

PARIS, KENTUCKY.

BRIC-À-BRAC.

Three Examples of English Verse.

"Fifty thousand socialists around old St. Paul's, and English poets are writing — Triolets!!!"

E. C. STEDMAN.

I.

WHILE they write Triolets,
The masses are rising,
With curses and threats,
While they write Triolets —
(How their anger it whets!)
Nor is it surprising,
While they write Triolets,
That the masses are rising.

II.

IN RE RONDEAU.

IN corsets laced, in high-heeled shoes,
Too fine a woodland way to choose,
With mincing step and studied strut,
Is this an English goddess? Tut —
Some masker from the Parlez-voos!

O Poet! thou of sinewy thews,
Wilt thou free ways and walks refuse,
To mince instead through paths close shut,
In corsets laced?

I cannot — for I 've old-time views —
Follow the poet who pursues
The Rondeau, with its rabbit scut,
Or triumphs in a Triolet, but —
There may be those who like the muse
In corsets laced!

III.

VS. THE VILLANELLE.

JEAN PASSERAT, I like thee well —
Thou sang'st a song beyond compare —
But I 've not lost a tourterelle:

Nor can I write a Villanelle —
Thou did'st — and for that jewel rare,
Jean Passerat, I like thee well.

Now many a twittering *hirondelle*
The plumes of thy lost dove would wear —
But I 've not lost a tourterelle.

Could not, indeed, true turtle tell —
If real or mock I could not swear:
Jean Passerat, I like thee well —

True heart that would go "après elle" —
And sure thy sentiment I 'd share —
But I 've not lost a tourterelle.

And am content on earth to dwell —
There are some men they cannot spare:
Jean Passerat, I like thee well,
But I 've not lost a tourterelle!

Charles Henry Webb.

Uncle Esek's Wisdom.

THE minority always beat the majority in the end.

EVEN if there were no profit in labor, it is worthy of all acceptation for the pleasure it affords.

ALL grab, and no grip, is the most common, as well as the poorest, kind of economy.

VANITY is a disease, and there is no cure for it this side of the grave, and even there it will often break out anew on the tombstone.

FREEDOM is the law of God, and yet if man could have his way, one half of creation would be abject slaves to the other half.

THERE is learning enough in the world just now to solve any question that may arise; but there is n't wisdom enough, put it all together, to tell what makes one apple sweet and the next one sour.

THERE is nothing that man is more proud of than his reason, and yet, if two strange dogs fell to fighting in the streets, he will take sides, with one dog or the other, with all the vehemence of his passions.

Uncle Esek.

Ballade of a Rejecter of MS.

[With apologies to the author of the "Ballade of Rejected MS.," in THE CENTURY for March, and frank confessions of plagiarism in the matter of rhymes, etc., etc.]

WE have read both your verse and your prose
(I am one of the "reading machines"),
We must read the productions of those
From whom we protect magazines, —
The "talented" maids in their teens, —
And we 're shocked at your — let us say — "face!"
So we know what the editor means
By, "We 're sorry we have n't the space."

Now, that madrigal written to Rose —
Its "feet" do not mate, and it leans;
And those "triolets, rondels, rondeaux" —
We 've read Dobson! And as to "Fifines,"
Just suppose you read that to marines!
Our printer would flee from his case,
Which is one thing the editor means
By, "We 're sorry we have n't the space."

Those tales, they *were* ghastly — but Poe's,
And legends! — our "limit which screens"
Will never their horror disclose!
Nor unclasp that portfolio's shagreen,
At least, until sense supervenes!
To say "It 's not needed," with grace,
That is what the kind editor means
By, "We 're sorry we have n't the space."

ENVOY.

Contributor! — back of the scenes
The thoroughbreds settle the pace! —
That is what the good editor means
By, "We 're sorry we have n't the space."

Tudor Jenks.

OSCAR.

Oscar (reading his new poem). "What more encouragement for my future success than this, that you weep?"

Maud. "Go on, go on, dearest. I am so silly—I weep at nothing."

Circumstantial Evidence.

IF our readers knew as well as we do the two amiable and upright gentlemen who figure in this actual epistle to the president of one of our best-known New York savings banks, the letter might seem to them even more striking. If an ordinary visit to an ordinary savings bank, of plain exterior and quite undecorated and business-like interior, could suggest such a bloody-gore episode, what a pity that the imagination thus easily released should not be employed to light the somber wastes of modern "realism."

November 8, 1887.

DEAR SIR: I see by the bank-book that you are the president of "The Institution."

I have every reason to think that the gentleman who counts the money of depositors is not honest. Here are my reasons:

Last time I handed him money to count and deposit, when he had been counting for some time, "Ha," said he, "I 'd have a good thing here." A little after he repeated it, "Ha, I 'd have a good thing here." At this I said to him, "Have I made a mistake? Did I give you too much?" Again he says for the third time and after my remark, "Ha, I 'd have a good thing here." At that a person inside said something to him. I could not hear what it was, but I have often thought since that it was something to this effect: "Don't say anything about it; keep it, and we will divide it between us." After some time he handed me my book *with the amount to the very cent marked upon it that I had told him I intended to deposit.*

"Well," said I, "did n't I make a mistake? Did n't I give you too much?" "No," said he, "it was correct." Of course I could say nothing, but I am certain he acted dishonestly on the occasion. I made other money transactions on that same day and before night found out I

had made a mistake, but then I could not positively swear as to where I made the mistake, nor to the exact amount, and I consequently thought it a folly to look after it; besides, my profession or calling in life would prevent me from having my name figuring in courts of law or in newspapers. I am as certain, though, as I am of my own existence that he deliberately defrauded me; and from my statements (which are perfectly true and correct) you will, I think, agree with me. If he be dishonest to your depositors, he will be dishonest to the bank also if he gets an opportunity.

He is a man, I would suppose, about 25 years of age, rather tall, and dark complexion. The screen inclosing your office is so high, though, I could not see him except when he came to the aperture or little window.

I am one of your depositors. You have my name, etc., etc., on your books; and though I do not sign my name to this, it is no less true.

" " " "

A Voice.

THE rain makes music at midnight,
Dripping from rafter and eaves,
Blown hither and thither by mad-cap
Wind on the twittering leaves.

Its sound has solace for sorrow,
Touching the heart-cords o'er
So softly, oh, so softly!
Sweet as the lutes of yore:

But sweetest of all sweet music,
Making my heart rejoice,
Comes over the dew-damp meadow
Tenderly, true—a voice!

Charles Knowles Bolton.

A Vain Quest.

We started one morn, my love and I,
On a journey brave and bold:
'T was to find the end of the rainbow,
And the buried bag of gold.
But the clouds rolled by from the summer sky,
And the radiant bow grew dim,
And we lost the way where the treasure lay,
Near the sunset's golden rim.

The twilight fell like a curtain
Pinned with the evening star,
And we saw in the shining heavens
The new moon's golden car.
And we said, as our hands clasped fondly,
"What though we found no gold?
Our love is a richer treasure
Than the rainbow's sack can hold."

And years, with their joys and sorrows,
Have passed since we lost the way
To the beautiful buried treasure
At the end of the rainbow's ray;
But love has been true and tender,
And life has been rich and sweet,
And we still clasp hands with the olden joy
That made our day complete.

D. M. Jordan.

The Real Reason.

"No, we did n't exactly quarrel," he said,
"But a man can't stand quite everything.
I thought I was in love with her, dead,—
But that was away last spring.

"I took her driving—she liked to drive,
Or she said she did; I believed her then,
But I'll never, as sure as I'm alive,
Believe a woman again!

"I'm not considered a talking man,
And I'm willing to own it; there's no doubt
A man can't talk like a woman can,
And I was about talked out.

"I had n't dared yet—for I am not vain—
To call her darling, or even dear,
So I just remarked, 'It's going to rain,
I felt a drop on my ear.'

"She looked at the clouds, and at my ear,
And this is what she saw fit to say:
'Oh, no! That rain is nowhere near;
It is half a mile away!'

"It did n't strike me at first, you know;
But when it did, why, it struck me strong!
She'd called me a donkey—or meant it so—
With ears a half-mile long!

"We both kept still the rest of the way,
And you might have thought that I was a prince,
She was so polite when I said good-day—
But I've never been near her since!"

Margaret Vandegrift.

A Humbug.

AN old, old garden. There the days
Slipped by in drowsy quiet;
There bees were busy in the shade
And posy-buds ran riot;
And there in summer Dolly strayed,
Plain-gowned, in cap and wimple,
Her frills and ruffles laid aside
To play at being simple.

The wild-rose hiding in her curls
Looked somehow pale and faded
Beside the pink and dimpled cheek
Her ancient head-gear shaded;
And when the carping bluebird heard
Her dear voice lightly thrilling
Through old-world airs, he quite forgot
To criticize her trilling.

So artless, shy, and sweet she seemed
That I, a cynic doubter
Of modest ways and downcast eyes,
Went fairly wild about her;
And falling at the little feet
That crushed the yellow lilies
I wooed as Strephon used to woo
His Lydian Amaryllis.

Ah me! Her kerchief's rise and fall,
Her lashes' tender trembling,
The flush that dyed her cheek, were all
But part of her dissembling;
For when she spoke at last, in tones
As sweet as Hybla's honey,
'T was but to say, "The man I love
Must be a man of money."

M. E. W.

How Nature Comforted the Poet.

"NATURE, I come to thee for rest,
For covert cool from thought and strife;
Oh, rock me on thine ample breast,
For I have loved thee all my life!"

Then Nature hushed me in her arms,
And softly she began to sing
A legend of her woodland charms,
A lullaby, a soothing thing.

She sang: "My beech-leaves fluttering down
Beneath these blue September skies
Are darkly soft, are softly brown,
But not so brown as some one's eyes!"

She sang: "This brook, that ripples clear
Where bending willow-boughs rejoice,
Is very sweet, but not so dear
And not so sweet as some one's voice!"

And thus she sang till evening dews,
And when at last she sang no more,
I said: "If this is all your news,
I knew it all too well before."

AN EXILE PARTY ON A MUDDY ROAD NEAR TIUMEN.

THE CENTURY MAGAZINE.

VOL. XXXVI.

JUNE, 1888.

NO. 2.

CONVICT BARGE AND EXILE PARTY.

PLAINS AND PRISONS OF WESTERN SIBERIA.

SIBERIA'S ENORMOUS TERRITORY.

CONVICT TYPE.

IN crossing the boundary line between the provinces of Perm and Tobolsk we entered a part of the Russian empire whose magnitude and importance are almost everywhere underestimated. People generally seem to have the impression that Siberia is a sub-arctic colonial province about as large as Alaska; that it is everywhere cold, barren, and covered during the greater part of the year with snow; and that its sparse population is composed chiefly of exiles and half-wild aborigines, with a few soldiers and government officials here and there to guard and superintend the "ostrogs," the prisons, and the mines. Very few Americans, if I may judge from the questions asked me, fully grasp and appreciate the fact that Siberia is virtually a continent in itself, and presents continental diversities of climate, scenery, and vegetation. We are apt, unconsciously, to assume that because a country is generally mapped upon a small scale it must necessarily occupy only a small part of the surface of the globe; but the conclusion does

not follow from the premises. If a geographer were preparing a general atlas of the world, and in drawing Siberia should use the same scale which is used in Stieler's Hand Atlas for England, he would have to make the Siberian page of his book nearly twenty feet in width to accommodate his map. If he should use for Siberia the scale adopted for New Jersey by Colton in his Atlas of the United States, he would have to increase the width of his page to fifty-six feet. If he should delineate Siberia upon the scale of the British ordnance survey maps of England (the "six-inch maps"), he would be compelled to provide himself with a sheet of paper 2100 feet wide, and his atlas, if laid out open, would cover the whole lower part of New York City from the Battery to Wall street. These illustrations are sufficient to show that if Siberia were charted upon a scale corresponding with that employed in mapping other countries, its enormous geographical extent would be much more readily apprehended, and would appeal much more strongly to the imagination.

In its extreme dimensions Siberia extends from latitude 40.17 (the southern boundary of Semirechinsk) to latitude 77.46 (Cape Cheliuskin), and from longitude 60 east (the

Urals to longitude 190 west (Behring Strait). It therefore has an extreme range of about 37 degrees, or 2500 miles, in latitude, and 130 degrees, or 5000 miles, in longitude. Even these bare statistics give one an impression of vast geographical extent; but their significance may be emphasized by means of a simple illustration. If it were possible to move entire countries from one part of the globe to another, you could take the whole United States of America, from Maine to California and from Lake Superior to the Gulf of Mexico, and set it down in the middle of Siberia without touching anywhere the boundaries of the latter territory. You could then take Alaska and all the states of Europe, with the single

exception of Russia, and fit them into the remaining margin like the pieces of a dissected map; and after having thus accommodated all of the United States, including Alaska, and all of Europe, except Russia, you would still have more than 300,000 square miles of Siberian territory to spare — or, in other words, you would still leave unoccupied in Siberia an area half as large again as the empire of Germany.

Difference in favor of Siberia..... 309,520

The single province of Tobolsk, which in comparison with the other Siberian provinces ranks only fourth in point of size, exceeds in area all of our northern states from Maine to Iowa taken together. The province of Yeniseisk is larger than all of the United States east of the Mississippi River, and the province of Yakutsk is thirteen times as large as Great Britain, thirty-

four times as large as the State of Pennsylvania, and might be cut up into a hundred and eighty-eight such States as Massachusetts; and yet Yakutsk is only one of eleven Siberian provinces.

VARIETIES OF CLIMATE.

It is hardly necessary to say that a country which has an area of five and a half million square miles, and which extends in latitude as far as from the southern extremity of Greenland to the island of Cuba, must present great diversities of climate, topography, and vegetation, and cannot be everywhere a barren arctic waste. A mere glance at a map is sufficient to show that a considerable part of western Siberia lies farther south than Nice, Venice, or Milan, and that the southern boundary of the Siberian province of Semirechinsk is nearer the equator than Naples.* In a country which thus stretches from the latitude of Italy to the latitude of central Greenland one would naturally expect to find, and as a matter of fact one does find, many varieties of climate and scenery. In some parts of the province of Yakutsk

the mean temperature of the month of January is more than 50 degrees below zero, Fahr., while in the province of Semipalatinsk the mean temperature of the month of July is 72 degrees above; and such maximum temperatures as 95 and 100 degrees in the shade are comparatively common.

On the Taimyr peninsula, east of the Gulf of Ob, the permanently frozen ground thaws out in summer to a depth of only a few inches, and supports but a scanty vegetation of berry bushes and moss, while in the southern part of western Siberia water-melons and cantaloupes are a profitable crop, tobacco is grown upon thousands of plantations, and the peasants harvest annually more than 50,000,000 bushels of grain. The fact which I desire especially to impress upon the mind of the reader is that Siberia is not everywhere uniform and homogeneous. The northern part of the country differs from the southern part quite as much as the Hudson Bay territory differs from Kentucky; and it is as great a mistake to attribute the cold and barrenness of the

* The provinces of Akmolinsk and Semirechinsk did not, however, belong originally to Siberia. They were annexed to it at the time of the organization of the "Governor-Generalship of the Steppes," in 1882.

WEAK, SICK, AND INFIRM EXILES IN TELEGAS.

Lena delta to the whole of Siberia as it would be to attribute the cold and barrenness of King William Land to the whole of North America.

Generally speaking, the winters in all parts of Siberia are severe; but as the annual range

* In some places there is a difference of 115 or 120 degrees Fahr. between the average temperature of January and that of July.

of temperature from the one extreme to the other is very great,* the summers are disproportionately hot. In the fertile and arable zone of southern Siberia, which is a belt of country four or five hundred miles wide, lying along the central Asiatic and Mongolian frontier, there are a dozen towns which have a higher mean temperature for the months of June, July, and August than the city of London. In

fact, the summer temperature of this whole belt of country, from the Urals to the Pacific, averages 6 degrees higher than the mean summer temperature of England. Irkutsk is 5 degrees warmer in summer than Dublin; Tobolsk is 4 degrees warmer than London; Semipalatinsk exactly corresponds in temperature with Boston; and Vierni has as hot a summer as Chicago.

To the traveler who crosses the Urals for the first time in June nothing is more surprising than the fervent heat of Siberian sunshine and the extraordinary beauty and profusion of Siberian flowers. Although we had been partly prepared, by our voyage up the Kama, for the experience which awaited us on the other side of the mountains, we were fairly astonished upon the threshold of western Siberia by the scenery, the weather, and the flora. In the fertile, blossoming country presented to us as we rode swiftly eastward into the province of Tobolsk, there was absolutely nothing even remotely to suggest an arctic region. If we had been blindfolded and transported to it suddenly in the middle of a sunny afternoon, we could never have guessed to what part of the world we had been taken. The sky was as clear and blue and the air as soft as the sky and air of California; the trees were all in full leaf; birds were singing over the flowery meadows and in the clumps of birches by the roadside; there were a drowsy hum of bees and a faint fragrance of flowers and verdure in the air; and the sunshine was as warm and bright as that of a June afternoon in the most favored part of the temperate zone.

A FARMING REGION.

THE country through which we passed between the post stations of Cheremishkaya and Sugatskaya was a rich, open, farming region, resembling somewhat that part of western New York which lies between Rochester and Buffalo. There were no extensive forests, but the gently rolling plain was diversified here and there by small patches of woodland, or groves of birch and poplar, and was sometimes cultivated as far as the eye could reach. Extensive stretches of growing wheat and rye alternated with wide fields of black plowed land not yet sown, and occasionally we crossed great expanses of prairie, whose velvety greensward was sprinkled with dandelions, buttercups, and primroses, and dotted in the distance with grazing cattle and sheep. Sometimes, for miles together, the road ran through unfenced but cultivated land where men and women in bright-colored dresses were plowing, harrowing, or weeding young grain; sometimes we plunged into a dense cool forest, from the depths of which we could hear the soft notes of shy cuckoos, and then we came out into a great sea of meadow blue with forget-me-nots, where field sparrows and warblers were filling all the air with joyous melody. Flowers met the eye everywhere in great variety and in almost incredible profusion. Never had we seen the earth so carpeted with them even in California. The roadside was bright with wild roses, violets, buttercups, primroses, marsh marigolds, yellow peas, iris, and Tartar honeysuckles; the woods were whitened here and there by soft clouds of wild-cherry blossoms, and the meadows were literally great floral seas of color. In some places the beautiful rose-like flowers of the golden trolius covered hundreds of acres with an almost unbroken sheet of vivid yellow; while a few miles farther on, the steppe to the very horizon was a blue ocean of forget-me-nots. I do not mean simply that the ground was sprinkled with them, nor merely that they grew in great abundance; I mean that the grass everywhere was completely hidden by them, so that the plain looked as if a sheet of blue gauze had been thrown over it, or as if it were a great expanse of tranquil water reflecting a pale blue sky. More than once these forget-me-not plains, when seen afar, resembled water so closely as to deceive us both.

Throughout the whole distance from Ekaterineburg to Tiumen, wherever the country was open, the road was bordered on each side by a double or triple row of magnificent silver-

A SIBERIAN PEASANT'S HOUSE, BARN, AND COURT-YARD GATE.

birches, seventy or eighty feet in height, set so closely together that their branches interlocked both along the road and over it, and completely shut out with an arched canopy of leaves the vertical rays of the sun. For miles at a time we rode between solid banks of flowers through this beautiful white and green arcade, whose columns were the snowy stems of birches, and whose roof was a mass of delicate tracery and drooping foliage. The road resembled an avenue through an extensive and well-kept park, rather than a great Siberian thoroughfare, and I could not help feeling as if I might look up at any moment and see an English castle or a splendid country villa. According to tradition these birches were planted by order of the Empress Catherine II., and the part of the great Siberian road, which they shade is known as "Catherine's Alley." Whether the object of the great Tsaritsa was to render less toilsome and oppressive the summer march of the exiles, or whether she hoped by this means to encourage emigration to the country in which she took so deep an interest, I do not know; but the long lines of beautiful birches have for more than a century kept her memory green, and her name has doubtless been blessed by thousands of hot and tired wayfarers whom her trees have protected from the fierce Siberian sunshine.

Almost the first peculiarity of a west Siberian landscape which strikes a traveler from America is the complete absence of fences and farm-houses. The cultivated land of the peasants is regularly laid out into fields, but the fields are not inclosed, and one may ride for two or three hours at a time through a fertile and highly cultivated region without seeing a single fence, farm-house, or detached building. The absence of fences is due to the Siberian practice of inclosing the cattle in the common pasture which surrounds the village, instead of fencing the fields which lie outside. The absence of farm-houses is to be explained by the fact that the Siberian peasant does not own the land which he cultivates, and therefore has no inducement to build upon it. With a very few exceptions, all of the land in Siberia belongs to the Crown. The village communes enjoy the usufruct of it, but they have no legal title, and cannot dispose of it nor reduce any part of it to individual ownership. All that they have power to do is to divide it up among their members by periodical allotments, and to give to each head of a family a sort of tenancy at will. Every time there is a new allotment, the several tracts of arable land held under the Crown by the commune may change tenants; so that if an individual should build a house or a barn upon the tract of which he was the temporary occupant, he

might, and probably would be forced, sooner or later, to abandon it. The result of this system of land tenure and this organization of society is to segregate the whole population in villages, and to leave all of the intervening land unsettled. In the United States such a farming region as that between the Urals and Tiumen would be dotted with houses, granaries, and barns; and it seemed very strange to ride, as we rode, for more than eighty miles, through a country which was everywhere more or less cultivated, without seeing a single building of any kind outside of the villages.

Another peculiarity of western Siberia which strongly impresses an American is the shabbiness and cheerlessness of most of its settlements.

THE "REAL SCHULE."

In a country so fertile, highly cultivated, and apparently prosperous as this, one naturally expects to see in the villages some signs of enterprise, comfort, and taste; but one is almost everywhere disappointed. A west Siberian village consists of two rows of unpainted one-story log-houses with A-shaped or pyramidal roofs, standing directly on the street, without front yards or front doors. Between every two houses there is an inclosed side yard around which stand sheds, granaries, and barns; and from this side yard or court there is an entrance to the house. The court-yard gate is sometimes ornamented with carved or incised wood-work, as shown in the illustration on the preceding page; the window shutters of the houses are almost always elaborately painted, and the projecting edges of the gable roofs are masked with long strips of carved or decorated board; but with these exceptions the dwellings of the peasants are simple log structures of the plainest type, and a large proportion of them are old, weather-beaten, and in bad repair. The wide street has no sidewalks; it is sometimes a sea of liquid mud from the walls of the houses on one side to the walls of the houses on the other; there is not a tree, nor a bush, nor a square yard of grass in the settlement. Bristly, slab-sided, razor-backed pigs lie here and there in the mud, or wander up and

down the street in search of food, and the whole village makes upon an American an impression of shiftlessness, poverty, and squalor. This impression, I am glad to say, is in most cases deceptive. There is in all of these villages more or less individual comfort and prosperity; but the Siberian peasant does not seem to take any pride in the external appearance of his premises, and pays little attention to beautifying them or keeping them in order. The condition of the whole village, moreover, indicates a lack of public spirit and enterprise on the part of its inhabitants. As long as an evil or a nuisance is endurable there seems to be no disposition to abate it, and the result is the general neglect of all public improvements. Much of this seeming indifference is doubtless attributable to the paralyzing influence of a paternal and all-regulating government. One can hardly expect the villagers to take the initiative, or to manifest public spirit and enterprise, when nothing whatever can be done without permission from the official representatives of the Crown, and when the very first effort to promote the general well-being is likely to be thwarted by some bureaucratic "regulation," or the caprice of some local police officer. All that the peasants can do is to obey orders, await the pleasure of the higher authorities, and thank God that things are no worse.

Almost the only indication of taste which one sees in a west Siberian settlement, and the only evidence of a love of the beautiful for its own sake, is furnished by the plants and flowers in the windows of the houses. Although there may not be a tree nor a blade of grass in the whole village, the windows of nine houses out of ten will be filled with splendid blossoming fuchsias, oleanders, cactuses, geraniums, tea roses, and variegated cinnamon pinks. One rarely finds, even in a florist's greenhouse, more beautiful flowers than may be seen in the windows of many a poor Siberian peasant's dwelling. Owing to some peculiarity in the composition of the glass, these windows are almost always vividly iridescent, some of them rivaling in color the Ciesnola glass from Cyprus. The contrast between the black, weather-beaten logs of the houses and the brilliant squares of iridescence which they inclose — between the sea of liquid mud in the verdureless streets and the splendid clusters of conservatory flowers in the windows — is sometimes very striking.

FLOWERS AND MOSQUITOES.

As we approached Tiumen we left behind us the open plains, and the beautiful farming country which had so much surprised and delighted us, and entered a low, swampy, and almost impenetrable forest, abounding in flow-

ers, but swarming with mosquitoes. The road, which before had been comparatively smooth and dry, became a quagmire of black, tenacious mud, in which the wheels of our heavy tarantas sank to the hubs, and through which our progress was so slow that we were four hours in traversing a single stretch of about eighteen miles. Attempts had apparently been made here and there to improve this part of the route, by laying down in the soft marshy soil a corduroy of logs; but the logs had sunk unequally under the pounding wheels of ten thousand loaded freight wagons, leaving enormous transverse ruts and hollows filled with mud, so that the only result of the "improvement" was to render the road more nearly impassable than before, and to add unendurable jolting to our other discomforts. At last, weary of lurches, jolts, and concussions, we alighted, and tried walking by the roadside; but the sunshine was so intensely hot, and the mosquitoes so fierce and bloodthirsty, that in twenty minutes we were glad to climb back into the tarantas with our hands full of flowers, and our faces scarlet from heat and mosquito bites. Upon comparing our impressions we found that we were unanimously of opinion that if we had been the original discoverers of this country, we should have named it either Florida or Culexia, since flowers and mosquitoes are its distinctive characteristics and its most abundant products.

At the gate-keeper's lodge of one of the last villages that we passed before reaching Tiïmen, we were greeted with the ringing of a large hand-bell. The sound was strangely suggestive of an auction, but as we stopped in front of the village gate, the bell-ringer, a bare-headed man in a long black gown, with a mass of flaxen hair hanging over his shoulders and a "savings bank" box suspended from his neck, approached the tarantas and called our attention to a large brownish picture in a tarnished gilt frame resting on a sort of improvised easel by the road-side. It was evidently an ikon or portrait of some holy saint from a Russian church; but what was the object of setting it up there, and what relation it bore to us, we could not imagine. Finally the bell-ringer, bowing, crossing himself, and invoking blessings on our heads, implored us, "Khrista radi" ["For Christ's sake"], to contribute to the support of the holy saint's church, which, it appeared, was situated somewhere in the vicinity. This combination of an auctioneer's bell, a saint's image, a toll-gate, and a church beggar greatly amused Mr. Frost, who inquired whether the holy saint owned the road and collected toll. The gate-keeper explained that the saint had

nothing to do with the road, but the church was poor, and the "noble gentlemen" who passed that way were accustomed to contribute to its support; and (removing his hat) "most of the noble gentlemen remembered also the poor gate-keeper." Of course the two noble gentlemen, with mosquito-bitten faces, rumpled hair, soiled shirt-collars and mud-bespattered clothing, sitting with noble dignity on a luxurious steamer trunk in a miry tarantas, could not resist such an appeal as this to their noble sympathies. We gave the gate-keeper a few copper coins with directions to put half of them into the savings bank of the black-robed deacon, and having thus contributed to the support of two great Russian institutions, the church and the grog-shop, we rode on.

Late in the afternoon of Thursday, June 18, we came out of the forest into an extensive marshy plain, tinted a peculiar greenish-yellow by swamp grass and buttercups, and our driver, pointing ahead with his whip, said, "There is Tiïmen." All that we could see of the distant city was a long line of pyramidal board roofs on the horizon, broken here and there by the white stuccoed walls of a Government building, or the green-domed belfries and towers of a Russo-Greek church. As we approached it we passed in succession a square marble column marking the spot where the citizens of Tiïmen bade good-bye to the Grand Duke Vladimir in 1868; a squad of soldiers engaged in target practice, stepping forward and firing volleys by ranks to the accompaniment of a flourish of bugles; a series of long, low sheds surrounded by white, tilted emigrant wagons; and finally, in the suburbs, the famous exile forwarding prison.

There were two or three hotels in the town, but upon the recommendation of our driver we went to the "Rooms for Arrivers," or furnished apartments of one Kovalski, who occupied a two-story brick house near the bank of the river in the eastern part of the city. About 6 o'clock in the evening we finally alighted from our muddy tarantas in Kovalski's court-yard, having made a journey of 204 miles in two days with eleven changes of horses, and having spent more than forty hours without sleep, sitting in a cramped and uncomfortable position on Mr. Frost's trunk. My neck and spine were so stiff and lame from incessant jolting that I could not have made a bow to the Tsar of all the Russias, and I was so tired that I could hardly climb the stairs leading to the second story of Kovalski's house. As soon as possible after dinner we went to bed, and for twelve hours slept the sleep of exhaustion.

TIUMEN.

TIUMEN, where we virtually began our Siberian journey, as well as our investigation of the exile system, is a town of 19,000 inhabitants, situated 1700 miles east of St. Petersburg, on the right bank of the river Tura, just above the junction of the latter with the Tobol. The city and the surrounding country have much more commercial importance than is generally supposed. Siberian cold and Siberian desolation have been so much talked and written about, and have been brought so forcibly to the attention of the world by the terrible experience of De Long and the survivors of the *Jeannette*, that nine readers out of ten, in forming a conception of the country, give undue prominence to its arctic side and its winter aspect. When, in conversation since my return, I have happened to refer to Siberian tobacco, Siberian orchids, or Siberian camels, my remarks have even been received with smiles of incredulity. I do not know any better way to overthrow the erroneous popular conception of Siberia than to assail it with facts and statistics, even at the risk of being wearisome. I will therefore say briefly, that the province of Tobolsk, which is the part of Siberia with which a traveler from Europe first becomes acquainted, extends from the coast of the Arctic Ocean to the sun-scorched steppes of Semipalatinsk and Akmolinsk, and from the mountains of the Ural to the boundary line of Yeniseisk and Tomsk. It has an area of 590,000 square miles and includes 27,000,000 acres of arable land. It contains 8 towns of from 3000 to 20,000 inhabitants, and its total population exceeds 1,200,000. In the last year for which I was able to get statistics the province produced 30,044,880 bushels of grain and 3,778,230 bushels of potatoes, and contained 2,647,000 head of live stock. It sends annually to European Russia enormous quantities of raw products, such as hides, tallow, bristles, furs, bird skins, flax, and hemp; it forwards more than 2,000,000 pounds of butter to Constantinople by way of Rostoff, on the Don; and there is held within its limits, at Irbit, a commercial fair whose transactions amount annually to 35,000,000 rubles (\$17,500,000). The manufacturing industries of the province, although still in their infancy, furnish employment to 6252 persons and put annually upon the market goods to the value of 8,517,000 rubles. Besides the workmen employed in the regular manufacturing establishments, the urban population includes 27,000 mechanics and skilled laborers. Cottage industries are carried on extensively throughout the province, and produce annually, among other things, 50,000 rugs

and carpets; 1,500,000 fathoms of fish netting; 2,140,000 yards of linen cloth; 50,000 barrels; 70,000 telegas and sleighs; leather manufactures to the value of 2,500,000 rubles; and quantities of dressed furs, stockings, mittens, belts, scarfs, laces, and ornamented towels and sheets. The quantity of fish caught annually along the Ob and its tributaries is estimated at 8000 tons, and salt to the amount of 3000 tons is used in curing it. Tiumen, which is the most important town in the province, stands on a navigable branch of the vast Ob river system, through which it has steam communication with the greater part of western Siberia, from Semipalatinsk and Tomsk to the shores of the Arctic Ocean. Fifty-eight steamers ply on the Ob and its tributaries, most of them between Tomsk and Tiumen, and through the latter city is transported annually merchandise to the value of thirty or forty million rubles. Sixteen million rubles' worth of Siberian products are brought every year to the Nizhni Novgorod fair, and in exchange for this mass of raw material European Russia sends annually to Siberia nearly 300,000 tons of manufactured goods.

It cannot, I think, be contended that a country which furnishes such statistics as these is an arctic desert or an uninhabited waste.

On the next day after our arrival in Tiumen the weather furnished us with convincing evidence of the fact that the Siberian summer climate, although sometimes as mild and delightful as that of California, is fickle and untrustworthy. During the night the wind changed suddenly to the north-east, and a furious storm of cold, driving rain swept down across the tundras from the coast of the Arctic Ocean, turning the unpaved and unsewered streets of the city to lakes of liquid mud, and making it practically impossible to go out of doors. We succeeded, with the aid of a droshky, in getting to the post-office and back, and devoted the remainder of the day to reading and to writing letters. On Saturday, during lulls in the storm, we walked and rode about the city, but saw little to reward us for our trouble. The muddy, unpaved streets did not differ much in appearance from the streets of the villages through which we had passed, except that some of them had plank sidewalks, and the unpainted log-houses with high, steep, pyramidal roofs were larger and more pretentious. There was the same absence of trees, shrubbery, front yards and front doors which we had noticed in all of the Siberian villages; and but for the white-walled and green-domed churches, which gave it a certain air of picturesquequeness, the town would have been commonplace and uninteresting.

The only letter of introduction we had to deliver in Tiumen was from a Russian gentleman in St. Petersburg to Mr. Slovtsof, Director of the "Realnoi Uchilishche," an institution which is known in Germany as a "real schule." Saturday afternoon, the storm having broken, we presented this letter and were received by Mr. Slovtsof with great cordiality. The educational institution over which he presides is a scientific and technical school similar in plan to the Institute of Technology in Boston. It occupies the largest and finest edifice in the city—a substantial two-story structure of white stuccoed brick, nearly twice as large as the Executive Mansion in Washington. This building was erected and equipped at a cost of \$85,000 by one of Tiumen's wealthy and public-spirited merchants, and was then presented to the city as a gift. One would hardly expect to find such a school in European Russia, to say nothing of Siberia, and indeed one might look far without finding such a school even in the United States. It has a mechanical department, with a steam-engine, lathes, and tools of all kinds; a department of physics, with fine apparatus, including even the Bell, Edison, and Dolbear telephones and the phonograph; a chemical laboratory, with a more complete equipment than I have ever seen, except in the Boston Institute of Technology; a department of art and mechanical drawing; a good library, and an excellent museum—the latter containing, among other things, 900 species of wild flowers collected in the vicinity of the city. It is, in short, a school which would be in the highest degree creditable to any city of similar size in the United States.

From Mr. Slovtsof we obtained the address of Mr. Jacob R. Wardropper, a Scotch gentleman who had for twenty years or more been engaged in business in Siberia; and feeling sure that Mr. Wardropper would be glad to see any one from the western world, we ventured to call upon him without the formality of an introduction. We were received by the whole family with the most warm-hearted hospitality, and their house was made almost a home to us during the remainder of our stay in the city.

The chief interest which Tiumen had for us lay in the fact that it contains the most important exile forwarding prison in Siberia, and the "Prikaz o Syl'nikh," or Bureau of Exile Administration. Through this prison pass, on their way southward or eastward, all criminals condemned to banishment or penal servitude, and in this administrative bureau are kept all the records and statistics of the exile system. After our arrest in Perm for merely looking at the outside of a prison, we felt some doubt as to the result of an application for leave to

inspect the forwarding prison of Tiumen; but Mr. Wardropper thought we would have no trouble in gaining admittance, and on the following day (Sunday) he went with us to call upon Mr. Krassin, the *ispravnik*, or chief police officer of the district. I presented to the latter my open letters from the Russian Minister of the Interior and the Minister of Foreign Affairs, and was at once received with a cordiality which was as pleasant as it was unexpected. Mr. Krassin invited us to lunch, said that he had already been informed by private and official letters from St. Petersburg of our projected journey through Siberia, and that he would gladly be of service to us in any way possible. He granted without hesitation my request to be allowed to visit the forwarding prison, and promised to go thither with us on the following day. We would find the prison, he said, greatly overcrowded and in bad sanitary condition; but, such as it was, we should see it.

THE FORWARDING PRISON.

MR. KRASSIN was unfortunately taken sick Monday, but, mindful of his promise, he sent us on Tuesday a note of introduction to the warden which he said would admit us to the prison; and about 10 o'clock Wednesday morning, accompanied by Mr. Wardropper, and Mr. Ignatof, a former member of the prison committee, we presented ourselves at the gate. The Tiumen forwarding prison is a rectangular three-story brick building, 75 feet in length by 40 or 50 in width, covered with white stucco and roofed with painted tin. It is situated in a large yard formed by a whitewashed brick wall 12 or 15 feet in height, at each corner of which stands a black and white zigzag-barred sentry-box, and along each face of which paces a sentry carrying a loaded Berdan rifle with fixed bayonet. Against this wall, on the right-hand side of the gate, is a small building used as a prison office, and in front of it stands a post surmounted by a small A-shaped roof under which hangs a bell. A dozen or more girls and old women were sitting on the ground in front of the prison with baskets full of black rye bread, cold meat, boiled eggs, milk, and fish pies for sale to the imprisoned exiles. The Tiumen prison was originally built to hold 500 prisoners, but was subsequently enlarged by means of detached barracks so that it could accommodate 800. On the day of our visit, as we were informed by a small blackboard hanging beside the office door, it contained 1741. As we approached the entrance we were stopped by an armed sentry, who, upon being informed that we desired

admittance, shouted through a square port-hole in the heavy gate, "Star-she-e-e!" (the usual call for the officer of the day). A corporal or sergeant, with a saber at his side and a Colt's revolver in a holster on his hip, answered the summons, carried our note to the warden, and in a moment we were admitted to the prison yard. Fifty or sixty exiles and convicts were walking aimlessly back and forth in front of the main prison building, or sitting idly in groups here and there on the ground. They were all dressed from head to foot in a costume of gray, consisting of a visorless Scotch cap, a shirt and trousers of coarse homespun linen, and a long gray overcoat with one or two diamond-shaped patches of black or yellow cloth sewn upon the back between the shoulders. Nearly all of them wore leg-fetters, and the air was filled with a peculiar clinking of chains which suggested the continuous jingling of innumerable bunches of keys.

The first "kamera" or cell that we entered was situated in a one-story log barrack standing against the wall on the left of the gate, and built evidently to receive the overflow from the crowded main building. The room was about 35 feet in length by 25 in width and 12 feet high; its walls of hewn logs were covered with dirty whitewash; its rough plank floor was black with dried mud and hard-trodden filth; and it was lighted by three grated windows looking out into the prison yard. Down the center of the room, and occupying about half its width, ran the sleeping-bench—a wooden platform 12 feet wide and 30 feet long, supported, at a height of 2 feet from the floor, by stout posts. Each longitudinal half of this low platform sloped a little, roof-wise, from the center, so that when the prisoners slept upon it in two closely packed transverse rows, their heads in the middle were a few inches higher than their feet at the edges. These sleeping-platforms are known as "nares," and a Siberian prison cell contains no other furniture except a large wooden tub for excrement. The prisoners have neither pillows, blankets, nor bedclothing, and must lie on these hard plank nares with no covering but their overcoats. As we entered the cell, the convicts, with a sudden jingling of chains, sprang to their feet, removed their caps, and stood silently in a dense throng around the nares. "Zdrastvuitui rebiata!" ["How do you do, boys!"] said the warden. "Zdravie zhelaem vasha vvisoki blagarodie" ["We wish you health, your high nobility"], shouted a hundred voices in a hoarse chorus. "The prison," said the warden, "is terribly overcrowded. This cell, for example, is only 35 feet long by 25 wide, and has air space for 35,

or at most 40 men. How many men slept here last night?" he inquired, turning to the prisoners.

"A hundred and sixty, your high nobility," shouted half a dozen hoarse voices.

"You see how it is," said the warden, again addressing me. "This cell contains more than four times the number of prisoners that it was intended to hold, and the same condition of things exists throughout the prison." I looked around the cell. There was practically no ventilation whatever, and the air was so poisoned and foul that I could hardly force myself to breathe it. We visited successively in the yard six *kameras* or cells essentially like the first, and found in every one of them three or four times the number of prisoners for which it was intended, and five or six times the number for which it had adequate air space. In most of the cells there was not room enough on the sleeping-platforms for all of the convicts, and scores of men slept every night on the foul, muddy floors, under the nares, and in the gangways between them and the walls. Three or four pale, dejected, and apparently sick prisoners crawled out from under the sleeping-platform in one of the cells as we entered.

From the log barracks in the prison yard we went into the main building, which contained the kitchen, the prison workshops, and the hospital, as well as a large number of *kameras*, and which was in much worse sanitary condition than the barracks. It was, in fact, a building through which Mr. Ignatof—a former member of the prison committee—declined to accompany us. On each side of the dark, damp, and dirty corridors were heavy wooden doors, opening into cells which varied in size from 8 feet by 10 to 10 by 15, and contained from half a dozen to thirty prisoners. They were furnished with nares, like those in the cells that we had already inspected; their windows were small and heavily grated, and no provision whatever had been made for ventilation. In one of these cells were eight or ten "*dvoryane*," or "nobles," who seemed to be educated men, and in whose presence the warden removed his hat. Whether any of them were "politicals" or not I do not know; but in this part of the prison the politicals were usually confined. The air in the corridors and cells, particularly in the second story, was indescribably and unimaginably foul. Every cubic foot of it had apparently been respired over and over again until it did not contain an atom of oxygen; it was laden with fever germs from the unventilated hospital wards, fetid odors from diseased human lungs and unclean human bodies, and the stench arising from unemptied excrement

THE TIUMEN FORWARDING PRISON.

buckets at the ends of the corridors. I breathed as little as I possibly could, but every respiration seemed to pollute me to the very soul, and I became faint from nausea and lack of oxygen. It was like trying to breathe in an underground hospital-drain. The "smatritel," or warden, noticing perhaps that my face had grown suddenly pale, offered me his cigarette case, and said: "You are not accustomed to prison air. Light a cigarette: it will afford some relief, and we will get some wine or "vodki" presently in the dispensary." I acted upon this suggestion and we continued our investigations. The prison workshops, to which we were next taken, consisted of two small cells in the second story, neither of them more than eight feet square, and neither of them designed for the use to which it had been put. In one, three or four convicts were engaged in cobbling shoes, and in the other an attempt was being made to do a small amount of carpenter's work. The workmen, however, had neither proper tools nor suitable appliances, and it seemed preposterous to call the small cells which they occupied "workshops."

We then went to the prison kitchen, a dark, dirty room in the basement of the main building, where three or four half-naked men were baking black rye-bread in loaves about as large as milk-pans, and boiling soup in huge iron kettles on a sort of brick range. I tasted some of the soup in a greasy wooden bowl which a convict hastily cleaned for me with a wad of dirty flax, and found it nutritious and good. The bread was rather sour and heavy, but not worse than that prepared and eaten by Russian peasants generally. The daily ration of the prisoners consisted of two and a half pounds of this black bread, about six ounces of boiled meat, and two or three ounces of coarsely ground barley or oats, with a bowl of "kvas" morning and evening for drink.*

THE HOSPITAL WARDS.

AFTER we had examined the workshops, the kitchen, and most of the *kameras* in the first and second stories, the *smatritel* turned to me and said, "Do you wish to go through the hospital wards?" "Certainly," I replied; "we wish to see everything that there is to be seen

* According to the report of the Inspector of Exile Transportation for 1884, the cost to the Government for the food furnished each prisoner in the Tiumen forwarding prison is 3½ cents a day (7 kopeks). Pris-

oners belonging to the privileged classes (including politicals) receive food which costs the Government 5 cents a day per man. Of course the quality of a daily ration which costs only 3½ cents cannot be very high.

THE COURT-YARD OF THE PRISON. (FROM A SKETCH MADE BY AN EXILE.)

in the prison." The warden shrugged his shoulders, as if he could not understand a curiosity which was strong enough to take travelers into a Siberian prison hospital; but, without making any remarks, he led the way up another flight of stone steps to the third story, which was given up entirely to the sick. The hospital wards, which numbered five or six, were larger and lighter than any of the cells that we had previously examined in the main building, but they were wholly unventilated, no disinfectants apparently were used in them, and the air was polluted to the last possible degree. It did not seem to me that a well man could live there a week without

becoming infected with disease, and that a sick man should ever recover in that awful atmosphere was inconceivable. In each ward were twelve or fifteen small iron bedsteads, set with their heads to the walls round three sides of the room, and separated one from another by about five feet of space. Each bedstead was furnished with a thin mattress consisting of a coarse gray bed-tick filled with straw, a single pillow, and either a gray blanket or a ragged quilt. Mr. Frost thought that some of the beds were supplied with coarse gray linen sheets and pillow-cases, but I did not notice anything of the kind. Over the head of each bedstead was a small blackboard,

MAKING UP A PARTY IN THE TIUMEN PRISON.

bearing in Russian and Latin characters the name of the prisoner's disease and the date of his admission to the hospital. The most common disorders seemed to be scurvy, typhus fever, typhoid fever, acute bronchitis, rheumatism, and syphilis. Prisoners suffering from malignant typhus fever were isolated in a single ward; but with this exception no attempt apparently had been made to group the patients in classes according to the nature of

their diseases. Women were separated from the men, and that was all. Never before in my life had I seen faces so white, haggard, and ghastly as those that lay on the gray pillows in these hospital cells. The patients, both men and women, seemed to be not only desperately sick, but hopeless and heart-broken. I could not wonder at it. As I breathed that heavy, stifling atmosphere, poisoned with the breaths of syphilitic and fever-stricken patients,

COURT-YARD OF THE WOMEN'S PRISON, TIUMEN.

loaded and saturated with the odor of excrement, disease germs, exhalations from unclean human bodies, and foulness inconceivable, it seemed to me that over the hospital doors should be written, "All hope abandon ye who enter here."*

After we had gone through the women's

* The cost of the maintenance of each patient in the hospital of the Tiumen forwarding prison in 1884, including food, medicines, etc., was 27 cents a day. The dead were buried at an expense of \$1.57 each. [Report of Inspector of Exile Transportation for 1884.]

lying-in ward and the ward occupied by patients suffering from malignant typhus fever, I told the smatritel that I had seen enough; all I wanted was to get out of doors where I could once more breathe. He conducted us to the dispensary on the ground floor, offered us alcoholic stimulants, and suggested that we allow ourselves to be sprayed with carbolic acid and water. We probably had not been in the prison long enough, he said, to take any infection; but we were unaccustomed to prison air, the hospital was in bad condition,

we had visited the malignant typhus fever ward, and he thought that the measure which he suggested was nothing more than a proper precaution. We of course assented, and were copiously sprayed from head to foot with dilute carbolic acid, which, after the foulness of the prison atmosphere, seemed to us almost as refreshing as spirits of cologne.

At last, having finished our inspection of the main building, we came out into the prison-yard, where I drew a long, deep breath of pure air, with the delicious sense of relief that a half-drowned man must feel when he comes to the surface of the water.

"How many prisoners," I asked the warden, "usually die in that hospital in the course of the year?"

"About 300," he replied. "We have an epidemic of typhus almost every fall. What else could you expect when buildings that are barely adequate for the accommodation of 800 persons are made to hold 1800? A prison so overcrowded cannot be kept clean, and as for the air in the cells, you know now what it is like. In the fall it is sometimes much worse. During the summer the windows can be left open, and some ventilation can be secured in that way; but when the weather becomes cold and stormy the windows must be closed, and then there is no ventilation at all. We suffer from it as well as the prisoners. My assistant has only recently recovered from an attack of typhus fever which kept him in bed for six weeks, and he caught the disease in the prison. The local authorities here have again and again urged the Government to make adequate provision for the large number of exiles crowded into this prison during the season of navigation, but thus far nothing has been done beyond the building of two log barracks."*

The warden spoke naturally and frankly, as if the facts which he gave me were known to everybody in Tiumen, and as if there was no use in trying to conceal them even from a foreign traveler when the latter had been through the prison and the prison hospital.

THE WOMEN'S PRISON.

FROM the main prison building we went to the women's prison, which was situated on the other side of the road in a court-yard formed by a high stockade of closely set and sharpened logs. It did not differ much in external appearance from the men's barracks inside the prison-wall, which we had already ex-

amined. The kameras varied in size from 10 feet by 12 to 30 feet by 45, and contained from three to forty women each. They were all clean and well lighted, the floors and sleeping-platforms had been scrubbed to a snowy whiteness, strips of coarse carpet had been laid down here and there in the gangways between the nares, and one cell even had potted plants in the window. The women, like the men, were obliged to sleep in rows on the hard platforms without pillows or blankets, but their cells were not so overcrowded as were those of the men, and the air in them was infinitely purer. Most of the women seemed to belong to the peasant class; many of them were accompanied by children, and I saw very few hard or vicious faces.

From the women's prison we went to the prison for exiled families, another stockaded log barrack about 75 feet in length which had no cell partitions and which contained nearly 300 men, women, and children. Here again the sleeping-platforms were overcrowded; the air was heavy and foul; dozens of children were crying from hunger or wretchedness; and the men and women looked tired, sleepless, and dejected. None of the women in this barrack were criminals. All were voluntarily going into banishment with their criminal husbands, and most of them were destined for points in western Siberia.

ABOUT 1 o'clock in the afternoon, after having made as thorough an examination as possible of all the prison buildings, Mr. Frost, Mr. Wardropper, and I went with Mr. Ignatof to lunch. Knowing that our host was the contractor for the transportation of exiles eastward by barge, and that he had been a prominent member of the Tiumen prison committee, I asked him if the Central Government in St. Petersburg was aware of the condition of the Tiumen forwarding prison, and of the sickness and misery in which it resulted. He replied in the affirmative. The local authorities, the prison committee, and the Inspector of Exile Transportation for western Siberia had reported upon the condition of the Tiumen prison, he said, every year; but the case of that prison was by no means an exceptional one. New prisons were needed all over European Russia, as well as Siberia, and the Government did not yet feel able financially to make sweeping prison reforms, nor to spend perhaps ten million rubles in the erection of new prison buildings. The condition of the Tiumen prison was, he admitted, extremely bad, and he himself had resigned his place as a member of the prison committee because the Government would not authorize the erection of a new building for use as a hospital. The prison

* During the season of navigation in 1884 the Tiumen forwarding prison was overcrowded 133 days out of 151. [Report of the Inspector of Exile Transportation for 1884.]

EXILES GOING ON BOARD THE BARGE.

committee had strongly recommended it, and when the Government disapproved the recommendation, he resigned.

Subsequent conversation with other citizens of Tiumen and with officers of the Exile Administration more than confirmed all that had been told me by Mr. Ignatof and the warden. The report of the Medical Department of the Ministry of the Interior, extracts from which were furnished me, showed that the sick rate of the Tiumen forwarding prison for 1884 was

28.4 per cent. ; or, in other words, nearly one third of the whole prison population received hospital treatment. When one considers that from 17,000 to 19,000 exiles pass every year through the Tiumen forwarding prison, and that thousands of sick are treated at the dispensary and in their cells, and are not included therefore in the hospital records, one can partly realize the human suffering and misery of which that prison is the scene.

In order fully to understand the scope of

the Siberian exile system and the important place occupied in that system by the Tiumen forwarding prison, the reader must bear in mind that there are in Russia no penitentiaries. If the penalty affixed by the Russian penal code to a crime is not greater than imprisonment for four years, the criminal serves out his sentence in one of the prisons of European Russia, simply because it would be unprofitable to send him to Siberia for so short a time. If, however, a prisoner's crime calls for a more severe punishment than four years of confinement — to Siberia he goes.

Between the years 1823 and 1887, inclusive, there were sent to Siberia 772,979 exiles, as follows:

From 1823 to 1832.. 98,725	<i>Bro't forward</i> 593,914
From 1833 to 1842.. 86,550	In 1878 .. 17,790
From 1843 to 1852.. 69,764	In 1879 .. 18,255
From 1853 to 1862.. 101,238	In 1880 .. 17,660
From 1863 to 1872.. 146,380	In 1881 .. 17,183
From 1873 to 1877.. 91,257	In 1882 .. 16,945
	In 1883 .. 19,314
Total	In 1884 .. 17,824
	In 1885 .. 18,843
	In 1886 .. 17,477
	In 1887 .. 17,774

Total * 772,979

Exiles to Siberia may be grouped according to the nature of their sentences into three great classes, namely:

I. Katorzhniki, or hard-labor convicts.

II. Poselentse, or penal colonists.

III. Sylni, or persons simply banished.

To these must be added a fourth class, composed of women and children, who go to Siberia voluntarily with their exiled husbands or parents. Criminals belonging to the first two classes are deprived of all civil rights and must remain in Siberia for life. Offenders of the third class retain some of their civil rights and may return to European Russia at the expiration of their terms of banishment. Convicts and penal colonists go to their places of destination in five-pound leg-fetters and with half-shaven heads, while simple exiles wear no fetters and are not personally disfigured. Exiles of the third class comprise

a. Vagrants (persons without passports who refuse to disclose their identity).

b. Persons banished by sentence of a court.

c. Persons banished by the village communes to which they belong.

d. Persons banished by order of the Minister of the Interior.

The relative proportions of these several classes for 1885, the year that I spent in Siberia, may be shown in tabular form as follows:

Penal Class.	Men.	Women.	Total.
I. Hard-labor convicts [Katorzhniki], punished by sentence of a court	1,440	111	1,551
II. Penal colonists [Poselentse], punished by sentence of a court	2,526	133	2,659
III. Exiles {			
a. Vagrants	1,646	73	1,719
b. Exiled by judicial sentence	172	10	182
c. Exiled by village communes	3,535	216	3,751
d. Exiled by executive order	300	68	368
IV. Voluntaries [Dobrovolni] accompanying relatives	2,068	3,468	5,536
Totals	11,687	4,079	15,766

An analysis of this classified statement reveals some curious and suggestive facts. It shows in the first place that the largest single class of exiles (5536 out of 15,766) is composed of women and children who go to Siberia voluntarily with their husbands and fathers.† It shows in the second place that out of the 10,230 persons sent to Siberia as criminals only 4392, or less than a half, have had a trial by a court, while 5838 are exiled by "administration process" — that is, by a mere order from the Ministry of the Interior.‡ Finally, it shows that more than one-third of the involuntary exiles (3751 out of 10,230) were sent to Siberia by the village communes, and not by the Government.

Every "mir," or village commune, in Russia has the right to banish any of its members who, through bad conduct or general worth-

* The statistics of exile in this article are all from official sources, as are also the facts, unless otherwise stated.

† The records of the Bureau of Exile Administration for the four years ending with the year of my visit to Siberia showed that the numbers and percentages of women and children who voluntarily accompanied their husbands and fathers to Siberia were as follows:

Year.	Whole number of exiles.	Women and children.	Percentage.
1882	16,945	5,276	31
1883	19,314	6,311	33
1884	17,824	6,067	34
1885	18,843	5,536	28
Totals	72,926	23,190	31

‡ The proportion of the judicially sentenced to the administratively banished varies little from year to year. In the ten-year period from 1867 to 1876, inclusive, there were sent to Siberia 151,585 exiles: 48.80 per cent. went under sentences of courts, and 51.20 per cent. were banished by administrative process. In the seven-year period from 1880 to 1886, inclusive, there passed through the Tiumen forwarding prison 120,065 exiles, of whom 64,513, or 53.7 per cent., had been tried and condemned by courts, and 55,552, or 46.3 per cent., had been banished by orders from the Ministry of the Interior. A prison reform commission appointed by Alexander II. in the latter part of the last decade reported that on an average 45.6 per cent. of all the exiles sent to Siberia went under sentences of courts, and 54.4 per cent. were banished by administrative process.

TIUMEN LABORERS WAITING FOR WORK ON "THE HILL OF LAZINESS."

lessness, have rendered themselves obnoxious to their fellow-citizens and burdensome to society. It has also the right to refuse to receive any of its members who, after serving out terms of imprisonment for crime, return to the "mir" and ask to be re-admitted. Released prisoners whom the mir will not thus re-admit are exiled to Siberia by administrative process.

The political exiles who are sent to Siberia do not constitute a separate penal class or grade, but are distributed among all of the classes above mentioned. Their number is much smaller than it is generally supposed to be, and does not, I think, average more than about 150 a year. One hundred and forty passed through the Tiumen forwarding prison in 1884 and sixty in 1885 up to the time of my visit. Owing, however, to the fact that until recently they have not been classed as "politicals" in the prison records and in official reports, it is difficult to ascertain exactly what proportion they make of the whole number of

exiles. I believe, however, that one per cent. is a fair estimate.* Up to the time of my visit to the Tiumen prison I had not seen a political; and acting upon the advice of friends in St. Petersburg, I was very careful and guarded in making inquiries about them.

AN EXILE MARCHING PARTY.

On the morning after our first visit to the Tiumen forwarding prison we had an opportunity of seeing the departure of a marching exile party. We went to the prison merely for the purpose of getting a sketch or a photograph of it, but happened to be just in time to see a party of 360 men, women, and children set out on foot for Yalutorfsk. Our attention was attracted first by a great crowd of people standing in the street outside the prison wall. As we drew nearer, the crowd resolved itself into a hundred or more women and children in bright-colored calico gowns, with kerchiefs over their heads, and about 250 men dressed in the gray exile costume, all standing close together in a dense throng, surrounded by a cordon of soldiers. In the street near them were fifteen or twenty one-horse telegas, or small four-wheeled wagons, some piled high with the gray bags in which exiles carry their spare clothing and personal property, and

* According to the report of the Tiumen Bureau of Exile Transportation for 1887, there were sent to Siberia in that year 165 political exiles, as follows:

<i>Belonging to the noble class.</i>		<i>Other non-privileged classes.</i>	
Men	50	Men	70
Women	17	Women	18
Children	4	Children	6
Total	71	Total	94

some filled with men, women, and children, who, by reason of age, weakness, or infirmity, could not walk. It seemed surprising to me that anybody should be able to walk after a week's confinement in that prison. The air was filled with a continuous hum of voices as the exiles talked eagerly with one another, and occasionally we

"What's the matter with her ankle?" inquired the officer impatiently, looking down at the child's thin bare feet and legs.

"I don't know; she says it hurts her," replied the mother. "Please let her ride, for God's sake!"

"She can't ride, I tell you — there's no

MEN'S CAGE, CONVICT BARGE — EXILES BUYING FOOD.

could hear the wail of a sick child from one of the telegas, or a faint jingle of chains as some of the men, tired of standing, changed their positions or threw themselves on the ground. The officer in charge of the party, a heavily built man with yellowish side-whiskers, light-blue eyes, and a hard, unsympathetic face, stood near the telegas, surrounded by women and children, begging him to let them ride.

"Please put my little girl in a wagon," said one pale-faced woman, as I approached the group. "She is n't ten years old and she has a lame ankle; she can never walk thirty versts."

room," said the officer, still more impatiently. "I don't believe there's anything the matter with her ankle, and anybody can see that she's more than twelve years old. Stoopaitye!" ["Move on!"] he said sternly to the child; "you can pick flowers better if you walk."

The mother and the child shrank away without a word, and the officer, to escape further importunities, shouted the order to "Form ranks!" The hum of conversation suddenly ceased; there was a jingling of chains as the prisoners who had been lying on the ground sprang to their feet; the soldiers of the guard shouldered

their rifles; the exiles crossed themselves devoutly, bowing in the direction of the prison chapel; and at the word "March!" the whole column was instantly in motion. Three or four Cossacks, in dark-green uniforms and with rifles over their shoulders, took the lead; a dense but disorderly throng of men and women followed, marching between thin, broken lines of soldiers; next came the telegas with

THE CONVICT BARGE.

HAVING witnessed the departure of one of the marching parties, we went down Saturday afternoon to the steamer-landing to see the embarkment of seven hundred exiles for Tomsk. The convict barge, which we were permitted to inspect, did not differ much in general appearance from an ordinary ocean

INSIDE THE WOMEN'S CAGE, CONVICT BARGE.

the old, the sick, and the small children; then a rear-guard of half a dozen Cossacks; and finally four or five wagons piled high with gray bags. Although the road was soft and muddy, in five minutes the party was out of sight. The last sounds I heard were the jingling of chains and the shouts of the Cossacks to the children to keep within the lines. These exiles were nearly all penal colonists and persons banished by Russian communes, and were destined for towns and villages in the southern part of the province of Tobolsk.

steamer, except that it drew less water and had no rigging. The black iron hull was about 220 feet in length by 30 in width, pierced by a horizontal line of small rectangular port-holes which opened into the sleeping-cabins on the lower deck. The upper deck supported two large yellow deck-houses about seventy-five feet apart, one of which contained three or four hospital wards and a dispensary, and the other, quarters for the officers of the convoy and a few cells for exiles belonging to the noble or privileged class. The space between

the deck-houses were roofed over and inclosed on each side by a coarse net-work of heavy iron wire, so as to make a cage 30 feet wide and 75 feet long, where the prisoners could walk and breathe the fresh air. This cage, which is known to the common criminal exiles as the "chicken-coop," was divided by a net-work partition into two compartments of unequal size, the smaller of which was intended for the women and children, and the larger for the men. Companion-ladders led down into the sleeping-cabins, of which there were three or four, varying in length from 30 to 60 feet, with a uniform width of 30 feet and a height of about 7. One of these cabins was occupied by the women and children, and the others were given up to the men. Through the center of each cabin ran longitudinally two tiers of double sleeping-platforms, precisely like those in the Tiumen prison kameras, upon which the exiles lay athwart-ship in four closely packed rows, with their heads together over the line of the keel. Along each side of the barge ran two more tiers of nares, upon which the prisoners lay lengthwise head to feet, in rows four or five deep. A reference to the plan and section of the barge will, I think, render this description of the interior of the sleeping-cabins fairly intelligible. The vessel had been thoroughly cleaned and disinfected after its return from a previous trip to Tomsk, and the air in the cabins was pure and sweet.

The barge lay at a floating landing-stage of the type with which we had become familiar on the rivers Volga and Kama, and access to it was gained by means of a zigzag wooden bridge sloping down to it from the high bank of the river. When we reached the landing, a dense throng of exiles, about one-third of whom were women, were standing on the bank waiting to embark. They were surrounded by a cordon of soldiers, as usual, and non-commissioned officers were stationed at intervals of 20 or 30 feet on the bridge leading down to the landing-stage. I persuaded Colonel Vinokurof, Inspector of Exile Transportation for western Siberia, to delay the embarkment a little, in order that we might take photographs of the exiles and the barge. As soon as this had been accomplished the order was given to "Let them go on board," and the prisoners, shouldering their gray bags, walked one by one down the sloping bridge to the landing-stage. More than three-fourths of the men were in leg-fetters, and for an hour there was a continuous clanking of chains as the prisoners passed me on their way to the barge. The exiles, although uniformly clad in gray, presented, from an ethnological point of view, an extraordinary diversity of types, having evidently been collected from all parts of the

vast empire. There were fierce, wild-looking mountaineers from Daghestan and Circassia, condemned to penal servitude for murders of blood-revenge; there were Tartars from the lower Volga, who had been sunburned until they were almost as black as negroes; Turks from the Crimea, whose scarlet fezzes contrasted strangely with their gray convict overcoats; crafty looking Jews from Podolia, going into exile for smuggling; and finally, common peasants in great numbers from all parts of European Russia. The faces of the prisoners generally were not as hard, vicious, and depraved as the faces of criminals in America. Many of them were pleasant and good-humored, some were fairly intelligent, and even the worst seemed to me stupid and brutish rather than savage or malignant. At last all were on board; the sliding doors of the network cages were closed and secured with heavy padlocks, and a regular Russian bazar opened on the landing-stage. Male and female peddlers to the number of forty or fifty were allowed to come down to the side of the barge to sell provisions to the prisoners, most of whom seemed to be in possession of money. In one place might be seen a half-grown girl passing hard-boiled eggs one by one through the interstices of the net-work; in another, a gray-haired old woman was pouring milk through a tin tube into a tea-pot held by a convict on the inside of the cage; and all along the barge men were buying or bargaining for loaves of black rye-bread, salted cucumbers, pretzels, and fish turn-overs. The peddlers seemed to have perfect trust in the convicts, and often passed in food to them before they had received pay for it. The soldiers of the guard,

who were good-looking, fresh-faced young fellows, facilitated the buying and selling as far as possible by handing in the provisions and handing out the money, or by opening the sliding doors for the admission of such bulky articles as loaves of bread, which could not be passed through the net-work.

While we stood looking at this scene of busy traffic, a long-haired Russian priest in a black gown and a broad-brimmed felt hat crossed the landing-stage and entered one of the deck-houses, followed by an acolyte bearing his robes and a prayer-book. In a few moments, having donned his ecclesiastical vestments, he entered the women's cage, with a smoking censer in one hand and an open book in the other, and began a "moleben," or service of prayer. The women all joined devoutly in the supplications, bowing, crossing themselves, kneeling, and even pressing their foreheads to the deck. The priest hurried through the service, however, in a perfunctory manner, swung the censer back and forth a few times so as to fill the compartment with fragrant smoke, and then went into the men's cage. There much less interest seemed to be taken in the services. The convicts and soldiers removed their caps, but only a few joined in the prayer, and buying and selling went on without interruption all along the side of the barge. The deep-voiced chanting of the priest mingling with the high-pitched rattle of chains, the chaffering of peddlers, and the shouting of orders to soldiers on the roof of the cage produced a most strange and incongruous effect. Finally, the service ended, the priest took off his vest-

ments, wished the commanding officer of the convoy a pleasant voyage, and returned to the city, while Mr. Frost and I walked back and forth on the landing-stage studying the faces of the prisoners. With few exceptions the latter seemed cheerful and happy, and in all parts of the cage we could hear laughter, joking, and animated conversation. Mr. Frost finally began making sketches in his note-book of some of the more striking of the convict types on the other side of the net-work. This soon attracted the attention of the prisoners, and amidst great laughter and merriment they began dragging forward and arranging, in what they regarded as artistic poses, the convicts whom they thought most worthy of an artist's pencil. Having selected a subject, they would place him in all sorts of studiously careless and negligent attitudes, comb and arrange the long hair on the unshaven side of his head, try the effect of a red fez or an embroidered Tartar cap, and then shout suggestions and directions to the artist. This arranging of figures and groups for Mr. Frost to draw seemed to afford them great amusement, and was accompanied with as much joking and laughter as if they were school-boys off for a picnic, instead of criminals bound for the mines.

At last, just after sunset, a steamer made fast to the barge, the order was given to cast off the lines, the exiles all crowded against the net-work to take a parting look at Tiumen, and the great black and yellow floating prison moved slowly out into the stream and began its long voyage to Tomsk.

George Kennan.

INFINITE DEPTHS.

THE little pool, in street or field apart,
Glasses the heavens and the rushing storm ;
And into the silent depths of every heart
The Eternal throws its awful shadow-form.

Charles Edwin Markham.

MATTHEW ARNOLD'S CRITICISM.

READERS who know Matthew Arnold only as an occasional contributor to British periodical literature, or as a lecturer during his brief tour in this country, in the fall and winter of 1883-84, will do

well, before they make up their minds about him, to give him a hearing as he appears in his collected works, recently published by Macmillan & Co. A writer who has a distinct and well-defined point of view of his own, like Arnold, suffers by being read fragmentarily, or by the single essay or discourse. His effect is cumulative; he hits a good many times in the same place, and his work as a whole makes a deeper impression than any single essay of his would seem to warrant. He is not in any sense one of those random and capricious minds that often cut such a brilliant figure in periodical literature, but the distinguishing thing about him is that he stands for a definite and well-grounded idea or principle, an idea which gives a certain unity and simplicity to his entire work. The impression that a fragmentary and desultory reading of Arnold is apt to give one, namely, that he is one of the scorers, a man of "a high look, and a proud heart," gradually wears away as one grows familiar with the main currents of his teachings. He does not indeed turn out to be a large, hearty, magnetic man, but he proves to be a thoroughly serious and noble one, whose calmness and elevation are of great value. His writings, as now published, in a uniform edition, embrace ten volumes, to wit: two volumes of poems; two volumes of literary essays, "Essays in Criticism" and a volume made up of "Celtic Literature" and "On Translating Homer"; a volume of mixed essays, mainly on Irish themes; a volume called "Culture and Anarchy" and "Friendship's Garland," mainly essays in political and social criticism; three volumes of religious criticism, namely, "Literature and Dogma," "God and the Bible," and "St. Paul and Protestantism" with "Last Essays," and one volume of "Discourses in America." Of this body of work the eight volumes of prose are pure criticism, and by criticism, when applied to Arnold, we must mean the scientific passion for pure truth, the passion for seeing the thing exactly as it is carried into all fields. "I wish to decide nothing as of my

own authority," he says in one of his earlier essays; "the great art of criticism is to get one's self out of the way and to let humanity decide." "A free play of mind" is a frequent phrase with him, and well describes much of his own criticism. He would play the rôle of a disinterested observer. Apropos of his political and social criticisms, he says:

I do not profess to be a politician, but simply one of a disinterested class of observers, who, with no organized and embodied set of supporters to please, set themselves to observe honestly and to report faithfully the state and prospects of our civilization.

He urges that criticism in England has been too "directly polemical and controversial"; that it has been made to subserve interests not its own; the interest of party, of a sect, of a theory, or of some practical and secondary consideration. His own effort has been to restore it to its "pure intellectual sphere" and to keep its high aim constantly before him, "which is to keep man from a self-satisfaction which is retarding and vulgarizing; to lead him towards perfection, by making his mind dwell upon what is excellent in itself, and the absolute beauty and fitness of things."

The spirit in which he approaches Butler's "Analogy" is a fair sample of the spirit in which he approaches most of his themes:

Elsewhere I have remarked what advantage Butler had against the Deists of his own time, in the line of argument which he chose. But how does his argument in itself stand the scrutiny of one who has no counter-thesis, such as that of the Deists, to make good against Butler? How does it affect one who has no wish at all to doubt or cavil, like the loose wits of fashionable society who angered Butler, still less any wish to mock, but who comes to the "Analogy" with an honest desire to receive from it anything which he finds he can use?

Arnold is preëminently a critical force, a force of clear reason and of steady discernment. He is not an author whom we read for the man's sake or for the flavor of his personality, for this is not always agreeable, but for his unfailing intelligence and critical acumen; and because, to borrow a sentence of Goethe, he helps us to "attain certainty and security in the appreciation of things exactly as they are." Everywhere in his books we are brought under the influence of a mind which indeed does not fill and dilate us, but which clears our vision, which sets going a process of crystallization in our thoughts, and brings our knowledge, on a certain range of subjects, to a higher state of clearness and purity.

Let us admit that he is not a man to build upon; he is in no sense a founder; he lacks the broad, paternal, sympathetic human element that the first order of men possess. He lays the emphasis upon the more select, high-bred qualities. All his sympathies are with the influences which make for correctness, for discipline, for taste, for perfection, rather than those that favor power, freedom, originality, individuality, and the more heroic and primary qualities. The more vital and active forces of English literature of our century have been mainly forces of expansion and revolution, or Protestant forces; our most puissant voices have been voices of dissent, and have been a stimulus to individuality, separatism, and to independence. But here is a voice of another order; a voice closely allied to the best spirit of Catholicism; one from which we will not learn hero-worship, or Puritanism, or non-conformity, or catch the spark of enthusiasm, or revolution, but from which we learn the beauty of urbanity, and the value of clear and fresh ideas.

It is not difficult to get at Arnold's point of view; it is stated or implied in nearly every page of his works. It is the point of view of Greek culture and Greek civilization. From this ground the whole body of his critical work, religious, political, and literary, is launched. His appeal is constantly made to the classic type of mind and character.

He divides the forces that move the world into two grand divisions — Hellenism and Hebraism, the Greek idea and the Jewish idea, the power of intellect and the power of conscience. "The uppermost idea with Hellenism is to see things as they really are; the uppermost idea with Hebraism is conduct and obedience. Nothing can do away with this ineffaceable difference. The Greek quarrel with the body and its desires is that they hinder right thinking; the Hebrew quarrel with them is that they hinder right acting." "An unclouded clearness of mind, an unimpeded play of thought," is the aim of the one; "strictness of conscience," fidelity to principle, is the mainspring of the other. As, in this classification, Carlyle would stand for unmitigated Hebraism, so Arnold himself stands for pure Hellenism; as the former's Hebraism upon principle was backed up by the Hebraic type of mind, its grandeur, its stress of conscience, its opulent imagination, its cry for judgment and justice, etc., so Arnold's conviction of the superiority of Hellenism as a remedy for modern ills is backed up by the Hellenic type of mind, its calmness, its lucidity, its sense of form and measure. Indeed, Arnold is probably the purest classic writer that English literature, as yet, has to show; classic not merely in the repose and purity of his style, but in

the unity and simplicity of his mind. What primarily distinguishes the antique mind from the modern mind is its more fundamental singleness and wholeness. It is not marked by the same specialization and development on particular lines. Our highly artificial and complex modern life leads to separatism; to not only a division of labor, but almost to a division of man himself. With the ancients, religion and politics, literature and sciences, poetry and prophecy, were one. These things had not yet been set apart from each other and differentiated. When to this we add vital unity and simplicity, the love of beauty, and the sense of measure and proportion, we have the classic mind of Greece, and the secret of the power and charm of those productions which have so long ruled supreme in the world of literature and art. Arnold's mind has this classic unity and wholeness. With him religion, politics, literature, and science are one, and that one is comprehended under the name of culture. Culture means the perfect and equal development of man on all sides.

"Culture," he says, giving vent to his Hellenism, "is of like spirit with poetry, follows one law with poetry"; the dominant idea of poetry is "the idea of beauty and of a human nature perfect in all its sides"; this idea is the Greek idea. "Human life," he says, "in the hands of Hellenism, is invested with a kind of aerial ease, clearness, and radiance; it is full of what we call sweetness and light." "The best art and poetry of the Greeks," he says, "in which religion and poetry are one, in which the idea of beauty and of human nature perfect on all sides adds to itself a religious and devout energy, and works in the strength of that, is on this account of such surpassing interest and instructiveness for us." But Greece failed because the moral and religious fiber in humanity was not braced and developed also.

But Greece did not err in having the idea of beauty, harmony, and complete human perfection so present and paramount. It is impossible to have this idea too present and paramount; only, the moral fiber must be braced too. And we, because we have braced the moral fiber, are not on that account in the right way, if at the same time the idea of beauty, harmony, and complete human perfection is wanting or misapprehended amongst us; and evidently it is wanting or misapprehended at present. And when we rely, as we do, on our religious organizations, which in themselves do not and can not give us this idea, and think we have done enough if we make them spread and prevail, then I say we fall into our common fault of overvaluing machinery.

From the point of view of Greek culture, and the ideal of Greek life, there is perhaps very little in the achievements of the English race, or in the ideals which it cherishes, that would not be pronounced the work of barba-

rians. From the Apollonian standpoint Christianity itself, with its war upon our natural instincts, is a barbarous religion. But no born Hellenic from the age of Pericles could pronounce a severer judgment upon the England of to-day than Arnold has in his famous classification of his countrymen into Barbarians, Philistines, and Populace, an upper class materialized, a middle class vulgarized, and a lower class brutalized. Arnold has not the Hellenic joyousness, youthfulness, and spontaneity. His is a "sad lucidity of soul," whereas the Greek had a joyous lucidity of soul. "O Solon, Solon!" said the priest of Egypt, "you Greeks are always children." But the Englishman has the Greek passion for symmetry, totality, and the Hellenic abhorrence of the strained, the fantastic, the obscure. His are not merely the classical taste and predilections of a scholar, but of an alert, fearless, and thorough-going critic of life; a man who dare lay his hands on the British constitution itself and declare that "with its compromises, its love of facts, its horror of theory, its studied avoidance of clear thought, it sometimes looks a colossal machine for the manufacture of Philistines." Milton was swayed by the Greek ideals in his poetry, but they took no vital hold of his life; his Puritanism and his temper in his controversial writings are the furthest possible remove from the serenity and equipoise of the classic standards. But Arnold, a much less poetic force certainly than Milton, is animated by the spirit of Hellenism on all occasions; it is the shaping and inspiring spirit of his life. It is not a dictum with him, but a force. Yet his books are thoroughly of to-day, thoroughly occupied with current men and measures, and covered with current names and allusions.

Arnold's Hellenism speaks very pointedly all through "Culture and Anarchy," in all those assaults of his upon the "hideousness and rawness" of so much of British civilization, upon the fierceness and narrowness, the Jacobinism of parties, upon "the Dissidence of Dissent, and the Protestantism of the Protestant religion"; in his efforts to divest the mind of all that is harsh, uncouth, impenetrable, exclusive, self-willed, one-sided; in his efforts to render it more flexible, tolerant, free, lucid, with less faith in individuals and more faith in principles. They speak in him when he calls Luther a Philistine of genius; when he says of the mass of his countrymen that they have "a defective type of religion, a narrow range of intellect and knowledge, a stunted sense of beauty, a low standard of manner"; that "Puritanism was a prison which the English people entered and had the key turned upon its spirit there for two hundred years"; when he tells the dissenters that in preferring their

religious service to that of the established church they have shown a want of taste and of culture like that of preferring Eliza Cook to Milton. "A public rite with a reading of Milton attached to it is another thing from a public rite with a reading from Eliza Cook."

His ideas of poetry as expressed in the preface to his poems in 1853 are distinctly Greek, and they led him to exclude from the collection his long poem called "Empedocles on Etna," because the poem was deficient in the classic requirements of action. He says:

The radical difference between the poetic theory of the Greeks and our own is this: that with them the poetical character of the action in itself, and the conduct of it, was the first consideration; with us attention is fixed mainly on the value of the separate thoughts and images which occur in the treatment of an action. They regarded the whole; we regard the parts. We have poems which seem to exist merely for the sake of single lines and passages, not for the sake of producing any total impression. We have critics who seem to direct their attention merely to detached expressions, to the language about the action, not to the action itself. I verily think that the majority of them do not in their hearts believe that there is such a thing as a total impression to be derived from a poem at all, or to be demanded from a poet; they think the term a commonplace of metaphysical criticism. They will permit the poet to select any action he pleases, and to suffer that action to go as it will, provided he gratifies them with occasional bursts of fine writing, and with a shower of isolated thoughts and images. That is, they permit him to leave their poetical sense ungratified, provided that he gratifies their rhetorical sense and their curiosity.

Here we undoubtedly have the law as deducible from the Greek poets, and perhaps as deducible from the principles of perfect taste itself. Little wonder Arnold found Emerson's poems so unsatisfactory,—Emerson, the most unclassical of poets, with no proper sense of wholeness at all, no continuity, no power to deal with actions. Emerson has great projectile power, but no constructive power. His aim was mainly to shoot a thought or an image on a line like a meteor athwart the imagination of his reader, to kindle and quicken his feeling for beautiful and sublime truths. Valuable as these things are, it is to be admitted that those poems that are concrete wholes, like the organic products of nature, will always rank the higher with a pure artistic taste.

Whatever be our opinion of the value of his criticism, we must certainly credit Arnold with a steady and sincere effort to see things whole, to grasp the totality of life, all the parts duly subordinated and brought into harmony with one another. His watch-word on all occasions is totality, or perfection. He has shown us the shortcomings of Puritanism, of Liberalism, and of all forms of religious dissent, when tried by the spirit of Hellenism. We have been made to see very clearly wherein

John Bull is not a Greek, and we can divine the grounds of his irritation by the comparison. It is because the critic could look in the face of his great achievement in the world and blame him for being John Bull. The concession that after all he at times in his history exhibited the grand style, the style of the Homeric poems, was a compliment he did not appreciate.

English civilization,—the humanizing, the bringing into one harmonious and truly human life of the whole body of English society,—that is what interests me. I try to be a disinterested observer of all which really helps and hinders that.

He recognizes four principal needs in the life of every people and community—the need of conduct, the need of beauty, the need of knowledge, and the need of social life and manners. The English have the sense of the power of conduct, the Italians the sense of the power of beauty, the Germans the sense of the power of knowledge or science, the French the sense of the power of social life and manners. All these things are needed for our complete humanization or civilization; the ancient Greeks came nearer possessing the whole of them, and of moving on all these lines, than any other people. The ground of his preference for the historic churches, the Catholic and the Anglican, over the dissenting churches is that, while they all have a false philosophy of religion, the former address themselves to more needs of human life than the latter.

The need for beauty is a real and now rapidly growing need in man; Puritanism cannot satisfy it; Catholicism and the English Church can. The need for intellect and knowledge in him, indeed, neither Puritanism, nor Catholicism, nor the English Church can at present satisfy. That need has to seek satisfaction nowadays elsewhere,—through the modern spirit, science, literature.

He avers that Protestantism has no intellectual superiority over Catholicism, but only a moral superiority arising from greater seriousness and earnestness. Neither have the Greek wholeness and proportion. The attitude of the one towards the Bible is as unreasoning as the attitude of the other towards the Church.

The mental habit of him who imagines that Balaam's ass spoke, in no respect differs from the mental habit of him who imagines that a Madonna, of wood or stone, winked.

The most that can be claimed for each sect, each church, each party is that it is free from some special bondage which still confines the mind of some other sect or party. Those, indeed, are free whom the truth makes free; but each sect and church has only a fragment of the truth, a little here and a little there. Both

Catholic and Protestant have the germ of religion, and both have a false philosophy of the germ.

But Catholicism has the germ invested in an immense poetry, the gradual work of time and nature, and of that great impersonal artist, Catholic Christendom.

The unity or identity of literature and religion, as with the Greeks—this is the animating idea of "Literature and Dogma." In this work Arnold brings his Hellenism to bear upon the popular religion and the dogmatic interpretation of the Bible, upon which the churches rest; and the result is that we get from him a literary interpretation of the Bible, a free and plastic interpretation, as distinguished from the hard, literal, and historical interpretation. He reads the Bible as literature, and not as history or science. He seeks its verification in an appeal to taste, to the simple reason, to the fitness of things. He finds that the Biblical writers used words in a large and free way, in a fluid and literary way, and not at all with the exactness and stringency of science or mathematics; or, as Sir Thomas Browne said of his own works, that many things are to be taken in a "soft and flexible sense."

In other words, the aim of Arnold's religious criticism is to rescue what he calls the natural truth of Christianity from the discredit and downfall which he thinks he sees overtaking its unnatural truth, its reliance upon miracles and the preternatural. The ground, he says, is slipping from under these things; the time spirit is against them, and unless something is done the very heart and core of Christianity itself, as found in the teachings of Christ, will be lost to the mass of mankind. But it is difficult to see how Christianity, as a people's religion, can be preserved by its natural or verifiable truth alone. This natural truth the world has always had; it bears the same relation to Christianity that the primary and mineral elements bear to a living organism; what is distinctive and valuable in Christianity is the incarnation of these truths in a living system of beliefs and observances which not only take hold of men's minds but which move their hearts.

We may extract the natural truth of Christianity, a system of morality or of ethics, and to certain minds this is enough; but it is no more Christianity than the extract of lilies or roses is a flower-garden. "Religion," Arnold well says, "is morality touched with emotion." It is just this element of emotion which we should lose if we reduced Christianity to its natural truths. Show a man the natural or scientific truth of answer to prayer, that is, that answer to prayer is a purely subjective phenomenon, and his lips are sealed; teach him the natural truth of salvation by Jesus Christ,

namely, that self-renunciation, that love, that meekness, that dying for others, is saving, and the emotion evaporates from his religion.

Another form which Arnold's Hellenism takes is that it begets in him what we may call the spirit of institutionalism, as opposed to the spirit of individualism. Greek culture centers in institutions, and the high character of their literary and artistic productions was the expression of qualities which did not merely belong to individuals here and there, but were current in the nation as a whole. With the Greek the state was supreme. He lived and died for the state. He had no private, separate life and occupation, as has the modern man. The arts, architecture, sculpture, existed mainly for public uses. There was probably no domestic life, no country life, no individual enterprises, as we know them. The individual was subordinated. Their greatest men were banished or poisoned from a sort of jealousy of the state. The state could not endure such rivals. Their games, their pastimes, were national institutions. Public sentiment on all matters was clear and strong. There was a common standard, an unwritten law of taste, to which poets, artists, orators, appealed. Not till Athens began to decay did great men appear, who, like Socrates, had no influence in the state. This spirit of institutionalism is strong in Matthew Arnold; and it is not merely an idea which he has picked up from the Greek, but is the inevitable outcropping of his inborn Hellenism. This alone places him in opposition to his countrymen, who are suspicious of the state and of state action, and who give full swing to the spirit of individualism. It even places him in hostility to Protestantism, or to the spirit which begat it, to say nothing of the dissenting churches. It makes him indifferent to the element of personalism, the flavor of character, the quality of unique individual genius, wherever found in art, literature, or religion. It is one secret of his preference of the establishment over the dissenting churches. The dissenter stands for personal religion, religion as a private and individual experience; the established churches stand for institutional religion, or religion as a public and organized system of worship; and when the issue is between the two, Arnold will always be found on the side of institutionalism. He always takes up for the state against the individual, for public and established forms against private and personal dissent and caprice. "It was by no means in accordance with the nature of the Hellenes," says Dr. Curtius, "mentally to separate and view in the light of contrast such institutions as the state and religion, which, in reality, everywhere most intimately pervaded one another."

What Arnold found to approve in this country was our institutions, our success in solving the social and political problems, and what he found to criticise was our excessive individualism, our self-glorification, the bad manners of our newspapers, and, in general, the crude state of our civilization.

One would expect Arnold to prefer the religion of the Old Testament to that of the New, for, as he himself says: "The leaning, there, is to make religion social rather than personal, an affair of outward duties rather than of inward dispositions"; and, to a disinterested observer, this is very much like what the religion of the Anglican Church appears to be.

Arnold always distrusts the individual; he sees in him mainly a bundle of whims and caprices. The individual is one-sided, fantastical, headstrong, narrow. He distrusts all individual enterprises in the way of schools, colleges, churches, charities; and, like his teacher, Aristotle, pleads for state action in all these matters. "Culture," he says (and by culture he means Hellenism), "will not let us rivet our attention upon any one man and his doings"; it directs our attention rather to the "natural current there is in human affairs," and assigns "to systems and to system makers a smaller share in the bent of human destiny than their friends like."

I remember, when I was under the influence of a mind to which I feel the greatest obligations, the mind of a man who was the very incarnation of sanity and clear sense, a man the most considerable, it seems to me, whom America has yet produced,—Benjamin Franklin,—I remember the relief with which, after long feeling the sway of Franklin's imperturbable common sense, I came upon a project of his for a new version of the Book of Job, to replace the old version, the style of which, says Franklin, has become obsolete, and hence less agreeable. "I give," he continues, "a few verses, which may serve as a sample of the kind of version I would recommend." We all recollect the famous verse in our translation: "Then Satan answered the Lord, and said, Doth Job fear God for nought?" Franklin makes this: "Does your Majesty imagine that Job's good conduct is the effect of mere personal attachment and affection?" I well remember how, when first I read that, I drew a deep breath of relief, and said to myself: "After all, there is a stretch of humanity beyond Franklin's victorious good sense!" So, after hearing Bentham cried loudly up as the renovator of modern society, and Bentham's mind and ideas proposed as the rulers of our future, I open the "Deontology." There I read: "While Xenophon was writing his history and Euclid teaching geometry, Socrates and Plato were talking nonsense under pretense of talking wisdom and morality. This morality of theirs consisted in words; this wisdom of theirs was the denial of matters known to every man's experience." From the moment of reading that, I am delivered from the bondage of Bentham! the fanaticism of his adherents can touch me no longer. I feel the inadequacy of his mind and ideas for supplying the rule of human society, for perfection.

The modern movement seems to me peculiarly a movement of individualism, a move-

ment favoring the greater freedom and growth of the individual, as opposed to outward authority and its lodgment in institutions. It is this movement which has given a distinctive character to the literature of our century, a movement in letters which Goethe did more to forward than any other man — Goethe, who said that in art and poetry personal genius is everything, and that "in the great work the great person is always present as the great factor." Arnold seems not to share this feeling; he does not belong to this movement. His books give currency to another order of ideas. He subordinates the individual, and lays the emphasis on culture and the claims of the higher standards. He says the individual has no natural rights, but only duties. We never find him insisting upon originality, self-reliance, character, independence, but, quite the contrary, on conformity and obedience. He says that at the bottom of the trouble of all the English people lies the notion of its being the prime right and happiness for each of us to affirm himself and to be doing as he likes. One of his earliest and most effective essays was to show the value of academies, of a central and authoritative standard of taste to a national literature; and in all his subsequent writings the academic note has been struck and adhered to. With him right reason and the authority of the state are one. "In our eyes," he says, "the very framework and exterior order of the state, whoever may administer the state, is sacred." "Every one of us," he again says, "has the idea of country, as a sentiment; hardly any one of us has the idea of *the state*, as a working power. And why? Because we habitually live in our ordinary selves, which do not carry us beyond the ideas and wishes of the class to which we happen to belong." Which is but saying because we are wrapped so closely about by our individualism. His remedy for the democratic tendencies of the times, tendencies he does not regret, is an increase of the dignity and authority of the state. The danger of English democracy is, he says, "that it will have far too much its own way, and be left far too much to itself." He adds, with great force and justness, that "Nations are not truly great solely because the individuals composing them are numerous, free, and active, but they are great when these numbers, this freedom, and this activity are employed in the service of an ideal higher than that of an ordinary man, taken by himself." Or, as Aristotle says, these things must be in "obedience to some intelligent principle, and some right regulation, which has the power of enforcing its decrees."

When the licensed victualers or the commercial travelers propose to make a school for their children, Arnold is unsparing in his

ridicule. He says that to bring children up "in a kind of odor of licensed victualism or of bagmanism is not a wise training to give to children." The heads and representatives of the nation should teach them better, but they do nothing of the kind; on the contrary, they extol the energy and self-reliance of the licensed victualers or commercial travelers, and predict full success for their schools. John Bull is suspicious of centralization, bureaucracy, state authority, which carry things with such a high hand on the Continent. Anything that threatens, or seems to threaten, his individual liberty, he stands clear of. The sense of the nation spoke in the words lately uttered through the "Times" by Sir Auberon Herbert. He says:

All great state systems stupefy; you cannot make the state a parent without the logical consequence of making the people children. Official regulation and free mental perception of what is right and wise do not and can not co-exist. I see no possible way in which you can reconcile these great state services and the conditions under which men have to make true progress in themselves.

But to preach such notions in England, Arnold would say, is like carrying coals to Newcastle. They would be of more service in France, where state action is excessive. In England the dangers are the other way.

Our dangers are in exaggerating the blessings of self-will and of self-assertion; in not being ready enough to sink our imperfectly formed self-will in view of a large general result.

There seems to be nothing in Hellenism that suggests Catholicism, and yet evidently it is Arnold's classical feeling for institutions that gives him his marked Catholic bias. The Catholic Church is a great institution, the greatest and oldest in the world. It makes and always has made short work of the individual. It is cold, stately, impersonal. Says Emerson:

In the long time it has blended with everything in heaven above and the earth beneath. It moves through a zodiac of feasts and fasts, names every day of the year, every town and market and headland and monument, and has coupled itself with the almanac, that no court can be held, no field plowed, no horse shod, without some leave from the Church.

It appeals to Arnold by reason of these things, and it appeals to him by reason of its great names, its poets, artists, statesmen, preachers, scholars; its imposing ritual, its splendid architecture, its culture. It has been the conservator of letters. For centuries the priests were the only scholars, and its ceremonial is a kind of petrified literature. Arnold clearly speaks for himself, or from his own bias, when he says that "the man of imagination, nay, and the philosopher too, in spite of her propensity to burn him, will always have a weakness for the Catholic Church"; "it is

because of the rich treasures of human life which have been stored within her pale." Indeed, there is a distinct flavor of Catholicism about nearly all of Matthew Arnold's writings. One cannot always put his finger on it; it is in the air, it is in that cool, haughty impersonalism, that *ex cathedra* tone, that contempt for dissenters, that genius for form, that spirit of organization. His mental tone and temper ally him to Cardinal Newman, who seems to have exerted a marked influence upon him, and who is still, he says, a great name to the imagination. Yet he says Newman "has adopted, for the doubts and difficulties which beset men's minds to-day, a solution, which, to speak frankly, is impossible." What, therefore, repels Arnold in Catholicism, and keeps him without its fold, is its "ultramontanism, sacerdotalism, and superstition." Its cast-iron dogmas and its bigotry are too much for his Hellenic spirit; but no more so than are the dogmas and bigotry of the Protestant churches. It is clear enough that he would sooner be a Catholic than a Presbyterian or a Methodist.

Arnold's Hellenism is the source of both his weakness and his strength; his strength, because it gives him a principle that cannot be impeached. In all matters of taste and culture the Greek standards are the last and highest court of appeal. In no other race and time has life been so rounded and full and invested with the same charm. "They were freer than other mortal races," says Professor Curtius, "from all that hinders and oppresses the motions of the mind."

It is the source of his weakness, or ineffectualness, because he has to do with an unclassical age and unclassical people. It is interesting and salutary to have the Greek standards applied to modern politics and religion, and to the modern man, but the application makes little or no impression save on the literary classes. Well may Arnold have said, in his speech at The Authors Club in New York, that only the literary class had understood and sustained him. The other classes have simply been irritated or bewildered by him. His tests do not appeal to them. The standards which the philosopher, or the political economist, or the religious teacher brings, impress them more.

The Greek flexibility of intellect cannot be too much admired, but the Greek flexibility of character and conscience is quite another thing. Of the ancient Hellenes it may with truth be said that they were the "wisest, brightest, meanest of mankind." Such fickleness, treachery, duplicity, were perhaps never before wedded to such æsthetic rectitude and wholeness. They would bribe their very gods. Such a type of character can never take deep hold of the British mind.

When Arnold, reciting the episode of Wragg, tells his countrymen that "by the Ilissus there was no Wragg, poor thing," will his countrymen much concern themselves whether there was or not? When the burden of his indictment of the English Liberals is that they have worked only for political expansion, and have done little or nothing for the need of beauty, the need of social life and manners, and the need of intellect and knowledge, will the English Liberals feel convicted by the charge? When he says of the Pilgrim fathers that Shakspeare and Vergil would have found their company intolerable, is Puritanism discredited in the eye of English Puritans? Indeed, literary standards, applied to politics or religion, are apt to be ineffectual with all except a very limited circle of artistic spirits.

Whether it be a matter for regret or for congratulation, there can be little doubt that man and all his faculties are becoming more and more specialized, more and more differentiated; the quality of unique and individual genius is more and more valued, so that we are wandering farther and farther from the unity, the simplicity, and the repose of the antique world.

This fact may afford the best reason in the world for the appearance of such a man as Arnold, who opposes so squarely and fairly this tendency, and who draws such fresh courage and strength from the classic standards. But it accounts in a measure for the general expression of distaste with which his teachings have been received. Still, he has shown us very clearly how British civilization looks to Hellenic eyes, where it needs pruning and where it needs strengthening; and he has doubtless set going currents of ideas that must eventually tell deeply upon the minds of his countrymen.

It is undoubtedly as a critic of literature that Arnold is destined to leave his deepest mark. In this field the classic purity and simplicity of his mind, its extraordinary clearness, steadiness, and vitality are the qualities most prized. His power as a critic is undoubtedly his power of definition and classification, a gift he has which allies him with the great naturalists and classifiers. Probably no other English critic has thrown into literature so many phrases and definitions that are likely to become a permanent addition to the armory of criticism as has Arnold. Directness and definiteness are as proper and as easy to him as to a Greek architect. He is the least bewildering of writers. With what admirable skill he brings out his point on all occasions! Things fall away from it till it stands out like a tree in a field, which we see all around. His genius for definition and analysis finds full scope in his works on "Celtic Litera-

ture," wherein are combined the strictness of scientific analysis with the finest literary charm. The lectures, too, on "Translating Homer," seem as conclusive as a scientific demonstration.

A good sample of his power to pluck out the heart of the secret of a man's influence may be found in his essay on Wordsworth.

Wordsworth's poetry is great because of the extraordinary power with which Wordsworth feels the joy offered to us in nature, the joy offered to us in simple elementary affections and duties, and because of the extraordinary power with which, in case after case, he shows us this joy and renders it so as to make us share it.

A recent English reviewer says that there are but two English authors of the present day whose works are preëminent for quality of style, namely, John Morley's and Cardinal Newman's. But one would say that the man of all others among recent English writers who had in a preëminent degree the gift of what we call style — that quality in literature which is like the sheen of a bird's plumage — was Matthew Arnold. That Morley has this quality is by no means so certain. Morley is a vigorous, brilliant, versatile writer, but his quality is not distinctively literary, and his sentences do not have a power and a charm by virtue of their very texture and sequence alone. Few writers, of any time or land, have had the unity, transparency, centrality of Arnold's mind — the piece or discourse is so well cast, it is so homogeneous, it makes such a clear and distinct impression. Morley's vocabulary is the more copious; more matters are touched upon in any given space; he is more fruitful of ideas and suggestions; his writings may have a greater political, or religious, or scientific value than Arnold's. But in pure literary value, they, in my opinion, fall far below. Arnold's work is like cut glass; it is not merely clear, it has a distinction, a prestige which belongs to it by reason of its delicate individuality of style. The writings of Cardinal Newman have much of the same quality — the utmost lucidity combined with a fresh, distinct literary flavor. They are pervaded by a sweeter, more winsome spirit than Arnold's; there is none of the scorn, contemptuousness, and superciliousness in them that have given so much offense in Arnold, and while his style is not so crisp as the latter's, it is perhaps more marvelously flexible and magnetic.

Arnold is, above all things, integral and consecutive. He seems to have no isolated thoughts, no fragments, nothing that begins and ends in a mere intellectual concretion; his thoughts are all in the piece and have reference to his work as a whole; they are entirely subordinated to plan, to structure, to total re-

sults. He values them, not as ends, but as means. In other words, we do not come upon those passages in his works that are like isolated pools of deep and beautiful meaning, and which make the value to us of writers like Landor, for instance, but we everywhere strike continuous currents of ideas that set definitely to certain conclusions; always clear and limpid currents, and now and then deep, strong, and beautiful currents. And, after all, water was made to flow and not to stand, and those are the most vital and influential minds whose ideas are *working* ideas, and lay hold of real problems.

Certainly a man's power to put himself in communication with live questions, and to take vital hold of the spiritual and intellectual life of his age, should enter into our estimate of him. We shall ask of a writer who lays claim to high rank, not merely has he great thoughts, but what does he do with his great thoughts? Is he superior to them? Can he use them? Can he bring them to bear? Can he wield them to clear up some obscurity or bridge over some difficulty for us, or does he sit down amid them and admire them? A man who wields a great capital is above him who merely hoards it and keeps it. Let me refer to Landor, in this connection, because, in such a discussion, one wants, as they say in croquet, a ball to play on, and because Landor's works have lately been in my hands, and I have noted in them a certain remoteness and ineffectualness which contrast them well with Arnold's. Landor's sympathies were mainly outside his country and times, and his writings affect me like capital invested in jewels and precious stones, rather than employed in any great and worthy enterprise. One turns over his beautiful sentences with a certain admiration and enjoyment, but his ideas do not fasten upon one, and ferment and grow in his mind, and influence his judgments and feelings. It is not a question of abstraction or of disinterestedness, but of seriousness of purpose. Emerson is more abstract, more given up to ideal and transcendental valuations, than Landor; but Emerson is a power, because he partakes of a great spiritual and intellectual movement of his times; he is unequivocally of to-day and of New England. So with Arnold, he is unequivocally of to-day; he is unequivocally an Englishman, but an Englishman thoroughly imbued with the spirit of Greek art and culture. The surprise in reading Arnold is never the novelty of his thought or expression, or the force with which his ideas are projected, but in the clearness and nearness of the point of view, and the steadiness and consistency with which the point of view is maintained. He is as free from the diseases of subtlety and over-refinement of thought or expression, and

from anything exaggerated or fanciful, as any of the antique authors. His distinguishing trait is a kind of finer common-sense. One remembers his acknowledgment of his indebtedness to the sanity and clear sense of Franklin. It is here the two minds meet; the leading trait of each is this same sanity and clear sense, this reliance upon the simple palpable reason.

Arnold's reliance upon the near and obvious reason, and his distrust of metaphysical subtleties and curious refinements, are so constant, that he has been accused of parading the commonplace. But the commonplace, when used with uncommon cleverness and aptness, is always the most telling. He thinks the great weakness of Christianity at the present time is its reliance, or pretended reliance, upon the preternatural, and the whole burden of his own effort in this field is to show its basis upon common-sense, upon a universal need and want of mankind. For ingenious, for abstruse reasons Arnold has no taste at all, either in religion, in literature, or in politics, and the mass of readers will sympathize with him. "At the mention of that name *metaphysics*," he says, "lo, essence, existence, substance, finite and infinite, cause and succession, something and nothing, begin to weave their eternal dance before us, with the confused murmur of their combinations filling all the region governed by *her* who, far more indisputably than her late-born rival, political economy, has earned the title of the Dismal Science."

The dangers of such steadiness and literary conservatism as Arnold's are the humdrum and the commonplace; but he is saved from these by his poetic sensibility. How homogeneous his page is, like air or water! There is little color, little variety, but there is an interior harmony and fitness, that are like good digestion, or good health. Vivacity of mind he is not remarkable for, but in singleness and continuity he is extraordinary. His seriousness of purpose seldom permits him to indulge in wit; humor is a more constant quality with him. But never is there wit for wit's sake, nor humor for humor's sake; they are entirely in the service of the main argument. The wit is usually a thrust, as when he says of the Non-conformist that he "has worshiped his fetich of separatism so long that he is likely to wish to remain, like Ephraim, 'a wild ass alone by himself.'" The book in which he uses the weapons of wit and humor the most constantly he calls, with refined sarcasm, "*Friendship's Garland*"—a garland made up mainly of nettles. Like all of his books, it is aimed at the British Philistine, but it is less Socratic than the other books and contains more of Dean Swift. Arnold is always a master of the artful Socratic method, but this book has, in

addition, a playful humor and a nettle-like irony,—an itch which ends in a burn,—that are more modern. What a garland he drops by the hand of his Prussian friend Arminius upon the brow of Hepworth Dixon, in characterizing his style as "*Middle-class Macaulayese*":

"I call it Macaulayese," says the pedant, "because it has the same internal and external characteristics as Macaulay's style; the external characteristic being a hard metallic movement with nothing of the soft play of life, and the internal characteristic being a perpetual semblance of hitting the right nail on the head without the reality. And I call it middle-class Macaulayese because it has these faults without the compensation of great studies and of conversance with great affairs, by which Macaulay partly redeemed them."

By the hand of another character he crowns Mr. Sala thus:

But his career and genius have given him somehow the secret of a literary mixture novel and fascinating in the last degree: he blends the airy epicureanism of the *salons* of Augustus with the full-bodied gayety of our English Cider-cellar.

Most of the London newspapers too receive their garland. That of "*The Times*" is most taking:

"Nay," often this enthusiast continues, getting excited as he goes on, "'*The Times*' itself, which so stirs some people's indignation,—what is '*The Times*' but a gigantic Sancho Panza, following by an attraction he cannot resist that poor, mad, scorned, suffering, sublime enthusiast, the modern spirit; following it, indeed, with constant grumbling, expostulation, and opposition, with airs of protection, of compassionate superiority, with an incessant by-play of nods, shrugs, and winks addressed to the speculators; following it, in short, with all the incurable recalcitrancy of a lower nature, but still following it?"

In "*Friendship's Garland*" many of the shafts Arnold has aimed at his countrymen in his previous books are re-feathered and re-pointed and shot with a grace and playful mockery that are immensely diverting. He has perhaps never done anything so artistic and so full of genius. It fulfills its purpose with a grace and a completeness that awaken in one the feeling of the delicious; it is the only one of his books one can call delicious.

The force and value of the main drift of Arnold's criticism are probably greater in England than in this country, because, in the first place, the cramped, inflexible, artificial and congested state of things which prevails in England does not prevail to anything like the same extent among us; and because, in the second place, with us the conscience of the race needs stimulating more than the reason needs clearing. We are much more hospitable to ideas than is the British Philistine, but, as a people, we are by no means correspondingly sensitive and developed on the side of conduct. We need Hebraizing more than we need Hellenizing; we need Carlyle more than we need Arnold. Yet we need Arnold too.

His recent utterances upon us and our civilization seem to me just and timely. They are in keeping with the general drift of his teachings, and could not well be other than they are. That beauty and distinction, that reverence and truthfulness and humility and good manners are at a low ebb in this country—who can deny it? and that our news-

paper press partakes of this condition and is, in a measure, responsible for it—who can deny that?*

Moreover, the questions of culture, of right reason, and of a just mean and measure in all things, are always vital questions, and no man of our time has spoken so clear and forcible a word upon them as has Matthew Arnold.

John Burroughs.

SELINA'S SINGULAR MARRIAGE.

IT is a common enough saying that truth is stranger than fiction; and indeed, though I have read many novels in my time,—I was always mad for novels,—I have never yet come across a tale in any book that was half so strange as the story of Selina Jarvis's marriage. But Selina is my cousin, and I happened to be there, and so can vouch that every word of it is true.

It happened years ago, when I was a girl and much less sensible than I am now, and I had just arrived at my aunt's on my yearly visit. I was not overfond of my aunt, nor she of me; for my father was a rich man, and I was city bred, and had had advantages of education and dress and society such as with her straitened means and in her quiet country home were totally lacking to Selina, and Aunt Jarvis was one of those who consider other people's blessings in the light of personal affronts, as if they were so many flags of triumph wantonly flaunted in her face by the victor. But Selina was my bosom friend, and not a thought of jealousy or envy had ever troubled her gentle spirit.

She was one of the sweetest, dearest, loveliest girls I ever saw; fair and frail and dainty, with great, wondering blue eyes full of the dreams of a scarcely forgotten childhood. Oh, how pretty she was! Yet, in looking at her, one thought not so much of her and her delicate beauty as of a host of lovely visionary things of which one seemed suddenly reminded—of soft sunlight stealing through summer leaves; of drifting snows; of pale wind-flowers, too fragile for perfume; of sweet, far strains of music that one held one's breath to hear and never fully caught. One felt instinctively that she was destined for no common fate, and one longed to gather her in one's arms and shield her with one's very heart-blood from all life's storms, or to shut her up safely, like the beautiful princesses of the fairy-tales, in some lofty tower beyond reach of the world's toil and

soil, where, standing at its base, troops of hopeless lovers should woo her with incessant song, singing to her through the noontide and the midnight, beneath blazing suns and beneath cold dim stars, turning the sweet madness of their despair into a lovely melody to soothe her dreams. Ah, my dear little Selina, how I loved her!

But to go back to my story. A simple enough story, too, when all is told.

Well, I had not been two hours in my aunt's house before I felt that there was something unusual in the atmosphere. Selina was unchanged, greeting me with the tender smile and butterfly kiss fitted to her sweet lips; but my aunt seemed restless, and preoccupied, and anxious, and ever and anon glanced in my direction with a disapprobation she was at no pains to hide.

"What is it, Aunt?" I abruptly asked at last. "Is it me or my dress that you don't like?"

"It's your dress," she answered shortly. "You'll do well enough."

By which I knew at once she meant that I was as plain as ever, but altogether too well dressed. I got up and surveyed myself in the glass with a little laugh. Not being gifted with good looks, I made what amends I could to the world for the deficiency by uncommonly good dressing; and, to tell the truth, I was just a little vain of my figure, and felt that upon the whole it was about as well to be stylish as to be handsome.

"Are you going to keep that on?" continued my aunt, with increasing disapproval. "You had better change it for tea. That gray moiré hair you used to wear last summer would do. We've company coming, and that's your traveling dress, is n't it?"

"I traveled in it to-day, but it was not fabricated exclusively for railway purposes," I replied, noting with considerable satisfaction how admirably it fitted and how citified and complete my whole toilet looked beside the home-made costumes of my aunt and cousin. "Who is coming?"

* See Mrs. Schuyler van Rensselaer's "Open Letter" in this number of THE CENTURY.

"Oh, it 's only two gentlemen," said Selina, fingering my buttons admiringly. "They won't notice that your dress is dark, and you do look so nice in it. Don't change it, Janey."

My aunt looked hard from my dress back to her daughter's. Selina had on one of her lightest, freshest muslins, the only one in her simple wardrobe that had thus far escaped that deleterious process known as the wash, and there was a suspicious newness about her ribbons. She was even uncommonly sweet and dainty.

"No, I'll not change just for two gentlemen," I said, quite as conscious as was Aunt Jarvis that no other dress could suit me better, and that I looked as well in my way as Selina did in hers. "And I am happy to inform you, Aunt, that your eyes will never be tortured by seeing me in that odious gray mo-hair again. It was preëminently unadapted to my yellow skin. I have sent it to the missionaries. Who are the gentlemen, Selina?"

"Mr. Eaton and his friend. They are going to be in town for some time, and he brought a letter of introduction to us, so Mamma wants to be polite to him. She likes him."

"Which him? Mr. Eaton or his friend?"

"Oh, Mr. Eaton—not Mr. Opdyke. Only Mr. Opdyke is traveling with him, so of course Mamma has to ask him too."

"Jane can take him off our hands now," interrupted my aunt. "I don't doubt he and she will get on capitally together."

I instantly comprehended that there was some particular and insuperable objection to Mr. Opdyke. I looked at my aunt defiantly. "What is it?" I asked. "Is he poor?"

She changed color a little and looked uneasily at Selina.

"It does not matter what he is, so far as we are concerned," she answered. "He is nothing to us. It is Mr. Eaton who is our friend."

I looked at Selina too. She was busy smoothing out a tiny crease in her flounces. The droop of her head had brought a faint pink tinge into her cheek.

"I am sorry for Mr. Opdyke," she said softly, without looking up. "He does n't seem to have many friends. He is quite poor, I believe; and he 's ugly, and rather old, and I am afraid he is not very good either."

"A brilliant category of virtues by which to commend him to me," I declared, laughing. "Poor, old, ugly, and wicked. We shall be sworn friends in five minutes. And is Mr. Eaton young, rich, handsome, and good?"

It was Aunt Jarvis who answered, for Selina was still busy over her flounces, and pinker than ever.

"Yes," she said, emphatically. "Harry Eaton is everything, in every way worthy and attract-

ive. He is one among a thousand. I don't see a thing I could wish changed in him."

"I think I'll get a bunch of sweet-peas," said Selina irrelevantly, and slipped slyly away. I went to the window and stood watching her little figure in the garden outside, flitting here and there over the lawn lightly as a thistle-down blown by the wind. Aunt Jarvis resumed her work,—she was hemming kitchen towels, I think, or something equally serviceable and homely,—and presently I heard a faint sigh from where she sat. I faced about immediately. It was so very odd to hear Aunt Jarvis sigh. It was like an open confession of weakness, and that was the last thing one expected from her.

"What 's the matter, Aunt?" I asked.

She did not answer, but kept on with her ugly work, jerking the needle sharply through the coarse stuff as if each stitch were a protest against it. Then the thread broke, and she took the opportunity to reply, while hunting in her basket for a stouter spool:

"I wish that man and you were in Jericho together," she remarked.

"Mr. Eaton and I, Aunt? If he is so uniquely delightful, I should not object."

"Look here, Jane," said my aunt bluntly, giving a vexed push to her basket that nearly upset it. "You are rich and well placed. You don't lack for admirers at home, while my Selina may never have such a chance as this in all her life again. She will certainly never meet another man like Harry Eaton in this stupid little town. He is everything I could desire for her. I would give the world and all to see her safely married to him."

"Make your mind easy as to me, Aunt," I replied lightly. "I never consciously interfere with anyone's ewe lamb, and really I think I should prefer this wicked Mr. Opdyke to even the angel Gabriel himself. You have no idea how irresistible a fascinating sinner is to me."

"I beg you will not teach Selina any such arrant nonsense," said my aunt sharply. "You are not my daughter, and may, therefore, marry whom you please without my consent, and I fancy there is small likelihood of the angel Gabriel entering the lists against any of your suitors; but I would rather see my child dead to-day than know she was ever to become the wife of Mr. Opdyke. I wish to Heaven he had not come here."

"My dear Aunt," I remonstrated, surprised at her earnestness, "do you suppose for an instant that that lovely, innocent girl of yours could ever be attracted towards any one less pure and good and lovely than herself? You may trust her to her own instincts surely."

Aunt Jarvis shook her head.

"I would n't trust the very best instincts in the world around the corner where there's a man in the case," she said gloomily. "There is not a girl living but will fall in love in the wrong place if she can. Trust her to do that. If you are wanted to walk one way, it's human nature to want to walk the other. As a rule, like is attracted by unlike vastly more than by like. Did you ever in your life know a girl to care for the right man if there was a wrong one anywhere about whom she could lose her heart to instead? How many people marry just the one of all others that they should? Are not half the unhappy marriages one sees due to the fact that the girl will not be guided or warned by those who know better than she?"

As my aunt spoke I took a rapid mental survey of all the matrimonial ventures I had known of, and could not but secretly agree with her.

"Here's Mr. Eaton," said Selina's soft voice in the doorway. "Mr. Opdyke staid outside to finish his cigar."

She lingered a few moments on the threshold, playing with her sweet-peas, and watching us both shyly from under her long lashes while her mother introduced the guest. Then she quietly slipped away again. Of course, she had gone back to Mr. Opdyke.

I shall never forget that summer's visit. The two young men were at the house daily. Morning, noon, or night there was always some pretext that brought them both, and daily Selina's voice grew sweeter, her smile brighter, her eyes bluer, her cheeks pinker. She was like some lovely rosebud unfolding visibly before our eyes in the glow of a radiant mid-day. I watched her with growing anxiety. How could any one help loving so unutterably lovely a thing? I laughed to myself as I looked at my sallow face, with its marked features, colorless cheeks, and small, deep-set black eyes. "Aunt Jarvis may be without fear on my score," I thought grimly; "the night is no rival for the day."

But there was no mistaking Harry Eaton's feelings. The blind could have seen them. My advent noways affected him. He was openly and irretrievably in love with Selina, just as everybody wished him to be. Ah, why could she not care for him? How was it possible for her to resist him? In her place I could not but have yielded at once. He was so handsome and good, and so charming in every way, that his riches, even in the eyes of the less wealthy, were accounted the least of his many merits. He was the very model of a lover. He would be the very model of a husband. Why should gentle little Selina be the only one of us all to fail to appreciate him rightly?

But from the first I felt that it was utterly

hopeless. Harry was too suitable. Nature had too obviously cut them out for each other. Everybody desired the match too much. It was too exactly what Selina ought to do. Had there been but a breath of opposition! As it was, I foresaw that the natural perversity of things would inevitably lead her to prefer Mr. Opdyke. It did seem too hard. I studied Mr. Opdyke closely. How was it possible that Selina should choose him in preference to Harry Eaton? He was an oldish young man, already quite bald, and so tall and thin as to be ungainly, with large, clumsy features that were not of any particular shape, and a provokingly cynical smile. He was poor and lazy, and, the better to cope with these difficulties, was maliciously endowed with extravagant habits and expensive tastes. He smoked to excess. He was devoted to horses and never missed a race, not even on Sundays, it was said. In short, he was notoriously the black sheep of a family never remarkable for its white ones. He was selfish, morose, fault-finding, and sharp-tongued. There seemed at first absolutely no redeeming quality in him, and yet something indefinable about the man attracted and held one against one's will,—a feeling, perhaps, that after all he was better than he seemed, that beguiled one into an unwilling admiration for the truthfulness of a nature which at least never dissembled or glossed over its weaknesses, so that, bad as he was, at any rate one knew the worst of him at once, while whatever extenuating virtues he had (and of course no poor wretch is ever wholly without good) were discoverable only upon further acquaintance. It was impossible, therefore, altogether to dislike him, try as one would; and in the face of one's most violent mental protest, one found one's self not only enduring him, but before long positively enjoying his sarcastic, brilliant talk, and thinking other people commonplace beside him. Was it any wonder, then, that Selina, our innocent, white-souled dove, should not escape the snare? He never sought her out, apparently; indeed, he seemed as indifferent to one human being as to another, and was at no trouble to please anybody; and yet, day by day, hour by hour, I felt more and more what an irresistible power of fascination the man possessed. I could not bear to see my darling with him, looking up in his ugly face with her confiding, trustful smile. I could not have her give her heart's first fresh love so unworthily as this. She was too precious, too rare, too worshipful for such a fate. I did all that I could to warn her. I pointed out his faults unsparingly, and in her sweet charity she found some unsuspected virtue in him to counterbalance every one I named. I declared that I

hated and despised him above all men I had ever met, and she only pitied and excused him the more. I ridiculed him, made fun of his awkwardness and his ugliness, and mimicked him with a spirit and success that would have made my fortune on the stage. She looked at me with reproachful blue eyes, and said never a word. Then I contrasted him with Mr. Eaton, praising the one as ardently as I mercilessly decried the other, and in the middle of it all she jumped up, throwing her arms around me and rubbing her soft cheek against my lips, and whispered, "O Cousin Janey, Cousin Janey! Do you like Mr. Eaton so very, very much as that?"

Then she ran out of the room, and when I next saw her she was seated in the swing with the two men standing by her, and she was talking earnestly with Mr. Opdyke, her pretty head bent towards him with the look of a child waiting to be kissed, and paying no attention whatever to Harry, who held the rope of the swing not an inch above where her tiny white fingers clasped it, and was swaying her gently to and fro.

Well, I did what I could to avert the impending calamity. I am no flirt by nature, but I became one for Selina's sake. I set myself deliberately to entice the monster away from her. I wore my most stylish dresses, and the ones that my quick perception saw best pleased his fastidious fancy; for, as he never paid a compliment, one could but guess at his likings. I took the utmost pains to smooth my crisp black locks into silkiness, and to remove the freckles from my skin,—what mistaken genius first called them beauty-spots?—and to keep my hands white and soft. I aired my every accomplishment for his benefit. I left my sketches around accidentally in places where I thought he would find them. The best ones had been done by an artist friend of mine, but I scratched my initials in the corner *pro tem.*, and strewed them around with the rest. I brought my German and French books down into the drawing-room, leaving the dictionaries upstairs, and fished out one or two abstruse works from the library, which I pretended to read for pleasure. I sang uninvited in the evenings, knowing instinctively the songs that he liked best, and I never sang so well. I have not much of a voice: it is thin, and not nearly so sweet as Selina's; but it has been excellently trained, and when it is carefully used—in a sort of suppressed, reckless way that presupposes I might do wonders did I but choose to take pains or to let it all out—it is quite effective.

I was singing so one evening, throwing all the smothered passion into my tones of which they are capable,—that broken-hearted way of singing is such a telling trick, though any four-

dollar-the-lesson singing-master can teach it,—and as I went on, all talk in the room ceased, and I felt, for I never looked at him, that Mr. Opdyke had drawn away from everybody, and was standing in the window bay, listening intently. Then, because I knew I was graceful and danced well, I coaxed Selina to play one of her horrid little rattling waltzes, while Mr. Eaton and I pirouetted slowly around the room, passing and repassing before the window where that ungainly figure stood drawn back from us all, while Aunt Jarvis glared at me exasperatedly, looking at me as if she were going to jump up any moment to tear my partner from me. It requires an uncommonly well-balanced mind to discriminate between a girl's dancing *with* one man, and her dancing *for* another.

Later in the evening we all went out on the piazza, and Mr. Opdyke walked off to the other end to enjoy his inevitable cigar. At least he was considerate of other people's rights, and never obtruded his failings upon us. Every now and then Selina glanced towards him uneasily.

"It seems so inhospitable to leave him off there alone," she said at last. "It is a pity that mother minds the smoke so much, or he could just as well sit here with us. I am afraid he feels lonely."

I saw that she would go to him in another moment, so I quietly left my seat and sauntered leisurely down the piazza towards him, under pretense of getting a better view of the moonlit lawn. Selina looked quite satisfied. All city people are supposed to rave over the moonlight, as if the country had a monopoly of it, and it were procurable nowhere else. Naturally my slow walk came to a standstill by the time I reached Mr. Opdyke; but for a while I answered him only in monosyllables, suffering myself, however, to be drawn by degrees into more and more animated conversation, until at last I found myself talking for that one man as I had never talked in the most brilliant assembly before. I could not tell whether I was succeeding or not in my well-meant effort to convince him of my mental superiority to my little country-bred cousin, but at least I was keeping him from her. There was safety for her in that.

I saw Selina watching us, and even at that distance I could detect a shade of surprise upon her lovely face. She was undoubtedly wondering at my long voluntary *tête-à-tête* with a man whom I so unsparingly denounced to her. How exquisite she looked in her pale-tinted dress, with a lacey shawl wound carelessly around her head and shoulders to protect her from the night dews. She might have been Titania herself. Mr. Opdyke glanced

towards her too, then turned and looked straight down at me. I felt the cruel moonlight playing pitilessly upon my face. There was nothing of Titania about me.

"Do you know," he said, slowly knocking off the ashes of his cigar upon the balustrade against which we leaned, careless that the greater portion fell over my dress, "I think your cousin is the very prettiest little thing I have ever seen. I particularly admire blondes."

I felt myself flushing suddenly, as if his words had been an impertinence especially directed against my brunette plainness, and I was all the more indignant because I fancied he intended me to understand him exactly as I had done.

"Let us go back," I said. "Your cigar spoils the moonlight."

"As you please," he answered, tossing it away. "I do not in the least mind what you do with me."

At this I felt angrier with him than ever; so angry, that the next day I could not bring myself to talk civilly with him, even for Selina's sake, though I saw her abandon Mr. Eaton in the most barefaced manner to devote herself to this moody man, from whom even she could scarcely win a smile, and who forced his companionship upon us for no better reason than to be a little less bored with himself. He was particularly unamiable that day, and provoked me into several rude speeches, and by evening I would have nothing whatever to do with him. If Selina chose to rush headlong to such a fate, she might. I was very, very sorry for her, but I had done what I could, and surely need no longer hold myself responsible. She was not blindfold, and despite her youth she was quite old enough to know better and not wilfully to choose chaff when she might have wheat.

But I made one last effort even then, as I sat sulkily in the window, attired in my most unbecoming dress and my hair all rough and fuzzy: what was the use of taking any more pains with my toilet? All my city fashions together could not outshine this poor child's fatal beauty that seemed leading her so fast into her life's mistake.

"Selina," I said, catching her hand as she passed near me, "why will you devote yourself to that man? Do go back to Mr. Eaton, and leave him to himself. He is not worth a tithe of the attention you bestow upon him."

"But I am so sorry for him," Selina murmured back. "Every one likes Mr. Eaton, and nobody seems to like Mr. Opdyke at all but just me. I really think he is ever so much nicer than you say."

"Oh, very well," I rejoined, shrugging my shoulders. "If you like bears, by all means

put a chain on him and lead him round. Perhaps, by and by, if he tamed down, you can get him to dance to a drum."

"I'll dance now, if you like,—to the piano," said the bear's voice, directly behind us. "Miss Selina, will you favor me with a turn?"

I rose, mortified beyond endurance at having been overheard, and went dully to the piano, playing mechanically on and on for I did not know or care how long. It seemed to me the cracked old instrument had never been so outrageously out of tune. Every note set me on edge.

"You are keeping atrocious time," said a voice in my ear at last. "I don't think Miss Selina can do much worse. Let her try."

Then Selina, all bright and breathless with dancing, took my place with a gay little laugh, and Harry immediately sat down by her to "beat time," he said, and in another moment I found myself gliding around the room with Mr. Opdyke. He danced divinely, I will say that much for him,—these ungainly men sometimes do,—and we kept on and on and on, with never a word spoken between us. Aunt Jarvis had left the room, quite content with the present division of couples, and the pair at the piano were chatting merrily, but we two danced on in utter silence, as if engaged in some solemn ceremony that words would desecrate. It was unutterably ridiculous, and finally I stopped short.

"It is too silly," I said petulantly.

Mr. Opdyke stopped too, but without releasing me.

"It is rather," he said coolly, not an atom flushed or flurried by the exercise. "Dancing is always foolish. I think I'll go and smoke. But tell me first what possessed you to put on that hideous dress to-night? I never saw you look so badly."

"Thank you," I replied, flashing up a vindictive look at him. "I think I have capabilities of ugliness nearly equal to your own. Will you let me go, please?"

Selina's frightful waltz had not yet come to an end. She and Harry were improvising a still more dreadful duet out of it, and were quite wild with delight over their success. Mr. Opdyke suddenly drew me close and bent low over me.

"Jane," he whispered, "I could dance on so forever!"

With a cry of surprise and alarm and I know not what emotion beside, I broke from him and fled upstairs to my own room like one pursued by demons. There I sat all the rest of the evening alone in the dark, with my heart beating painfully, while footsteps paced steadily up and down the piazza beneath—Mr. Opdyke's footsteps. He was having his

cigar. He could readier forego heaven itself than his evening smoke. Then the sound of voices stole up to me indistinctly. Somebody had joined him there. It might be Selina or Aunt Jarvis, I could not tell which, and I said to myself that it did not at all matter which, but that nothing should ever, *ever* tempt me to go downstairs again when I knew that that man was there.

Suddenly my door opened softly, and Selina ran in and knelt down by me, burying her face in my dress. I could feel that she was trembling.

"O Janey! O Janey!" she whispered. "I have something wonderful to tell you. I am so happy I can't keep it to myself. Janey, I am engaged!"

Such an odd sensation shot through me! I always thought before it was a figure of speech to say that one's heart sank; but as the child spoke, I absolutely felt my heart go down, down, down, till I did not know where it would bring up. There is nothing idiomatic about the phrase. The thing positively happens.

I pushed the child involuntarily a little away from me.

"I have been expecting it," I said harshly. "I have seen it all along, of course. If you wish to throw yourself away abominably, do so, but don't come to me for congratulations. There's not a man in this world that I hate so intolerably as I do Alston Opdyke."

"Alston Opdyke!" repeated Selina, lifting her sweet face in utmost amazement. "But Janey, you did n't suppose I ever cared for Mr. Opdyke in that way, did you? Why, I would n't marry him for all the world, though I'm just as sorry for him as I can be, because he is so disagreeable, though he's nothing like so bad as we all thought him at first. But, O Janey, Janey! how could you think it? Why,

I have loved Harry Eaton with all my heart ever since the first day I saw him. I never for one moment thought of anybody but him, and I think he guessed it all along. Do kiss me, Janey!"

Then something like a great gush of relief swept over me and took away my words, and I kissed her in perfect silence.

So that was the singular marriage that Selina made. She went exactly contrary to the time-old custom of things, which, in every case is that they turn out wrong, of course. She outwitted fate, which, having thrown both the evil and the good in her way, made it clear to onlookers that she would naturally eschew the good and select the evil. She married precisely as she should have married, and entirely in accordance with the wishes of those who loved her most and who could best judge for her, securing her happiness from the first and forever, without a struggle, without a doubt, and without a cross. Fortunate little Selina! Thrice blessed little Selina!

For, alas that it is so, but how many of us know and choose the best when it is within our reach? How many of us, holding our fates in our hands, do not mar rather than make our fortunes by our arrogance and pride of willfulness? Indeed, it is a marvel to me, to this day, that Selina should not out of sheer contrariness have fallen in love with the thoroughly unworthy Mr. Opdyke instead, and have clung to him, for better, for worse, mainly for worse, amid the shrieking protestations of her entire circle of outraged friends and relations. For, situated as she was, that is what nine hundred and ninety-nine girls out of a thousand would have done, to rue it their lifelong thereafter—as I have rued it. For I married Mr. Opdyke.

Grace Denio Litchfield.

A CRY.

O WANDERER in unknown lands, what cheer?
 How dost thou fare on thy mysterious way?
 What strange light breaks upon thy distant day,
 Yet leaves me lonely in the darkness here?
 Oh, bide no longer in that far-off sphere,
 Though all Heaven's cohorts should thy footsteps stay.
 Break through their splendid, militant array,
 And answer to my call, O dead and dear!
 I shall not fear thee, howsoe'er thou come.
 Thy coldness will not chill, though Death is cold—
 A touch and I shall know thee, or a breath;
 Speak the old, well-known language, or be dumb;
 Only come back! Be near me as of old,
 So thou and I shall triumph over Death!

Louise Chandler Moulton.

THE TEXAS TYPE OF COWBOY.

THE RANCHMAN'S RIFLE ON CRAG AND PRAIRIE.

BY THEODORE ROOSEVELT.

ILLUSTRATIONS BY FREDERIC REMINGTON.

THE ranchman owes to his rifle not only the keen pleasure and strong excitement of the chase, but also much of his bodily comfort; for, save for his prowess as a hunter and his skill as a marksman with this, his favorite weapon, he would almost always be sadly stinted for fresh meat. Now that the buffalo have gone, and the Sharps rifle by which they were destroyed is also gone, almost all ranchmen use some

form of repeater. Personally I prefer the Winchester, using the new model, with a 45-caliber bullet of 300 grains, backed by 90 grains of powder.

From April to August antelope are the game we chiefly follow, killing only the bucks; after that season, black-tail and white-tail deer. Occasionally we kill white-tail by driving them out of the wooded bottoms with the help of the slow, bell-mouthed, keen-nosed Southern track-hounds; or more often take the swift gazehounds and, on the open prairie, by sheer speed, run down antelope, jack-rabbit, coyotes, and foxes. Now and then we get a chance at mountain sheep, and more rarely at larger game still. As a rule, I never shoot anything but bucks. But in the rutting season, when the bucks' flesh is poor, or when we need to lay in a good stock of meat for the winter, this rule of course must be broken.

A small band of elk yet linger round a great patch of prairie and Bad Lands some thirty-five miles off. In 1885 I killed a good bull out of the lot; and once last season, when we were sorely in need of meat for smoking and drying, we went after them again. At the time most of the ponies were off on one of the round-ups, which indeed I had myself just left. However, my two hunting-horses, Manitou and Sorrel Joe, were at home. The former I rode myself, and on the latter I mounted one of my men

who was a particularly good hand at finding and following game. With much difficulty we got together a scrub wagon team of four as unkempt, dejected, and vicious-looking broncos as ever stuck fast in a quicksand or balked in pulling up a steep pitch. Their driver was a crack whip, and their load light, consisting of little but the tent and the bedding; so we got out to the hunting-ground and back in safety; but as the river was high and the horses were weak, we came within an ace of being swamped at one crossing, and the country was so very rough that we were only able to get the wagon up the worst pitch by hauling from the saddle with the riding-animals.

We camped by an excellent spring of cold, clear water—not a common luxury in the Bad Lands. We pitched the tent beside it, getting enough timber from a grove of ash to make a large fire, which again is an appreciated blessing on the plains of the West, where we often need to carry along with us the wood for cooking our supper and breakfast, and sometimes actually have to dig up our fuel, making the fire of sage-brush roots, eked out with buffalo chips. Though the days were still warm, the nights were frosty. Our camp was in a deep valley, bounded by steep hills with sloping, grassy sides, one of them marked by a peculiar shelf of rock. The country for miles was of this same character, much broken, but everywhere passable for horsemen, and with the hills rounded and grassy, except now and then for a chain of red scoria buttes or an isolated sugar-loaf cone of gray and brown clay. The first day we spent in trying to find the probable locality of our game; and after beating pretty thoroughly over the smoother country, towards nightfall we found quite fresh elk tracks leading into a stretch of very rough and broken land about ten miles from camp.

We started next morning before the gray was relieved by the first faint flush of pink, and reached the broken country soon after sunrise. Here we dismounted and picketed our horses, as the ground we were to hunt through was very rough. Two or three hours passed before we came upon fresh signs of elk. Then we found the trails that two, from the size presumably cows, had made the pre-

ceding night, and started to follow them, carefully and noiselessly, my companion taking one side of the valley in which we were, and I the other. The tracks led into one of the wildest and most desolate parts of the Bad Lands. It was now the heat of the day, the brazen sun shining out of a cloudless sky, and not the least breeze stirring. At the bottom of the

could, the game must have heard or smelt us; for after a mile's painstaking search we came to a dense thicket in which were two beds, evidently but just left, for the twigs and bent grass-blades were still slowly rising from the ground to which the bodies of the elk had pressed them. The long, clean hoof-prints told us that the quarry had started off at a

OUR ELK OUTFIT AT THE FORD.

valley, in the deep, narrow bed of the winding water-course, lay a few tepid little pools, almost dried up. Thick groves of stunted cedars stood here and there in the glen-like pockets of the high buttes, the peaks and sides of which were bare, and only their lower, terrace-like ledges thinly clad with coarse, withered grass and sprawling sage-bush; the parched hill-sides were riven by deep, twisting gorges, with brushwood in the bottoms; and the cliffs of coarse clay were cleft and seamed by sheer-sided, canyon-like gullies. In the narrow ravines, closed in by barren, sun-baked walls, the hot air stood still and sultry; the only living beings were the rattlesnakes, and of these I have never elsewhere seen so many. Some basked in the sun, stretched out at their ugly length of mottled brown and yellow; others lay half under stones or twined in the roots of the sage-brush, and looked straight at me with that strange, sullen, evil gaze, never shifting or moving, that is the property only of serpents and of certain men; while one or two coiled and rattled menacingly as I stepped near.

Yet, though we walked as quietly as we

swinging trot. We followed at once, and it was wonderful to see how such large, heavy beasts had gone up the steepest hill-sides without altering their swift and easy gait, and had plunged unhesitatingly over nearly sheer cliffs down which we had to clamber with careful slowness.

They left the strip of rugged Bad Lands and went on into the smoother country beyond, luckily passing quite close to where our horses were picketed. We thought it likely they would halt in some heavily timbered coulies six or seven miles off, and as there was no need of hurry, we took lunch and then began following them up—an easy feat, as their hoofs had sunk deep into the soft soil, the prints of the dew-claws showing now and then. At first we rode, but soon dismounted, and led our horses.

We found the elk almost as soon as we struck the border of the ground we had marked as their probable halting-place. Our horses were unshod and made but little noise; and coming to a wide, long coulie, filled with tall trees and brushwood, we as usual separated, I

going down one side and my companion the other. When nearly half-way down he suddenly whistled sharply, and I of course at once stood still, with my rifle at the ready. Nothing moved, and I glanced at him. He had squatted down and was gazing earnestly over into the dense laurel on my side of the coulie. In a minute he shouted that he saw a red patch in the brush which he thought must be the elk, and that it was right between him and myself. Elk will sometimes lie as closely as rabbits, even when not in very good cover; still I was a little surprised at these not breaking out when they heard human voices. However, there they staid; and I waited several minutes in vain for them to move. From where I stood it was impossible to see them, and I was fearful that they might go off down the valley and so offer me a very poor shot. Meanwhile, Manitou, who is not an emotional horse, and

secured us an ample stock of needed fresh meat; and the two elk lay very handily, so that on the following day we were able to stop for them with the wagon on our way homeward, putting them in bodily, and leaving only the entrails for the vultures that were already soaring in great circles over the carcasses.

In the fall of 1886 I went far west to the Rockies and took a fortnight's hunting trip among the northern spurs of the Cœur d'Alène, between the towns of Heron and Horseplains in Montana. There are many kinds of game to be found in the least known or still untrodden parts of this wooded mountain wilderness—caribou, elk, ungainly moose with great shovel horns, cougars, and bears. But I did not have time to go deeply into the heart of the forest-clad ranges, and devoted my entire energies to the chase of but one animal, the white antelope-goat, at present the least known and rarest of all American game.

We started from one of those most dismal and forlorn of all places, a dead mining town, on the line of the Northern Pacific Railroad. My foreman, Merrifield, was with me, and as guide I took a tall, lithe, happy-go-lucky mountaineer, who, like so many of the restless frontier race, was born in Missouri. Our outfit was simple, as we carried only blankets, a light wagon sheet, the ever-present camera, flour, bacon, salt, sugar, and coffee; canned goods are very unhandy to pack about on horseback. Our rifles and ammunition, with the few cooking-utensils and a book or two, completed the list. Four solemn ponies and a ridicu-

lous little mule named Walla Walla bore us and our belongings. The Missourian was an expert packer, versed in the mysteries of the "diamond hitch," the only arrangement of the ropes that will insure a load staying in its place. Driving a pack train through the wooded paths and up the mountain passes that we had to traverse is hard work anyhow, as there are sure to be accidents happening to the animals all the time, while their packs receive rough treatment from jutting rocks and overhanging branches, or from the half-fallen tree-trunks under which the animals wriggle; and if the loads are continually coming loose, or slipping so as to gall the horses' backs and make them sore, the labor and anxiety are increased tenfold.

In a day or two we were in the heart of the vast wooded wilderness. A broad, lonely river ran through its midst, cleaving asunder the

OUR CAMP.

is moreover blessed with a large appetite, was feeding greedily, rattling his bridle-chains at every mouthful; and I thought he would act as a guard to keep the elk where they were until I shifted my position. So I slipped back, and ran swiftly round the head of the coulie to where my companion was still sitting. He pointed me out the patch of red in the bushes, not sixty yards distant, and I fired into it without delay, by good luck breaking the neck of a cow elk, when immediately another one rose up from beside it and made off. I had five shots at her as she ascended the hill-side and the gentle slope beyond; and two of my bullets struck her close together in the flank, ranging forward—a very fatal shot. She was evidently mortally hit, and just as she reached the top of the divide she stopped, reeled, and fell over, dead.

We were much pleased with our luck, as it

IN A CANYON OF THE CŒUR D'ALÈNE.

mountain chains. Range after range, peak upon peak, the mountains towered on every side, the lower timbered to the top, the higher with bare crests of gray crags or else hooded with fields of shining snow. The deep valleys lay half in darkness, hemmed in by steep, timbered slopes and straight rock walls. The torrents, broken into glittering foam masses,

sprang down through the chasms they had rent in the sides of the high hills, lingered in black pools under the shadows of the scarred cliffs, and reaching the rank, tree-choked valleys, gathered into rapid streams of clear brown water, that drenched the drooping limbs of the tangled alders. Over the whole land lay like a shroud the mighty growth of the

unbroken evergreen forest—spruce and hemlock, fir, balsam, tamarack, and lofty pine.

Yet even these vast wastes of shadowy woodland were once penetrated by members of that adventurous and now fast vanishing folk, the American frontiersmen. Once or twice, while walking silently over the spongy moss beneath the somber archways of the pines, we saw on a tree-trunk a dim, faint ax-scar, the bark almost grown over it, showing

and eager. There is no plain so lonely that their feet have not trodden it; no mountain so far off that their eyes have not scanned its grandeur.

We took nearly a week in going to our hunting-grounds and out from them again. This was tedious work, for the pace was slow, and it was accompanied with some real labor. In places the mountain paths were very steep and the ponies could with difficulty scramble

THE INDIANS WE MET.

where, many years before, some fur-trapper had chopped a deeper blaze than usual in making out a "spotted line"—man's first highway in the primeval forest; or on some hill-side we would come across the more recent, but already half-obliterated, traces of a miner's handiwork. The trapper and the miner were the pioneers of the mountains, as the hunter and the cowboy have been the pioneers of the plains; they are all of the same type, these sinewy men of the border, fearless and self-reliant, who are forever driven restlessly onward through the wilderness by the half-formed desires that make their eyes haggard

along them; and once or twice they got falls that no animals less tough could have survived, Walla Walla being the unfortunate that suffered most. Often, moreover, we would come to a windfall, where the fallen trees lay heaped crosswise on one another in the wildest confusion, and a road had to be cleared by ax work. It was marvelous to see the philosophy with which the wise little beasts behaved, picking their way gingerly through these rough spots, hopping over fallen tree-trunks, or stepping between them in places where an Eastern horse would have snapped his leg short off, and walking composedly along

CARRYING FRESH MEAT TO CAMP.

narrow ledges with steep precipices below. They were tame and friendly, being turned loose at night, and not only staying near by, but also allowing themselves to be caught without difficulty in the morning; industriously gleaning the scant food to be found in the burnt places or along the edges of the brooks, and often in the evening standing in a patient, solemn semicircle round the camp fire, just beyond where we were seated. Walla Walla, the little mule, was always in scrapes. Once we spent a morning of awkward industry in washing our clothes; having finished, we spread the partially cleansed array upon the bushes and departed on a hunt. On returning, to our horror we spied the miserable Walla Walla shamefacedly shambling off from the neighborhood of the wash, having partly

chewed up every individual garment and completely undone all our morning's labor.

At first we did not have good weather. The Indians, of whom we met a small band,—said to be Flatheads or their kin, on a visit from the coast region,—had set fire to the woods not far away, and the smoke became so dense as to hurt our eyes, to hide the sun at midday, and to veil all objects from our sight as completely as if there had been a heavy fog. Then we had two days of incessant rain, which rendered our camp none too comfortable; but when this cleared we found it had put out the fire and settled all the smoke, leaving a brilliant sky overhead.

We first camped in a narrow valley, surrounded by mountains so tall that except at noonday it lay in the shadow; and it was

only when we were out late on the higher foothills that we saw the sun sink in a flame behind the distant ranges. The trees grew tall and thick, the underbrush choking the ground between their trunks, and their branches inter-

little water wrens—the water-ousel of the books—made this brook their home. They were shaped like thrushes, and sometimes warbled sweetly, yet they lived right in the torrent, not only flitting along the banks and wading

STALKING GOATS.

lacing so that the sun's rays hardly came through them. There were very few open glades, and these were not more than a dozen rods or so across. Even on the mountains it was only when we got up very high indeed, or when we struck an occasional bare spur, or shoulder, that we could get a glimpse into the open. Elsewhere we could never see a hundred yards ahead of us, and like all plainsmen or mountaineers we at times felt smothered under the trees, and longed to be where we could look out far and wide on every side; we felt as if our heads were in hoods. A broad brook whirled and eddied past our camp, and a little below us was caught in a deep, narrow gorge, where the strangling rocks churned its swift current into spray and foam, and changed its murmurous humming and splashing into an angry roar. Strange

in the edges, but plunging boldly into mid-stream, and half walking, half flying along the bottom, deep under water, and perching on the slippery, spray-covered rocks of the waterfall or skimming over and through the rapids even more often than they ran along the margins of the deep, black pools.

White-tail deer were plentiful, and we kept our camp abundantly supplied with venison, varying it with all the grouse we wanted, and with quantities of fresh trout. But I myself spent most of my time after the quarry I had come to get—the white goat.

White goats have been known to hunters ever since Lewis and Clarke crossed the continent, but they have always ranked as the very rarest and most difficult to get of all American game. This reputation they owe to the nature of their haunts, rather than to their

own wariness, for they have been so little disturbed that they are less shy than either deer or sheep. They are found here and there on the highest, most inaccessible mountain peaks down even to Arizona and New Mexico; but being fitted for cold climates, they are extremely scarce everywhere south of Montana and northern Idaho, and the great majority even of the most experienced hunters have hardly so much as heard of their existence. In Washington Territory, northern Idaho, and north-western Montana they are not uncommon, and are plentiful in parts of the mountain ranges of British America and Alaska. Their preference for the highest peaks is due mainly to their dislike of warmth, and in the north—even south of the Canadian line—they are found much lower down the mountains than is the case farther south. They are very conspicuous animals, with their snow-white coats and polished black horns, but their pursuit necessitates so much toil and hardship that not one in ten of the professional hunters has ever killed one; and I know of but one or two Eastern sportsmen who can boast a goat's head as a trophy. But this will soon cease to be the case; for the Canadian Pacific Railway has opened the haunts where the goats are most plentiful, and any moderately adventurous and hardy rifleman can be sure of getting one by taking a little time, and that, too, whether he is a skilled hunter or not, since at present the game is not difficult to approach. The white goat will be common long after the elk has vanished, and it has already outlasted the buffalo. Few sportsmen henceforth—indeed, hardly any—will ever boast a buffalo head of their own killing; but the number of riflemen who can place to their credit the prized white fleeces and jet-black horns will steadily increase.

The Missourian, during his career as a Rocky Mountain hunter, had killed five white goats. The first he had shot near Canyon City, Colorado, and never having heard of any such animal before had concluded afterward that it was one of a flock of recently imported Angora goats, and accordingly, to avoid trouble, buried it where it lay; and it was not until fourteen years later, when he came up to the Cœur d'Alène and shot another, that he became aware what he had killed. He described them as being bold, pugnacious animals, not easily startled, and extremely tenacious of life. Once he had set a large hound at one which he came across while descending an ice-swollen river in early spring. The goat made no attempt to flee or to avoid the hound, but coolly awaited its approach and killed it with one wicked thrust of the horns; for the latter are as sharp as needles, and are used for

stabbing, not butting. Another time he caught a goat in a bear trap set on a game trail. Its leg was broken, and he had to pack it out on pony-back, a two-days' journey, to the settlement; yet in spite of such rough treatment it lived a week after it got there, when, unfortunately, the wounded leg mortified. It fought most determinedly, but soon became reconciled to captivity, eating with avidity all the grass it was given, recognizing its keeper, and grunting whenever he brought it food or started to walk away before it had had all it wished. The goats he had shot lived in ground where the walking was tiresome to the last degree, and where it was almost impossible not to make a good deal of noise; and nothing but their boldness and curiosity enabled him ever to kill any. One he shot while waiting at a pass for deer. The goat, an old male, came up, and fairly refused to leave the spot, walking round in the underbrush and finally mounting a great fallen log, where he staid snorting and stamping angrily until the Missourian lost patience and killed him.

For three or four days I hunted steadily and without success, and it was as hard work as any I had ever undertaken. Both Merrifield and I were accustomed to a life in the saddle,

DOWN BRAKES!

and although we had varied it with an occasional long walk after deer or sheep, yet we were utterly unable to cope with the Missourian when it came to mountaineering. When we had previously hunted, in the Big Horn mountains, we had found stout moccasins most comfortable, and extremely useful for still-hunting through the great woods and among the open glades; but the multitudinous sharp rocks and sheer, cliff-like slopes of the Cœur

THE FIRST SHOT.

d'Alène rendered our moccasins absolutely useless, for the first day's tramp bruised our feet till they were sore and slit our foot-gear into ribbons, besides tearing our clothes. Merrifield was then crippled, having nothing else but his cowboy boots; fortunately, I had taken in addition a pair of shoes with soles thickly studded with nails.

We would start immediately after breakfast each morning, carrying a light lunch in our pockets, and go straight up the mountain sides for hours at a time, varying it by skirting the broad, terrace-like ledges, or by clambering along the cliff crests. The climbing was very hard. The slope was so steep that it was like going up stairs; now through loose earth, then through a shingle of pebbles or sand, then over rough rocks, and again over a layer of pine needles as smooth and slippery as glass, while brittle, dry sticks that snapped at a touch, and loose stones that rattled down if so much as brushed, strewed the ground everywhere, the climber stumbling and falling over them and finding it almost absolutely impossible to proceed without noise, unless at a rate of progress too slow to admit of getting anywhere. Often, too, we would encounter dense underbrush, perhaps a thicket of little burnt balsams, as prickly and brittle as so much coral; or else a heavy growth of laurel, all the branches pointing downward, and to be gotten through only by main force. Over all grew the vast

evergreen forest, except where an occasional cliff jutted out, or where there were great landslides, each perhaps half a mile long and a couple of hundred yards across, covered with loose slates or granite boulders.

We always went above the domain of the deer, and indeed saw few evidences of life. Once or twice we came to the round footprints of cougars, which are said to be great enemies of the goats, but we never caught a glimpse of the sly beasts themselves. Another time I shot a sable from a spruce, up which the little fox-headed animal had rushed

with the agility of a squirrel. There were plenty of old tracks of bear and elk, but no new ones; and occasionally we saw the foot-marks of the great timber wolf.

But the trails at which we looked with the most absorbed interest were those that showed the large, round hoof-marks of the white goats. They had worn deep paths to certain clay licks in the slides, which they must have visited often in the early spring, for the trails

THE LAST SHOT.

were little traveled when we were in the mountains during September. These clay licks were mere holes in the banks, and were in spring-time visited by other animals besides goats; there were old deer trails to them. The clay seemed to contain something that both birds and beasts were fond of, for I frequently saw flocks of cross-bills light in the licks and stay there for many minutes at a time, scratching the smooth surface with their little claws and bills. The goat trails led away in every direction from the licks, but usually went up hill, zigzagging or in a straight line, and continually growing fainter as they went farther off, where the animals scattered to their feeding-grounds. In the spring-time the goats are clad with a dense coat of long white wool, and there were shreds and tufts of this on all the twigs of the bushes under which the paths passed; in the early fall the coat is shorter and less handsome.

Although these game paths were so deeply worn they yet showed very little fresh goat sign; in fact, we came across the recent trails of but two of the animals we were after. One of these we came quite close to, but never saw it, for we must have frightened it by the noise we made; it certainly, to judge by its tracks, which we followed for a long time, took itself straight out of the country. The other I finally got, after some heart-breaking work and a complicated series of faults committed and misfortunes endured.

I had been, as usual, walking and clambering over the mountains all day long, and in mid-afternoon reached a great slide, with half-way across it a tree. Under this I sat down to rest, my back to the trunk, and had been there but a few minutes when my companion, the Missourian, suddenly whispered to me that a goat was coming down the slide at its edge, near the woods. I was in a most uncomfortable position for a shot. Twisting my head round, I could see the goat waddling downhill, looking just like a handsome tame billy, especially when at times he stood upon a stone to glance around, with all four feet close together. I cautiously tried to shift my position, and at once dislodged some pebbles, at the sound of which the goat sprang promptly up on the bank, his whole mien changing into one of alert, alarmed curiosity. He was less than a hundred yards off, so I risked a shot, all cramped and twisted though I was. But my bullet went low; I only broke his left foreleg, and he disappeared over the bank like a flash. We raced and scrambled after him, and the Missourian, an excellent tracker, took up the bloody trail. It went along the hill-side for nearly a mile, and then turned straight up the mountain, the Missourian leading with his long,

free gait, while I toiled after him at a dogged trot. The trail went up the sharpest and steepest places, skirting the cliffs and precipices. At one spot I nearly came to grief for good and all, for in running along a shelving ledge, covered with loose slates, one of these slipped as I stepped on it, throwing me clear over the brink. However, I caught in a pine top, bounced down through it, and brought up in a balsam with my rifle all right, and myself unhurt except for the shaking. I scrambled up at once and raced on after my companion, whose limbs and wind seemed alike incapable of giving out. This work lasted for a couple of hours.

The trail came into a regular game path and grew fresher, the goat having stopped to roll and wallow in the dust now and then. Suddenly, on the top of the mountain, we came upon him close up to us. He had just risen from rolling and stood behind a huge fallen log, his back barely showing above it as he turned his head to look at us. I was completely winded, and had lost my strength as well as my breath, while great beadlike drops of sweat stood in my eyes; but I steadied myself as well as I could and aimed to break the backbone, the only shot open to me, and not a difficult one at such a short distance. However, my bullet went just too high, cutting the skin right above the long spinal bones over the shoulders; and the speed with which that three-legged goat went down the precipitous side of the mountain would have done credit to an antelope on the level.

Wearied and disgusted, we again took up the trail. It led straight downhill, and we followed it at a smart pace. Down and down it went, into the valley and straight to the edge of the stream, but half a mile above camp. The goat had crossed the water on a fallen tree trunk, and we took the same path. Once across it had again gone right up the mountain. We followed it as fast as we could, although pretty nearly done out, until it was too dark to see the blood stains any longer, and then returned to camp, dispirited and so tired that we could hardly drag ourselves along, for we had been going at speed for five hours, up and down the roughest and steepest ground.

But we were confident the goat would not travel far with such a wound after he had been chased as we had chased him. Next morning at daybreak we again climbed the mountain and took up the trail. Soon it led into others and we lost it, but we kept up the hunt nevertheless for hour after hour, making continually wider and wider circles. At last, about midday, our perseverance was rewarded,

for coming silently out on a great bare cliff shoulder, I spied the goat lying on a ledge below me and some seventy yards off. This time I shot true, and he rose only to fall back dead; and a minute afterward we were standing over him, handling the glossy black horns and admiring the snow-white coat.

After this we struck our tent and shifted camp some thirty miles to a wide valley through whose pine-clad bottom flowed a river, hurrying on to the Pacific between unending forests. On one hand the valley was hemmed in by an unbroken line of frowning cliffs, and on the other by chains of lofty mountains in whose sides the ravines cut deep gashes.

The clear weather had grown colder. At night the frost skimmed with thin ice the edges of the ponds and small lakes that at long intervals dotted the vast reaches of woodland. But we were very comfortable, and hardly needed our furs, for as evening fell we kindled huge fires, to give us both light and warmth; and even in very cold weather a man can sleep out comfortably enough with no bedding if he lights two fires and gets in between them, or finds a sheltered nook or corner across whose front a single great blaze can be made. The long walks and our work as cragsmen hardened our thews, and made us eat and sleep as even our life on the ranch could hardly do: the mountaineer must always be more sinewy than the horseman. The clear, cold water of the swift streams too was a welcome change from the tepid and muddy currents of the rivers of the plains; and we heartily enjoyed the baths, a plunge into one of the icy pools making us gasp for breath and causing the blood to tingle in our veins with the shock.

Our tent was pitched in a little glade, which was but a few yards across, and carpeted thickly with the red kinnikinnick berries, in their season beloved of bears, and from the leaves of which bush Indians make a substitute for tobacco. Little three-toed woodpeckers with yellow crests scrambled about over the trees near by, while the great log-cocks hammered and rattled on the tall dead trunks. Jays that were all of dark blue came familiarly round camp in company with the ever-present moose-birds or whisky jacks. There were many grouse in the woods, of three kinds,—blue, spruce, and ruffed,—and these varied our diet and also furnished us with some sport with our rifles, as we always shot them in rivalry. That is, each would take a shot in turn, aiming at the head of the bird, as it perched motionless on the limb of a tree or stopped for a second while running along the ground; then if he missed or hit the bird anywhere but in the head, the other scored one and took the shot. The resulting tally was a good test of comparative

skill; and rivalry always tends to keep a man's shooting up to the mark.

Once or twice, when we had slain deer, we watched by the carcasses, hoping that they would attract a bear, or perhaps one of the huge timber wolves whose mournful, sinister howling we heard each night. But there were no bears in the valley; and the wolves, those cruel, crafty beasts, were far too cunning to come to the bait while we were there. We saw nothing but crowds of ravens, whose hoarse barking and croaking filled the air as they circled around overhead, lighted in the trees, or quarreled over the carcass. Yet although we saw no game it was very pleasant to sit out, on the still evenings, among the tall pines or on the edge of the great gorge, until the afterglow of the sunset was dispelled by the beams of the frosty moon. Now and again the hush would be suddenly broken by the long howling of a wolf, that echoed and rang under the hollow woods and through the deep chasms until they resounded again, while it made our hearts bound and the blood leap in our veins. Then there would be silence once more, broken only by the rush of the river and the low moaning and creaking of the pines; or the strange calling of the owls might be answered by the far-off, unearthly laughter of a loon, its voice carried through the stillness a marvelous distance from the little lake on which it was swimming.

One day, after much toilsome and in places almost dangerous work, we climbed to the very top of the nearest mountain chain, and from it looked out over a limitless, billowy field of snow-capped ranges. Up above the timber line were snow-grouse and huge, hoary-white woodchucks; but no trace of the game we were after; for, rather to our surprise, the few goat signs we saw were in the timber. I did not catch another glimpse of the animals themselves until my holiday was almost over and we were preparing to break camp. Then I saw two. I had spent a most laborious day on the mountain as usual, following the goat paths, which were well-trodden trails leading up the most inaccessible places; certainly the white goats are marvelous climbers, doing it all by main strength and perfect command over their muscles, for they are heavy, clumsy seeming animals, the reverse of graceful, and utterly without any look of light agility. As usual, towards evening I was pretty well tired out, for it would be difficult to imagine harder work than to clamber unendingly up and down the huge cliffs. I came down along a great jutting spur, broken by a series of precipices, with flat terraces at their feet, the terraces being covered with trees and bushes, and running, with many breaks

and interruptions, parallel to each other across the face of the mountains. On one of these terraces was a space of hard clay ground beaten perfectly bare of vegetation by the hoofs of the goats, with, in the middle, a hole, two or three feet in width, that was evidently in the spring used as a lick. Most of the tracks were old, but there was one trail coming diagonally down the side of the mountain on which there were two or three that were very fresh. It was getting late, so I did not stay long, but continued the descent. The terrace on which the lick was situated lay but a few hundred yards above the valley, and then came a level, marshy plain a quarter of a mile broad, between the base of the mountain and the woods. Leading down to this plain was another old goat-trail, which went to a small, boggy pool, which the goats must certainly have often visited in the spring; but it was then unused.

When I reached the farther side of the plain and was about entering the woods, I turned to look over the mountain once more, and my eye was immediately caught by two white objects that were moving along the terrace, about half a mile to one side of the lick. That they were goats was evident at a glance, their white bodies contrasting sharply with the green vegetation. They came along very rapidly, giving me no time to get back over the plain, and stopped for a short time at the lick, right in sight from where I was, although too far off for me to tell anything about their size. I think they smelt my foot-prints in the soil; at any rate they were very watchful, one of them always jumping up on a rock or fallen log to mount guard when the other halted to browse. The sun had just set; it was impossible to advance across the open plain, which they scanned at every glance; and to skirt it and climb up any other place than the pass down which I had come—*itself a goat-trail*—would have taken till long after nightfall. All I could do was to stay where I was and watch them, until in the dark I slipped off unobserved and made the best of my way to camp, resolved to hunt them up on the morrow.

Shortly after noon next day we were at the terrace, having approached with the greatest caution, and only after a minute examination, with the field-glasses, of all the neighboring mountain. I wore moccasins, so as to make no noise. We soon found that one of the trails was evidently regularly traveled, probably every evening, and we determined to lie in wait by it, so as either to catch the animals as they came down to feed, or else to mark them if they got out on some open spot on the terraces where they could be stalked. As an ambush we chose a ledge in the cliff

below a terrace, with, in front, a breastwork of the natural rock some five feet high. It was perhaps fifty yards from the trail. I hid myself on this ledge, having arranged on the rock breastwork a few pine branches, through which to fire, and waited, hour after hour, continually scanning the mountain carefully with the glasses. There was very little life. Occasionally a chickaree or chipmunk scurried out from among the trunks of the great pines to pick up the cones which he had previously bitten off from the upper branches; a noisy Clarke's crow clung for some time in the top of a hemlock; and occasionally flocks of cross-bill went by, with swift undulating flight and low calls. From time to time I peeped cautiously over the pine branches on the breastwork; and the last time I did this I suddenly saw two goats, that had come noiselessly down, standing motionless directly opposite to me, their suspicions evidently aroused by something. I gently shoved the rifle over one of the boughs; the largest goat turned its head sharply round to look, as it stood quartering to me, and the bullet went fairly through the lungs. Both animals promptly ran off along the terrace, and I raced after them in my moccasins, skirting the edge of the cliff, where there were no trees or bushes. As I made no noise and could run very swiftly on the bare cliff edge, I succeeded in coming out into the first little glade, or break, in the terrace at the same time that the goats did. The first to come out of the bushes was the big one I had shot at, an old she, as it turned out; while the other, a yearling ram, followed. The big one turned to look at me, as she mounted a fallen tree that lay across a chasm-like rent in the terrace; the light red frothy blood covered her muzzle, and I paid no further heed to her as she slowly walked along the log, but bent my attention towards the yearling, that was galloping and scrambling up an almost perpendicular path that led across the face of the cliff above. Holding my rifle just over it, I fired, breaking its neck, and it rolled down some fifty or sixty yards, almost to where I stood. I then went after the old goat, which had lain down; as I approached she feebly tried to rise and show fight, but her strength was spent, her blood had ebbed away, and she fell back lifeless in the effort. They were both good specimens, the old one being unusually large, with fine horns. White goats are squat, heavy beasts; not so tall as black-tail deer, but weighing more.

Early next morning I came back with my two men to where the goats were lying, taking along the camera. Having taken their photographs and skinned them we went back to

camp, hunted up the ponies and mules, who had been shifting for themselves during the past few days, packed up our tent, trophies, and other belongings, and set off for the settlements, well pleased with our trip.

I suppose the sport to be had among the tremendous mountain masses of the Himalayas must stand above all other kinds of

hill shooting; yet after all it is hard to believe that it can yield much more pleasure than that felt by the American hunter when he follows the lordly elk and the grizzly among the timbered slopes of the Rockies, or the big-horn and the white-fleeced, jet-horned antelope goat over their towering and barren peaks.

Theodore Roosevelt.

[In the article of this series entitled "The Home Ranch," published in *THE CENTURY* for March, the origin of the word "savey" should have been ascribed to the Spanish.]

UNSHED TEARS.

WHEN she whom I loved died —
 She whom I loved full well,
 Better than love can tell,
 More than the lover loves his untouched
 bride —

I stood beside her bed;
 Her face was white and cold;
 Her soft hair shone like gold,—
 A pale gold fillet for her sacred head.

I looked, but did not weep;
 Only a dull regret
 Shadowed my soul; and yet
 She was gone — gone to the unending sleep!

Nay, and the very thought of her
 Was dim, like memory's ghost,
 As she indeed were lost,
 And even the world beyond held naught of
 her!

My live heart beat unmoved,
 Though hers had ceased to beat;
 I left her: in the street
 I faced the crowd, who knew not her I loved.

The days pass, and the years;
 My beard is touched with gray;
 I feel my powers decay;
 And still I have not found my unshed tears.

But, O my heart! I know —
 I know thy time will come,
 When thou, no longer dumb,
 Wilt break—wilt break and utter all thy
 woe!

To-day thou must be still,
 For sin has hardened thee,
 And cares have burdened thee,
 And failure checked thy pulse with sullen chill.

But when my shadow is cast
 Eastward, at set of sun,
 And all my deeds are done,—
 Or evil or good,—and the dull day is past,

And when the imprisoning years
 Shall fetter me no more,
 Then open wide thy door,
 O heart! the secret door of unshed tears!

This little life of earth,
 These moment-years of time,
 Insult the grief sublime
 Of the immortal soul, that waiteth for its
 birth —

Its birth to that domain
 Where God and man are one,
 Whose everlasting sun
 Throws an eternal shadow over memory's
 plain.

There break, O willing heart!
 Break, and at last be free!
 No dearer liberty
 Ask, than to shed those tears that vouch
 God's human part!

God gave man love and light:
 Grief is man's very own;
 Nor would God's shining throne
 (But for man's godlike tears) be half so bright!

Julian Hawthorne.

THE LIAR.

BY HENRY JAMES.

IN TWO PARTS. PART II.

CHAPTER II.—(Continued.)

LYON finished his picture and took his departure, after having worked in a glow of interest which made him believe in his success, until he found he had pleased every one, especially Mr. and Mrs.

Ashmore, when he began to be skeptical. The party, at any rate, changed; Colonel and Mrs. Capadose went their way. He was able to say to himself, however, that his separation from the lady was not so much an end as a beginning, and he called on her soon after his return to town. She had told him the hours she was at home—she seemed to like him. If she liked him why had n't she married him, or, at any rate, why was n't she sorry she had n't? If she was sorry she concealed it too well. Lyon's curiosity on this point may strike the reader as fatuous, but something must be allowed to a disappointed man. He did not ask much, after all; not that she should love him to-day or that she should allow him to tell her that he loved her, but only that she should give him some sign she was sorry. Instead of this, for the present she contented herself with exhibiting her little daughter to him. The child was beautiful and had the prettiest eyes of innocence he had ever seen: which did not prevent him from wondering whether she told horrid fibs. This idea gave him much entertainment—the picture of the anxiety with which her mother would watch, as she grew older, for the symptoms of heredity. That was a nice occupation for Everina Brant! Did she lie to the child herself, about her father—was that necessary, when she pressed her daughter to her bosom, to cover up his tracks? Did he control himself before the little girl, so that she might not hear him say things that she knew to be other than he said? Lyon doubted this: his genius would be too strong for him and the only safety for the child would be in her being too stupid to analyze. One could n't judge yet—she was too young. If she should grow up clever she would be sure to tread in his steps—a delightful improvement in her mother's situation!

Her little face was not shifty, but neither was her father's big one; so that proved nothing.

Lyon reminded his friends, more than once, of their promise that Amy should sit to him, and it was only a question of his leisure. The desire grew in him to paint the colonel also—an operation from which he promised himself a rich private satisfaction. He would draw him out, he would set him up in that totality about which he had talked with Sir David, and none but the initiated would know. They, however, would rank the picture high, and it would be indeed six rows deep—a masterpiece of subtle characterization, of legitimate treachery. He had dreamed for years of producing something which should bear the stamp of the psychologist as well as of the painter, and here at last was his subject. It was a pity it was not better, but that was not *his* fault. It was his impression that already no one drew the colonel out more than he, and he did it not only by instinct but on a plan. There were moments when he was almost frightened at the success of his plan—the poor gentleman went so terribly far. He would pull up some day, look at Lyon between the eyes, guess he was being played upon—which would lead to his wife's guessing it also. Not that Lyon cared much for that, however, so long as she did n't suppose (and she could n't) that *she* was a part of his joke. He formed such a habit now of going to see her of a Sunday afternoon that he was angry when she went out of town. This occurred often, as the couple were great visitors and the colonel was always looking for sport, which he liked best when it could be had at other people's expense. Lyon would have supposed that this sort of life was particularly little to her taste, for he had an idea that it was in country-houses that her husband came out strongest. To let him go off without her, not to see him expose himself—that ought, properly, to have been a relief and a luxury to her. She told Lyon, in fact, that she preferred staying at home; but she did n't say it was because in other people's houses she was on the rack: the reason she gave was that she liked so to be with the child. It was not perhaps criminal to draw such a bow, but it was vulgar; poor Lyon was delighted when he

arrived at that formula. Certainly, some day, too, he would cross the line—he would become a noxious animal. Yes, in the mean time he was vulgar, in spite of his talents, his fine person, his impunity. Twice, by exception, towards the end of the winter, when he left town for a few days' hunting, his wife remained at home. Lyon had not yet reached the point of asking himself whether the desire not to miss two of his visits had something to do with her immobility. That inquiry would perhaps have been more in place later, when he began to paint the child, and she always came with her. But it was not in her to give the wrong name, to pretend, and Lyon could see that she had the maternal passion, in spite of the bad blood in the little girl's veins.

She came inveterately, though Lyon multiplied the sittings: Amy was never intrusted to the governess or the maid. He had knocked off poor old Sir David in ten days, but the portrait of this simple-faced child bade fair to stretch over into the following year. He asked for sitting after sitting, and it would have struck anyone who might have witnessed the affair that he was wearing the little girl out. He knew better, however, and Mrs. Capadose also knew; they were present together at the long intermissions he gave her, when she left her pose and roamed about the great studio, amusing herself with its curiosities, playing with the old draperies and costumes, having unlimited leave to handle. Then her mother and Mr. Lyon sat and talked; he laid aside his brushes and leaned back in his chair; he always gave her tea. What Mrs. Capadose did not know was the way, during these weeks, he neglected other orders: women have no faculty of imagination with regard to a man's work beyond a vague idea that it does not matter. In fact Lyon put off everything and made several celebrities wait. There were half-hours of silence, when he plied his brushes, during which he was mainly conscious that Everina was sitting there. She easily fell into that, if he did not insist on talking, and she was not embarrassed or bored by it. Sometimes she took up a book—there were plenty of them about; sometimes, a little way off, in her chair, she watched his progress (though without in the least advising or correcting), as if she cared for every stroke that represented her daughter. These strokes were occasionally a little wild; he was thinking so much more of his heart than of his hand. He was not more embarrassed than she was, but he was agitated; it was as if, in the sittings (for the child, too, was beautifully quiet), something was growing between them, or had already grown—a kind of confidence, an inexpressible secret. He felt it that way; but after all he could not be sure that she

did. What he wanted her to do for him was very little; it was not even to confess that she was unhappy. He would be superabundantly gratified if she should simply let him know, even by a silent sign, that she recognized that with him her life would have been finer. Sometimes he guessed—his presumption went so far—that he might see this sign in her contentedly sitting there.

III.

At last he broached the question of painting the colonel: it was now very late in the season—there would be little time before the general dispersal. He said they must make the most of it; the great thing was to begin; then in the autumn, with the resumption of their London life, they could go forward. Mrs. Capadose objected to this; that she really could not consent to accept another present of such value. Lyon had given her the portrait of herself, of old, and he had seen what they had had the indelicacy to do with it. Now he had offered her this beautiful memorial of the child—beautiful it would evidently be when it was finished, if he could ever satisfy himself; a precious possession, which they would cherish forever. But his generosity must stop there—they could not be so tremendously "beholden" to him. They could not order the picture—of course he would understand that without her explaining; it was a luxury beyond their reach, for they knew the great prices he received. Besides, what had they ever done—what, above all, had *she* ever done, that he should overload them with benefits? No, he was too dreadfully good; it was really impossible that Clement should sit. Lyon listened to her without protest, without interruption, while he bent forward at his work, and at last he said: "Well, if you won't take it, why not let him sit for me for my own pleasure and profit? Let it be a favor, a service I ask of him. It will do me a lot of good to paint him, and the picture will remain in my hands."

"How will it do you a lot of good?" Mrs. Capadose asked.

"Why, he's such a rare model—such an interesting subject. He has such an expressive face. It will teach me no end of things."

"Expressive of what?" said Mrs. Capadose.

"Why, of his nature."

"And do you want to paint his nature?"

"Of course I do. That's what a great portrait gives you, and I shall make the colonel's a great one. It will put me up high. So you see my request is eminently interested."

"How can you be higher than you are?"

"Oh, I'm insatiable! Do consent," said Lyon.

"Well, his nature is very noble," Mrs. Capadose remarked.

"Ah, trust me, I shall bring it out!" Lyon exclaimed, feeling a little ashamed of himself.

Mrs. Capadose said before she went away that her husband would probably comply with his invitation, but she added, "Nothing would induce me to let you pry into *me* that way!"

"Oh, you," Lyon laughed—"I could do you in the dark!"

The colonel shortly afterward placed his leisure at the painter's disposal, and by the end of July had paid him several visits. Lyon was disappointed neither in the quality of his sitter nor in the degree to which he himself rose to the occasion; he felt really confident that he should produce a fine thing. He was in the humor; he was charmed with his *motif*, and deeply interested in his problem. The only thing that troubled him was the idea that when he should send his picture to the Academy he should not be able to give the title, for the catalogue, as simply "The Liar." However, it little mattered, for he had now determined that that character should be perceptible even to the meanest intelligence—as overtopping as it had become, to his own sense, in the living man. As he saw nothing else in the colonel to-day, so he gave himself up to the joy of painting nothing else. How he did it he could not have told you, but it seemed to him that the mystery of how to do it was revealed to him afresh every time he sat down to his work. It was in the eyes and it was in the mouth, it was in every line of the face and every fact of the attitude, in the indentation of the chin, in the way the hair was planted, the mustache was twisted, the smile came and went, the breath rose and fell. It was in the way he looked out at a bamboozled world, in short—the way he would look out forever. There were half a dozen portraits in Europe that Lyon rated as supreme; he regarded them as immortal, for they were as perfectly preserved as they were consummately painted. It was to this small, everlasting group that he aspired to attach the canvas on which he was now engaged. One of the productions that helped to compose it was the magnificent Moroni of the National Gallery—the young tailor in the white jacket, at his board, with his shears. The colonel was not a tailor, nor was Moroni's model, unlike many tailors, a liar; but as regards the masterly clearness with which the individual should be rendered his work should be on the same line as that. He had, to a degree in which he had rarely had it before, the satisfaction of feeling life grow and grow under his brush. The colonel, as it turned out,

liked to sit, and he liked to talk while he was sitting: which was most fortunate, as his talk largely constituted Lyon's inspiration. Lyon put into practice that idea of drawing him out which he had been nursing for so many weeks; he could not possibly have been in a better relation to him for the purpose. He encouraged, beguiled, excited him, manifested an unfathomable credulity, and his only interruptions were when the colonel did not respond to it. He had his intermissions, his hours of sterility, and then Lyon felt that the picture also languished. The more flights his companion indulged in the better he painted; he could not make him soar high enough. He lashed him on when he flagged; his apprehension became very real, at moments, that the colonel would discover his game. But he did not, apparently; he basked and expanded in the fine steady light of the painter's attention. In this way the picture grew very fast; it was astonishing what a short business it was, compared with the little girl's. By the fifth day of August it was nearly finished—that was the date of the last sitting the colonel was for the present able to give, as he was leaving town the next day with his wife. Lyon was amply content—he saw his way so clear; he should be able to do at his convenience what remained, with or without his friend's attendance. At any rate, as there was no hurry, he would let the thing stand over till his own return to London, in November, when he would come back to it with a fresh eye. On the colonel's asking him if his wife might come and see it the next day, if she should find a minute,—this was so greatly her desire,—Lyon begged, as a special favor, that she would wait: he was so far from satisfied as yet. This was the repetition of a proposal Mrs. Capadose had made on the occasion of his last visit to her, and he had then asked for a delay—declared that he was by no means content. He was really delighted, and he was again a little ashamed of himself.

By the 5th of August the weather was very warm, and on that day, while the colonel sat straight and gossiped, Lyon opened, for the sake of ventilation, a little subsidiary door which led directly from his studio into the garden and sometimes served as an entrance and an exit for models and visitors of the humbler sort, and as a passage for canvases, frames, packing-boxes and other professional gear. The main entrance was through the house and his own apartments, and this approach had the charming effect of admitting you first to a high gallery, from which a crooked picturesque staircase enabled you to descend to the wide, decorated, encumbered room. The view of this room, beneath

them, with all its artistic ingenuities and the objects of value that Lyon had collected, never failed to elicit exclamations of delight from persons stepping into the gallery. The way from the garden was plainer, and at once more practicable and more private. Lyon's domain, in St. John's Wood, was not vast, but when the door stood open of a summer's day, it offered a glimpse of flowers and trees; you smelt something sweet and you heard the birds. On this particular morning this ingress had been found convenient by an unannounced visitor—a youngish woman who stood in the room before the colonel perceived her and whom he perceived before she was noticed by his friend. She was very quiet, and she looked from one of the men to the other. "Oh, dear, here's another!" Lyon exclaimed, as soon as his eyes rested on her. She proved to belong to a somewhat importunate class—the model in search of employment, and she explained that she had ventured to come straight in that way because, very often, when she went to call upon gentlemen, the servants played her tricks, turned her away, would n't take in her name.

"But how did you get into the garden?" Lyon asked.

"The gate was open, sir—the servants' gate. The butcher's cart was there."

"The butcher ought to have closed it," said Lyon.

"Then you don't require me, sir?" the lady continued.

Lyon went on with his painting; he had given her a sharp look at first, but now his eyes turned to her no more. The colonel, however, examined her with interest. She was a person of whom you could scarcely say whether being young she looked old, or old she looked young; she had, at any rate, evidently turned several of the corners of life, and had a face that was rosy but that, somehow, did n't suggest freshness. Nevertheless she was pretty and even looked as if at one time she might have sat for the complexion. She wore a hat with many feathers, a dress with many bugles, long black gloves, encircled with silver bracelets, and very bad shoes. There was something about her that was not exactly of the governess out of place nor completely of the actress seeking an engagement, but that savored of an interrupted profession or even of a blighted career. She was rather soiled and tarnished, and after she had been in the room a few moments the air, or at any rate the nostril, became acquainted with a certain alcoholic waft. She was unpracticed in the *h*, and when Lyon at last thanked her and said he did n't want her—he was doing nothing for which she could

be useful—she replied with rather a wounded manner, "Well, you know you *'ave* 'ad me!"

"I don't remember you," Lyon answered.

"Well, I dare say the people that saw your pictures do! I have n't much time, but I thought I would look in."

"I am much obliged to you."

"If ever you should require me, if you just send me a post-card—"

"I never send post-cards," said Lyon.

"Oh, well, I should value a private letter! Anything to Miss Geraldine, Mortimer Terrace Mews, Notting 'ill—"

"Very good; I 'll remember," said Lyon.

Miss Geraldine lingered. "I thought I 'd just stop, on the chance."

"I 'm afraid I can't hold out hopes, I 'm so busy with portraits," Lyon continued.

"Yes; I see you are. I wish I was in the gentleman's place."

"I 'm afraid in that case it would n't look like me," said the colonel, laughing.

"Oh, of course it could n't compare—it would n't be so 'andsome! But I do hate them portraits!" Miss Geraldine declared. "It 's so much bread out of our mouths."

"Well, there are many that can't paint them," Lyon suggested, comfortingly.

"Oh, I 've sat to the very first—and only to the first! There 's many that could n't do anything without me."

"I 'm glad you 're in such demand." Lyon was beginning to be bored, and he added that he would n't detain her—he would send for her in case of need.

"Very well; remember it 's the Mews—more 's the pity! You don't sit so well as *us*!" Miss Geraldine pursued, looking at the colonel.

"You put him out; you embarrass him," said Lyon.

"Embarrass him, oh, gracious!" the visitor cried, with a laugh which diffused a fragrance.

The poor woman retreated, with an uncertain step. She passed out into the garden, as she had come.

"How very dreadful—she 's drunk!" said Lyon. He was painting hard, but he looked up, checking himself; Miss Geraldine, in the open doorway, had thrust back her head.

"Yes, I do hate it—that sort of thing!" she cried, with an explosion of mirth which confirmed Lyon's declaration. And then she disappeared.

"What sort of thing—what does she mean?" the colonel asked.

"Oh, my painting you, when I might be painting her."

"And have you ever painted her?"

"Never in the world; I have never seen her. She is quite mistaken."

The colonel was silent a moment; then he remarked, "She was very pretty—ten years ago."

"I dare say, but she's quite ruined. For me the least drop too much spoils them; I should n't care for her at all."

"My dear fellow, she's not a model," said the colonel, laughing.

"To-day, no doubt, she's not worthy of the name; but she has been one."

"*Jamais de la vie!* That's all a pretext."

"A pretext?" Lyon pricked up his ears—he began to wonder what was coming now.

"She did n't want you—she wanted me."

"I noticed she paid you some attention. What does she want of you?"

"Oh, to do me an ill turn. She hates me—lots of women do. She's watching me—she follows me."

Lyon leaned back in his chair—he did n't believe a word of this. He was all the more delighted with it and with the colonel's bright, candid manner. The story had bloomed, fragrant, on the spot. "My dear colonel!" he murmured, with friendly interest and commiseration.

"I was annoyed when she came in—but I was n't startled," his sitter continued.

"You concealed it very well, if you were."

"Ah, when one has been through what I have! To-day, however, I confess I was half prepared. I have seen her hanging about—she knows my movements. She was near my house this morning—she must have followed me."

"But who is she then—with such a *toupet*?"

"Yes, she has that," said the colonel; "but as you observe, she was primed. Still, there was a cheek, as they say, in her coming in. Oh, she's a bad un! She is n't a model and she never was; no doubt she has known some of those women, and picked up their form. She had hold of a friend of mine, ten years ago—a stupid young gander who might have been left to be plucked, but whom I was obliged to take an interest in, for family reasons. It's a long story—I had really forgotten all about it. She's thirty-seven if she's a day. I cut in and made him get rid of her—I sent her about her business. She knew it was me she had to thank. She has never forgiven me—I think she's off her head. Her name is n't Geraldine at all, and I doubt very much if that's her address."

"Ah, what is her name?" Lyon asked, most attentive. The details always began to multiply, to abound, when once his companion was well launched—they flowed forth in battalions.

"It's Pearson—Harriet Pearson; but she used to call herself Grenadine—was n't that

a rum appellation? Grenadine—Geraldine—the jump was easy." Lyon was charmed with the promptitude of this response, and his interlocutor went on: "I had n't thought of her for years—I had quite lost sight of her. I don't know what her idea is, but practically she's harmless. As I came in I thought I saw her, a little way up the road. She must have found out I come here and have arrived before me. I dare say—or, rather, I'm sure—she is waiting for me there now."

"Had n't you better have protection?" Lyon asked, laughing.

"The best protection is five shillings—I'm willing to go that. Unless indeed she has a bottle of vitriol. But they only throw vitriol on the men who have deceived them, and I never deceived her—I told her the first time I saw her that it would n't do. Oh, if she's there we'll walk a little way together and talk it over, and, as I say, I'll go as far as five shillings."

"Well," said Lyon, "I'll contribute another five." He felt that this was little to pay for his entertainment.

That entertainment was interrupted, however, for the time, by the colonel's departure. Lyon hoped for a letter, recounting the fictive sequel; but apparently his brilliant sitter did not operate with the pen. At any rate he left town without writing; they had taken a rendezvous for three months later. Oliver Lyon always passed the holidays in the same way; during the first weeks he paid a visit to his elder brother, the happy possessor, in the south of England, of a rambling old house, with formal gardens in which he delighted, and then he went abroad—usually to Italy or Spain. This year he carried out his custom, after taking a last look at his all but finished work and feeling as nearly pleased with it as he ever felt with the translation of the idea by the hand—always, as it seemed to him, a pitiful compromise. One yellow afternoon, in the country, as he was smoking his pipe on one of the old terraces, he was seized with the desire to see it again and do two or three things more to it; he had thought of it so often while he lounged there. The impulse was too strong to be dismissed, and though he expected to return to town in the course of another week he could n't brook the delay. To look at the picture for five minutes would be enough—it would clear up certain questions which hummed in his brain; so that, the next morning, to give himself this luxury, he took the train for London. He sent no word in advance; he would lunch at his club, and probably return into Sussex by the 5.45.

In St. John's Wood the tide of human life

flows at no time very fast, and in the first days of September Lyon found unmitigated emptiness in the straight sunny roads, where the little plastered garden-walls, with their incommunicative doors, looked slightly Oriental. There was definite stillness in his own house, to which he admitted himself by his pass-key, having a theory that it was well sometimes to take servants unprepared. The good woman who was mainly in charge and who cumulated the functions of cook and housekeeper, was, however, quickly summoned by his step, and (he cultivated frankness of intercourse with his domestics) received him without the confusion of surprise. He told her that she need n't mind the place being not quite straight, he had only come up for a few hours—he should be busy in the studio. To this she replied that he was just in time to see a lady and a gentleman who were there at the moment—they had arrived five minutes before. She had told them he was away from home, but they said it was all right; they only wanted to look at a picture and would be very careful of everything. "I hope it is all right, sir," the housekeeper concluded. "The gentleman says he's a sitter, and he gave me his name—rather an odd name; I think he's a colonel. The lady's a very fine lady, sir; at any rate, there they are."

"Oh, it's all right!" Lyon said, the identity of his visitors being clear. The good woman could n't know, for she usually had little to do with the comings and goings; his man, who showed people in and out, had accompanied him to the country. He was a good deal surprised at Mrs. Capadose's having come to see her husband's portrait when she knew that the artist himself wished her to wait; but it was a familiar truth to him that she was a woman of a high spirit. Besides, perhaps the lady was not Mrs. Capadose; the colonel might have brought some inquisitive friend, a person who wanted a portrait of *her* husband. What were they doing in town, at any rate, at that moment? Lyon made his way to the studio with a certain curiosity; he wondered vaguely what his friends were "up to." He pushed aside the curtain that hung in the door of communication—the door opening upon the gallery which it had been found convenient to construct at the time the studio was added to the house. When I say he pushed it aside I should amend my phrase; he laid his hand upon it, but at that moment he was arrested by a very singular sound. It came from the floor of the room beneath him, and it startled him extremely, consisting apparently as it did of a passionate wail—a sort of smothered shriek—accompanied by a violent burst of tears. Oliver Lyon listened

intently a moment, and then he passed out upon the balcony, which was covered with an old thick Moorish rug. His step was noiseless, though he had not endeavored to make it so, and after that first instant he found himself profiting irresistibly by the accident of his not having attracted the attention of the two persons in the studio, who were some twenty feet below him. In truth they were so deeply and so strangely engaged that their unconsciousness of observation was explained. The scene that took place before Lyon's eyes was one of the most extraordinary they had ever rested upon. Delicacy and the failure to comprehend kept him at first from interrupting it,—for what he saw was a woman who had thrown herself, in a flood of tears, on her companion's bosom,—and these influences were succeeded after a minute (the minutes were very few and very quick) by a definite motive, which presently had the force to make him step back behind the curtain. I may add that it also had the force to make him avail himself for further contemplation of a crevice formed by his gathering together the two halves of the *portière*. He was perfectly aware of what he was about—he was for the moment an eavesdropper, a spy; but he was also aware that a very odd business, in which his confidence had been trifled with, was going forward, and that if in a measure it did n't concern him in a measure it very definitely did. His observation, his reflections, accomplished themselves in a flash.

His visitors were in the middle of the room; Mrs. Capadose clung to her husband, weeping, sobbing as if her heart would break. Her distress was horrible to Oliver Lyon, but his astonishment was greater than his horror when he heard the colonel respond to it by the words, vehemently uttered, "Damn him, damn him, damn him!" What in the world had happened? why was she sobbing and whom was he damning? What had happened, Lyon saw the next instant, was that the colonel had finally rummaged out his unfinished portrait (he knew the corner where the artist usually placed it, out of the way, with its face to the wall), and had set it up before his wife, on an empty easel. She had looked at it a few moments, and then—apparently—what she saw in it had produced an explosion of dismay and resentment. She was too busy sobbing and the colonel was too busy holding her and reiterating his oburgation, to look round or look up. The scene was so unexpected to Lyon that he could not take it, on the spot, as a proof of the triumph of his hand—of a tremendous hit: he could only wonder what on earth was the matter. The idea of the triumph came a little later. Yet he

could see the portrait from where he stood; he was startled with its look of life—he had n't thought it so masterly. Mrs. Capadose flung herself away from her husband—she dropped into the nearest chair, buried her face in her arms, leaning on a table. Her weeping suddenly ceased to be audible, but she shuddered there as if she were overwhelmed with anguish and shame. Her husband remained a moment staring at the picture; then he went to her, bent over her, took hold of her again, soothed her. "What is it, darling, what the devil is it?" he demanded.

Lyon heard her answer. "It's cruel—oh, it's too cruel!"

"Damn him—damn him—damn him!" the colonel repeated.

"It's all there—it's all there!" Mrs. Capadose went on.

"Hang it, what's all there?"

"Everything there ought n't to be—everything he has seen—it's too dreadful!"

"Everything he has seen? Why, ain't I a good-looking fellow? He has made me awfully handsome."

Mrs. Capadose had sprung up again; she had darted another glance at the painted betrayal. "Handsome? Hideous, hideous! Not that—never, never!"

"Not *what*, in Heaven's name?" the colonel almost shouted. Lyon could see his flushed, bewildered face.

"What he has made of you—what you know! *He* knows—he has seen. Every one will know—every one will see. Fancy that thing in the Academy!"

"You're going wild, darling; but if you hate it so, it need n't go."

"Oh, he'll send it—it's so good! Come away—come away!" Mrs. Capadose wailed, seizing her husband.

"It's so good?" the poor man cried.

"Come away—come away," she only repeated; and she turned towards the staircase that ascended to the gallery.

"Not that way—not through the house, in the state you're in," Lyon heard the colonel object. "This way—we can pass," he added; and he drew his wife to the small door that opened into the garden. It was bolted, but he pushed the bolt and opened the door. She passed out quickly, but he stood there looking back into the room. "Wait for me a moment!" he cried out to her; and with an excited stride he reentered the studio. He came up to the picture again, and again stood looking at it. "Damn him—damn him—damn him!" he broke out once more. It was not clear to Lyon whether this invocation had for its object the original or the

painter of the portrait. The colonel turned away and moved rapidly about the room, as if he were looking for something; Lyon could n't, for the instant, guess his intention. Then the artist said to himself, below his breath, "He's going to do it a harm!" His first impulse was to rush down and stop him; but he paused, with the sound of Everina Brant's sobs still in his ears. The colonel found what he was looking for—found it among some odds and ends on a small table and rushed back with it to the easel. At one and the same moment Lyon perceived that the object he had seized was a small Eastern dagger, and that he had plunged it into the canvas. He seemed animated by a sudden fury, for with extreme vigor of hand he dragged the instrument down (Lyon knew it to have no very fine edge), making a long, abominable gash. Then he plucked it out and dashed it again several times into the face of the figure, exactly as if he were stabbing a human victim; it had the oddest effect—that of a sort of constructive suicide. In a few seconds more the colonel had tossed the dagger away—he looked at it as he did so, as if he expected it to reek with blood—and hurried out of the place, closing the door after him.

The strangest part of all was—as will doubtless appear—that Oliver Lyon made no movement to save his picture. But he did n't feel as if he were losing it, or cared not if he were, so much more did he feel that he was gaining a certitude. His old friend *was* ashamed of her husband, and he had made her so, and he had scored a great success, even though the picture had been reduced to rags. The revelation excited him so—as indeed the whole scene did—that when he came down the steps after the colonel had gone he trembled with his happy agitation; he was dizzy, and had to sit down a moment. The portrait had a dozen jagged wounds—the colonel literally had hacked it to death. Lyon left it where it was, did n't touch it, scarcely looked at it; he only walked up and down his studio, still excited, for an hour. At the end of this time his good woman came to recommend that he should have some luncheon; there was a passage, under the staircase, from the offices.

"Ah, the lady and gentleman have gone, sir? I did n't hear them."

"Yes; they went by the garden."

But she had stopped, staring at the picture on the easel. "Gracious, how you've served it, sir!"

Lyon imitated the colonel. "Yes, I cut it up—in a fit of disgust."

"Mercy, after all your trouble! Because they were n't pleased, sir?"

"Yes; they were n't pleased."

"Well, they must be very grand! Blessed if I would!"

"Have it chopped up; it will do to light fires," Lyon said. He returned to the country by the 3.30, and a few days later passed over to France. During the two months that he was absent from England he expected something—he could hardly have said what; a manifestation of some sort on the colonel's part. Would n't he write, would n't he explain, would n't he take for granted Lyon had discovered the way he had, as the cook said, served him, and deem it only decent to take pity, in some fashion or other, on his bewilderment? Would he plead guilty or would he repudiate suspicion? The latter course would be difficult and make a considerable draft upon his genius, in view of the certain testimony of Lyon's housekeeper, who had admitted the visitors and would establish the connection between their presence and the violence wrought. Would the colonel proffer some apology or some amends, or would any word from him be only a further expression of that destructive petulance which our friend had seen his wife so suddenly and so potently communicate to him? He would have either to declare that he had n't touched the picture or to admit that he had, and in either case he would have to tell a fine story. Lyon was impatient for the story and, as no letter came, disappointed that it was not produced. His impatience, however, was much greater in respect to Mrs. Capadose's version, if version there was to be; for certainly that would be the real test, would show how far she would go for her husband on the one side or for him, Oliver Lyon, on the other. He could scarcely wait to see what line she would take; whether she would simply adopt the colonel's, whatever it might be. He wanted to draw her out without waiting, to get an idea in advance. He wrote to her, to this end, from Venice, in the tone of their established friendship, asking for news, narrating his wanderings, hoping they should soon meet in town, and not saying a word about the picture. Day followed day, after the time, and he received no answer; upon which he reflected that she could n't trust herself to write—was still too much under the influence of the emotion produced by his "betrayal." Her husband had espoused that emotion, and she had espoused the action he had taken in consequence of it, and it was a complete rupture, and everything was at an end. Lyon considered this prospect rather ruefully, at the same time that he thought it deplorable that such charming people should have put themselves so grossly in the wrong. He was at last cheered,

though much further mystified, by the arrival of a letter, brief but breathing good-humor, and hinting neither at a grievance nor a bad conscience. The most interesting part of it, to Lyon, was the postscript, which consisted of these words: "I have a confession to make to you. We were in town for a couple of days the 1st of September, and I took the occasion to defy your authority—it was very bad of me, but I could n't help it. I made Clement take me to your studio—I wanted so dreadfully to see what you had done with him, your wishes to the contrary notwithstanding. We made your servants let us in and I took a good look at the picture. It is wonderful!" "Wonderful" was non-committal, but at least, with this letter, there was no rupture.

The third day after Lyon's return to London was a Sunday, so that he could go and ask Mrs. Capadose for lunch. She had given him, in the spring, a general invitation to do so and he had availed himself of it several times. These had been the occasions (before he sat to him) when he saw the colonel most familiarly. Directly after the meal his host disappeared (he went out, as he said, to call on *his* women), and the second half-hour was the best, even when there were other people. Now, in the first days of December, Lyon had the luck to find the pair alone, without even Amy, who did n't come to luncheon. They were in the drawing-room, waiting for the repast to be announced, and as soon as he came in the colonel broke out, "My dear fellow, I'm delighted to see you! I'm so keen to begin again."

"Oh, do go on, it's so beautiful," Mrs. Capadose said, as she gave him her hand.

Lyon looked from one to the other; he did n't know what he had expected, but he had n't expected this. "Ah, then, you think I've got something?"

"You've got everything," said Mrs. Capadose, smiling from her golden-brown eyes.

"She wrote you of our little crime?" her husband asked. "She dragged me there—I had to go." Lyon wondered for a moment whether he meant by their little crime the assault on the canvas; but the colonel's next words did n't confirm this interpretation. "You know I like to sit—it gives such a chance to my *bavardise*. And just now I have time."

"You must remember I had almost finished," Lyon remarked.

"So you had. More's the pity. I should like you to begin again."

"My dear fellow, I shall have to begin again!" said Oliver Lyon, with a laugh, looking at Mrs. Capadose. She did n't meet his eyes—she had got up to ring for luncheon.

"The picture has been smashed," Lyon continued.

"Smashed? Ah, what did you do that for?" Mrs. Capadose asked, standing there before him in all her clear, rich beauty. Now that she looked at him she was impenetrable.

"I did n't—I found it so—with a dozen holes punched in it!"

"I say!" cried the colonel.

Lyon turned his eyes to him, smiling. "I hope *you* did n't do it?"

"Is it ruined?" the colonel inquired. He was as brightly true as his wife, and he looked simply as if Lyon's question could n't be serious. "For the love of sitting? My dear fellow, if I had thought of it, I would!"

"Nor you either?" the painter demanded of Mrs. Capadose.

Before she had time to reply her husband had seized her arm, as if a most suggestive idea had come to him. "I say, my dear, that woman—that woman!"

"That woman?" Mrs. Capadose repeated; and Lyon, too, wondered what woman he meant.

"Don't you remember when we came out, she was at the door—or a little way from it? I spoke to you of her—I told you about her. Geraldine—Grenadine—the one who burst in that day," he explained to Lyon. "We saw her hanging about—I called Everina's attention to her."

"Do you mean she got at my picture?"

"Ah yes, I remember," said Mrs. Capadose, with a sigh.

"She burst in again—she had learned the way—she was waiting for her chance," the colonel continued. "Ah, the little brute!"

Lyon looked down; he felt himself coloring. This was what he had been waiting for—the day the colonel should wantonly sacrifice some innocent person. And could his wife be a party to that final atrocity? Lyon had reminded himself repeatedly, during the previous weeks, that when the colonel perpetrated his misdeed she had already quitted the room; but he had argued none the less—it was a virtual certainty—that he had, on rejoining her, immediately made his achievement plain to her. He was in the flush of performance; and even if he had not mentioned what he had done, she would have guessed it. He did n't for an instant believe that poor Miss Geraldine had been hovering about his door, nor had the account given by the colonel the summer before of his relations with this lady deceived him in the slightest degree. Lyon had never seen her before the day she planted herself in his studio; but he knew her and classified her as if he had made her. He was acquainted with the London female model in

all her varieties—in every phase of her development and every step of her decay. When he entered his house, that September morning, just after the arrival of his two friends, there had been no symptoms whatever, up and down the road, of Miss Geraldine's reappearance. That fact had reflected that they mind by his recollecting the vacancy of the prospect when his cook told him that a lady and a gentleman were in his studio: he had wondered there was n't a carriage or cab at his door. Then he had reflected that they would have come by the underground railway; he was close to the Marlborough Road station and he knew the colonel, coming to his sittings, more than once had availed himself of that convenience. "How in the world did she get in?" He addressed the question to his companions indifferently.

"Let us go down to lunch," said Mrs. Capadose, passing out of the room.

"We went by the garden—with no troubling your servant—I wanted to show my wife." Lyon followed his hostess with her husband, and the colonel stopped him at the top of the stairs. "My dear fellow, I *can't* have been guilty of the folly of not fastening the door?"

"I am sure I don't know, colonel," Lyon said as they went down. "It was a very determined hand—a perfect wild-cat."

"Well, she *is* a wild-cat—confound her! That's why I wanted to get him away from her."

"But I don't understand her motive."

"She's off her head—and she hates me; that was her motive."

"But she does n't hate me, my dear fellow!" Lyon said, laughing.

"She hated the picture—don't you remember she said so? The more portraits there are, the less employment for such as her."

"Yes; but if she is not really the model she pretends to be, how can that hurt her?" Lyon asked.

The inquiry baffled the colonel an instant, but only an instant. "Ah, she was in a vicious muddle! As I say, she's off her head."

They went into the dining-room, where Mrs. Capadose was taking her place. "It's too bad, it's too horrid!" she said. "You see the fates are against you. Providence won't let you be so disinterested—painting masterpieces for nothing."

"Did *you* see the woman?" Lyon demanded, with something like a sternness that he could not mitigate.

Mrs. Capadose appeared not to perceive it, or not to heed it if she did. "There was a person, not far from your door, whom Clement

called my attention to. He told me something about her, but we were going the other way."

"And do you think she did it?"

"How can I tell? If she did, she was mad, poor wretch."

"I should like very much to get hold of her," said Lyon. This was a false statement, for he had no desire for any further conversation with Miss Geraldine. He had exposed his friends to himself, but he had no desire to expose them to any one else, least of all to themselves.

"Oh, depend upon it, she will never show again. You're safe!" the colonel exclaimed.

"But I remember her address — Mortimer Terrace Mews, Notting Hill."

"Oh, that's pure humbug; there is n't any such place."

"Lord, what a deceiver!" said Lyon.

"Is there any one else you suspect?" the colonel went on.

"Not a creature."

"And what do your servants say?"

"They say it was n't *them*, and I reply that I never said it was. That's about the substance of our conferences."

"And when did they discover the havoc?"

"They never discovered it at all. I noticed it first — when I came back."

"Well, she could easily have stepped in," said the colonel. "Don't you remember how she turned up that day, like the clown in the ring?"

"Yes, yes; she could have done the job in three seconds, except that the picture was n't out."

"My dear fellow, don't curse me! — but of course I dragged it out."

"You did n't put it back?" Lyon asked, tragically.

"Ah, Clement, Clement, did n't I tell you to?" Mrs. Capadose exclaimed, in a tone of exquisite reproach.

The colonel groaned, dramatically; he covered his face with his hands. His wife's words were, for Lyon, the finishing touch; they made his whole vision crumble — his theory that she had secretly kept herself true. Even to her old lover she would n't be so! He was sick; he could n't eat; he knew that he looked very strange. He murmured something about its being useless to cry over spilled milk — he tried to turn the conversation to other things. But it was a horrid effort, and he wondered whether they felt it as much as he. He wondered all sorts of things: whether they guessed he disbelieved them (that he had seen them of course they would never guess); whether they had arranged their story in advance or it was only an inspiration of the moment; whether she had resisted, protested, when the

colonel proposed it to her, and then been borne down by him; whether in short she did n't loathe herself as she sat there. The cruelty, the cowardice, of fastening their unholy act upon the wretched woman struck him as monstrous — no less monstrous indeed than the levity that could make them run the risk of her giving them, in her righteous indignation, the lie. Of course that risk could only exculpate her and not inculpate them — the probabilities protected them so perfectly; and what the colonel counted on (what he would have counted upon the day he delivered himself, after first seeing her, at the studio, if he had thought about the matter then at all and not spoken from the pure spontaneity of his genius), was simply that Miss Geraldine had really vanished forever into her native unknown. Lyon wanted so much to quit the subject that when, after a little, Mrs. Capadose said to him, "But can nothing be done, can't the picture be repaired? You know they do such wonders in that way now," he only replied, "I don't know, I don't care, it's all over, *n'en parlons plus!*" Her hypocrisy revolted him. And yet, by way of plucking off the last veil of her shame, he broke out to her again, shortly afterward, "And you *did* like it, really?" To which she returned, looking him straight in his face, without a blush, a pallor, an evasion, "Oh, I loved it!" Truly her husband had trained her well. After that Lyon said no more, and his companions forebore temporarily to insist, like people of tact and sympathy, aware that the odious accident had made him sore.

When they quitted the table the colonel went away, without coming upstairs; but Lyon returned to the drawing-room with his hostess, remarking to her, however, on the way, that he could remain but a moment. He spent that moment — it prolonged itself a little — standing with her before the chimney-piece. She did n't sit down, nor ask him to; her manner denoted that she intended to go out. Yes, her husband had trained her well; yet Lyon dreamed for a moment that, now he was alone with her, she would perhaps break down, retract, apologize, confide, say to him, "My dear old friend, forgive this hideous comedy — you understand!" And then how he would have loved her and pitied her, guarded her, helped her always! If she were not ready to do something of that sort, why had she treated him as if he were a dear old friend; why had she let him, for months, suppose certain things — or almost; why had she come to his studio, day after day, to sit near him, on the pretext of her child's portrait, as if she liked to think what might have been? Why had she come so near a tacit confession, in a word, if she

was not willing to go an inch further? And she was not willing — she was not; he could see that as he lingered there. She moved about the room a little, rearranging two or three objects on the tables, but she did nothing more. Suddenly he said to her: "Which way was she going, when you came out?"

"She — the woman we saw?"

"Yes, your husband's strange friend. It's a clew worth following." He did not wish to frighten her; he only wished to communicate the impulse which would make her say, "Ah, spare me — and spare *him*! There was no such person."

Instead of this Mrs. Capadose replied, "She was going away from us — she crossed the road. We were coming towards the station."

"And did she appear to recognize the colonel — did she look around?"

"Yes; she looked around, but I did n't

notice much. A hansom came along and we got into it. It was n't till then that Clement told me who she was: I remember he said that she was there for no good. I suppose we ought to have gone back."

"Yes; you would have saved the picture."

For a moment she said nothing; then she smiled. "For you, I am very sorry. But you must remember that I possess the original!"

At this Lyon turned away. "Well, I must go," he said; and he left her without any other farewell and made his way out of the house. As he went slowly up the street the sense came back to him of that first glimpse of her he had had at Stayes — the way he had seen her gaze across the table at her husband. Lyon stopped at the corner, looking vaguely up and down. He would never go back — he could n't. She was still in love with the colonel — he had trained her too well.

Henry James.

THE END.

THE GOLDEN PRIME.

"— the golden prime of this sweet prince."

NEVER so fair a May was seen,
Never an evening half so fair;
Then first I knew what Maytimes mean,
First deeply breathed the vernal air,
First looked through Nature's sylvan screen,
And saw herself, in robe of green.

The breathing dusk, the dreaming sky,
Were with a thousand meanings fraught;
But all my thoughts were scented by
The sweetness of a single thought.
Wide flew my heart, yet circled nigh,
As happy swallows wheel and fly.

The world, for me, was newly made,
And given unto my heart for food;
And scent and blossom, bud and blade,
Were in its waking understood.
All things the inward mood obeyed,
For life its spell upon them laid.

Behind the budding sycamore
I saw the new moon's golden boat,
Without a sail, without an oar,
Adown the leafy lattice float,
And touch the ether's rosy shore.
Never was moon so new before.

Nor far, Love's star looked trembling through,
As if but then it learned to shine;
And Love's first smiles shone heavenly true,
They were so newly, freshly mine.
And in that hour my soul outgrew
Itself, and found itself anew.

Frances Louisa Bushnell.

HOW THE MOHAWKS SET OUT FOR MEDOCTEC.

I.

GROWS the great deed, though none
Shout to behold it done!
To the brave deed done by night
Heaven testifies in the light!

Stealthy and swift as a dream,
Crowding the breast of the stream,
In their paint and plumes of war
And their war-canoes four-score

They are threading the Oolastook
Where his cradling hills o'erlook.
The branchy thickets hide them;
The unstartled waters guide them.

II.

COMES night to the quiet hills
Where the Madawaska spills,—
To his slumbering huts no warning,
Nor mirth of another morning!

No more shall the children wake
As the dawns through the hut-door break;
But the dogs, a trembling pack,
With wistful eyes steal back.

And, to pilot the noiseless foe
Through the perilous passes, go
Two women who could not die,—
Whom the knife in the dark passed by.

III.

WHERE the shoaling waters froth,
Churned thick like devil's broth,—
Where the rocky shark-jaw waits,
Never a bark that grates!

And the tearless captives' skill
Contents them. Onward still!
And the low-voiced captives tell
The tidings that cheer them well:

How a clear stream leads them down
Well-nigh to Medoctec town,
Ere to the great Falls' thunder
The long wall yawns asunder.

IV.

THE clear stream glimmers before them;
The faint night falters o'er them;
Lashed lightly bark to bark,
They glide the windless dark.

Late grows the night. No fear
While the skillful captives steer!
Sleeps the tired warrior, sleeps
The chief; and the river creeps.

V.

IN the town of the Melicete
The unjarred peace is sweet,
Green grows the corn and great,
And the hunt is fortunate.

This many a heedless year
The Mohawks come not near.
The lodge-gate stands unbarred;
Scarce even a dog keeps guard.

No mother shrieks from a dream
Of blood on the threshold stream,—
But the thought of those mute guides
Is where the sleeper bides!

VI.

GETS forth those caverned walls
No roar from the giant Falls,
Whose mountainous foam treads under
The abyss of awful thunder.

But — the river's sudden speed!
How the ghost-gray shores recede!
And the tearless pilots hear
A muttering voice creep near.

A tremor! The blanched waves leap.
The warriors start from sleep.
Faints in the sudden blare
The cry of their swift despair,

And the captives' death-chant shrills.
But afar, remote from ills,
Quiet under the quiet skies
The Melicete village lies.

A PRINTER'S PARADISE.

THE PLANTIN-MORETUS MUSEUM AT ANTWERP.

GUTENBERG'S OFFICE AT MAYENCE.

fate that fell on Gutenberg's office has fallen on the offices of Aldus and the Stephens and the Elzevirs. Not a vestige of office fittings or working material remains.

The Plantin-Moretus Museum at Antwerp is the only printing-house that has been left intact as the monument of a great departed business. How well it was worth having may be inferred from the price of twelve hundred thousand francs paid for it by the city, in 1876, to the last member of the family of the founder. How well it is worth seeing is proved by the steady tide of visitors that pass through it every day. Here is a printing-house that is not a factory — a house that has been as much the home of art and education as a place for work and trade.

It is not an imposing structure. No public building in Antwerp is more unpretentious as to its exterior. Its dull front on the *Marché du Vendredi* gives but one indication of the treasures behind the walls. To him who can read it, the little tablet over the door is enough to tell the story; for it is the device of Christopher Plantin, "first printer to the king, and the king of printers." Here is the hand emerging from the clouds, holding a pair of compasses, one leg at rest and one describing a circle; here is the encircling legend of *Labore et Constantia*. Heraldry is overfull of devices that are as arrogant as they are absurd, but no one dare say that Plantin did not fairly earn the right to use the motto of labor and patience.

Plantin deserved remembrance from Antwerp. He did much for its honor, although he was not of Flemish birth. Born in France, about 1514, taught printing and book-

binding at Caen, he should have been by right, and would have been by choice, a worthy successor to the printers of Paris who did admirable work during the first half of the sixteenth century. But his most Christian majesty Henry II. of France had begun his reign in 1547 with the announcement that he should punish heresy as worse than treason. What a drag-net was this word heresy for the entanglement of printers! Stephen Dolet, most promising of all, had been recently burned at the stake; Robert Stephens, weary of endless quarrels with meddlesome ecclesiastics, was meditating the flight he soon afterward made to Geneva. To those who could read the signs of the times, there were even then forewarnings of the coming massacre of St. Bartholomew. France was a good country for a printer to leave, and Plantin did wisely to forsake Paris in 1548 and to make his home in Antwerp.

Not so large as Paris or London, Antwerp was superior in wealth and commerce, as well as in its artistic development. Printing was under restraint here, as it was everywhere; but the restraints were endurable, and printers were reasonably prosperous. Antwerp encouraged immigration. One of the most interesting of the many paintings in its *Hôtel de*

Phototyp.

A TRADE-MARK.

Jus Mare, Antverp

Ville is that of the ceremonious naturalization of an Italian and his family in the sixteenth century. It was as the principal in a similar ceremony that Plantin became a citizen in 1550, and was enrolled as a printer.

With little money and few friends, Plantin had to struggle to keep his foot-hold in a city that had already been well served by many master printers. It did not appear that he was needed at all as a printer. So Plantin

printing-office. In that year he published two little books, cautiously dividing the risk with other publishers. It must have been difficult to get books that were salable, for his first book * was in Italian and French, his second in Spanish, his third in French,—clear evidences all that there were in Antwerp already printers before him who had published all the books called for in Flemish.

But Plantin went to Antwerp to stay. In

PAINTING IN HÔTEL DE VILLE—ITALIAN FAMILY TAKING THE OATH OF ALLEGIANCE. (LAST PAINTING BY HENRI LEYS.)

must have thought, for he avoided printing, and opened a shop in which he sold prints and books, and his wife sold haberdashery. To fill up unemployed time he bound books and decorated jewel-boxes. At this work he prospered, and soon earned a reputation as the most skillful decorator in the city. Before he was fairly established he met a great misfortune. Encountered on a dark night by a ruffian who mistook him for another, Plantin was dangerously stabbed, and forever disabled from handling gilding-tools. The possible rivalry that might have arisen between him and the artistic book-binders of Paris was effectually prevented. He had to begin anew, but it was more as a publisher than as a printer, for it is not certain that in 1555 he owned a

1556 he published four more books, two of them original; in 1557 eight books, six of them original; in 1558 fourteen books, many of them of large size and of marked merit. The four years that followed show steady increase in the number and improvement in the quality of his publications, among which were several Latin classics, a Greek text, a Latin Bible, and a dictionary in four languages.

His ability was fully recognized in 1562, but his business life was henceforward a succession of great misfortunes as well as of great achievements. By leaving Paris he did not escape, he only postponed, the conflict that had begun between the press, the state, and the church. The country that promised to

* "*La Institutione di una Fanciulla nata nobilemente.*" It was a small 12mo (now rated an 18mo). It would have greatly cheered him if he could have known

that three hundred years after his death a copy of this book would be sold for more than one hundred dollars. He had to be content with one sou and a quarter.

give him liberty was to become the chosen battle-field of the contestants, and the result of the battle was to be undecided even at his death. In 1562 the regent, Margaret of Parma, ordered search for the unknown printer of a heretical prayer-book, and it was proved that the book had been printed in Plantin's printing-office. Forewarned of com-

lent him money to found a printing-house, in which he worked hard. At the end of the next four years he had seven presses and forty workmen in his employ, and had published 209 books. What to him was of more importance, he had established friendly relations with the authorities of the state. The city of Antwerp gave him special privileges as printer; the King of Spain in 1570 made him "Prototypographe," the ruler of all the printers of the city. He was in correspondence with many of the great scholars and artists of his time, and was by them, as well as by every one, regarded as the foremost printer of the world. The King of France invited him to Paris; the Duke of Savoy offered to give to him a great printing-house and special rewards if he would go to Turin. But he kept in Antwerp, and enlarged his business. He not only worked himself, but made all his household help him. His daughters kept a book-store in the cloisters of the cathedral; he established an agency in Paris under the direction of his son-in-law, Gilles Beys. Another son-in-law, Moretus, was his chief clerk, and a regular attendant at all the German book fairs, while another, Raphelengius, was his ablest corrector of the press. Even the younger daughters were required to learn to read writing, and to serve as copy-holders, often on books in foreign languages, before

JEAN MORETUS I, SON-IN-LAW OF PLANTIN. (FROM A PAINTING BY RUBENS.)

ing danger, Plantin escaped to Paris, where he staid for twenty months. When he could safely return, his business had been destroyed, and his printing-office, and even his household property, had been sold at auction to satisfy the demands of his creditors. Thirteen years of labor had been lost. He was down, but not to stay.

Plantin was strongly suspected of complicity in this matter of heretical printing, but he had not been condemned. He overcame the prejudices, if there had been any, of ecclesiastical authorities, and made them active friends forever, although he was frequently afterward denounced as a Calvinist. Four wealthy men

they were twelve years old.

His season of greatest apparent prosperity began in 1570. His printing-house was soon after one of the wonders of the literary world. Twenty-two presses were kept at work, and two hundred crowns in gold were required every day for the payment of his workmen, recites an old chronicler with awe and astonishment. His four houses were too small. He had to buy and occupy the larger property which now constitutes the Plantin-Moretus Museum. Before he occupied his new office he had printed the largest and most expensive book then known to the world, the "Royal Polyglot," eight volumes folio, in four lan-

BUST OF BALTHAZAR MORETUS, IN THE COURT-YARD.

guages, with full-page illustrations from copper-plates. It was an enterprise that earned him more of honor than of profit, for the King of Spain, who had promised liberal help, disappointed him. Plantin had incurred enormous expenses and was harassed by creditors, and had to sell or pledge his books at losing prices. At that time the patronage of the king was a hindrance, for when he was in the greatest straits the king commanded him to print new service books for the Church that would be of great cost and of doubtful profit.

The king's habitual neglect to pay his obligations provoked his soldiers to outrages which nearly ruined Plantin. Antwerp had been for years in practical mutiny against the king. To repress this mutiny the citadel was filled with Spanish soldiers who were furious because they had not been paid, and were threatening to plunder the city by way of reprisal or as compensation. On the fourth day of November, 1576, when Plantin was no more than fairly settled in his new office, the threat was executed. Joined by an army beyond the walls, and by treacherous allies that the civic authorities had hired as defenders, they began the sack of the city. Eight thousand citizens were killed, a thousand houses were

burned, six million florins' worth of property were burned, and as much more was stolen, amid most atrocious cruelties. The prosperity of the great city, which had been the pride of Europe, received a blow from which it never recovered. The business of Plantin was crushed. "Nine times," he said, "did I have to pay ransom to save my property from destruction; it would have been cheaper to have abandoned it." But his despondency was but for a day. In the ruins of the sacked city, surrounded by savage soldiers, discouraged with a faithless king who would not protect his property nor pay his debts, ill at ease with creditors who feared to trust him, and alarmed at the absence of buyers who dared not come to the city, Plantin still kept at work. The remainder of his life was practically an unceasing struggle with debt, but debt did not make him abandon his great plans. To pay his debts he often had to sell his books at too small prices. Sometimes he had to sell his working-tools. In 1581 he went to Paris to dispose of his library, costing 16,000 francs, for less than half its value.

Rich enough in books, in tools, in promises to pay, he had little of money, and slender credit. The political outlook was disheartening. Alexander of Parma was menacing Flanders and Brabant; there was reason to fear a siege of Antwerp and the destruction of his printing-house. With the consent of his creditors

BALTHAZAR MORETUS I. (AFTER A PAINTING IN BLACK AND WHITE BY ERASMUS QUELLYN.)

Plantin temporarily transferred his office to his sons-in-law, and in 1582 went to Leyden, to muse as he went on the warning, "Put not your trust in princes." There he was cordially received by the university, and at once appointed their printer. There he founded a new printing-house, in which he remained for nearly three years. When the siege was over, Plantin returned to Antwerp, but it was never after the Antwerp of his earlier days. Nor was Plantin himself as active. The king had made Antwerp a Catholic city, but its commerce was destroyed.

Plantin died on the first day of July, 1589, and was buried in the cathedral. Although, by reason of his bold undertakings, he had been financially embarrassed for many years before his death, he left a good estate, at least

on paper. By a will made conjointly with his wife, who soon followed him, he gave the management of his printing-office and most of his property, then valued at 135,718 florins (equal to \$217,000), to his son-in-law Moretus and his wife, burdened with legacies to children and other heirs, with the injunction that they, at their death, should bequeath the undivided printing-office to the son or successor who could most wisely manage it. If they had no competent son, then they must select a competent successor out of the family. This injunction was fairly obeyed. Under John Moretus the reputation of the house was fully maintained, although the publications were not so many nor so meritorious. But this falling-off was largely due to the diminished importance of Antwerp as a commercial city. His sons Bal-

thazar and John Moretus II. carried the office to the highest degree of prosperity. To Balthazar I., more than to any other member of the family, the world is indebted for the treasures of art and learning which now grace the rooms of the Plantin-Moretus Museum. A very large share of the prosperity of the house came from the valuable patents and privileges accorded to Plantin and his successors by the King of Spain. For more than two hundred years they were the exclusive makers of the liturgical books used in Spain and its dependencies. The decline of the house began with the death of Balthazar III. in 1696. During the eighteenth century it lost its preëminence as the first printing-house in the world, and was simply a manufactory of religious books. In 1808 the special privileges they had for making these books for Spain and its possessions were withdrawn, and this great business of the house was at an end. In 1867 it ceased to do any business.

In his "Archéologie Typographique," Bernard told of the desolation of the house as he saw it in 1850. Everything was in decay. That the types and matrices would soon go to the melting-kettle; that books and prints, furniture and pictures, would find their way, bit by bit, to bric-à-brac shops; that this old glory of Antwerp would soon be a story of the past — seemed inevitable. Fortunately there were in Antwerp men who tried to save the collection. Messrs. Emanuel Rosseels and Max Roosees (now *conservateur* of the Museum), under the zealous direction of M. Leopold de Wael, the burgomaster of the city, induced the city and the state to buy the property, the transfer of which was formally made, as we read from a tablet in the wall, in 1875.

The Museum, as it now stands, is not as Plantin left it. His successors, Balthazar I. especially, made many changes, additions, and restorations, but all have been done with propriety. The visitor is not shocked by incongruities of structure or decoration. The difficult task of re-arranging the house has been done with excellent taste by the architect Pierre Dens. It is the great charm of the Museum that the house and its contents, the books, pictures, prints, windows, walls,

JEANNE RIVIÈRE, HER SIX DAUGHTERS, AND JOHN THE BAPTIST. (FROM A PAINTING IN THE CATHEDRAL BY VAN DEN BRDECK.)

ROOM OF JUSTUS LIPSIIUS.

types, presses, furniture, are all in their places, and with proper surroundings. They fit. To pass the doorway is to take leave of the nineteenth century; to put ourselves not only within the walls, but to surround ourselves with the same familiar objects which artists and men of letters saw and handled two or three centuries ago. Here are their chairs and tables, their books and candlesticks, and other accessories of every-day office and domestic life. It is a new atmosphere. Standing in the vestibule under a copper lamp, facing a statue of Apollo, surrounded by sculptured emblems of art and science, the visitor at once perceives that he is in something more than a printing-house — in an old school of literature.

Yet there is little that is bookish in the first salon. One's attention is first caught by the little octagonal window lights that face the inner court, bright in colors, and with commemorations of John Moretus II. and Balthazar Moretus II. and their wives. And then one has to note the heavy beams overhead, and the old tapestries on the walls, the great

tortoise-shell table, and the buffet of oak with its queer pottery, and the still quicer painting of an old street parade in Antwerp.

Over the chimney-piece in the second salon is the portrait of Christopher Plantin as he appeared at sixty-four years of age, wrapped in a loose black robe, with a broad ruff about his neck — unmistakably a man of authority, and of severity too. There is nothing dull, or impassive, or Dutch, about this head. He is a Frenchman of the old school, — muscular, courageous, enduring, — a man of the type of Condé or Coligny. Here too is Jeanne Rivière, his wife. How Flemish-looking is this French woman of placid face, in her white cap and quilled collar! plainly one of the grand old women that Rembrandt loved to honor. The portraits of some of Plantin's five daughters are on the walls, but they can be seen together only at the cathedral, on a panel painted by Van den Broeck. The eldest, Marguerite, was married in 1565, to Francis Raphelengius.* Martine, the second daughter, in 1570 married John Moretus, who was

* The wedding festivities lasted one week, for which Plantin made this provision, which has a fine medieval flavor: three sucking pigs at 17 sous each, six capons at 22 sous, twelve pigeons at 6 sous, twelve quails at 4

sous, five legs of mutton at 1 florin, twelve sweet-breads at 7½ sous the dozen, three beef tongues at 8 sous, four almond cakes, six calves' heads, three legs of mutton browned, six (16-lb.) hams at 2¾ sous the

Plantin's trusted man of business during his life, and his heir and successor. Madeleine, the fourth daughter, brightest of all, in 1572 married Egidius Beys, who was Plantin's agent in Paris. "My first son-in-law," wrote Plantin, "cares for nothing but books; my

in-law who complemented each other and fully served him. Beys* was not an esteemed assistant, nor was his son.

Here too are the portraits of many of the learned friends of Plantin. The somber face of Arias Montanus, the learned confessor of

THE CONFERENCE CHAMBER.

second knows nothing but business." Not a kindly criticism of Moretus, who was learned and wrote well in four languages, but Plantin must have been well content with these sons-

pound, Rhine wine valued at 12 florins 5 sous, red wine valued at 4 florins 2½ sous, red and black cherries, strawberries, oranges, capers, olives, apples, salads, and radishes valued at 3 florins 8½ sous, confectionery valued at 4 florins 9 sous, two pounds of sugar-plums, one pound of anis, and three pounds of Milan cheese. The gifts to Raphelengius amounted to 32 florins 5 sous; to Plantin (for this was the custom of the period), 90 florins 16½ sous. Plantin gave to his workmen on this occasion a pot of wine valued at 7 florins.

*In 1587 the eldest son of Beys, then fourteen years of age, lived with his grandfather. At the close of a day of alleged misconduct, Plantin required of him the task to compose and write in Latin a description of the manner in which he had spent that day. This is the translation: "The occupations of Christophe Beys, February 21, 1587. I got up at half-past 6 o'clock. I went to embrace my grandfather and grandmother. Then I took breakfast. Before 7

Philip II., who was commissioned by the king to superintend the printing of the great polyglot, glows with all the color that Rubens could give. By the same painter are the por-

o'clock I went to my class, and well recited my lesson in syntax. At 8 o'clock I heard mass. At half-past 8 I had learned my lesson in Cicero and I fairly recited it. At 11 o'clock I returned to the house and studied my lesson in phraseology. After dinner I went back to the class and properly recited my lesson. At half-past 2 I had fairly recited my lesson in Cicero. At 4 o'clock I went to hear a sermon. Before 6 o'clock I returned to the house, and I read a proof [held copy for] *Libellus Sodalitatis* with my cousin Francis [Raphelengius]. I showed myself refractory while reading the proofs of the book. Before supper, my grandfather having made me go to him, to repeat what I had heard preached, I did not wish to go nor to repeat; and even when others desired me to ask pardon of grandfather, I was unwilling to answer. Finally, I have showed myself in the eyes of all, proud, stubborn, and willful. After supper I have written my occupations for this day, and I have read them to my grandfather. The end crowns the work."

traits of Ortelius and Justus Lipsius and Pantinus—grave, scholarly, dignified faces all. Of greater attraction is the portrait, so often copied, of Gevaertius, the clerk of the city of Antwerp. A showcase in the middle of the room contains designs by Martin de Vos, Van den Broeck, Van der Borcht, Van Noort, Van der Horst, Rubens, Quellyn, and other illustrators of books for the Plantin office, all famous

ception must have been exercised to find heresy in the Psalms! This was not the only interference with the printer by the law, for there is also posted a tariff made by the magistrates of Antwerp, by which a fixed price is made for every popular book. Whoever dares sell a book at a higher price is warned that he shall be fined twenty-five florins. In the corner near the window is the chair in which

PLANTIN'S PROOF-READERS AT WORK.
(FROM A PAINTING BY PIERRE VAN DER OUDERA, NOW IN POSSESSION OF FELIX GRISAR, ANTWERP.)

in their time. Not the least curious is Rubens' bill of sale, dated 1630, to Balthazar Moretus I., of 328 copies of the works of Hubert Goltzius, the great archæologist, for 4920 florins, and the further sum of 1000 florins for the plates of the same, payable in books. The opportunity for "working off unsold remainders" was not neglected.

Fronting on a side street is the old book-store, with all its furniture, including the old scales by which light gold coin was tested. A motley collection of books is on the shelves—prayer-books and classic texts, amatory poems and polemical theology. Posted up is a "Catalogue of Prohibited Books," a placard printed by Plantin himself in 1569, by the order of the Duke of Alva. Two of the prohibited books, the "Colloquies of Erasmus" and the "Psalms of Clement Marot," came from the Plantin press. What keen per-

the shop-boy sat and announced incoming customers to the daughters who were at work in the rear of the store, from which it was separated by a glazed partition. Plainly a room for work and trade, but how differently work and trade were done then! No doubt there was enough of drudgery, but to the young women who worked in the glow of the colored glass windows, and listened to the ticking of the tall Flemish clock, and saw above them on the wall the beautiful face of a statuette of the Madonna, life could not have had the grimy, stony face it presents to the modern shop-girl.

In an adjoining room is the salon of tapestries, five of which represent shepherds, hunters, market women, dancers,—Flemish idyls all. One has to make another comparison, between the value of old and modern needle-work, not to the credit of Berlin wools

THE PRESS-ROOM.

and South Kensington stitches. Curious furniture is in the room—a buffet on which rests fine old china, wardrobes in oak and ebony, chairs and tables of wonderful carving, all surmounted by a chandelier of crystal. Most interesting of all is an old harpsichord with three tiers of keys, on the interior of which is painted a copy of Rubens' *St. Cecilia*. It bears the inscription, "Johannes Josephus Coenen, priest and organist of the cathedral, made me, Roermond, 1735." Not at all an old piece,—just midway between Plantin's time and ours,—but how old it seems by the side of a modern piano!

Of severer simplicity is the room of the Correctors of the Press, in which is a great oak table that overlaps the two diamond-paned windows opening on the inner court. On the walls are paintings of two of the most famous of Plantin's correctors—Theodore Poelman and Cornelius Kilianus. Poelman is represented as a scholar at work on his books in a small, mean room, in which his wife is spinning thread and a fuller is at work. And this was Poelman's lot in life: to work as a fuller by day, and to correct and prepare for press classic texts at night, for three or four florins per volume. Kilianus was corrector for the Plantin house for fifty years. Beginning

as a compositor in 1558, at the very modest salary of five patards a day, not more (perhaps less) than two dollars and forty cents a week in our currency, he ultimately became Plantin's most trusted general proof-reader. Not so learned as Raphelengius, he was more efficient in supervising the regular work of the house. He wrote good Latin verse, composed prefaces and made translations for many books, and compiled a Flemish dictionary of which Plantin seems to have been ungenerously envious. His greatest salary was but four florins a week, but little more than was then paid to Plantin's expert compositors. The most learned of Plantin's regular correctors was his son-in-law Raphelengius, who had been a teacher of Greek at Cambridge. He began his work in the Plantin office at forty florins a year and his board. Montanus testified that he had thorough knowledge of many languages, and was an invaluable assistant on the *Polyglot Bible*. His greatest salary, in 1581, was but four hundred florins a year. As a rule editing and proof-reading were done at the minimum of cost. The wages paid to a scholarly reader, who had entire knowledge of three or four languages, was about twelve florins a month. Ghisbrecht, one of these correctors, agreed to prepare

copy for and to oversee the work of six compositors for his board and sixty florins a year. Besides the regular correctors of the house, Plantin had occasionally some volunteer or unpaid correctors, like Montanus. His friend Justus Lipsius seems to have been the only editor who was fairly paid for literary work.

The printing-room does not give a just idea of its old importance. What here remains is as it was in 1576, but the space then occupied for printing must have been very much

workmanship which has been the admiration of the world.

Plantin had this work done at small cost. His account-books show that the average yearly earnings of expert compositors were one hundred and forty-two florins, and of the pressmen one hundred and five florins. The eight-hour law was unknown. Work began at five o'clock in the morning, but no time is stated for its ending. His rules were hard. One of them was that the compositor who

THE PROOF-READERS' ROOM.

larger. Plantin's inventory, taken after his death, showed that he had in Antwerp seventy-three fonts of type, weighing 38,121 pounds. Now seven hand-presses and their tables occupy two sides of the room, and rows of type-cases and stands fill the remnant of space. How petty these presses seem! How small the impression surface, how rude all the appliances! Yet from these presses came the great "Royal Polyglot," the Roman Missal, still bright with solid black and glowing red inks, and thousands of volumes, written by great scholars, many of them enriched with designs by old Flemish masters. "The man is greater than the machine," and Plantin was master over his presses. From these uncouth unions of wood and stone, pinned together with bits of iron, he made his pressmen extort

set three words or six letters not in the copy should be fined. Another was the prohibition of all discussions on religion. Every workman must pay for his entrance a *bienvenue* of eight sous as drink money, and give two sous to the poor-box. At the end of the month he must give thirty sous to the poor-box and ten sous to his comrades. This *bienvenue* was as much an English as a Flemish custom, as one may see in Franklin's autobiography.

The presses cost about fifty florins each. In one of his account-books is the record that he paid forty-five florins for copper platens to six of his presses. This is an unexpected discovery. It shows that Plantin knew the value of a hard impression surface, and made use of it three centuries before the printer of THE CENTURY tried, as he thought for the first

time, the experiment of iron and brass impression surfaces for inelastic impression.

The proportion of readers or correctors to compositors was large. In 1575 Plantin had, besides Raphelengius and Moretus, five correctors for twenty-four compositors, thirty-nine pressmen, and four apprentices. Much of the work done by these correctors was really editing, translating, re-writing, and preparing copy. With all these correctors, proof-reading proper was not too well done. Ruelens notes in Plantin's best work, the "Royal Polyglot," one hundred and fifteen errors of paging in the eight folio volumes. Yet this book was supervised by Montanus and Raphelengius, and in some portions by eminent scholars and professors of the Leyden University.

To publish a polyglot with parallel texts in Latin, Greek, Hebrew, and Chaldee, with Granvelle and ecclesiastics of high station to recommend the proposed work to the king and to get from him a subvention, Plantin's first estimate for the six volumes which he then thought enough for the work was 24,000 florins, exclusive of the cost of new types and binding. After much deliberation the king consented to advance 6000 ducats, for which he was to receive an equal value in books at trade rates. But the work grew on Plantin's hands; it made eight volumes instead of six, and it cost 100,000 crowns before it was completed. Twelve hundred copies on paper were printed and announced to the trade in the style of the modern Parisian publisher.

10 on grand imperial paper of Italy. . . price not stated
30 on grand imperial, at the price of. . . . 200 florins
200 on the fine royal paper of Lyons 100 florins
960 on the fine royal paper of Troyes 70 florins

The king had twelve copies on vellum, which required more skins than could be had in Antwerp or Holland. It is of interest to note that Plantin, like all printers, had no enthusiasm for vellum. To an application from a German prince who asked for a copy on vellum, Plantin answered that none could be furnished, but that the copies on the imperial Italian paper were really better printed than those on the vellum. In the matter of

THE ENTRANCE TO THE ENGRAVING-ROOM—IN BLACK AND GOLD.

clean, clear printing they were every way better.

This "Royal Polyglot" was the beginning of Plantin's financial troubles, from which he never fairly recovered. The king would not allow the work to be published until it had been approved by the pope, who refused his consent. Montanus went to Rome to plead for a change of decision; but it was not until 1573, when a new pope was in the chair, that this permit was granted. Even then the difficulties were not over. A Spanish theologian denounced the work as heretical, Judaistic, the product of the enemies of the Church. Then the Inquisition made a slow examination, and grudgingly decided in 1580 that it might be lawfully sold. For more than seven years the unhappy book was under a cloud of doubt as to its orthodoxy. The damage to Plantin was severe. Before he reached the concluding volumes his means were exhausted, and he had to mortgage at insufficient prices two-thirds of the copies done. The king was fully repaid in books for all money he had advanced, but Plantin got no more. With the generosity of people who are accustomed to give what does not belong to them, the king granted Plantin an annual pension of four hundred florins, secured on a confiscated Dutch estate;

but the perverse Dutchman who owned the estate soon retook it, and as the king could not wrest it from him, the pension was forever ineffective.

Seven rooms or lobbies in the Museum are devoted to the exhibition of engravings as well as of their blocks or plates, of which there are more than 2000 on copper and about 15,000 on wood. It is a most curious collection of original work, more complete and more diversified than that of any printing-house before

was in his trade, and who loved his work for the work's sake. His early training as a book-finisher gave him decorative inclinations. What he could not do on book covers with gilding-tools he tried to have done on the printed leaves with wood-cuts from designs by eminent artists.

He must have quickly earned good reputation as a skillful printer of wood-cuts, for he was chosen by the authorities of Antwerp over all rivals to print a large illustrated book de-

THE TYPE-FOUNDRY.

the nineteenth century. Indeed, it would not be easy to find a rival as to quantity and quality among modern houses. Here are etchings by Rubens, Van Dyck, Jordaens, Teniers; engravings by Bolswert, Vorsterman, Pontius, Edelinck. One looks with more than ordinary attention on the *St. Catharine*, the only etching known to have been done by the hand of Rubens, as well as on the wonderful line engraving by Edelinck of the portrait of *Philippe de Champagne*. The prints that may be most admired were made to the order of Plantin's successors, who were contemporaries of the greatest Flemish masters, but their preference for the work of true artists was implanted by the founder of the house. "I never neglected," Plantin said, "when I had the opportunity and the ability, to pay for the work of the best engravers." The sparsity of engravings in his earlier books was, no doubt, caused by his poverty; but even these petty books show that they were planned by a man of superior taste — by a printer whose heart

scribed the recent obsequies of Charles V. This book he published in 1559 in the form of an oblong folio, containing thirty-three large plates, at the cost of 2000 florins. These plates, although separately printed, were designed to be conjoined, and used as a processional frieze. In planning this book he did not repeat the folly of many of his rivals, who were still imitating the coarse designs and rude cutting of the obsolete "*Biblia Pauperum*" and "*Speculum Salutis*." He gave the work to a competent designer, and was equally careful with the engraving and printing, and found his profit in the large sale of many editions and in five languages. After this he made increasing use of engravings on wood. No printer of his time illustrated books so freely: in one book, the "*Botany*" of Dodonæus, the cuts would be regarded now as profusely extravagant. To this day they are models of good line drawing and clean engraving. When the text did not call for descriptive illustrations he made free use of large initial letters, head-bands, and

tail-pieces. The shelves and closets of the Museum contain thousands of initials remarkable for the vigor of their designs or the ingenuity of their backgrounds or interlacings. One series is about five inches square. One cannot refrain from expressing the regret that so many modern designers and publishers seem to be entirely ignorant of the beauty of some of the Plantin initials, and prefer elaborated distortions of the alphabet, which are every way unworthy of comparison. But Plantin soon found that there was a limit to the effects to be had from engravings on wood when printed on his rough paper and by his weak presses. He began to develop on a grand scale illustrations on copper, of which the "*Humanæ Salutis Monumenta*" of 1571, with its seventy-one large plates, was his earliest and most noteworthy example.

Two rooms contain the remnants of the type-foundry, which provoke reflection on the difference between old and new methods of book-making. The modern printer does not make his types; he does not even own a punch or a matrix. Buying his types from many foundries, he has great liberty of selection, but, necessarily, a selection from the designs of other men. It follows that the text types of one printer may be—must be, often—just the same as those of another printer, and that there can be no really strong individuality in the books of any house. In the sixteenth century every eminent printer had some of his types made to his own order, which types he only used. This was the method: He hired an engraver to draw and cut in steel the model letters, or punches, and to provide the accompanying mold and matrices. Keeping the punches, he took the mold and matrices to men who cast types for the trade, who furnished him all he needed. The founders who made Plantin's earlier types were Guyot and Van Everbrocht of Antwerp. The designs for these types and the making of the punches and matrices were by skilled engravers in different cities at prices which now seem incredibly small—from twenty to forty sous for punch and matrix of ordinary letter. Robert Granjon of Lyons and Guillaume Le Bé of Paris did much of his best work; Hautin of Rochelle, Ven der Keere of Tours, and Bomberghe of Cologne were also employed. Plantin had types cast in his office after 1563, but the foundry was not an important part of the house until 1600: at that date the collection of punches was very large.

Here are some of the common tools of type-making,—the vises, grindstones, files, gravers, etc.,—and rude enough they seem. When we go into the next room, and scrutinize the molds and punches behind the wire screens, and the justified matrices in the showcases,

we wonder that this excellent workmanship could have been done by these rough tools. Printed specimens of some of the types are shown on the walls, but they do not fairly show the full merit of the work. It is true that the counters are not as deep as a modern foundry would require, but the cutting is clean and good. Here are the punches of the great type of the Polyglot, of the music of the Antiphonary, besides Roman, Italic, Greek, and Hebrew,—of many sizes,—all out of use, out of style. Do we make better types now? From the mechanical point of view, yes: modern types are more truly cut and aligned, more solid in body, than those cast by hand from metal poured in the mold with a spoon. From the utilitarian, and even from the artistic standpoint, one cannot say yes so confidently. Modern types are more delicate, have more finish, and more graceful lines; but the old types are stronger and simpler, more easily read, and have features of grace that have never been excelled.

To the admirer of old furniture, the room numbered 26—the bed-chamber of the last Moretus—is attractive. A great bedstead of carved oak, black with age, partly covered with an embroidered silk coverlet (a marvel of neat handiwork and dinginess), flanked by a grimy prie-dieu and a wardrobe equally venerable, is dimly reflected in a tarnished mirror of the last century. On walls covered with stamped and gilt leather hang two old prints and a carving of the crucifixion. Elegant in its day, admirable yet, but how dead and cheerless is this little room! As devoid of life and warmth as the crucibles and furnaces in the foundry.

There is no room in the Museum deficient in objects of interest, for in all are paintings or prints or old typographic bric-à-brac enough to evoke enthusiasm from the dullest observer; but, after all, the great charm of a printer's museum is in the printer's books, and the library is properly placed at the end of all, and is the culmination of all. It is rich in rare books. Here is the Bible of thirty-six lines, which is rated by many bibliographers as the first great work of Gutenberg. Here are first editions and fine copies from the offices of all the famous early printers. They were not bought for show, nor as rarities—merely as texts to be compared, collated, or referred to for a new manuscript copy to be put in the compositors' hands. The collection here shown of the books printed by Plantin is large, probably larger than can be found elsewhere, but not entirely complete. They are not arranged in chronological order; one has to consult Ruelens's catalogue to see how Plantin's ambition rose with opportunity—to see what great advances he made

every year and for many years, not only in the number of his books, but in their greater size and merit, and in steadily increasing improvement of workmanship. "He is all spirit," wrote Montanus; "he gives little thought to food, or drink, or repose. He lives to work."

published by Max Rooses, the director of the Museum.

In these records may be found his correspondence with artists, scholars, and dignitaries, both civil and ecclesiastical, as well as the weekly bills of his workmen, inventories of stock, accounts of sales, of profit and loss, memoranda of work done and work prepared — everything one can need for an insight into the economy of an old printing-house. Here is his letter to the King of Spain setting forth his grievances from the king's delayed payments;

PLANTIN'S PRIVATE OFFICE.

But the most valuable part of this collection of 14,000 books is not in its printed but its written treasures. Plantin was a model man of business, who carefully preserved records, accounts, and much of his correspondence, and taught his successors to exercise similar diligence. The records show more than the business; they show the man and his motives. Many are in Plantin's handwriting; the accounts in Flemish, the correspondence in Latin, French, and sometimes in Spanish. The more valuable papers have been edited and

the items of money spent at the wedding-feast of each daughter (and curious reading it is); the bills of type-founders and engravers on wood; his written wrestlings with money-lenders who wanted too much of interest or of security, and with booksellers who wanted too much discount, and sold books below regular prices; his bargainings with editors and authors for manuscripts, and the *pourboires* he had to pay to officials of high and low station for permission to print; his complaints against the intolerable delays of artists and

engravers.* Rich as it is in relics of the domestic life of the sixteenth and seventeenth centuries, the house and furniture of the Museum does not show that domestic life with the clearness that the business life can be seen in the records. What is missing?

It is not an easy matter to make a wise selection from the wealth of the material which M. Rooses, the director of the Museum, has brought to light. One must begin with the unexpected discoveries. Contrary to the prevailing belief, Plantin's editions were not small. His ordinary edition was 1250 copies; his largest edition was 3900 copies of the *Pentateuch* in Hebrew. He refused to print books in small editions unless he was paid the cost of the work before it was begun. He sold few single copies; the retail trade in ordinary books was done by wife and daughters in shops in other quarters of the city. Nearly all his books went to booksellers at fairs or in other cities, to whom he gave small discounts, about one-sixth less than the retail price. The retail prices were very small. The ordinary text-book, in an octavo (in size of leaf equivalent to the modern 16mo) of three hundred and twenty pages, was then sold at retail for ten sous. A *Horace* of eleven sheets sold for one sou; a *Virgil* of nineteen and a half sheets for three sous—of thirty-eight sheets for five sous; the Bible, 1567, in Latin, at one florin. For large quartos and folios, for texts in Greek, and for profusely illustrated books, the prices were as high as, or even higher than, they are now, considering the then greater purchasing power of money. For his *Polyglot* in eight volumes he asked seventy florins, equivalent to one hundred and twelve dollars of American money.

The modern publisher is amazed at the low prices for ordinary books, but the records show that the cost of a book was in proportion. Plantin paid very little to authors and editors. Sometimes they were required to contribute to the cost of the printing, and were given a few copies of the book after it had been printed as a full make-weight. As a rule they contributed nothing, and were paid, if paid at all, in their own books. Many authors got but ten florins for the copy of valuable and salable books. The literary world was undergoing a curious transition. In the fourteenth and fifteenth centuries scholars had tried to

keep to themselves their knowledge; in the sixteenth century they were eager to publish it, and glad to get an opportunity.† Many seemed to think that they were under moral obligation to give freely what they knew.

Designing and engraving were relatively cheaper than they are now. From four to seven sous was the price for designing and engraving a beautiful initial letter, not to be had as good now for as many dollars. What modern publisher would hesitate to engage Van den Broeck to furnish the elaborate and beautiful design, "Our Lady of Seven Sorrows" (a full folio page), at the price of six

A ROOM IN PLANTIN'S HOUSE.

florins? For his superb engraving of this design Plantin overpaid the dissolute Jerome Wiericx ninety-six florins. The usual price of the brothers Wiericx for engraving a plate of folio size was thirty florins.

All the materials of the book were cheap. The ordinary paper came from France and cost, according to weight and quality, from twenty-four to seventy-eight sous a ream. Even the large vellum skins of Holland, bought for the "Royal Polyglot," cost but forty-five sous the dozen.

He paid his binders for the labor of binding (not including the leather or boards) an octavo in full sheep one sou for each copy; for a quarto, one sou and a half to two sous; for a folio, in full calf, from seven to eleven

* There are engravers on copper here who offer to work for eight florins a day in their own houses. When they have worked one or two days they go to taverns and disreputable houses, and carouse with worthless people. There they pawn their goods and tools. Whoever has work in their hands is obliged to hunt them up and pay their debts. [Plantin to Ferdinand Ximenes, Jan. 2, 1587.]

† Balzac wrote a letter to Elzevir, in which he thanked Elzevir effusively for his piratical reprint of one of his books. Balzac never got a sou from this reprint, not even thanks, but he was not the less grateful, for he was delighted because he had been introduced in the good society of the great authors, and had received the imprimatur and approval of Elzevir.

sous.* Richly gilt books were paid for at higher prices, but miserably small they seem as compared with present prices.

If Plantin had done no more than to found a large printing-house, he would deserve no more consideration than any other successful trader of his time. He was not an ordinary trader: he has right to an honorable place among the great educators of his century—not for what he wrote, but for what he had written or created for him. He has no stand-

that could be printed to profit. To this could be added the poverty and the sparseness of readers. All the popular classic texts, and all ordinary forms of school books and of devotional books, had been printed so many times, and in such large editions, that they often had to be sold for little more than the cost of the white paper. Yet Plantin entered this overcrowded field with confidence. His books of devotion were more carefully printed and more richly illustrated; his school texts were more carefully edited and more intelligently arranged. All were of the first order; he did not pander to low appetites; his aims were always high and his taste was severe.

Before the year 1567 he had printed many editions of the Bible in Latin, Flemish, and Hebrew. By far the largest part of the reading of the sixteenth century was theological, and Plantin saw that he would make his greatest success in getting an appointment as the recognized or official printer of the liturgical books of the Roman Catholic Church. His earliest attempts were beset with difficulties. He had to solicit the help of Cardinal Granvelle and Philip II. The permit given by the pope and his cardinals was grudgingly allowed by the ec-

clesiastical magnates of the Netherlands. When he did begin to print, he had to pay ten per cent. of his receipts to Paul Manutius of Rome, who held the privilege. He had to petition the King of Spain to get the exclusive privilege he desired for the printing of the Church on Spanish territory. His friend Montanus told the king that Plantin's prices were more, but his printing was better than that of the Italian printers. It was this superiority in workmanship, as well as in business methods, that turned the scale in his favor. Two of these service books, the great Psalter and the Antiphonary of 1571 and 1572, are admirable pieces of rubricated printing. For

A CORNER OF THE COURT-YARD.

ing as a scholar or as an editor, but as a publisher he outranks all his contemporaries. He printed more than sixteen hundred editions, some of which were original work written at his request. His greatest production was eighty-three editions in 1575, and the lowest, twenty-four editions in 1576, the year of the Spanish Fury.

One of the difficulties of a publisher of the sixteenth century was the scarcity of books

* M. Roose appraises the real or purchasing value of silver in the time of Plantin, at its maximum, at four times its stamped or nominal value. By this standard the sou should be rated as equal to eight cents of American money, and the florin as equal to \$1.60.

many years the printing of these and other books kept him in financial embarrassment, but the result demonstrated the wisdom of his foresight. He never lived to enjoy the fruits, but his successors were made rich by a monopoly which they held for more than two hundred years.

Plantin's printing was good, but it has been overpraised. He was named "King of Printers" at a time when the duties most admired in a printer were those of editor and publisher. Here he was grand. His purposes were always far beyond those of his rivals; great folios, many volumes, large types, difficult works in little-known languages, "lumping patents" or privileges, profuse illustrations by eminent artists—every peculiarity of typography that dazzled or astonished. All his books are above mediocrity, but he did not attain the highest rank, either in his arrangement of types or in his press-work. He had obscure rivals in France and the Netherlands, who never made showy or imposing books, but who did better technical work, furnished more faultless texts, and showed clearer and sharper impressions from types. After Balthazar III. a decline set in. Some of the later books of the house are positively shabby—a disgrace to their patent and to the art.

Was Plantin a Catholic? Prefaces written by him in some books are fervid with protestations of loyalty to the old Church. Montanus and Cardinal Granvelle, and many prominent ecclesiastics, were his personal friends, and vouched for his orthodoxy. The suspicious King of Spain never seems to have doubted him, not even when he went to Louvain, that home of heresy. These are strong assurances; yet he was often denounced as a Calvinist: he printed books that were proscribed, and for which he lost his property. His correspondence with heretics proves beyond cavil that he was at heart a member of a non-resisting sect not unlike that of the Friends,—a sect which taught that religion was a personal matter of the heart and life, and not at all dependent on churches, creeds, or confessions. How much this flexible, non-resistant faith was his justification for the insincerity of his professions he alone can answer. It is certain that he was insincere. He was not the stuff martyrs are made of.

It is more pleasant to turn to another side of his character, in which his sincerity is above all reproach. To the last, Plantin was true to his trade. Too many successful traders make use of their success to indulge in unsuspected propensities. They kick away the ladder they climbed up on; they forswear trade and plebeian occupations; they take their ease and display their wealth; they build mansions and

STATUETTE OF MADONNA AND CHILD, OVER CANDLESTICK IN THE PRESS-ROOM. (FROM AN ETCHING MADE FOR THIS ARTICLE BY OTTO H. BACHER.)

buy estates; they seek social distinction for themselves and their families. From this vain-glory Plantin was entirely free. His ambition began and ended in his printing-house. To form a great office worthy of the king of printers, in which the largest and best books should be printed in a royal manner, was the great purpose of his life. Neither the Spanish Fury, nor the siege of Antwerp, nor the destruction of the great city's privileges and commerce, nor the king's neglect, nor his failure to perpetuate his name in a son, nor the infirmities of old age, shook his purpose. The future fate of the office for which he had labored was doubtful; for his sons-in-law were not in accord with one another. He had little ready money and many obligations. He had only the appearance of success; his greatest bequest was the means by which unreachd success could be attained. The probabilities were that his name, fame, and estate would soon disappear in a struggle between contentious heirs; but with all the odds against him, he did carry his point. The will of the dying old man had more enduring force in it than there was in any decree or treaty then made for the perpetuation of the Spanish dynasty. The Plantin-Moretus house outlived the Spanish house of Hapsburg. For more than three centuries the printing-

ERAS

C. PLANTIN.

office was kept in the family in unbroken line of descent; for at least three generations it maintained its position as the first office in the world. The Plantin types and presses and office are still the pride of Antwerp, but the statue of the king's representative, the fierce Duke of Alva, which once dominated a square in the city, and who boasted on the pedestal that he had restored order and preserved religion and reconstructed society, was long ago overthrown. No overthrow could be more complete. It was not merely the upsetting of statue or dynasty, but of the foundations of medieval ideas and principles. Plantin, unwittingly no doubt, but not the less efficiently, did his share in bringing down this thorough destruction. The books which he and others printed aroused the mental activity and inspired the freedom which soon made the Netherlands the foremost state in the world. Kings die and beliefs change; the bronze statues made to be imperishable are destroyed, but the printed word stands. The book lives, and lives forever. Horace was right: it is more enduring than bronze.

In walking through the Museum the eye does not weary of sight-seeing, but the brain does refuse to remember objects that crowd so fast. To remember, one must rest and think of what he has seen. It is a relief to sit down under the cool arcade and look out on the quiet court, and think of the men who trod these stones. For here Plantin and Moretus used to sit in the cool of the day; here they matured plans for great books, and devised means of borrowing money to pay fast-coming obligations. Was the end worth the worry? Behind those latticed windows, obscured with rampant grape-vine leaves, the great Justus

Lipsius wrote or corrected the books that were the admiration of all the universities — books now almost forgotten. In the next room Poelman and Kilianus and Raphelengius plodded like wheel-horses in dragging obscure texts out of the muddy roads in which copyists and compositors had left them. Who thinks of them now? Through that doorway have often passed the courtly Van Dyke and the dashing Rubens, gay in velvets and glittering with jewels. They, at least, are of the immortals. Dignitaries of all classes have been here: patriarchal Jewish rabbis and steeple-crowned Puritans; the ferocious Duke of Alva and the wily Cardinal Granvelle; cowed ecclesiastics from Rome and black-gowned professors from Leyden. From upper windows not far away Plantin's daughters have looked out in terror, on the awful night of the Spanish Fury, as they heard the yells of the savage soldiers raging about the court, and listened to their threats of "blood and flesh and fire," and shuddered at the awful fate that seemed before them. Truly a sad time for the making of books or the cultivation of letters. And even nine years after this, the boy Balthazar must have been stopped at study by the roar of Farnese's guns during that memorable siege, and by the shrieks of the starving defenders of the doomed city.

The evening bell sounds its warning: it is time to go. At our request the obliging concierge gives us a few leaves from the grape-vine, and we take our places in the outgoing procession. Out once more in the steaming streets — out in the confused roar and clatter of modern city life. But the memory of the Museum is like that of the chimes of Antwerp's great cathedral — never to be forgotten.

Theo. L. De Vinne.

PLAN OF THE PLANTIN-MORETUS MUSEUM.

The Ground Floor: 1, 2, 3, Parlors; 4, 5, Shops; 6, Room of tapestries; 7, Room of the correctors; 8, Office; 9, Room of Justus Lipsius; 10, Lobby; 11, Room for the letters; 12, Printing-room; X, Porter's lodge; Y, Staircase looking out on the court; Z, Servants' room, etc. First Story: 13, 14, Front rooms; 15, 20, 30, Library; 16, 18, 22, Wood-engravings; 17, Lobby; 19, Copper-plates; 20, 24, Parlors; 21, Room of the licenses; 23, Room of the Antwerp engravers; 25, Rear room; 26, Sleeping-room; 31, Hall of archives; X, Reading-room; Y, Office of the Director; Z, Staircase leading to the court.

THE PHILOSOPHY OF COURAGE.

FRENCH writer has said that every mistake made in life can be traced to fear. Though this was doubtless written more to shape an epigram than to state a fact,—and epigrams are generally regarded as

jewels purchased at the expense of veracity,—yet the more we reflect upon the remark the more we are impressed with its truth.

Fear, above all things else, enfeebles the vigor of man's actions, supplants decision by vacillation, and opens the road to error. When one seeks counsel of one's fears, judgment ceases to obtrude advice.

Courage, on the other hand, is universally recognized as the manliest of all human attributes; it nerves its possessor for resolute attempts, and equips him for putting forth his supreme efforts. Powerful aristocracies have been founded with courage as the sole patent of nobility; kings have maintained their dynasties with no other virtue to commend them to their subjects. A once popular farce set forth these two opposite traits in human nature under the title of "The nervous man and the man of nerve."

Courage has so many different natures, assumes so many different forms, and is subject to so many eccentricities, that it is hard to define it. To separate it into the two grand divisions of moral courage and physical courage is a simple matter, but when the subdivisions of these are to be determined, the task is confronted with formidable difficulties.

Few men possess all the various forms of courage. One man may be utterly fearless in the most perilous storm at sea, while on land he may be afraid to travel at the rate of twenty-five miles an hour on a first-class railroad, and, sailor-like, expends his sympathies in pitying "poor unhappy folks ashore." A locomotive engineer on an Eastern railway, who was always selected for his "nerve" when a fast "special" was to be sent out, and whose courage, repeatedly displayed in appalling accidents, had become proverbial, was afraid in the quiet of his own home to go upstairs alone in the dark.

In ascending a Southern river on a steamboat, towards the close of our civil war, we had an officer on board who, during three years of fighting, had treated shot and shell in action with an indifference that made him a

marvel of courage; but on this expedition he manifested a singular fear of torpedoes, put on enough life-preservers to float an anchor, and stood at the stern of the boat ready, at the first sign of danger, to plunge into the water with the promptness of a Baptist convert. He once came very near jumping overboard at the sound of a sudden escape of steam from the boiler. He made no disguise of his nervousness at this new form of danger. I recollect a company officer of infantry who never seemed to know what the word fear meant under any circumstances until his promotion to a higher rank compelled him to mount a horse, and then his mind knew no peace. A sudden snort from the beast alarmed him more than the opening of a battery, and the pricking up of the animal's ears had more terrors for him than a bayonet charge.

These instances, though numerous, are the exceptions, not the rule. They can often be accounted for by the fact that the victim had suffered a severe fright, perhaps in childhood, which produced a permanent shock to his nerves, and made him timid ever after respecting the particular form of danger to which he had been exposed. An acquaintance of mine whose repeated acts of gallantry in the field had convinced all his comrades that he had been born without the sense of fear was seen to give a wide berth to any horned animals that came in sight. Whenever a drove of commissary's cattle were encountered on the road, he began a series of well-timed maneuvers with a view to getting a fence between himself and them in the shortest possible time. Their approach seemed to demoralize him as much as a cavalry charge of the enemy elated him. The providing of an army with "beef on the hoof" was one of the methods of military logistics which had more terrors for him than a prospect of starvation. When twitted on the subject, he one day said in explanation, that, when a child, a cow had once chased him, thrown him down, and then tossed him on her horns, and he had never recovered from the shock, or been able to banish from his mind the sense of terror the circumstance produced. It was the burned child dreading the fire.

This instinct is common to all animals. At a country station on one of our railways a pig used to be a constant visitor, and drove a thriving business in picking up stray grains of corn which dropped from the bags as they

were loaded on the cars. One day the pig's greed so far overmastered his discretion that his tail got nipped between the brake-shoe and the car-wheel, and when the train started the tail was jerked out by the root. The victim of this sudden catastrophe was now confronted with the dismal prospect of having to navigate through the rest of life with his steering apparatus a total wreck. He continued coming to the station after that, but whenever he heard the clatter of an approaching train, he hurried off to a safe distance and backed up close against a brick wall till the cars had passed; he was never going to permit himself to be subject to the risk of such an indignity again, even though there was no longer any tail left to be pulled out. He had acquired sufficient railroad experience to appreciate the magnitude of the loss of terminal facilities.

As one's physical condition is affected by circumstances of health and sickness, so does one's courage vary under different surroundings. Troops, after being refreshed by a rest and a good meal, have stood their ground under a fire from which they would have fled in confusion if tired and hungry. An empty stomach, like conscience, makes cowards of us all. The Duke of Wellington proved himself a philosopher when he said, "An army moves principally upon its belly." In the days when personal difficulties were settled under the "code," the parties never tried to screw their courage to the sticking-point on empty stomachs, but "pistols and coffee" always went hand in hand.

In the successful attack made by Admiral Du Pont with his fleet upon the Confederate forts which commanded Port Royal harbor, when the dinner hour arrived the admiral directed rations to be served as usual, and the crews were ordered to cease loading their guns and go to loading their stomachs to fortify themselves for the continuation of the battle. The commanding officer was severely criticised for this at the time, but it was afterwards generally conceded that he understood the true relations between the nerves and the stomach, and gained the victory all the sooner by taking time to lodge that dinner where it would do the most good. An attack of dyspepsia or a torpid liver will sometimes rob a man of half his natural courage; rabbits in his path then become magnified into lions, and mole-hills into mountains. Napoleon lost the battle of Leipsic from eating too heavy a dinner and being seized with a fit of the blues brought on by indigestion. As the Latin roots of the word locate the source of courage in the heart, and as the seat of all courage is believed by many to be in the mind, no one would attempt the ungracious and un senti-

mental task of trying to transfer its location to the stomach, but facts point to the belief that the condition of the stomach has something to do even with this high attribute of man.

Courage, like everything else, wears out. Troops used to go into action during our late war displaying a coolness and steadiness the first day that made them seem as if the screeching of shot and shell was the music on which they had been brought up. After fighting a couple of days, their nerves gradually lost their tension, their buoyancy of spirits gave way, and dangers they would have laughed at the first day often sent them panic-stricken to the rear on the third.

It was always a curious sight in camp after a three-days' fight to watch the effect of the sensitiveness of the nerves; men would start at the slightest sound, and dodge at the flight of a bird or a pebble tossed at them. One of the chief amusements on such occasions used to be to throw stones and chips past one another's heads to see the active dodging that would follow.

Recruits sometimes rush into dangers from which veterans would shrink. When Thomas was holding on to his position at Chickamauga on the afternoon of the second day, and resisting charge after charge of an enemy flushed with success, General Granger came up with a division of troops, many of whom had never before been under fire. As soon as they were deployed in front of the enemy, they set up a yell, sprang over the earth-works, charged into his ranks, and created such consternation that the Confederate veterans were paralyzed by the very audacity of such conduct. Granger said, as he watched their movements, "Just look at them; they don't know any better; they think that's the way it ought to be done. I'll bet they'll never do it again." Men, like children, are often ignorant of danger till they learn its terrors in the school of experience.

Every soldier understands why "two o'clock in the morning" courage is recognized as courage in its highest form. At that time many hours of fasting have occurred since the evening meal; enough sleep has not yet been had to restore the nervous system to its normal condition after the fatigue and excitement of the previous day; it is the hour of darkness and silence, when the mind magnifies the slightest sounds. The stoutest nerves require a great deal of bracing when a camp is startled out of its sleep by an attack at such an hour.

Nearly all persons are more timid when alone. The feeling of lonesomeness is akin to fear. At Spotsylvania a staff officer flinched and turned back when bearing a message to a part of the field which required him to pass

along a road exposed to a short-range fire from the enemy. His courage had stood every test when in the company of others, but on this occasion he had set out alone, and had been seized with a fear which at the time completely unmanned him.

A woman when quite alone in a house at night may be tortured by a sense of fear which completely destroys her peace of mind; but let there be a child in the same room with her, and she will feel but little apprehension of danger. The relief comes not from any protection she believes the child could afford, but from her release from the fearful sense of loneliness which had unnerved her.

There is a peculiar significance in "shoulder to shoulder" courage. It springs from a sense of the strength which comes from union, the confidence which lies in comradeship, the support derived from a familiar "touch of the elbow."

A battery of artillery has often been ordered to open fire when there was no chance of doing the enemy any damage, merely for the moral effect upon the infantry, whose courage is always increased by feeling that they have the support of the noise of the sister arm of the service, if nothing else.

Indifference to danger is not always the form of courage which should entitle its possessor to the highest credit. It is a negative virtue as compared with the quality which enables one to perform a dangerous duty while realizing the full measure of the peril encountered.

These two traits are best illustrated by the old story of the two soldiers whose regiment was charging up a hill in a desperate attempt to capture a battery. When half-way up, one of them turned to the other and said, "Why, you're as pale as a sheet; you look like a ghost; I believe you're afraid." "Yes, I am," was the answer; "and if you were half as much afraid as I am you'd have run long ago." It is something higher than physical courage, it is a species of moral courage, which recognizes the danger and yet overmasters the sense of fear. When the famous mine in front of Petersburg had been completed, and the National troops drawn up ready to charge the enemy's works as soon as the mine had done its work in creating a breach, the signal was given just before daylight, the fuse was lighted, and the command stood waiting with intense anxiety for the explosion which was to follow. But seconds, then minutes, then tens of minutes passed, and still no sound from the mine. The suspense became painful, and the gloom of disappointment overspread the anxious faces of officers and men. The fuse had been spliced about midway. It was now

thought that there was a defect in the splice, and that it was at this point that the fuse was hanging fire. The day was breaking, the enemy was becoming alert at sight of our unmasked columns, there was not a moment to be lost. Lieutenant Doughty and Sergeant Rees, of the 48th Pennsylvania infantry, now volunteered to examine the fuse. They entered the long dark gallery which led to the mine, and without stopping to calculate the chances of life, calmly exposed themselves to one of the most horrible forms of death. With no excitement to lend them its intoxication, with nothing to divert their minds from the fate which seemed to await them, they followed the course of the fuse through the long subterranean passage, found the defect at which the spark had been arrested, and made a new splice. On their return the match was again applied, and the train was now prompt to do its deadly work. These men displayed even a higher order of courage than those who afterwards charged into the breach.

Perhaps the most striking case of desperate and deliberate courage which the history of modern warfare has furnished was witnessed at Cold Harbor. The men had been repeatedly repulsed in assaulting earth-works, had each time lost heavily, and had become impressed with the conviction that such attacks meant certain death. One evening, after a dangerous assault had been ordered for daylight the next morning, I noticed in passing along the line that many of the men had taken off their coats and seemed engaged in mending rents in the back. Upon closer examination I found that they were calmly writing their names and home addresses on slips of paper, and pinning these slips upon the backs of their coats, so that their dead bodies might be recognized upon the field and their fate made known to their friends at home. Never was there a more gallant assault than that made by those men the next day, though their act of the night before bore painful proof that they had entered upon their work without a hope of surviving. Such courage is more than heroic; it is sublime.

Recklessness often masquerades as courage, but it is made of different mettle. Plato, in reasoning upon this subject, says: "As knowledge without justice ought to be called cunning rather than wisdom, so a mind prepared to meet danger, if exerted by its own eagerness and not the public good, deserves the name of audacity rather than of courage."

Courage born of passion or excitement should always be looked upon with suspicion. It may fail at the very moment it is most needed. I remember a soldier in one of the regular batteries in the Army of the Cumber-

land, who had displayed conspicuous bravery in a dozen engagements while serving his gun as a cannoneer. At the battle of Chickamauga he was assigned to duty as a driver, and instead of participating in the excitement of loading and firing, he had nothing to do but sit quietly on his horse and watch the havoc created around him by the enemy's shot. He soon became seized with a terror which completely unmanned him, and after the battle he implored his commanding officer to send him back to his gun, saying that if he ever went into another engagement as a driver, he felt certain he should run away and lose all the reputation he had ever gained. His courage had disappeared with the excitement which inspired it.

Men have performed deeds of bravery by being goaded on by anger or stung with taunts, but those who require to be lashed into a rage before they can key up their nerves sufficiently to meet danger are not the possessors of a courage which is trustworthy. Fierce fires soon burn out. According to Shaftesbury, "Rage can make a coward fight, but fury or anger can never be placed to the account of courage."

It is a fact known to every soldier that the most courageous men indulge the least in brutal bullying, and those who exhibit all the pluck necessary to make them leaders in street rows and prize rings are the first to shirk an encounter in which death stares them in the face. During our civil war the regiments which were composed of plug-uglies, thugs, and midnight rounders, with noses laid over to one side as evidence of their prowess in bar-room mills and paving-stone riots, were generally cringing cowards in battle, and the little courage they exhibited was of an exceedingly evanescent order. A graduate of a volunteer fire company arrived in Washington one day, in the ranks of a regiment in which he had enlisted. As he stepped from the cars he took off his coat, hung it over his arm, tilted his hat a little farther up behind, brushed his soap-locks forward with his hand, and said to a midget of a newsboy standing at the station, "I say, sonny, hev you seen anything of Je-Jeff Davis around h'yar? Ve 're lookin' fur him."

"You 'd better go down to Richmond and do yer lookin'," replied the boy.

"Well now, sonny, don't you worry none about that," said this forerunner of destruction. "That 's de very town ve 're goin' fur, and ven ve gets inside of it, thar von't be anything but vacant lots around thar, you bet."

In his first fight this same plunging swash-buckler suddenly became seized with a feeling of marked tenderness towards his fellow-be-

ings generally, concluded he did not want to hurt anybody, and soon struck his best gait in an effort to join the baggage-wagon committee in the rear.

Courage, like most other qualities, is never assured until it has been tested. No man knows precisely how he will behave in battle until he has been under fire, and the mind of many a gallant fellow has been sorely perplexed by the doubts that have entered it previous to his first fight. He sometimes fears his courage, like Bob Acres's, may ooze out, and that he may behave like the enthusiastic young hunter in pursuit of his first bear, who followed the trail vigorously all day, spoiling for a chance to get to close quarters with the animal, but in the evening suddenly turned back, giving as an explanation of his abrupt abandonment of the hunt that the bear's tracks were getting too fresh.

At the beginning of our war officers felt that, as untested men, they ought to do many things for the sake of appearance that were wholly unnecessary. This, at times, led to a great deal of posing for effect and useless exposure of life. Officers used to accompany assaulting columns over causeways on horseback, and occupy the most exposed positions that could be found. They were not playing the bravo: they were confirming their own belief in their courage, and acting under the impression that bravery ought not only to be undoubted, but conspicuous. They were simply putting their courage beyond suspicion.

At a later period of the war, when men began to plume themselves as veterans, they could afford to be more conservative; they had won their spurs; their reputations were established; they were beyond reproach. Officers then dismounted to lead close assaults, dodged shots to their hearts' content, did not hesitate to avail themselves of the cover of earth-works when it was wise to seek such shelter, and resorted to many acts which conserved human life, and in no wise detracted from their efficiency as soldiers. There was no longer anything done for buncombe; they had settled down to practical business. One day, in the last year of the war, General Butler rode out with his staff to see how the work was progressing in the digging of his famous Dutch Gap Canal, that was to cut off a bend in the James River. He stopped at a point which soon became a conspicuous target for the enemy's batteries. After a while a staff officer, who had won a famous reputation by his repeated acts of personal courage, saw the uselessness of the exposure of so many valuable officers, and proposed to the general to move to another position. The general turned upon him sharply and said,

"Any officer of the staff who 's afraid can go back to camp." The officer at once turned his horse about, touched his hat, and with a quizzical look at his commanding officer said, "Good morning, General, I 'm afraid," and rode off to a position where he could be of just as much service and not be a party to an exhibition of recklessness. Such an act before his courage had been tested would have cost him his commission. Now he could afford to exercise the wisdom of a veteran, and no one dared question his motives.

There have been many instances which go to prove that a young soldier ought not always to be hastily sacrificed for flinching in his first engagement. Upon one occasion, during a desperate assault in which the attacking column was under a withering fire, I saw a company officer desert his men, and run to the rear, as pale as a corpse, trembling like an aspen, the picture of an abject craven. He even tore off his shoulder-straps that he might not be recognized as an officer. He heeded neither urgings nor threats; he was past all shame; he was absolutely demented. It was the more distressing because he was a man of great intelligence and possessed many good qualities. When the engagement was over, the only question seemed to be whether he should be cashiered or shot; but he begged so hard of his commanding officer to give him another trial, to grant him one more chance to redeem himself from disgrace, and gave such earnest pledges for his future conduct, that he was finally released from arrest and allowed to go into battle again with his company. He fulfilled his pledges most religiously. Wherever there was danger he was seen in the midst of it; his conduct in every subsequent fight was that of a hero; and he was finally promoted to the rank of a field officer. He had effaced the blot from his escutcheon. The man was no coward at heart; he had for the moment, in army parlance, "lost his grip" under that first murderous fire.

Boucicault, in his play called the "Relief of Lucknow," introduces the character of a young English officer fired with professional ambition, who has just joined the service, and finds himself in the beleaguered city, surrounded by rebels. He is ordered to make his way through the enemy and carry a message to the column advancing to the garrison's relief; but his heart fails him, his courage deserts him, and he turns back and stands before a brother officer a miserable poltroon. This officer brings him to a realizing sense of the wretched position in which he has placed himself, and procures him an opportunity to wipe out his disgrace. He embraces it, and afterwards becomes one of the most heroic

figures in the siege. In conversation with Mr. Boucicault, I once asked him whether this scene was founded on fact. He said it was not, that he had introduced the incident merely because he considered it dramatic, and somewhat novel in a military play. I then told him the story related above, about the company officer whose nerves were unstrung in his first encounter with danger, as confirmative of the truthfulness with which the distinguished author had held the mirror up to nature in his admirable military drama.

The cases of recovery, however, from the disease of fear are rare. Cowardice is generally a constitutional malady, and has to be recognized and dealt with as such. General Sheridan used to estimate that about twenty-five per centum of the men were lacking in the requisite courage for battle, and he at times tried to have the weak-kneed troopers singled out and assigned to hold the horses of the other men when the cavalry dismounted to fight on foot. He said we had this complement of the faint-hearted in the ranks; we could not very well deplete the forces by getting rid of them, and the only philosophical plan was to utilize them by giving them some duty which their unsoldierly nerves could stand.

A curious characteristic of fear is that it generally affects persons when death is threatened in an inverse ratio to the value of their lives. In battle an officer upon whom the fate of a command depends will risk his life generously unmoved by a sense of fear, while a shirk whose life is of no earthly use to anybody will skulk in the rear and dodge all danger. When encountering heavy weather in a sail-boat an able-bodied young fellow, with every prospect of a career of usefulness before him, often sits calmly through the danger, while some aged invalid, with one foot already in the grave, will prove himself a martyr to his fears, squirm at every lurch of the boat, and summon all hands to stand by to save him.

A sense of cowardice seems to rob a being of all his manhood. When you see a person acting the coward you may sting him with reproach, hurl at him every epithet of contempt, even cudgel him as you would a cur, and there is usually not enough manhood left in him to resent it; no sense of shame to which appeal can be made; no sensibilities to wound.

The question is often asked whether men in battle, when they break, run to the rear very fast. Usually they do not; they often do not run at all; the most provoking part of it is that they deliberately walk away; and as to reasoning with them, you might as well try to reason with lobsters when they scramble out of a basket and start for the water.

There was one soldier, however, in a Western army, who in a retreat proved an exception to the rule and showed himself still master of the faculty of resentment. An irreverent general officer, who was famous for designating his men on all critical occasions by a title which was anything but a pet name, called out to this soldier who was breaking for the rear:

"Halt there, turn round, and get back to the front, you ——."

"Look-ee here, Gin'ral," said the man, cocking his gun and taking aim at the officer's head, "when a man calls me a name sich es that, it's his last departin' word."

"Oh, put up your gun," said the general. "I did n't mean anything. I forgot your other name."

Reasoning dictated by fear is seldom logical. When a man becomes panic-stricken he recognizes but one principle for his guidance, that self-preservation is the first law of nature, and is ready to repeat the cry, "I would give all my fame for a pot of ale and safety." The instincts of fear do not always guide him to a safe place. In his confusion he often rushes into more danger, and becomes a ludicrous object to watch. In one of our prominent battles, a soldier belonging to a command which was supporting a battery was lying down with the rest of his regiment to obtain some cover afforded by a bit of rolling ground. The fire soon became so hot that his nerves could no longer stand the strain upon them, and he sprang to his feet and started for the rear. He soon found himself in a level field that was being plowed by the shot and shell which ricocheted over the rolling ground in front, and saw that he had got out of the frying-pan into the fire.

"What are you doing there?" cried an officer.

"Well," said the man, "I 'm looking for the rear of this army, but it don't seem to have any."

The question most frequently asked of soldiers is, "How does a man feel in battle?" There is a belief, among some who have never indulged in the pastime of setting themselves up as targets to be shot at, that there is a delicious sort of exhilaration experienced in battle, which arouses a romantic enthusiasm, surfeits the mind with delightful sensations, makes one yearn for a life-time of fighting, and feel that peace is a pusillanimous sort of thing at best. Others suppose, on the contrary, that one's knees rattle like a Spanish *bailarina's* castanets, and that one's mind dwells on little else than the most approved means of running away.

A happy mean between these two extremes would doubtless define the condition

of the average man when he finds that as a soldier he is compelled to devote himself to stopping bullets as well as directing them. He stands his ground and faces the dangers into which his profession leads him, under a sense of duty and a regard for his self-respect, but often feels that the sooner the firing ceases the better it would accord with his notion of the general fitness of things, and that if the enemy is going to fall back the present moment would be as good a time as any at which to begin such a highly judicious and commendable movement. Braving danger, of course, has its compensations. "The blood more stirs to rouse a lion than to start a hare." In the excitement of a charge, or in the enthusiasm of approaching victory, there is a sense of pleasure which no one should attempt to under-rate. It is the gratification which is always born of success, and, coming to one at the supreme moment of a favorable crisis in battle, rewards the soldier for many severe trials and perilous risks.

The physical effect produced upon different men in the presence of danger forms an interesting study, but in many cases the outward signs as indicated by the actions of the individual in no wise measure the degree of his courage or his fear. The practice, for instance, of dodging shots, "jackknifing" under fire, proceeds from a nervousness which is often purely physical, and has but little more significance as a test of courage than winking when something is thrown in one's face. The act is entirely involuntary. A general officer who was killed at the second battle of Bull Run was one of the most gallant soldiers that ever drew a blade. Everybody had predicted his early death from the constant and unnecessary exposure to which he subjected himself. When under fire, the agile dodging he performed was a whole gymnastic exercise in itself. His head would dart from side to side and occasionally bob down to his horse's neck with all the vigor of a signal-flag in waving a message. These actions were entirely beyond his control, and were no indications whatever of fear. Dodging to some extent under a heavy infantry fire is very common. I can recall only two persons who throughout a rattling musketry fire always sat in their saddles without moving a muscle or even winking an eye; one was a bugler in the regular cavalry, and the other was General Grant.

Two general officers in the field, conspicuous for their fearlessness, possessed such nervous temperaments physically that, under the strain to which they were subjected in the face of a destructive fire, they invariably became affected with nausea, and, as our English friends say of seasick people, they frequently became

"actively ill." It was a source of great mortification to them, but it was constitutional; they could not control it, and no one could attribute it to fear.

The realization of danger is always egotistical. Men waiting to go into action turn their conversation upon their previous hair-breadth escapes and the havoc made among their comrades, just as passengers on a steamer invariably assemble in a storm and relate their former harrowing experiences in the "roaring forties," and travelers on a railway train as soon as it gets to running at a break-neck speed on a dark night begin to tell each other their blood-curdling stories of fatal telescoping and tangled wrecks. These recitals are not calculated to be cheering in their effects, but human nature is so constituted that the mind will dwell upon the horrors which the presence of danger always conjures up, and it seems to find a melancholy relief in expending its thoughts in words.

Superstition, which is the child of fear, is common among all people who lead a life surrounded by dangers. Sailors are proverbially superstitious, and it is natural that such a feeling should enter an army and sometimes warp men's courage. Presentiments are usually common with recruits, but after repeatedly finding their most clearly defined apprehensions unrealized they lose faith in such imaginings, and begin to look upon these things as so lost to all sense of punctuality that they no longer believe in their coming. I have known but one presentiment which was fulfilled, and that was accomplished in such a bungling way as to be robbed of all respect for its methods.

The practical questions involved in this discussion are, Can courage be taught, and, if so, what are the best means of education? Numerous experiments have been attempted in this direction. I knew the father of a large family of boys who became greatly distressed on account of the timidity shown by several of them, and set about educating them up to a higher standard of courage after a method which he had practiced successfully with dumb animals. He had found, for instance, that when a horse showed great terror at sight of a railway train in motion, the surest way to break him of it was to throw him down close to the track and confine him in that position till the train had thundered by. After subjecting the animal to this mode of discipline two or three times its sense of fear was entirely overcome. He applied similar lessons to his boys. If one was afraid to be alone in the dark, the father made him wander repeatedly through the attic rooms at midnight without a light. If another had a dread of the water, he compelled him to swim swift streams and dive off high landings. The

practice was disagreeably heroic for the boys, but the father insisted that it finally drove all fear from the most timid of them. He proceeded upon the theory that fear is fed by the imagination, and as soon as any one is convinced that the objects dreaded are harmless, all fear of them will vanish. He evidently believed, with Schiller, that the chief element in the sense of fear is the unknown.

Some years ago a gentleman traveling on a European steamer became such a victim to his terror of the sea that he attracted universal attention. He allowed his mind to dwell constantly upon the objects of his fears. A morbid curiosity led him to take a look into the boiler-room and watch the blazing fires just before going to bed; every few hours in the night he would open his state-room door and sniff the air to find whether he could notice the smell of smoke, and prow around through the passage-ways to see just when the expected conflagration was going to break out. In a storm he would watch the waves in an agony of fear, in the confident belief that each one was going to swallow up the ship. Finding his business would require him to make frequent ocean trips, he set himself to work on the "mind cure." He gradually schooled his mind until, by a strong effort of the will, it could be in a great measure diverted from dwelling on the causes of his fears. When a sense of terror seized him he struggled manfully to concentrate his thoughts on other subjects, and finally he so far succeeded that, except in very dangerous gales, his fears were completely controlled, and he began to acquiesce in the popular belief that, after all, crossing the ocean was about as safe as crossing Broadway, New York, in the era of omnibuses.

The peculiarity of the cases just related, however, lies in the fact that the dangers were mainly unreal, and all the mind required was to be assured of the harmlessness of the objects which had inspired its fears. If the dangers had been real, and their effects had been destructive, the training by which the fear was expected to be overcome would not have been so effectual. If the father mentioned above had attempted to silence a son's fear of being shot by sending him into battle, the son, instead of finding his apprehensions unrealized would have seen that shots were fatal and that there was actual destruction of life all around him; his worst fears would have been realized, and in this mode of educating him to a higher standard of courage the lessons taught would doubtless have been found unprofitable.

It is true that a person may often nerve himself to meet danger courageously if he has

time to contemplate the coming peril, philosophize upon the situation, and thus avoid the effects of the shock which sudden danger always brings. A spy in war, or a criminal who has committed a capital offense, may at the moment of his capture evince an agony of fear and become totally unmanned; but after undergoing trial and a term of imprisonment, and dwelling upon the fate which awaits him and from which there is no escape, he may go to his execution without a tremor, and face death with the calmness of a Spartan.

Are there, then, any means by which man can be educated up to a degree of courage which will brave the actual danger of facing death? While heroes, in the great majority of cases, are, like poets, born, not made, yet courage can undoubtedly be acquired in many ways. Take two youngsters born with equal degrees of courage; let one remain in a quiet city, playing the milksop in a modern Capua, leading an unambitious, namby-pamby life, surrounded by all the safeguards of civilization, while the other goes out on the frontier, runs his chances in encounters with wild animals, finds that to make his way he must take his life in his hand, and assert his rights, if necessary, with deadly weapons, and knows he will be drummed out of the community if he is once caught showing the white feather. In the one particular trait of personal courage the frontiersman will undoubtedly become the superior of the lad who has remained at home. It is perhaps a confirmation of Guizot's remark, however, that in every country the value set upon human life is in proportion to the degree of civilization. Take the case of military schools, in which courage is inculcated from entrance to graduation, where cowardice is recognized as the unpardonable sin, and an exhibition of fear on the part of a lad in riding a bucking horse, or even in a boyish personal encounter with his fellows, makes it infamous for others to associate with him, and sends him like a leper outside the camp. The standard of courage under such circumstances is unquestionably raised to a higher grade than in a school in which this quality is not dwelt upon as the saving virtue.

Ancient Greece made her sons a nation of heroes by holding up valor as the only true badge of earthly glory. She sought out every means of claiming for her heroes the admiration of the people, and taught courage by the force of example. It is said that for ages after the battle of Thermopylæ every scholar in the public schools of Greece was required each day to recite from memory the names of the three hundred heroes who fell in defending that pass.

Napoleon taught Frenchmen that the sum

of worldly glory was the reward gained by courage on the field. Kingdoms were bestowed upon victorious marshals, and promotion and decorations evidenced the prompt recognition of every gallant deed. When La Tour d'Auvergne, accounted the bravest grenadier in the ranks of the grand army, finally fell, pierced by the bullets of the enemies of France, a general order was issued directing that his name should be kept on the active list of his regiment, that it should be called at every roll-call, and each time a comrade should answer from the ranks, "Dead on the field of honor." By every device that could appeal to men's ambition this wizard of modern warfare educated his people to be paragons of valor, and, until his training-school closed its doors, the French armies set all Europe an example in courage.

Discipline, that well-spring of victory, is recognized as one of the most potent means of raising the standard of courage in an army. It teaches men that their best reliance is in their own bravery; gives them confidence in each other; removes the fear that they may not be properly supported in emergencies; convinces them that they are part of an intelligent machine moving methodically, under perfect control and not guided by incompetency, and establishes that *esprit de corps* which goes so far towards making armies formidable in war. It was discipline which enabled the commander of the troops on board the English ship, when foundering, to form his men in line on deck, present arms, and go down with the vessel, while the band played "God save the King."

The moral influence of the prestige which comes from past success does much towards developing courage. Instances of this are innumerable. I happened to be in Chicago in May, 1886, when the anarchists attacked the police and threw the destructive bomb into their ranks, and when that force rallied so gallantly, drove the anarchists from their strongholds, scattered them like chaff before the wind, and became the object of the highest honors that the best citizens of Chicago could bestow. Before that event the police had been strictly on the defense; their small squads huddled together for protection had been boldly attacked, and they had been ordered from pillar to post to rescue their comrades from the fierce onslaughts that were being made upon them by a foe whose reckless acts and exaggerated numbers had almost paralyzed the community. But the next day after the suppression of the Haymarket riot the police went forth wearing the laurels of success; they swaggered like the returned heroes of Austerlitz; each man seemed to feel two feet higher

in stature and competent to cope single-handed with an army of anarchists. One of these policemen undertook to guard a railway station where a dozen were required the day before; they searched single-handed for anarchists like ferrets for rats; the city was safe from that hour. The prestige born of that memorable achievement had been a complete education in courage.

Moral courage will always rank higher than physical. The one is a daily necessity, while the other may be required only in emergencies.

It cannot be doubted that the crime of embezzlement, unhappily becoming so common among employes who handle money, is mainly due to lack of moral courage. The history of the unfaithful cashier is always the same old story. He has incurred a debt through an extra bit of extravagance or taking a turn in the stock market, in the certain belief in success. If he had the moral courage

to tell his employer frankly of his pressing necessities, make a clean breast of it, and ask advice and assistance at the outset, he would, in nine cases out of ten, if a valuable employé, receive good counsel, be assisted to a loan, helped to bridge over the results of his indiscretion, and be saved from ultimate ruin. His moral cowardice leads him to steal money with which to silence pressing creditors or to gamble in the hope of freeing himself from debt, and, when matters go from bad to worse, carries him panic-stricken to Canada to end his days as a branded criminal and a fugitive from justice.

Morality cannot flourish without courage; criminality certainly thrives upon the lack of it. If we cannot go so far as to believe with the Frenchman that every mistake in life may be traced to fear, we can at least agree with the philosopher who said, "Great talents have been lost for want of a little courage."

Horace Porter.

BIRD MUSIC: THE ORIOLE AND THE THRUSH.

HE Baltimore oriole is the most beautiful of our spring visitors, has a rich and powerful voice, the rarest skill in nest-building, and is among the happiest, most jubilant of birds. The male generally arrives here a few days in advance of the female—the first week in May.

The melodic structure here is similar to that of the bluebird's strain, but the effect is very different. Hardly a songster, the oriole is rather a tuneful caller, a musical shouter; nevertheless, as will appear, he sometimes vents his high spirits in ingenious variations indicative of great melodic possibilities. Years ago I heard, from a large, tall elm standing in an open field, a strain the beauty of which so struck me that it is often wafted through my mind to this day. It was the oriole's voice, but could it be his song?

It proved to be so, and it became with me a favorite argument for the old form of the minor scale—the seventh sharp ascending, natural descending.

But a still greater deviation from the usual vocal delivery of orioles was noticed here on the 22d of May, 1884, the new song continuing through the season. A remarkable feature of the performance was the distinct utterance of words as plainly formed as the whippoorwill's name when he "tells" it "to all the hills."

While listening to this song I could not help thinking that the bird had been trained. He invariably attacked the *f* in the climax most artistically, taking it as if with a full sense of the exclamation Hey! We hoped the wandering minstrel would summer in our grove of maples, but he passed on, visiting the neighbors as he went, finally taking quarters about a fourth of a mile away. Nearly every day during the season, however, we

were greeted with at least one vigorous "Hey! chickerway, chickerway, chew!"

The oriole, when about to fly, gives a succession of brisk, monotonous notes, much like those of the kingfisher.

The first notes from him here one spring were:

THE WOOD THRUSH.

THIS is probably the most popular singer of all the thrushes. He may be heard at any hour of the day during the mating and nesting season, but his best performances are at morning and evening. While his melodies are not so varied as those of the brown or those of the hermit thrush, they are exquisite, the quality of tone being indescribably beautiful and fascinating. Chancing to hear him in the edge of the woods at twilight as he sings:

in a moment you will be oblivious to all else, and ready to believe that the little song is not of earth, but a wandering strain from the skies. "How is it," you will ask, "that a bird has that inimitable voice? Whence his skill in the use of it? Whence the inspiration that, with the utmost refinement, selects and arranges the tones in this scrap of divine melody?" But hark!

It is a new key, and the rapture is both enhanced and prolonged.

These brief strains, precise in pitch, contain the leading peculiarities of the wood thrush's song, though by no means all of his notes. His compass rarely exceeds an octave. The following was copied about 10 o'clock A. M.:

THE HERMIT THRUSH.

IN the case of the thrushes, as in other cases, it is not easy to find out from the books "which is which." There is a general resemblance in their voices, in their color, in their nests and eggs. Wilson says of this one, "In both seasons it is mute, having only, in spring, an occasional squeak like that of a young, stray chicken." Dr. Coues says, "He is an eminent vocalist." Mr. Flagg holds a similar opinion. After no little research in the books and in the woods, I am obliged to record him not only as the greatest singer among the thrushes, but as the greatest singing bird of New England. The brown thrush, or "thrasher," the cat-bird, and the bobolink display a wider variety of songs; the bobolink especially, who sings a long, snatchy song, in a rollicking style altogether foreign to that of the hermit thrush. He never indulges in mere merriment, nor is his music sad; it is clear, ringing, spiritual, full of sublimity. The wood thrush does not excel his hermit cousin in sweetness of voice, while he by no means equals him in spirit and compass. The hermit, after striking his first low, long, and firm tone, startling the listener with an electric thrill, bounds upwards by thirds, fourths, and fifths, and sometimes a whole octave, gurgling out his triplets with every upward movement. Occasionally, on reaching the height, he bursts like a rocket, and the air is full of silver tones. Soon returning for a second flight, he probably takes a new key, which gives a fresh, wild, and enchanting effect. The hermit's constant and apparently indiscriminate modulations or changes of tonic lend a leading charm to his performances. Start from what point he may, it always proves the right one. When he moves off with

and then, returning, steps up a degree and follows it with a similar strain,

it is like listening to the opening of a grand overture. Does one attempt to steal the enchanter's notes he is anticipated, and finds himself stolen, heart and all the senses. But it is folly to attempt a description of the music of the thrushes, of the skill and beauty of their styles of singing; and all as vain to try to describe their matchless voices. The following notes of the hermit thrush are very meager

and unsatisfactory, being the result of only two or three interviews :

I have heard him no lower in the staff than B flat :

THE TAWNY THRUSH.

NOTWITHSTANDING Dr. Coues's silence, and Wilson's statement that this bird has "no song, but a sharp chuck," the tawny thrush is a charming singer. His song is short, but very beautiful, especially at evening. I think we

have no bird that sings so far into the dark; hence his popular title of the "American nightingale." It is particularly difficult to describe his quality of tone. An appreciative woman perhaps nearest indicates its metallic charm when she writes, "It is a spiral, tremulous, silver thread of music." There are eight tones in the song, the last two being on the same pitch as the first two. The beginning is very unusual, the first tone being on the second degree of the scale; and there is no breaking of the delicate "silver thread" from beginning to end:

This succession of sounds, so simple to the eye, becomes, as it is performed, quite intricate to the ear; something like the sweep of an accordion through the air. The first half of the song is deliberate, while the last is slightly hurried.

Simeon Pease Cheney.

"SINCE CLEOPATRA DIED."

"Since Cleopatra died
I have lived in such dishonor, that the world
Doth wonder at my baseness."

"SINCE Cleopatra died!" Long years are past,
In Antony's fancy, since the deed was done.
Love counts its epochs, not from sun to sun,
But by the heart-throb. Mercilessly fast
Time has swept onward since she looked her last
On life, a queen. For him the sands have run
Whole ages through their glass, and kings have won
And lost their empires o'er earth's surface vast
Since Cleopatra died. Ah! Love and Pain
Make their own measure of all things that be.
No clock's slow ticking marks their deathless strain;
The life they own is not the life we see;
Love's single moment is eternity;
Eternity, a thought in Shakspeare's brain.

Thomas Wentworth Higginson.

WHAT WE SHOULD EAT.

The ideal diet is that combination of foods which, while imposing the least burden upon the body, supplies it with exactly sufficient material to meet its wants.—DR. SCHUSTER.

FOOD and muscle, bone and tendon, brain and nerve, all the organs and tissues of the body, are built from the nutritive ingredients of food. As the child grows to the man the parts of his body are formed from food. With every motion of the body, and with exercise of feeling and thought as well, material is consumed and must be resupplied by food. The above definition of the ideal diet, as that which supplies the ingredients the body needs and no superfluous material to burden it, expresses very aptly the fundamental principle with which we have now to deal.

The body is a machine. Like other machines, it requires material to build up its several parts, to repair them as they are worn out, and to serve as fuel. In some ways it uses this material like a machine, in others it does not.

The steam-engine gets its power from fuel; the body does the same. In the one case, coal or wood, in the other, food, is consumed. But the body uses not only food, but its own substance also, for its fuel. When the fuel is burned in the furnace, only part of its latent energy is transformed into the mechanical power which the engine uses for its work; the larger part is changed to heat, which the engine does not utilize. A large part of potential energy of the food and of its own substance which the body consumes is likewise transformed into heat, but this heat the body uses and must have to keep it warm. And finally, metal from which an ordinary machine is built and repaired is very different from its fuel, but the same food which serves the body for fuel also builds it up and repairs its wastes.

The body is more than a machine. We have not simply organs to build, and keep in repair, and supply with energy: we have a nervous organization; we have sensibilities and the higher intellectual and spiritual faculties; and the right exercise of these depends upon the right nutrition of the body.

Different people differ greatly in the demands of their bodies for material to be consumed. Those with active exercise need more material, both to repair muscle and to yield muscular power, than those of sedentary habits. A per-

son in the Arctic region requires fuel to keep his body warm which would be superfluous in a warmer climate. The demands of a child are not those of an adult, and the food of an invalid needs to be very different from that of a person in vigorous health. Even for healthy persons of like age, sex, occupation, and surroundings individual differences require different diets. A food which agrees with one person may disagree with another—indeed, late research implies that it is literally true that “one man’s food is another man’s poison”; and what is enough for one man is too little for another and too much for a third.

Regarding the adaptation of food to the mental and nervous organization physiological chemistry has but little to say; it accepts the hygienic doctrine that health of mind is promoted by health of body. The fitting of diet to the demands of health and work and purse is a matter about which later research has brought a great deal of definite and useful information.

For the best knowledge of this special subject we have to go to Europe. While we may learn a great deal from what has been done in England, France, Italy, and other countries, the largest part of the accurate information has been obtained in Germany. The Germans have studied the science of food and nutrition as they have the sciences of biblical criticism and of war. Their investigations are conducted with wonderful patience and thoroughness. The Government supplies the means, the great universities furnish the laboratories and the opportunities for research, the rewards are such as to attract the ablest intellects, and the amount of information acquired within a comparatively few years past is remarkable.

The proper adjusting of food to the wants of the body is in reality a balancing of income and outgo. The body has certain necessary expenditures. To maintain it in health and strength it must have income to meet these. If it has too little or too much nutritive material to supply its wants, or if the proportions of the different nutrients are not right, injury must result to health and strength, to say nothing of purse.

Standards for dietaries are commonly calculated, not in pounds of meat, or bread, or

other food-materials, but in quantities of the nutritive ingredients, protein, fats, and carbohydrates.

The first question, then, is this: What amounts of these nutrients are appropriate for different classes of people under different conditions of life? A former article (*THE CENTURY*, June, 1887) described experiments for determining the amounts of income and outgo of the bodies of men under different conditions. The most thorough are those with the respiration apparatus. In these not only the food and drink and its solid and liquid products in the body, but even the inhaled and exhaled air are measured, weighed, and analyzed. The balance, by proper chemical calculation, shows just how much of protein and fat the man's body has gained or lost. If, now, we can find a food-mixture which will just enable the man to hold his own when he is at rest or when he is hard at work, we have the quantities of nutrients which he requires. This has been done in a number of cases, but the apparatus for experiments of this sort is complicated and costly, and the experiments are laborious and time-consuming, so that comparatively few have been made, and more are very much to be desired. Another method consists in observing simply the amounts of food used by people whose circumstances in life permit of reasonably good nourishment and at the same time preclude any considerable waste of food, and estimating the quantities of nutrients consumed. Hundreds of observations of this sort have been made in Europe, and a considerable number in the United States.

STANDARDS FOR DAILY DIETARIES.

LET us take, for instance, the case of an average man—say a carpenter, blacksmith, or day laborer—who is doing a moderate amount of muscular work. To make up for the constant wear and tear of muscle, tendon, and other nitrogenous tissue, he needs food containing nitrogen. That is to say, he must have protein, in the gluten of bread, in the myosin of lean meat or fish, the casein of milk, the albumen of egg or other food. To use the muscles, strength, muscular energy, is required. Furthermore, his body must be kept warm. These two kinds of energy, muscular energy and heat, his body gets by transforming the potential energy of either protein, or fats, or carbohydrates. The most of the energy is supplied by the fats, such as the fat of meat and butter, and the carbohydrates, such as starch of bread and potatoes, but some comes from the protein. Our working-man, then, needs in his daily food:

(1) Enough of protein to make up for the

protein of muscle and other nitrogenous tissues consumed in his body;

(2) Enough energy to supply the demand for heat and muscular work.

The problem, then, is this: How much protein, fats, and carbohydrates does the average man, with a moderate amount of manual work to do, require in a day's food? Here are estimates by several European authorities. Those by Voit are based upon experiments with men in the respiration apparatus and upon simple examinations of the food eaten. For the other standards the food consumed was the principal basis of the calculations.

STANDARDS FOR DAILY DIETARIES FOR ORDINARY MAN DOING MODERATE MUSCULAR WORK.

	NUTRIENTS.			Potential Energy.
	Protein.	Fats.	Carbohydrates.	
Playfair ..	119 grams.	51 grams.	530 grams.	3135 calories.
Moleschott	130 "	40 "	550 "	3160 "
Wolff.....	120 "	35 "	540 "	3032 "
Voit.....	118 "	56 "	500 "	3055 "

These four dietaries, which have for a long while been accepted by chemists and physiologists as probably expressing about the average quantities of nutrients which a man doing moderately hard work would need in his food each day, vary considerably from one another. That of Moleschott, for instance, calls for 130 grams of protein; that of Voit, only 118. There are similar differences in the quantities of fat and carbohydrates. But no one adjusts his food exactly to chemical standards. Different people consume very different foods and yet they get on very well, and it is perfectly clear that either of these standards may be right enough. And different as they are, a remarkable agreement between them has lately come to light.

When the above standards were proposed, experimental science had not taught how to measure the fuel value of food by the potential energy of its constituents. Late research has told how this may be done.* The energy is measured in heat-units called calories. A gram of protein or of carbohydrates is assumed to contain 4.1, and a gram of fats, 9.3 calories. Applying this measure to these dietaries by the computations in the last column of the table, the extreme variation in the four is only from 3032 to 3160 calories. That is to say, four of the most prominent investigators, Playfair in England and the others in Germany and Italy, working with different people and by more or less different methods, arrived at estimates which vary somewhat in the proportions of the nutrients, but when the different standards are reduced to terms of potential energy, they agree almost exactly. The closer scientific scrutiny which the latest and most painstaking research has made practicable serves only to bring the apparent discrepancies into accord, and thus confirm, in an unexpected and most striking way, the correctness of the standards.

* See article on "The Potential Energy of Food," in *THE CENTURY* for July, 1887.

Of course these are only general estimates. It is assumed that for an ordinary laboring man, doing an ordinary amount of work, such amounts of nutriment as these standards give will suffice; that with them he will hold his own; and that any considerable excess above these quantities will be superfluous. No one expects any given man to adjust his diet to these figures. He may need more, and he may, perhaps, get on with less. He may eat more fats and less carbohydrates, or he may consume more protein if he is willing to pay for it; though it is worth remembering that protein costs several times as much as the other nutrients. But if he has less protein and keeps up his muscular exertion, he will be apt, sooner or later, to suffer.

In general, the larger the person,—that is to say, the more bulky the machine and the more work done,—the more nutriment is needed. For these reasons men require on the average more than women, and aged people less than people in the more active period of life. Children need less than adults, although they must have material for growth. Of the dietary standards proposed by different investigators, those of Professor Voit and the Munich school of physiological chemists are most generally current. A number of such standards are given in tabular form below.

A great deal more of accurate experiment in the laboratory and of observation of dietary habits of different classes of people is needed before such standards can be made entirely accurate; and the differences in individuals must always be such that any standard can express at best only the average requirement for people of a given class. But these, such as they are, are probably not very far out of the way. Perhaps the main thing to criticise in those of Voit and his school is in the small proportions of fat. They are based largely on food consumed by people in Germany, whose

incomes were small and who had to live chiefly on vegetable food, which contains but little fat. It is a question whether a larger proportion of animal food with more fat would not be really better. Certainly many people in this country would be very ill content with such food, though doubtless many of us would be far better off in health and pocket if we were to bring our diet nearer to these standards. Those of Playfair make more of protein as a source of muscular power than later research seems to warrant.

AMERICAN VS. EUROPEAN DIET.—FOOD AND WAGES.

AFTER the correctness of the standards for dietaries proposed by the distinguished European authorities above named has been so strikingly confirmed, it may seem presumptuous for me to propose different ones. I have, nevertheless, ventured to do so, as appears in the table. The standard proposed by myself for a "man at moderate work" is nearly equivalent to Voit's (German) for a "man at hard work" and Playfair's (English) for "active labor," while mine for a "man at hard work" is larger than even Playfair's for a "hard-worked laborer." The reason for this more liberal allowance is, that a not inconsiderable number of observations of dietaries in the United States reveal very much larger quantities of both protein and energy in them than in those of corresponding classes of people in Europe. The explanation is apparently not far to seek. We live more intensely, work harder, need more food, and have more money to buy it. The better wages of the American working-man as compared with the European, the larger amount of work he turns off in a day or a year, and his more nutritious food are, I believe, inseparably connected.

The main difference between the diet of

STANDARDS FOR DAILY DIETARIES.

WEIGHTS OF NUTRIENTS AND CALORIES OF ENERGY (HEAT-UNITS) IN NUTRIENTS REQUIRED IN FOOD PER DAY.

	NUTRIENTS.				Potential Energy.
	Protein.	Fats.	Carbohydrates.	Total.	
	Grams.	Grams.	Grams.	Grams.	Calories.
1. Children to 1½ years	28 (20 to 36)	37 (30 to 45)	75 (60 to 90)	140	767
2. Children 2 to 6 years	55 (36 to 70)	40 (35 to 48)	200 (100 to 250)	295	1418
3. Children 6 to 15 years	75 (70 to 80)	43 (37 to 50)	325 (250 to 400)	443	2041
4. Aged woman	80	50	260	390	1859
5. Aged man	100	68	350	518	2477
6. Woman at moderate work. Voit	92	44	400	536	2426
7. Man at moderate work. Voit	118	56	500	674	3055
8. Man at hard work. Voit	145	100	450	695	3370
9. Man with moderate exercise. Playfair	119	51	531	701	3139
10. Active labor. Playfair	156	71	568	795	3629
11. Hard-worked laborer. Playfair	185	71	568	824	3748
12. Woman with light exercise. Writer	80	80	300	460	2300
13. Man with light exercise. Writer	100	100	360	560	2820
14. Man at moderate work. Writer	125	125	450	700	3520
15. Man at hard work. Writer	150	150	500	800	4060

Nos. 1, 3, 4, and 5 are as proposed by Voit and his followers of the Munich school; No. 2, by the writer. One ounce = 28½ grams, nearly.

people of moderate means here and in Europe is that the people here eat more meat and other animal foods and more sugar. The European wage-worker usually has but little meat, butter, or sugar. In England he often enjoys a richer diet, I suppose, but on the Continent ordinary people live mainly upon the cheaper vegetable foods. Meats and fish supply a good deal of protein and fat. The fats, including butter, are rich in energy, and sugar supplies more energy than most vegetable foods. While the energy in the working-people's dietaries in England, France, Germany, and Italy, as reported by Playfair, Moleschott, Voit, and others, ranges from 2500 calories, or less, to a maximum of 5700, those that I have found in this country range from a minimum of 3500 to 8000, and even higher. The differences in the protein in American and European dietaries are similar, though not quite as large. Without doubt we waste more of our food than the Europeans do, but the amount which we do eat is evidently very much larger. And though many of us eat far too much meats and sweetmeats for the good of our health or our pockets, the evidence seems to me to imply very clearly that we must keep on eating more than our transatlantic brethren if we are to keep on working as intensely and as productively as we now do. The question of high wages and short hours is largely a question of nutritious diet. Meats, eggs, milk, butter, and sugar can be had, when there is money to pay for them. They are toothsome, and hence people who can get them eat a great deal. They are easily digested and rich in protein and energy, and hence sustain a high degree of activity.

COMBINATIONS OF FOOD.—REASONS FOR MIXED DIET.

THE standards for proportions of nutrients help to explain why we need combinations of different food-materials for nourishment. Almost any one kind of food would make a one-sided diet.

Suppose, for instance, a working-man is restricted to a single food-material, as beef or potatoes. A pound and thirteen ounces of roast beef, of the composition here assumed, would furnish the required 125 grams (0.28 lb.) of protein, and with it 0.26 lb. of fat, but it has no carbohydrates. Yet nature has provided for the use of these in his food. Three pounds of corn-meal would yield the protein and with it a large excess of carbohydrates—over two pounds. A pound and three-quarters of codfish would supply the same protein, but it would have very little fat and no carbohydrates, to furnish the body with heat and

strength. Potatoes or rice would have even a greater excess of the fuel which the beef and fish lack than has corn-meal. Assuming that the man needs 3500 calories of potential energy in his daily food, the one and three-quarter pounds of salt codfish which would furnish the needed protein would supply only 540, while to get the needed protein from the fat pork would require 9.8 pounds, which would supply $7\frac{1}{2}$ pounds of fat and over 32,000 calories of energy!

Putting the matter in another way, we might estimate the quantities of each material which would furnish the required energy. A ration made up exclusively of either kind of food would be as one-sided in this case as before. The fish would be mostly protein, the fat pork nearly all fat, and the potatoes or rice little else than starch. With almost any one of these food-materials, in quantities to meet the demand of his body for heat and muscular strength, the man would have much more or much less protein than he would need to make up for the consumption of muscle and other tissues. If he were obliged to confine himself to any one food-material, oat-meal would come about as near to our standard as any. Wheat-flour with a little fat—in other words, bread and butter—would approach very close to Voit's standard for European working-people with chiefly vegetable diet, but it would need a little meat, fish, eggs, milk, beans, pease, or other nitrogenous food to bring it to the proportions that the American standard calls for.

Rice, which is the staple food of a large portion of the human race, is very poor in protein; beans have a large quantity. The different plants which are together called pulse are botanically allied to beans and are similar in chemical composition. We have here a very simple explanation of the use of pulse by the Hindus with their rice. The Chinese and the Japanese, whose diet is almost exclusively vegetable, follow a similar usage.

The codfish and potatoes and the pork and beans which have long been so much used in and about New England form a most economical diet; indeed, scarcely any other food available in that region has supplied so much and so valuable nutriment at so little cost. The combination is likewise in accord with the highest physiological law. Half a pound each of salt codfish and pork, two-thirds of a pound of beans, and three pounds of potatoes would together supply almost exactly the 125 grams of protein and 3500 calories of energy that our standard for the day's food of a working-man calls for.

I am told that the mixtures of these materials locally known as fish-balls and baked beans are being exported from Boston in large quanti-

BARON JUSTUS VON LIEBIG. (FROM A PHOTOGRAPH BY FRANZ HANFSTÄNGL)

ties. Possibly this is an indication that the outer world is growing wiser, and it is doubtless a compliment to Massachusetts legislators that the restaurant under the gilded dome on Beacon Hill is popularly called "The Beanery."

Although the pride of a loyal son of New England may perhaps prejudice his opinion as physiological chemist, I venture to ask, in all seriousness, whether there may not be, between the intellectual, social, and moral force of its people and the dietary usages of which those here instanced are a part, an important connection, one that reaches down deep into the philosophy of human living?

To those interested in the elevation of the poor whites and the negroes of the South, whose aliment consists so largely of corn-bread and bacon, or, in purer vernacular, "hog and hominy," I would suggest the consideration of the one-sidedness of such diet. A quarter of a pound of bacon and two pounds of corn-meal would furnish 4100 calories of energy and 85 grams of protein; in other words, a large excess of heat and force yielding substances, and about two-thirds the muscle-forming material the standard calls for. Instances of the connection between such ill-balanced dietaries and a low standard of physical, intel-

lectual, and moral efficiency are sadly frequent in human experience; but the cases in which the highest planes have been reached with such bodily nourishment are, I think, rare, if not unknown.

The grocer, the butcher, and the fishmonger supply us with a great variety of food-ma-

terials, and the practice of mankind justifies their use in still more varied combinations. What kinds and proportions are adapted to a healthful and economical diet? To answer this would require a book rather than a magazine article, but I may say that it is the comparison of the food consumed by people in this country with such standards for dietaries as those here given and with the food consumed by people in corresponding circumstances in other countries, especially on the Continent of Europe, that has led me to assert so confidently that many of us eat far too much of meats, of fats, and of sweetmeats. Not only are the quantities of nutrients in the dietaries of our working-people very large, in some cases enormously so, but those of people whose occupation involves little muscular work supply protein and fats and energy far in excess of what the best evidence indicates as the actual demand, even for active exercise. One of the instances that have come under my observation was that of a well-to-do professional man's family. None of the members except the servants were engaged in at all active muscular work. The estimates were of food actually consumed, due allowance being made for waste, which, under a careful mistress, was unusually little. The protein exceeded that

of either Voit's standard or the writer's for a laboring man at moderately hard muscular work. The energy, the amount of which was made very large by the fat of meat and butter and the sugar consumed, exceeded the amount called for, either by Playfair for a "hard-worked laborer," or by Voit or the writer for a "man at hard work," and was over fifty per cent. larger than that of any of the few European dietaries of people of similar occupation which I have found reported. Yet this family regarded themselves as rather small eaters, and would really be so if the other American dietaries were to be taken for the standard. I surmise that many a family would, if they were to compare their daily food consumption with the figures here given, find similar excess of food and of nutritive substance. In a large number of dietaries that have come under my observation there has been, in nearly every case, an excessive quantity of fat; and in several, if half of the meats and sugar had been left out, there would have remained considerably more of both nutrients and energy than either the standards above given calls for. This all means great waste of money, and, as the hygienists tell us, still greater injury to health.

It is often urged that appetite is the proper measure of one's wants. As regards the kinds of food best for each of us, doubtless rational experience gives the most reliable information. A man ought to eat that which, in the long run, agrees with him. But either the concurrent testimony of an immense amount of the most accurate experimenting and observation is radically wrong, or a great many of us eat far too much. Appetite would be a better guide if it were not for the demands of the palate.

PROGRESS OF THE SCIENCE OF NUTRITION.

It is very interesting to note how the science of nutrition has passed through several clearly marked stages of development, each of which corresponds to an epoch of discovery in chemical and physical science.

The first long step forward was made near the close of the last century, when Lavoisier, the French chemist, explained the principle of combustion with oxygen and applied it to the consumption of food in the body.

The next important epoch was ushered in by the German chemist Liebig, whose researches and whose reasoning give him a place among the great philosophers of our time. He invented new methods of chemical analysis and experimenting, and opened up new fields of research in chemistry in its application to physiology and to agriculture, and as part of his work propounded the first at all satisfac-

SIR LYON PLAYFAIR. (FROM A PHOTOGRAPH BY BASSANO.)

tory doctrine regarding the nutritive substances and their uses in the body. Claude Bernard, the French physiologist, by the discovery of the formation of glycogen in the liver, gave a new impulse to the science; and Messrs. Lawes and Gilbert, in England, by feeding experiments, and by chemical analysis of the bodies of the animals, contributed greatly to the knowledge of the subject. The German experimenters Bischoff, Pettenkoffer, Henneberg, and especially Voit, with untiring patience, elaborate apparatus, and refined chemical methods, have studied the changes that go on in the animal body. Moleschott in Germany and Italy, Payen in France, and Sir Lyon Playfair in England have devoted especial attention to food and dietaries. A number of other names of note might be mentioned. By far the greatest of all was Liebig, who died a few years since. Among the men now living Voit has, without doubt, rendered the most useful service. During the last two decades a large and constantly increasing number of gifted and zealous workers have availed themselves of the fruits of chemical research, and

pushed their investigations farther and farther into the unknown territory into whose borders the great discoverers first penetrated.

But the science of physics has been growing along with chemistry, and the general principle of the conservation of energy has been worked out with notable results. This too has been applied to the nutrition of the body, in ways such as those pointed out in these articles.

Of late, biological science has made remarkable revelation of the actions of the enzymes and microbes, which together are classed as ferments, and the biological chemists are now telling us that back of the chemical activity which we call metabolism, and in which the transformation of energy plays so important a part, the ferments are at work, and that a considerable part of the chemical changes that go on in the body are caused by them. That ferments in the alimentary canal are the chief agents in the digestion of food has long been known, but investigators have lately been finding them in other parts of the body, and we are beginning to think

ANSELMÉ PAYEN.
(FROM A PHOTOGRAPH BY PIERRE PETIT.)

that they work almost everywhere within us, and that the complex compounds which make up our food and our tissues must to some extent, at least, be broken up by these ferments before they can unite with oxygen and yield heat and muscular energy. In the beginnings of the modern science of nutrition it was taught that oxygen was the first great agent by which chemical changes in the body were brought about, but of late we are coming to think that the ferments begin the work and the oxygen ends it. The ferments thus appear as indispensable to the functions of life as they are direful in the diseases that lead to death.

While it seems probable to-day that the theories here so briefly and imperfectly set forth will, in their essential features at least, stand the test of future research, nobody can tell in just what minor details they will be changed, and past experience bids us beware of being too positive about them.

A generation ago Liebig and others taught, and it was generally believed, that the carbohydrates—sugar, starch, etc.—of the food were transformed into the fats of the body. In Liebig's later years a school of physiologists arose in Munich, with Pettenkofer, and especially Voit, as leaders, who denied, or at least seriously questioned, the formation of fat from carbohydrates. Though much of the talk in the laboratories continued to favor the old theory, and many physiological chemists privately clung to it, and some, like Messrs. Lawes and Gilbert in England, stoutly maintained it in public and defended it by their experiments, yet so powerful was the later Munich school that it was hardly counted in good form to urge that carbohydrates were transformed into fats. Dr. Gilbert, some years ago, in a meeting of German agricultural chemists, explained the views held by Mr. (now Sir John) Lawes and himself, but his paper was scarcely noticed in the report of the meeting. Since then, however, evidence in favor of the view maintained by Liebig, and by Lawes and Gilbert, has accumulated. Animals have in numerous cases been found to store in their bodies large amounts of fat, which could have had no other possible source than the sugar and starch of their food; indeed, some experiments lately made in the physiological laboratory at Munich with the respiration apparatus have given convincing evidence in the same direction; and a short time ago Professor Voit presented a paper to the Bavarian Academy of Sciences reviewing the history of the question, and frankly avowing that there is no longer any doubt that not only herbivorous animals, but carnivorous animals as well, are able to transform very considerable quantities of sugar and starch into fat, and store this fat in their bodies.

W. O. Atwater.

THE KING'S SEAT.

PRINCE VLADIMIR sat with his knights
In Kief's banquet hall,
And boasted of arms and of victories won,
And the joy of the bugle call.

While a figure gray at the gate
Knocked once and twice and thrice,
And Vladimir shouted, "No more shall come in
Neither for love nor for price!"

But a breath of wind blew apart
The fringe of the pilgrim's cloak,
And beneath, the lute of the singer was seen
Before the singer spoke.

"Ai, little minstrel," then said
The great Prince Vladimir,
"The top of the earthen oven is thine,
The minstrel's place is here.

"A small and a lowly place,
For my heroes all have come
Bloody with wounds and with honors rare
From Ilza of Murom."

The minstrel climbed to his seat
On the earthen oven's top,
And tuned his lute and began his song
And they would not let him stop.

For his song of battle and death
He sang of victories won,
Of Deuk and his Indian steed,
And the tale of Morga the Livan.

And there as he sang, as he sang,
The hearts of men bowed down,
And lo! the top of the oven
Became the monarch's throne.

THE GRAYSONS: A STORY OF ILLINOIS.*

BY EDWARD EGGLESTON,

Author of "The Hoosier Schoolmaster," "The Circuit Rider," "Roxy," etc.

XXIV.

FIRST COME, FIRST SERVED.

ZEKE sat restless on the fence until S'manthy's boy, exultant that his manhood was to be recognized by his admission to the band, had gone out of sight in the direction of the grocery. Then Zeke sprang from the fence and started, as fast as his legs could carry, along an old Indian trail, hoping by this disused and in some places obstructed short cut across to the prairie to save a mile of the eight-miles' journey to Bob McCord's cabin. Bob was already abed when Zeke, badly blown by his rapid walking, knocked at the door.

"Who's there?" called Bob, emerging from his first heavy sleep.

"It's me—Zeke Tucker! Git up, quick,

Bob! Jake Hogan's off at ten 'r 'leven, un it's nigh onto that a'ready." And Zeke impatiently rattled the door of the cabin, the latch-string of which had been drawn in to lock it.

Bob came down on the floor with a thump, and his few clothes were soon pulled on; then he came out and stood in the fresh air, on the "butt-cut" of a tulip-tree, or "flowering poplar," which, to compensate for the descent of the hill-side, had been laid against the bottom log of his cabin for a front doorstep. Zeke explained to him how urgent the case was.

"Baub! don't you go'n' go off down to Moscow to-night," called Mrs. McCord. "They hain't no sort-uh use in your botherin' yourself so much about other folkses business. You'd orter stay 'n' look arter your own wife un children." It was Mrs. McCord's invariable habit to object, in her plaintive and impotent fashion, to everything her husband proposed to do. She had not the slightest expectation that he would remain at home in consequence of anything

* Copyright, 1887, by Edward Eggleston. All rights reserved.

she might say, nor did she care that he should; but she had a vocation to hold in check his thriftless propensities. This she tried to do by protests uttered indiscriminately against all his outgoings and his incomings, his downsittings and his uprisings.

"We ain't got no hoss," said Bob, replying to Zeke, and paying no heed to his wife. "Mrs. Grayson un Barb'ry 've gone un gone to town weth ole Blaze, so 's to be weth Tom airy in the mornin'. What on yerth to do I don't no-ways see." Bob was standing with his fists in his pockets, looking off anxiously toward the horizon.

"Can't you git Butts's?" said Zeke.

"Thunder! No! Buttses un Graysons don't hitch. Butts don't speak to none uv 'em, un he hates Tom the wust, fer throwin' rocks at his geese when they got into the medder, un daugin' his hogs out-uh the corn. They 'd a leetle ruther Tom 'd be lynched un not. By blazes! I 've got to git one of Butts's hosses right straight off. Buchanan's hoss is lame, un they hain't nary nuther one to be got this side uv Albaugh's, and that 's too fur away. You go down to the branch un wait fer me, un I 'll git Butts's little wagon. I 'low they 'll be hoppin' mad 'f they fine out what I got it fer, but I 've got to git it, 'f I have to steal it. They hain't no two ways about it."

"I don't think you'd ortuh go off that a-way, Baub," began Mrs. McCord again. "Un me more 'n half sick. I 've been feelin' kind-uh slarruppy like fer two 'r three days. Un them air taters has to be dug, un Mely 's gone away. You 'n' Zeke Tucker 'll make a purty fist uv it a-lickin' all Broad Run, now, wonch yeh? Wha' choo got to do weth Jake—"

But Bob did not hear the rest of it, nor was it ever uttered indeed. For Mrs. McCord, when she found that her husband had gone, did not think it worth while to finish her lamentations; she only drew a sigh of complacent long-suffering and submission to fate, and went to sleep.

Hardened sinner that he was, Big Bob felt a little twinge of shame as he made his way rapidly to Butts's house. His wife's set speech about being more than half sick, often as he had heard it, and little as he had ever heeded it, had now made a sufficient lodgment in his consciousness to suggest a way out of his difficulty; but it was a way which a loafer of the superior sort, such as Bob, might feel ashamed to take, knowing that such a scheme as he was concocting would be an outrage on all the sacred principles of good neighborhood—an outrage only to be justified by military necessity. All the way to Butts's, hurried as he was, his hands were ramming his trousers-pockets, after his fashion of groping there

for a solution of his difficulties. It was perhaps the carrying over into other affairs the habitual research which the hunter makes for bullets, caps, patching, or jackknife to meet the exigencies of the forest.

Arrived at the unpainted, new frame-house, which, being two feet longer and one foot broader than any other in the neighborhood, was the particular pride of the Butts family, he noted that all the lights were out, and after hesitating whether to capture the horse by stealth or by strategy, he went to the front door and rapped. The head of the proprietor came out of one of the lower windows with an abrupt "Who's there?" spoken with that irritation a weary man is prone to express when awakened from his first nap to attend to some one else's wants.

"I say, Mr. Butts," said Bob, pushing his hands harder against the bottoms of his pockets, "kin I git the loan uv one uv your hosses un your leetle wagon to fetch the doctor? My ole woman 's purty bad; been sick ever sence the sun was 'n 'our high, un we can't git nothin' to do no good."

"What seems to be the matter?" said Butts, wishing to postpone an unpleasant decision.

Bob hesitated a moment: lying is a dangerous business unless it is carried on with circumspection. "Blamed 'f I know jest *what* it is. I suspicion it 's the *dyspepsy*."

The name of dyspepsia was new to the country at that day, though the complaint was ancient enough, no doubt. Just what *dyspepsy* might be Bob did not know, but he hit on it as the vaguest term he could recall and one that had a threatening sound. It would not have served his purpose to have repeated Mrs. McCord's diagnosis of her own case, that she was "feelin' kind-uh slarruppy like." "Whatever 't is, she don't think she kin git through till mornin' 'thout I git a doctor."

"Well, I doan know. The sorrel's lame; un I don't like to let the bay colt go noways, he 's sech a sperrited critter."

Butts drew his head in at this point to consult with Mrs. Butts as to how he could evade lending the cherished bay colt.

"Looky h-yer, Mr. McCord," presently called Mrs. Butts, keeping her nightcapped head well out of sight as she spoke, "you don't want no doctor nohow." Mrs. Butts had come by virtue of superior credulity to hold the position of neighborhood doctress, and she was not friendly to regular physicians. "You jest take along with you a bottle of my new medicine, 't I call the 'Scatter Misery.' It 's made out-uh roots an' yarbs, an' it 's the best thing I know fer mos' every kind of complaint. It 's good insides an' outsides. You rub the Scatter Misery onto the outsides un

give her a swaller now un then insides. It 'll fetch 'er 'roun' in an hour or two."

Bob felt himself fairly entangled in his own intrigue, but he gave his great fists another push into his trousers-pockets and said:

"I 'm much obleeged, Mrs. Butts, but my ole woman tole me ez I wuz n't to come back 'thout a doctor; un ef you hain't got no critter you kin len' me, I mus' be a-gittin' 'long down to Albaugh's mighty quick. That's a powerful ways off, though. I wish I 'd gone there straight un not come over h-er."

This last was uttered in a tone of plaintive disappointment as Bob turned away, walking slowly and giving the family council time to change its mind.

"Aw, well, Bob," called Butts, after a conference with his wife, "I don't like to disbleege a neighbor. You kin have the bay colt; but you must drive slow, Bob. He 's a young thing un the fidgetiest critter."

Bob would drive slow. He professed that he never drove faster 'n a slow trot, "nohows you can fix it." And he helped Butts to hitch up with no sense of exultation, but rather with a sneaking feeling of shame.

However, nothing troubled Bob long or deeply, and when he had passed the branch and taken in Zeke Tucker, and got out of the woods to the smooth prairie road beyond, he forgot his scruples and tried to find out just how much speed Butts's bay colt might have in him. Nor did he slacken pace even when he got into the village streets; but remembering how near it was to Jake's time, he held the horse swiftly on till he reached an alley-way behind some village stores. Telling Tucker to tie the horse, he got over the fence and laid hold of a rusty crowbar that he had long kept his mind fixed on. Putting this on his shoulder, he was soon at the jail.

"Tom!" he called, in a smothered voice, at the grated window on the east side. But all within was as silent as it was dark. For a moment Bob stood perplexed. Then he went to the grating at the back of the jail—the window that opened into the passage-way at the end opposite to the front door.

"Tom, where air you?" he called, putting his hands up on each side of his mouth, that his words might not be heard in the street.

"In the dungeon." Tom's voice sounded remote.

Bob spent no time in deliberating, but thrust the crowbar between the cross-bars of the iron grating. His first difficulty was similar to that of Archimedes, he could not get a fulcrum; or, as he expressed it less elegantly to Zeke, "he could n't git no purchase onto the daud-blasted ole thing." But by persistently ramming the point of the crowbar against the

stone-work at the side of the window he succeeded at length in picking out a little mortar and bracing the tip of the crowbar against a projecting stone. He had great confidence in his own physical strength, but the grating at first was too much for him; the wrought-iron cross-bar of the window bent under the strain he put upon it, but it would not loosen its hold on the masonry. At this rate it would take more time than he could hope to have to push the bars apart enough to admit even Zeke's thin frame, and he could not hope to bend them far enough to let his own great body through. He therefore changed his mode of attack. Withdrawing his crowbar from the grating, he felt for a seam in the stones at the base of the window and then drove the point of the bar into this over and over again, aiming as well as he could in the dark and taking the risk of attracting the attention of some wakeful villager by the sound of his ringing blows. At length, by drilling and prying, he had loosened the large stone which was in some sort the key to the difficulty. This accomplished, he made haste to insert the bar again into the grating, bracing its point as before in the seam he had already opened in the stone-work at the side of the window. Then, with his feet against the wall of the jail, he crouched his great frame and put forth the whole of his forces, thrusting his mighty strength against the crowbar, as blind Samson in his agony tugged at the pillars of the Philistine temple. In some colossal work of Michael Angelo's I have seen a tremendous figure so contorted, writhing in supreme effort. The mortar broke, some of the stones gave way at length, and one bar of the grating was wrenched reluctant from its anchorage in the wall below. Then, letting the crowbar fall, Bob seized the rod now loosened at one end and tore it quite out, and then threw it from him in a kind of fury. The process had to be repeated with each separate bar in the grating, though the breaking up of the wall about the window made each rod come more easily than the preceding one. When all had been removed he squeezed through the window-opening, feet first, and felt his way down the passage to the door of the dungeon, where Tom was anxiously waiting for his deliverer. Bob made what a surgeon would call a "digital examination" of the dungeon door, and found its strength to be such that to break it down would require the rest of the night, if, indeed, there was any hope of achieving it at all in a dark hallway, too narrow to admit of a free use of the crowbar.

"Dern the luck!" said Bob, pausing a moment.

"What 's the matter, Bob?" asked Tom anxiously.

But Bob did not seem to hear the question. "We must git a cole-chisel," was all he said; and he hastened to creep back out of the broken-up window.

"Whach yeh go'n' to do?" asked the waiting Zeke, as Bob emerged.

But Bob only said, "Come on, quick!" and started off in a swinging trot toward the village blacksmith shop, a low, longish, wooden building, barely visible in the darkness. He pulled at the door, but it was firmly closed with a padlock. Then he felt his way along the side of the building to a window-sash, which was easily taken out of its place.

"Heap uh use uh lockin' the door," he muttered, as he climbed in. "Blow up the belluses there un see ef you kin make a light."

Zeke, who had followed his leader, pumped away on the bellows in vain, for the fire in the forge had quite gone out, though the ashes were hot to Zeke's touch. Both of the men set to work to find a blacksmith's cold-chisel, feeling and fumbling all over the disorderly shop. As it often took the smith half an hour to find this particular tool, it would have been a marvel for two strangers to find it at all in the darkness.

"We 'll have to gin up the c'nundrum," said Bob, with his hands again in his pockets. "Did n' you say as you 'lowed the sher'f was expectin' Jake?"

"Yes," answered Zeke. "Jake's got a kind-uv a secret urrangement weth Plunkett's brother-in-law. They hain't to be shootin'-work on nary side, but on'y jist a-plenty uv thunderin' loud talk fer the looks uv the thing. Jake's to make the derndest kind uv a row, un the sher'f's to talk about dyin' 'n 'is tracts un all that, you know. That 's some weeks ago 't the sher'f's brother-in-law fixed all that up, un Jake, he tole us they would n' be no danger."

"Turn your coat wrong sides out," said Bob, turning his own. "Now tie your han'kercher acrost yer face, so 's to kiver all below yer eyes."

When these directions had been carried out Bob climbed out of the window, and stopped to put his hands into his pockets again and consider.

"Whach yeh go'n' to do?" asked Zeke.

But Bob only asked, "What 'll we do fer pistols?" and with that set himself to feeling all about the ground in front of the smith's shop, picking up and rejecting now a bit of a dead bough from the great sycamore under the friendly shade of which the smith did all his horse-shoeing, now a bit of a board, and again a segment of a broken wagon-tire, and then a section of a felloe. At last Bob came upon the broken wheel of a farmer's wagon, leaning against the side of the shop in wait-

ing for repairs to its wood-work and a new tire. From this he wrenched two spokes and gave one of them to Zeke.

"There 's your pistol, Zeke. Put it jam up agin Plunkett's head un tell him to hole still ur die. We 've got to play Jake Hogan onto 'im un git the keys. Th' ain't nary nuther way."

As Bob passed the jail in going towards the sheriff's house he took along the crowbar. Plunkett lived in a two-story frame dwelling on the eastern margin of the village. Bob sent Zeke to run around it and pound on the back door and bang on every window with his wagon-spoke and his fists, while Bob himself dealt rousing blows on the front door with his crowbar. When Zeke had made the circuit of the house, Bob put the crowbar under the door.

"We must n't wait fer him to open, he 'll see how few we air," he whispered. "Prize away on this yer." Then, while Zeke lifted up on the bar, Bob hurled his whole bull weight against the door. The staple of the lock held fast, but the interior facing of the door-jamb was torn from its fastenings and fell with a crash on the floor, letting the door swing open. Not to lose the advantage of surprise, Bob and Zeke pushed up the stairway, guided by the noise made by some one moving about. By the time they reached Plunkett's sleeping-room the latter had struck a light with steel and flint, and had just lighted a tallow candle, which was beginning to shed a feeble glimmer on the bed, the rag-carpeted floor, the shuck-bottom chairs, and the half-dressed man, when Bob, coming up quickly behind him, blew the light out, and seizing Plunkett with the grip of a bear crowded him down to the floor with a smothered oath.

"Don't kill me, boys," said the sheriff in a hoarse whisper; for this rough usage frightened him a little, notwithstanding his good understanding with the mob.

"Say one word un you 're a dead man," said Zeke Tucker, pressing the cold muzzle of his wagon-spoke close to the sheriff's head. These melodramatic words were, I am glad to say, a mere plagiarism. In the absence of anything better, Zeke repeated the speech of a highwayman in an old-fashioned novel he had heard Mrs. Britton read on Sunday afternoons. Then he added on his own account: "We won't have no tricks; d' yeh h'yer?"

"They's mor' 'n forty uv us," said Bob, "un we want them air keys right straight."

"If I had half a chance I 'd rather die than give 'em up,"—this was all that Plunkett could remember of the defiant speech he was to have made on this occasion,—“but there they air, at the head of my bed”; and a cold

shudder went over him as Zeke again touched him ominously with the end of the wagon-spoke.

The sheriff's wife, though she had every assurance of the secret friendliness of the mob, now began to weep.

"Not a word!" said Bob, who was continually scuffling his feet, in order, like Hannibal and other great commanders, to make his forces seem more numerous than they were. "We won't hurt you, Mrs. Plunkett, ef you keep still; but ef you make a noise while we're gone, the boys outside might shoot."

The woman became silent.

"Some of our men 'll be left to guard your house till our business is finished," said Bob to the sheriff, who lay limp on the floor, growing internally angry that the Broad Run boys should not show more respect for his dignity. "Don't you move ur make any soun', fer yer life," added Bob when he reached the top of the stairs, down which he descended with racket enough for three or four.

As they left the house with the keys, Bob and Zeke gave orders in a low voice to an imaginary guard at the door.

All that Tom had made out was that the irruption of Bob McCord into the jail signified imminent danger to himself, and when Bob had gone out again, Tom's heart failed him. He stood still, with his fingers on the iron grating in the dungeon door. For this last night the sheriff had taken the additional precaution of leaving Tom's manacles on when he had locked him in the dungeon, and the lack of the free use of his hands added much to his sense of utter helplessness in the face of deadly peril. He could not see any light where he stood, gripping the bars and staring into the passage-way; but he could not endure to leave this position and go back into the darker darkness behind him. Confinement and anxiety had sapped the physical groundwork of courage. When he heard Bob and Zeke come past the jail on their return from the blacksmith shop he had made out nothing but the sound of feet, whether of friends or foes he did not know; and when the sounds died away, a horror of deadly suspense fell upon him. All black and repulsive possibilities became imminent probabilities in the time that he waited. Over and over again he heard men and horses coming, and then discovered that he was hearkening to the throbbing of his own pulse. At last he heard the key turning in the lock of the front door, and was sure that the enemy had arrived. It was not till Bob said, when he had got into the hall and was trying the keys in the dungeon door, "Quick, Tom, fer God A'mighty's sake!" that his spirit, numb with terror, realized the presence of friends.

"What 's the matter?" asked Tom, his teeth chattering with reaction from the long suspense.

"Jake Hogan 'll be h-yer in less 'n no time"; and with that Bob, having got the door open, almost dragged the poor fellow out, taking time, however, to shut the front door and lock it, and taking the keys with him, "fer fear somebody might git in while we're away," as he said, laughing.

Once the jail was cleared, a new perplexity arose. Until this moment it had not occurred to Bob to consider what disposal he should make of the prisoner.

"What am I goin' to do weth you, Tom?" he demanded, when they stood concealed in the thick obscurity under an elm-tree on the side of the court-house opposite to the jail. "I wonder 'f you had n' better light out?"

"Not without Abra'm says so," answered Tom, still shivering and feeling a strong impulse to run away in the face of all prudence.

"Looky h-yer, Tom; when I got the keys from the sher'f, I brought them all along. They 's the big key to the jail, un the key to the dungeon. Now, h-yer, I 've got two more. It seems like as ef one uv 'em had orter on lock the east room of the jail, un liker 'n not t' other's the court-house key. S'pose 'n I put you in there; they 'll never look there in the worl'."

"I s'pose so," said Tom, "if you think it 's safe." But in his present state he shuddered at the idea of being left alone in the dark. "If Abra'm thinks I 'd better not clear out, I 'll be where I 'm wanted in the morning, and they can't say I have run off," he added.

So Tom was locked in the court-house and left to feel his way about in the dark. He found, at length, the judge's bench, the only one with a cushion on it, and lay down there to wait for daylight, listening with painful attention to every sound in the streets. When at length he heard the tramp of horses and conjectured that Jake's party were actually looking for him, he could not overcome the unreasonable terror that weakness and suspense had brought upon him. He groped his way up the stairs and slunk into one of the jury rooms above for greater security.

XXV.

LIKE A WOLF ON THE FOLD.

BARBARA, at her uncle's house, had not been able to go to bed. Tom's fate, she knew, would be decided the next day, and whatever of hope there might be for him was hidden in the mind of his lawyer. Mrs. Grayson had involuntarily fallen into a slumber, and the anxious Barbara sat by her in the darkness,

wishing for the coming of the day, whose coming was nevertheless dreadful to her. The sound of a wagon rattling in another street startled her; she went to the window and strained her eyes against the darkness outside of the glass. Though she could not suspect that in the wagon was Bob McCord hurrying to the rescue of Tom, she was yet full of vague and indistinct forebodings. She wished she might have passed the night in the jail. A little after midnight she thought she heard a sound as of horses' feet: again she went to the window, but she could not see or hear anything. Then again she heard it: there could be no mistake now; she could make out plainly the confused thudding of many hoofs on the unpaved road. Presently, from sound rather than from sight, she knew that a considerable troop of horsemen were passing in front of her uncle's house. She left the room quietly, and spoke to her uncle as she passed his door; but without waiting for him she went out into the street and ran a little way after the horsemen, stopping, hearkening, turning this way and that in her indecision, and at length, after groping among the trees and stumps in the public square, reached the jail.

Jake Hogan had sent forward two men to watch the prison, while he with his main force surrounded Plunkett's house. The sheriff had obediently kept his place where Bob had laid him, in the middle of the floor, until he got into a chill. Then, as he heard no sound outside of the house, his courage revived, and he crept back into bed.

Jake had come prepared to play the bully, according to agreement, in order to save Plunkett's reputation for courage and fidelity, but he was disconcerted at finding the door of the house wide open: he had not expected that things would be made so easy. After stumbling over the fallen door-facing, he boldly mounted the stairs with as much noise as possible. Entering Plunkett's bedroom, he cried out in what he conceived to be his most impressive tones:

"Gin up the keys of that ar jail, ur your time has come."

"What air you up to now?" cried the sheriff, angry at this second visit. "You knocked me down and got the keys nigh on to an hour ago. Now what in thunderation does this hullabaloo mean, I want to know."

"Wha' choo talkin'?" said Jake. "We hain't on'y jest got yer."

"Only just got here?" said the sheriff, rising up in bed. "Only just come? Then there's another crowd that must 'a' done the business ahead of you. There was more'n forty men surrounded this house awhile ago, and beat down my door, and come upstairs here in

this room, and knocked me down and choked me black and blue and went off with the keys. I guess they've hung Tom and gone before this."

"Looky h-yer now, we don't want no more uv your tricks. We're the on'y party out to-night, sartin shore, un we're boun' to have them air keys ur die," said Jake, tragically. "You might 's well gin 'em up fust as last, Hank Plunkett, un save yourself trouble."

"Well, if you want 'em, you'll have to look 'em up," said the sheriff. "I have n't got 'em, and I'll be hanged if I know who has. I was knocked down and nearly killed by a whole lot of men. Kill me, if you've got a mind to, but you won't find the keys in this house. So there now." And he lay back on his pillow.

"Come on, boys; we'll s'arch the jail. Un ef we've been fooled weth, Hank Plunkett'll have to pay fer it."

With that the Broad Run boys departed and the sheriff got up and dressed himself. There was a mystery about two lynching parties in one night; and there might be something in it that would affect his bond or his political prospects if it were not looked into at once. He resolved to alarm the town.

At the jail door Hogan encountered Barbara piteously begging the men to spare her brother's life.

"Looky h-yer," he said, in a graveyard voice, "this ain't no kind uv a place fer women folks. You go 'way."

"No, I won't go away. I'm Tom's sister and I won't leave him. You must n't shoot him. He did n't kill George Lockwood."

"You mus' go 'way, ur you'll git shot yer own self," said Jake.

"Well, shoot me — d'you think I care? I'd rather die with Tom. I know your voice, Jake Hogan; and if you kill Tom you'll be a murderer, for he is n't."

"Take her away, boys," said Jake, a little shaken by this unexpected appeal to his sympathies. But nobody offered to remove Barbara. All of these rude fellows were touched at sight of her tears. It had not occurred to them to take into account the sister or the mother when they thoughtlessly resolved to hang Tom. But the path of the reformer is always beset by such thorns.

"Down weth that ar door!" cried Jake, not to be baffled in his resolution, and convinced by Barbara's solicitude that Tom was certainly within. There was reason for haste too, for the villagers were already stirring, and there might be opposition to his summary proceedings. But pompous commands have not much effect on heavy doors, and Jake found that this one would not down so easily as he hoped. Jake began pounding on it with the poll of

an ax borrowed from a neighboring wood-pile, and meanwhile dispatched two men to break open the blacksmith shop and fetch a sledge-hammer. But some of his men, on their own motion, went around to the back of the jail with the purpose of trying the window. Finding it as Bob had left it, with the grating torn out, they entered the jail and penetrated to the dungeon, coming back presently to tell Jake that they had found the window out, the dungeon door open, and Tom "clean gone."

"Thunder!" said Jake, dropping his ax. "Who could they be? The shurruff says they wuz more 'n forty on 'em; so they could n't be rescuers. They hain't ten men in the wide worl' 'at thinks Tom's innercent. Like's not it's a lot uv fellers f'um the south-east of the k-younty, down towards Hardscrabble, whar Lockwood had some kin. They've hung him summers. Let's ride 'roun' un see ef we kin fin' any traces. Un ef Hank Plunkett has played a trick, we 'll git squar' some day, ur my name hain't Jake Hogan."

The men mounted and rode off. Barbara, who stood by in agony while Jake beat upon the door, and who had heard the report that Tom was gone, could not resist the despairing conclusion that he must have suffered death. In her broken-hearted perplexity she could think of nothing better than to go to the tavern where Hiram Mason was a boarder. Half the people of the village were by this time in the streets, running here and there and saying the most contradictory things. Mason had been awakened with the rest, and by the time Barbara reached the tavern door, she encountered him coming out.

"W'y, Barbara! for goodness' sake, what brought you out? What *has* happened?" he said.

"O Mr. Mason! I'm afraid Tom's dead. I ran after Jake Hogan and his men when I heard them pass, and begged Jake to let Tom off. They tried to drive me away, but I staid; and when they got into jail, Tom was n't there. Jake said that the sheriff said he had been taken away and lynched by more than forty men. Oh, if they have killed the poor boy!"

"Maybe it is n't so bad," said Hiram, as he took her left hand in his right and led her, as he might have led a weeping child, along the dark street towards her uncle's house. "Don't cry any more, Barbara!"

"I should n't wonder," he said, after a while, "if Bob McCord knows something of this."

"But we left him at home to-night," said Barbara; and then she began to weep again, and to say over and over in an undertone, "O my poor Tom!"

Mason could not say any more. He only grasped her hand the more firmly in his and

walked on. Presently a wagon came across the walk just in front of them, issuing from an alley.

"That's Butts's wagon, and that's his bay colt, I do believe," said Barbara, looking sharply at the dark silhouette of the horse. "I know the way that horse carries his head. I wonder if Butts has been mean enough to have anything to do with this wicked business."

What Barbara saw was Zeke Tucker hastening to replace the horse in the stable, while Bob remained in town to keep a furtive watch over the court-house till morning. Mason thought he saw some one moving in the alley, and a detective impulse seized him.

"Stay here a moment, Barbara," he said, and letting go of her hand he ran into the alley and came plump upon the burly form of Bob McCord.

"It's all right, Mr. Mason," chuckled Bob. "Tom's safe 'n' soun' where they'll never find him. By thunder!" And Bob looked ready to explode with laughter; the whole thing was to him one of the best of jokes.

"Come and tell Barbara," said Mason.

Bob came out of the alley to where Barbara was standing near the white-spotted trunk of a young sycamore, and recounted briefly how he had fooled Butts, and how he had got the keys from Plunkett. His resonant laughter grated on Barbara's feelings, but she was too grateful to him to resent the rudeness of his nature.

"Where is Tom?" Barbara asked.

"Oh! I'm a-playin' Abe Lincoln," said Bob in a whisper. "The fewer that knows, the better it'll be. Tom says he won't light out, unless Abra'm says to. Speak'n' of Abe Lincoln," he said, "I don't want to be seed weth him to-night. You go back, Mr. Mason, un tell Abe 't Tom's safe. Ef he thinks Tom's chances is better to stan' trial, w'y, he'll find 'im in the court-house to-morry when the court wants 'im, shore as shootin'. He's on'y out on bail to-night," said Bob, unwilling to lose his joke. "But ef Abe thinks Tom hain't got no chance afore a jury, let 'im jest wink one eye, kind-uh, un 'fore daybreak I'll have the boy tucked into a bear's hole 't I know of, un he kin lay there safe fer a week un then put out for Wisconsin, ur Missouri, ur the Ioway country. You go 'n' let Abe know, un I'll see Barb'ry safe home—she won't gimme the mitten to-night, I 'low." And Bob chuckled heartily; life was all so droll to this man, blessed with a perfect digestion and not worried by any considerable sense of responsibility.

Mason went up to Lincoln's room and awakened him to tell him the story of the night. The lawyer's face relaxed, and at length he broke into a merry but restrained laughter. He saw almost as much fun in it as Bob McCord had, and Mason felt a little out of pa-

tience that he should be so much amused over such a life-and-death affair.

"Tom does n't want to be an outlaw," said Lincoln very gravely, when the question of Tom's going or staying was put to him. "I don't believe he could escape; and if he did, life would hardly be worth the having. There is only just one chance of proving his innocence, but I think he'd better stay and take that. Maybe we'll fail; if we do, it may yet be time enough to fall back on Bob and his bear's hole. By the way, where has Bob stowed Tom for the night?"

"Bob won't tell," said Mason. "He says he's playing Abe Lincoln; and the fewer that know, the better."

Lincoln laughed again, and nodded his head approvingly. "So he brings Tom to court in good time," he said.

Mason went out and encountered Bob in the street, and gave him Lincoln's decision. Then Hiram went and told Barbara about it, and sat with her and her mother until morning. A while before daybreak, finding the town free from any person disposed to molest Tom, Bob came to Barbara and had her make a cup of coffee and give him a sandwich or two. These he took out of the back gate of the Grayson garden and left them with Tom in the court-house.

The next morning at half-past 6 o'clock the lawyers of the circuit took their seats at the breakfast-table in the meagerly furnished, fly-specked dining-room of the tavern, the windows of which were decorated with limp chintz curtains, and the space of which was entirely filled with the odors of coffee and fried ham, mingled with smells emitted by the rough-coat plastering and the poplar of the wood-work: this compound odor of the building was a genius of the place. The old judge, who sat at the end of the table opposite to that occupied by the landlady, spread his red silk handkerchief across his lap preparatory to beginning his meal, and looked up from under his overhanging brows at Lincoln, who was just taking his seat.

"What's this; Lincoln? I hear your client was carried off last night by a mob of forty or fifty men and probably hanged. And you don't even get up early to see about it."

"My client will be in court this morning, Judge," said the lawyer, looking up from his plate.

"What!"

"I am informed that he is in a safe place, and he will be ready for trial this morning."

"Where is he?" asked the judge, looking penetratingly at Lincoln.

"I should be glad to tell your Honor; but the fact is, I can't manage to find out myself."

Then one of the other lawyers spoke up. "Lincoln, from what you say, I suppose the first mob took Grayson to save him from the second. But I don't see how the Old Boy you raised forty men on your side. I would n't have believed that the poor devil had so many friends."

"I? I did n't raise any men. I was sound asleep, and did n't know a word about it until the row was all over."

After breakfast there was much discussion of the case among the lawyers standing in a group in the bar-room. What would Lincoln do? Why had he not moved for a change of venue? Why had he subpoenaed no witnesses? Would he plead necessary self-defense, or would Tom plead guilty and throw himself on the mercy of the governor?

The sheriff was very active in the latter part of the night in telling his story and in making a display of zeal. It was he who had taken time by the forelock by telling the judge all about the events of the night; how his door had been beaten in by a great mob; how he had been rudely knocked down and choked until he was almost insensible; and how pistols had been cocked and placed against his head. Then he told of the coming of the second mob. He did not know which way Tom had been taken, or whether he had been hanged or not, but he had sent a deputy to make inquiries.

In making an examination of the prison after daylight, Sheriff Plunkett found the keys of the jail inside of the hallway, as though they had been thrown in at the broken-down window. When he went to force the court-house door, the key belonging to it was found lying on the doorstep; and when on opening the door he saw Tom with his manacles on, awaiting him, his surprise was complete.

"I thought you'd been hung," he said.

"Not yet," said Tom, grimly.

"Say, where did that mob come from that got you out?"

"You can't question me," said Tom. "I'm not a witness to-day; I'm a prisoner."

Many of the excited people, moved by the restive longings of a vague curiosity, had followed the sheriff into the court-room, and the news of Tom's presence there soon spread throughout the village. There were already all sorts of contradictory and exciting rumors in the streets about the events of the preceding night; women let their breakfast coffee boil over while they discussed the affair across back fences; men almost forgot to eat anything in their eagerness for news; country people were flocking in by all the roads and listening to all sorts of contradictory tales told by the villagers. When it became known that Tom was alive and awaiting his trial there was a gen-

"WHERE IS HE?" ASKED THE JUDGE."

eral rush to secure seats, and the court-room was filled long before the bell in its belfry had announced the hour for the trial to begin.

XXVI.

CIRCUMSTANTIAL EVIDENCE.

AT last the sheriff's new deputy went up the court-house stairs, and pulled away on the rope that rattled the bell in the belfry — a bell that uttered its notes in irregular groups, now pausing for breath, and now sending one hurried stroke clattering hard on the heels of another. Its clanking had no more dignity than the words of a gossip eagerly tattling small news. While the bell was yet banging, Judge Watkins's iron-gray head and stooped shoulders appeared; he pushed his way slowly through the press, his brows contracted in impatience at finding even the physical progress of the court obstructed by the vulgar. The people squeezed themselves as nearly flat as possible in the endeavor to make way for his Honor, of whom they were as much in awe as school-boys of a stern master. Bob McCord, erect in the aisle,

was an island in the very channel, and the most serious obstacle to the judge's passage; nor did it help things for Bob to turn sidewise, for he was equally obtrusive in all his dimensions. The judge was a good deal ruffled in his endeavors to pull by him.

"I wish I *wuz* littler, Jedge," said Bob, with a fearless laugh that startled the bystanders, "but I can't seem to take myself in another cench."

The dyspeptic judge was not without a sense of humor. It would be a derogation from his dignity to say that he smiled at Bob's apology; but certainly there was a little relaxation of his brows, and a less severe set to his lips, when he finally edged past and left the crowd to close around Big Bob again.

The judge began the session by ordering the sheriff to bring in the grand jury. This in turn was no easy task; but at length that body succeeded in descending the stairs, defiling through the aisle, and getting into the jury box. In a few words, precise and tart, the judge charged the grand jurymen to inquire into two lawless attacks that had been made

on the sheriff during the night; into the conduct of the sheriff; and into the evidently insecure condition of the county jail. Then, when the members of the grand inquest had reluctantly made their painful way up the stairs to their room overhead, the judge called the case of *The people of the State of Illinois versus Thomas Grayson, Junior*, and there was a hush in the crowded court-room.

Tom sat regarding the crowd with such feelings as a gladiator doomed to mortal combat might have had in looking on the curious spectators in the Coliseum. Mrs. Grayson and Barbara had been provided with chairs within the bar; but on his mother and sister Tom did not dare to let his eyes rest. He saw, however, without looking directly at them, that little Janet was standing by Barbara, and that his uncle sat with crestfallen face by his mother's side, and that his Aunt Charlotte had not come at all. Just outside of the bar, but immediately behind Mrs. Grayson, so as to form one of the group, stood Hiram Mason, erect and unblushing. One of the landmarks on which Tom's gaze rested oftenest was the burly form and round, ruddy face of Big Bob McCord, half way between the judge and the door. And at one of the open windows there presently appeared the lank countenance of Jake Hogan, who had climbed up from the outside, with the notion that he was somehow bound to supervise the administration of public justice. He managed with difficulty to get perching-room on the window-sill. Into two of the raised back seats a group of women had squeezed themselves to their last density, and among them, singular and conspicuous as she always was, sat Rachel Albaugh. Tom's was not the only eye that observed her; the lawyers from other counties were asking one another who she was, and she had even attracted the attention of the judge himself; for a gallant interest in good-looking women lingers late in a Virginia gentleman, no matter how austere his mold. At a pause in the preliminary proceedings the judge spoke to the clerk, sitting just below and in front of him, at a raised desk.

"Magill, who is that girl?" he asked.

"Which one, Judge?" queried Magill, pretending to be in doubt.

"You need n't look so innocent. Of course I mean the one a modest man can't look at without being a little ashamed of himself. You know her well enough, I 'm sure."

"I s'pose yer Honor manes John Albaugh's daughter," said Magill. "She's the one that's at the bottom of all this row, they say."

As soon as the judge heard that Rachel's beauty had something to do with the case in hand he fell back into his official reserve, as

though he felt a scruple that to talk about her, or even to take note of her beauty, might be, in some sort, a receiving of evidence not properly before the court.

The jury was very soon impaneled, for in that day entire ignorance of the matter in hand was not thought indispensable to a wise decision. Lincoln made no objection to any of the names drawn for jurymen except that of Abijah Grimes, of Broad Run Township. The exclusion of Bijy's open countenance from the jury box was another blow to Jake Hogan's faith in the institutions of the land. His brow visibly darkened; here was one more sign that a rich man's nephew could not be punished, and that a poor man had n't no kind uv a chance in sech a dodrotted country. No time was spent in an opening speech; the preliminary oratory, by which our metropolitan barristers consume the time of an indulgent court and make a show of earning their preposterous fees, was rarely indulged in that simpler land and time. The fees paid, indeed, would not have justified the making of two speeches.

No portion of the crowd tucked into the four walls of the Moscow court-house showed more interest in the trial than the members of the bar. The unsolved mystery that hung about Lincoln's line of defense, the absence of any witnesses in Tom's behalf, the neglect of all the ordinary precautions, such as the seeking of a change of venue, produced a kind of flurry of expectation inside of the bar; and the lawyers in their blue sparrow-tail coats with brass buttons, which constituted then a kind of professional uniform, moved about with as much animation as uneasy jay-birds, to which the general effect of their costume gave them a sort of family likeness. Their attention was divided, it is true; for when a member of the bar did succeed in settling himself into a chair, which he always canted back on its hind legs, he was pretty sure to get into a position that would enable him to get a glance now and then at the face of Rachel Albaugh, who was interesting, not only for her beauty, but on account of her supposed relation to the case actually before the court. Never had Rachel's lustrous eyes seemed finer, never had her marvelous complexion shown a tint more delicious; her interest in the case lent animation to her expression, and her attitude of listening set off the graceful turn of her features.

The prosecuting attorney called Henry Miller to prove that Tom had been irritated with Lockwood at Albaugh's, but Henry did what he could for Tom, by insisting that it did n't "amount to anything" as a quarrel; it was "only a huff," he said. The next witness called was the nervous young man who had stood

balancing himself on the threshold of Wooden & Snyder's store when Tom had threatened Lockwood, in paying back the money borrowed to discharge his gambling debt. He was a habitual gossip, and the story lost nothing from his telling. He did not forget to mention with evident pleasure that Rachel Albaugh's name had been used in that quarrel. At this point Rachel, finding too many eyes turned from the witness to the high seat at the back of the room, lowered her green veil.

Then the carpenter who had bought a three-cornered file on the morning of Tom's outburst against Lockwood also swore to the details of that affair as he remembered them, and the villager who had come in to buy nails to repair his garden fence gave a third version of the quarrel; but Snyder, the junior proprietor of the store, told the incident as it was colored by his partisanship for Lockwood and in a way the most damaging to Tom. He swore that Lockwood was really afraid of Tom, and that at Lockwood's suggestion he had himself got Blackman to speak to Tom's uncle about it. The young men followed who had heard Tom say, as he left town after his break with his uncle, that George Lockwood was the cause of all his troubles, and that Lockwood "had better not get in his way again, if he knew what was good for him."

Lincoln sat out the hours of that forenoon without making a note, without raising an objection, without asking the witnesses a question, and without a book or a scrap of paper before him. He did not break silence at all, except to waive the cross-examination of each witness. The impression made in Tom's favor by his voluntary appearance at the trial, when he might perhaps have got away, was by this time dissipated, and the tide set now overwhelmingly against him; and to this tide his self-contained lawyer had offered not the slightest opposition. It was a serious question even among the lawyers whether or not Lincoln had given up the case. But if he had given up the case, why did he not fight on every small point, as any other lawyer would have done, for the sake of making a show of zeal? To Allen, the public prosecutor, there was something annoying and ominous in Lincoln's silence; something that made him apprehensive of he knew not what.

When the court took its noon recess Barbara and her mother were in utter despondency. It seemed to them that Lincoln was letting the case go by default, while the prosecuting attorney was full of energetic activity.

"Abra'm," said Mrs. Grayson, intercepting Lincoln as he passed out of the bar with his hat drawn down over his anxious brows, "ain't

ther' nothin' you kin do for Tom? Can't you show 'em that he never done it?"

"I 'll do whatever I can, Aunt Marthy, but you must leave it to me." So saying, he quickly left her and pushed out of the door, while his learned brethren gathered into a group within the bar, and unanimously agreed in condemning his neglect of every opportunity to break the force of the evidence against Tom. Why had he not objected to much of it, why had he not cross-questioned, why did he not ask for a change of venue yesterday?

When the sheriff and his deputy, at the close of this forenoon session, passed out of the court-house with Tom, there was a rush of people around and in front of them. Men and boys climbed up on wagons, tree stumps, and whatever afforded them a good view of the criminal. For the most part the people were only moved by that heartless curiosity which finds a pleasurable excitement in the sight of other people's woes, but there was also very manifest an increasing resentment toward Tom, and not a little of that human ferocity which is easily awakened in time of excitement and which reminds us of a sort of second cousinship that subsists between a crowd of men and a pack of wolves—or between a pack of men and a crowd of wolves.

When Tom found himself at length landed within the friendly prison walls, out of sight and hearing of the unfeeling crowd, he was in the deepest dejection. For what, indeed, that could happen now would be sufficient to turn back such a tide of popular condemnation? Barbara came to him presently with a dinner more relishable than that which the sheriff was accustomed to serve to prisoners, and all the way to the jail idle people had strolled after her; and though no one treated her with disrespect, she could hear them saying, "That 's his sister," and their voices were neither sympathetic nor friendly. When she set down the tray on one of the stools in front of Tom, she kept her eyes averted from his, lest he should detect the despondency that she knew herself to be incapable of hiding. On his part, Tom made a feint to eat the food, for Barbara's sake. But after examining first one tid-bit and then another, essaying to nibble a little first at this and then at that, he got up abruptly and left the whole.

"'T is n't any use, Barb," he said, huskily. "I can't eat."

And Barbara, knowing how much need her brother had for all his self-control, did not trust herself to speak, but took up the tray and went out again, leaving Tom, when the deputy had locked the door, sitting alone on the bench, with his head between his hands.

R. M. Johnston

AT the second of the recent Authors' Readings in Washington in aid of the cause of international copyright, Dr. Edward Eggleston, introducing one of the readers, said:

"A few years ago there began to appear in the magazines stories in dialect by an unknown writer. These were so full of quaint humor and individuality as to mark the arrival of a new man in our literature. I thought I saw here the hand of a vigorous young man destined

to make a name in our literature, and to push us old fellows off the board, when once he should have reached his maturity. I now have the pleasure of introducing to you that promising young man, Colonel R. M. Johnston."

Richard Malcolm Johnston was born in Hancock County, Georgia, March 8, 1822. His grandfather was the son of an Episcopal clergyman, and a Virginian, of Charlotte County, who emigrated to Georgia when it was

comparatively new ground. On the side of his mother, who was Catharine Davenport of the same county, his ancestors were also Virginians.

His father was a large planter, for that part of the country. He began with a farm of 500 acres, which, by gradual purchase, he increased to 2500. The early years of the boy were spent upon this farm; and here he received the impressions which have determined his tastes for life.

This region, called middle Georgia, was a strip of country about 100 miles long, from east to west, and 60 broad, with the city of Augusta as its metropolis. When settled, it was a mere oasis of civilization in the midst of a desert of barbarism. The country round about was either uninhabited or occupied by Indian tribes, which were forced back on all sides as the settled region gradually and slowly enlarged its borders. The life here was almost as circumscribed as it would have been in a desert island. These conditions may account in part for its rugged independence and charming provincialism.

As society settled and clarified, the classes naturally separated. Since no violence marked this separation, there was nothing of the strained relation so often found in our American society. Master and servant were brought into direct relation, without the intervention of the hated overseer. The plantation was usually not too large for the owner to take direct supervision of it,—to know his servants personally, and to visit the "quarters," which were not very far from the "big house." The perfect healthfulness of the climate made life possible all the year round on the plantations,—for white master as well as negro servant. In many parts of the South the arable land lay in river bottoms, low sea coasts, or swampy land, almost the counterpart of the country where the African race had been acclimated for thousands of years, but which was death to the white race. In these low-ground plantations the master had very little in his relations with his slaves that was personal. The races naturally grew apart. Many of the large planters did not even know all of their own slaves by sight, and their welfare was intrusted to an overseer. Of course, under these conditions, there was very little chance that the negroes, huddled together, and away from the helpful association with their masters, should rise much above their old heathenism and barbarism. Though in the main fairly well fed, well clothed, and well housed,—from interest, if from no better motive,—they were lamentably ignorant. Such plantations were very hot-beds, where voodooism and witchcraft flourished mightily.

In the middle Georgia region, in which

Richard Johnston was growing up and taking his earliest impressions, everything was the reverse of this. On his father's farm the field hands were on the kindest terms with the white members of the family, especially with the children, who delighted to visit the quarters, to hear the stories and to feast upon the crackling bread and roast sweet potatoes, that never seemed quite so perfect anywhere else.

The children, black and white, grew up together, getting into the same scrapes, talking the same patois, riding double in going to mill for the weekly grinding of meal—sometimes the white boy in front, but quite as often the other way. The institution of slavery existed here in its mildest form; it was, in the main, the patriarchal institution of the Bible, buying and selling being the exception, not the rule. Servants and their families descended from father to son, or were sometimes willed away, the servant being given, within limits, his choice of a master.

The relations between the field hands and their owners were here very much the same as they were, in other parts of the South, between the household servants and their masters.

Here no impassable chasm shut off the "po' whites," completely ostracizing them, as was the case in many parts of the Southern States. Life was almost archaic in its simplicity. The poorer classes were treated by their neighbors of the better class with the confidence and respect that their sturdy uprightness and self-respect commanded. They were a simple, unlettered folk, full of hardihood and loyalty. They "did what they pleased with the king's English, but were true to the behests of all honor": the men were brave and the women were virtuous. This is utterly unlike the picture that has been so often drawn of the Georgia "cracker."

Among the children of this gentle-hearted, simple-minded people, Richard Johnston grew up, forming friendships which colored all his future life, and furnish the key-note to that life and work. In the midst of the anomalous conditions of this society a group of character writers, unsurpassed by any others, have arisen, led on by Judge Longstreet in his rude but graphic pictures of the wholesome, jovial life of its earlier days, followed by Joel Chandler Harris, in his inimitable *Uncle Remus*, and Richard Malcolm Johnston, in his equally inimitable stories of cracker life. The reason is not far to seek, why just here this school of realistic literature took rise—because the material was here, and the writers were an integral part of the life they undertook to depict, in a sense true of perhaps no other region of the South. The school lacks the ideal-

ism of Cable and Page, though Page's realism is exquisitely well balanced with the ideal; but that the conditions were not destructive of the growth of an ideal genius perhaps needs nothing more than the mention of one name, reverently honored wherever it is known—Sidney Lanier came also from this same middle Georgia country.

Until he was eight years old, Richard Johnston lived in the midst of this simply happy, untrammelled life, absorbing its characteristics day by day, and being molded by its influences. For four years he attended what is known in some regions of the South as an "old field school." Some poor, broken-down farmer, or business man, at the end of his resources, would betake himself to teaching. For a mere pittance he would undertake to impart to the children of the neighborhood his small store of knowledge; reading, writing, and ciphering was usually the limit. The teacher did not possess knowledge enough to hurt the sturdy little lads and lassies who came to be taught, and who managed between times to learn many a lesson in kindness and courtesy, especially the boys in helping and guarding the girls, of whom less was required, both in scholarship and behavior, than was asked of the sterner sex.

"The Goose-pond School," the first story in the earliest series of "The Dukesborough Tales," is a genuine picture of the old field school, touched with the quaint humor of its writer. No one can read the story without feeling the warm-hearted, loving recognition of all that is good as well as a full appreciation of all its absurdities. The uncouthness of the master, his brutality and craven cowardice, were exceptional but not impossible, and they serve to bring out into clearer relief the system, the school, and the "scholars" than a more commonplace and peaceable teacher would have done.

In 1830, when the boy was eight years old, Mr. Johnston moved first to Crawfordville, then to Powelton, the "Dukesborough" of the tales. This he did to give his younger children the benefit of better schools than they could find in the country. At this time Powelton was a finished town of never more than one hundred and fifty inhabitants. It is to-day not larger than it was then, while Chicago, at that date a smaller town than Powelton, has in the mean time gone up to—Heaven and the census takers alone know where.

Powelton, however, possessed a school which was a successful rival of the town proper; it had over one hundred and fifty pupils, besides teachers, other officials, and servants. For many years this school was carried on by excellent teachers, usually from the New Eng-

land States. Here the boys and girls—for it was a mixed school—were prepared for college, or were "finished," as the case might be.

At this school Mr. Johnston's children entered and began serious study. "At thirteen," Colonel Johnston said, in talking over these old times, "I was madly, hopelessly, intensely, bottomlessly in love with a young lady of twenty-six, one of my teachers. The four years that must elapse before, according to my notions, I should be eligible to marry her, I thought of as I would now think of four thousand standing between me and the consummation of my highest earthly hope."

A curious friendship had existed for some time between the boy of thirteen and a whimsical bachelor of forty—a neighbor of the Johnston family. To this friend the boy confided the secret of his passionate attachment for his mature lady-love, with all its attendant thrills and hopes, woes and despairs. His friend received the confidence with the utmost gravity and sympathy, and advised him to confide in his mother—a piece of advice which he religiously followed. After pouring out the whole matter in her sympathetic ear, she said, with a curious, suppressed smile:

"My son, I would advise you, whatever you do, not to let your father know the state of your affections. He would assuredly give you a thrashing."

This suggestion is used in a very amusing way in "The Early Majority of Mr. Thomas Watts," one of the first series of "The Dukesborough Tales."

The youthful lover's hopes were dashed by his inamorata's marrying some one else. After the proper interim of desolation and dark despair over his crushed hopes, the lady teacher of twenty-six had a successor in the person of a young girl of fifteen. One is irresistibly reminded of David Copperfield and the eldest Miss Larkins in this experience.

These early and ardent love affairs, as intense and serious as any later experience could possibly be, were very characteristic of the Southern boy of the past. They sometimes ended in a temporary eclipse of the youthful lover in desperation and impenetrable gloom, and sometimes in them lay the germ of a happy married life. They were as different from the objectionable flirtations and fastness, so often seen among the children of the present day, as the light is different from darkness: full of ardent dreams of self-immolation, of daring courage, of tender protection, of reverent adoration for his lady-love, worthy of any knight of chivalry—beautiful they were and touching in spite of their absurd unreality.

After leaving the Powelton school the boy

went to college, where he was graduated in 1841. He taught two years, and then began the practice of law with Linton Stephens, a younger brother of Alexander H. Stephens, as his partner. For ten years he continued at the bar, in the northern and middle circuits of Georgia.

A lawyer's life, in those days, when the country was so thinly settled that no one small district afforded sufficient litigation to support a single lawyer, was a peculiar one. A bevy of practitioners following the court in its sessions made a peripatetic society for themselves. The scenes in court were sometimes irresistibly funny; the peculiarities of the people, the incongruity of setting, all supplied material for uproarious mirth in the symposium that followed each day's work.

The dialect, so familiar to these men in their childhood, became indelibly engraven on their memories by repetition in the stories they told, and their native gifts as *raconteurs* found an admirable field for development in these days filled with court experience and the nights filled equally with laughter.

In answer to the question, "How is it that you never 'slip up' in the dialect of the crackers?" Colonel Johnston replied, "Slip up in my vernacular! How could I? I talked it when I was a boy with the other boys. I often, now, find myself dropping unconsciously into it. When a middle Georgia man gets 'mad,' I assure you he does not use the stately anathemas of the Charlestonian or Savannese; he just 'cusses' roundly in the cracker 'lingo,' and gets an immense amount of satisfaction out of it."

I have often heard native Georgians drop in the most charming way into this dialect, when they were in a light or tender mood, particularly when talking to little children.

In 1844 Mr. Johnston was married to Miss Frances Mansfield, of the same county (Hancock), whose father was from the State of Connecticut. Twenty-two was quite a sober age for those days, but his wife was only fifteen. Marriages used to be contracted at absurdly early ages, especially in the Southern States. There was something besides climate to account for this. Housekeeping there was such a very simple affair. If, as often chanced to be the case, the youthful lovers belonged to families whose plantations adjoined, a slice was taken from each, a modest house was built, sometimes of the timber on the place and by domestic carpenters, and with the overflow of household goods from the homesteads the arrangements were easily and cheaply made, and the young couple were married and took possession, and began a simple happy life like that from which they had detached themselves.

Their homes were very full of comfort, their needs, beyond the inevitable education, especially the college course for the boys, made no heavy drain upon the family resources, and by the time the boys were old enough for that the means were there.

Certain of the household servants from one or other of the parent homes went with the young people, and they, with their children, formed an integral part of the new household, and grew up and grew old with it.

After ten years of this life at the bar, Mr. Johnston was offered three positions almost at the same time—a judgeship of the northern circuit, the presidency of one college, and a professorship in another. This latter offer, as being most congenial, he accepted, and was made professor of *belles-lettres* in the State University, Md., a position which he held for four years, and then he opened a boys' school at his plantation near Sparta. There he carried on a very flourishing school in connection with his farm till 1867. In this year a sad domestic bereavement, the death of a daughter just grown up, made old places and associations unbearable. Giving up a school of 60 pupils, of whom he took 40 with him, he returned to Maryland, intending to form a school there. This he did a few miles outside of Baltimore. Since that time he has been teaching, lecturing, and writing.

His first story appeared under the nom de plume Philemon Perch, in the "Southern Magazine," a periodical, largely eclectic, which was published in Baltimore. In this, as in all his other stories, he went back to the old home life of his early childhood. With the tendency to classical allusion so dear to the Southern heart, he says: "Of all places on earth, it is the dearest to me. The academy grove seems to me now more beautiful than anything in Tempe or Arcadia could possibly be."

This love for old associations, old places, old times, shines through all his work; it qualifies the fun in every description. No touch of ridicule or shade of contempt for the primitive simplicity of living, the clumsy laboring after expression, the narrowness of thought that marked that intensely provincial life, ever mars his work. A loving, tender light shines through the quaint humor; it plays over every incident, and irradiates every homely detail of life he depicts, lifting it above all touch of sordidness.

The merit of his work received almost immediate recognition. No one was so surprised as its author at the success of this his first literary venture; other stories followed, but it did not seem to occur to Colonel Johnston to seek a wider field for his work, or to think of his writing as a source of income, for he had contributed the early stories without asking

remuneration. In 1879, however, his dear and valued friend Sidney Lanier persuaded him to submit a story to "Scribner's Magazine," now THE CENTURY. When this was accepted Mr. Lanier's delight was unbounded, both because the writer was his friend, and because the life so vividly depicted was sweet in his memory.

This story, "Mr. Neelus Peeler's Conditions," forms the point from which Colonel Johnston dates his literary career. It is a remarkable fact that an author who has deservedly attained such wide recognition for the freshness, broadness, and humor of his work should have been over fifty years of age before he attempted it, and that he should date his literary life from his fifty-seventh year.

From the beginning Colonel Johnston has loved his work and been faithful and conscientious in it. He does not write rapidly, nor please himself easily. The stories that have such an easy, impromptu air have sometimes been written over and over again. Speaking of the principal female character in his novel "Old Mark Langston," he said: "I meant to make her mean, like her father; but before I had written fifty lines about her, she just turned herself out of my hands" [with a very graphic gesture], "and there she was, before me; she seemed to say: 'Don't make me mean! I am a woman. You never knew a woman mean like that'; and I had to stop. I just could not do it. I cannot, somehow, be rough with my women; they always seem to reproach me. I cannot forget the reverence due to their femininity." After a pause, "No, I cannot do it."

There is no plot in his stories carefully devised; it is not so much a story he has to tell as a life he has to depict. The nucleus of each sketch is not a thing, but a person. He takes a character or two, perhaps; as he writes, they become defined and grow into roundness and reality under his hand. The

incidents are for the sake of the characters, not the characters for the sake of the incidents.

The *mise en scène* is always photographically accurate; every detail is true. "As long as the people in my stories have no fixed surroundings, they are nowhere to me; I cannot get along with them at all."

Colonel Johnston has it in view to write a story of the higher village life about Powelton, which he says was equal in refinement, culture, and charm to any society he has ever known, and somewhat peculiar. It is, however, always difficult, after following a certain vein, to work out of it. The demand for short stories is much greater than for novels, either as books or serials. In consequence he has been rather crowded into the short story direction, and especially in the delineation of the cracker type.

Five books from his pen have been published besides "The Dukesborough Tales"—"Old Mark Langston"; "Two Gray Tourists," a book of sketches of travel; "Mr. Absalom Billingsbee and Other Georgia Folk"; and, in conjunction with William Hand Brown, a history of English literature, and the Life of Alexander H. Stephens.

In speaking of his future work, Colonel Johnston said: "In going back to my past life, and in attempting to make a worthy record of the limited provincial life in the midst of which my childish days were passed, I have drawn a sweet solace for the sadness of my exile, of being so far from old places, old friends, even old graves. The stories are all imaginary, but they are in harmony with what I have seen and of which I have sometimes been a part. I loved this people and this district, and in doing so have loved many of the most gifted and most cultured and most distinguished men in dear old Georgia."

Sophie Bledsoe Herrick.

LOVE ASLEEP.

I FOUND Love sleeping in a place of shade,
And as in some sweet dream his sweet lips smiled;
Yea, seemed he as a lovely, sleeping child.
Soft kisses on his full, red lips I laid,
And with red roses did his tresses braid;
Then pure, white lilies on his breast I piled,
And fettered him with woodbine fresh and wild,
And fragrant armlets for his arms I made.
But while I, gazing, yearned across his breast,
Upright he sprang, and from swift hand, alert,
Sent forth a shaft that lodged within my heart.
Ah! had I never played with Love at rest,
I still had lived, who die now of this hurt,
He had not wakened — had not cast his dart.

Philip Bourke Marston.

ABRAHAM LINCOLN: A HISTORY.*

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE ADVANCE.

SECESSION sophistry about oppression and subjugation was sufficiently answered by the practical logic of the Southern States in collecting armies and uniting in military leagues. Military necessity, not political expediency, was now the unavoidable rule of action. The Washington authorities had long foreseen that merely filling the National capital with Northern regiments would not by itself give security to the Government buildings and archives. The presidential mansion, the Capitol, and the various department offices all lay within easy reach of rebel batteries which might rise in a single night at commanding points on the southern bank of the Potomac, and from which hostile shot and shell could speedily reduce the whole city to ruins. As early, therefore, as the 3d of May, Scott instructed General Mansfield, the local commander, to seize and fortify Arlington Heights. Various causes produced a postponement of the design, urgent as was the necessity; but finally the needed reinforcements arrived. Under plans carefully matured, the Union forces commanded by Brigadier-General Irvin McDowell on the morning of May 24 made their advance across the Potomac River and entered Virginia. Here was begun that formidable system of earth-works, crowning every hill in an irregular line for perhaps ten miles, extending from the river-bend above Georgetown to the bay into which Hunting Creek flows, below Alexandria, which constituted such an immense military strength, and so important a moral support to the Army of the Potomac, and, indeed, to the Union sentiment of the whole country during the entire war.

Three other movements of troops were begun about the same time. General Butler was transferred from Baltimore to Fort Monroe to collect nine or ten regiments for aggressive purposes. General Robert Patterson, who was organizing the Pennsylvania militia, assembled the contingent of that State with a view to a movement against Harper's Ferry.

And General George B. McClellan, appointed to organize the contingent from the State of Ohio, had his earliest attention directed toward a movement into western Virginia.

Prompted by many different shades of feeling, there now arose throughout the North a demand for military action and military success. Assuming the undeniable preponderance of men and means in the free States, public opinion illogically also assumed that they could be made immediately victorious. Under bold head-lines a leading newspaper kept "The nation's war cry" standing in its columns: "Forward to Richmond! Forward to Richmond! The rebel Congress must not be allowed to meet there on the 20th of July. By that date the place must be held by the National army!"† Though this was but a single voice, it brought responsive echoes from all parts of the North.

Two months of the first three-months' enlistment of the militia called into service were already gone; it seemed desirable that the remaining third of their term should be utilized in an energetic movement. General Scott's original idea had been that this energetic movement should occur at Harper's Ferry; but Johnston's evacuation of that place, and Patterson's over-caution and defensive strategy, frustrated the design. Under the increasing political pressure, the most promising alternative was thought to be a direct advance from Washington against Manassas Junction, the strategical importance of which the Confederates had instinctively recognized, especially its relation to Harper's Ferry. Colonel Cocke had written to Lee, May 15:

These two columns, one at Manassas and one at Winchester, could readily coöperate and concentrate upon the one point or the other; either to make head against the enemy's columns advancing down the valley, should he force Harper's Ferry, or in case we repulse him at Harper's Ferry, the Winchester supporting column could throw itself on this side of the mountains to coöperate with the column at Manassas.

On the 29th of June President Lincoln called his Cabinet and principal military officers to a council of war at the Executive Mansion, to discuss a campaign against the rebels at Manassas. General Scott took occa-

† "New York Tribune," June 20, 1861.

sion to say that he was not in favor of such a movement. "He did not believe in a little war by piecemeal. But he believed in a war of large bodies." He adhered to the "anacanda" policy, and a decisive campaign down the Mississippi River in the autumn and winter. "We were to go down, fight all the battles that were necessary, take all the positions we could find and garrison them, fight a battle at New Orleans and win it, and thus end the war."* But being overruled by the President and Cabinet in favor of an immediate movement, the old soldier gracefully yielded his preference, and gave his best counsel and co-operation to the new enterprise. He caused to be read the plan matured by General McDowell and approved by himself.

McDowell's plan stated that the secession forces then at Manassas Junction, under command of General Beauregard, and its dependencies, were estimated at twenty-five thousand. When threatened they would call up all reinforcements within reach.

If General J. E. Johnston's force is kept engaged by Major-General Patterson, and Major-General Butler occupies the force now in his vicinity, I think they will not be able to bring up more than ten thousand men. So we must calculate on having to do with about thirty-five thousand men. . . . Leaving small garrisons in the defensive works, I propose to move against Manassas with a force of 30,000 of all arms, organized into 3 columns, with a reserve of 10,000. . . . After uniting the columns this side of it, I propose to attack the main position by turning it, if possible, so as to cut off communications by rail with the South. †

Before, however, the preparation for this advance had even been completed, the first campaign of the war, though not an extensive one, was already finished with a decided success to the Union arms.

When the Richmond convention by the secret secession ordinance of the 17th of April, and a few days later by a military league with Jefferson Davis, literally kidnapped Virginia and transferred her, bound hand and foot, to the rebel government at Montgomery, the western half of the State rose with an almost unanimous protest against the rude violation of self-government, and resolved to secede from secession. A series of popular meetings was held, with such success that on the 13th of May delegates from twenty-five counties met for consultation at Wheeling, and agreed on such further action and coöperation as would enable them to counteract and escape the treason and alienation to which they had been committed without their consent. The leaders made their designs known to President Lincoln at Washington, and to General McClellan at Cincinnati, commanding the

Department of the Ohio, and were not only assured of earnest sympathy, but promised active help from the Ohio contingent of three-months' volunteers, whenever the decisive moment of need should arrive. In conformity with this understanding, an expedition under McClellan's orders moved against and dispersed a little nucleus of rebel troops at Philippi, in a secluded mountain valley about fifteen miles south of Grafton.

Under shelter and encouragement of this initial military success, the political scheme of forming a new State proceeded with accelerated ardor. As early as June 11 a delegate convention, representing about forty counties lying between the crest of the Alleghanies and the Ohio River, met and organized at Wheeling. On the 13th of June, after reciting the various treasonable usurpations of the Richmond convention and Governor Letcher, it adopted a formal declaration that all the acts of the convention and the executive were without authority and void, and declared vacated all executive, legislative, and judicial offices in the State held by those "who adhere to said convention and executive." On the 19th of June an ordinance was adopted creating a provisional State government, under which F. H. Peirpoint was appointed governor, to wield executive authority in conjunction with an executive council of five members. A legislature was constituted by calling together such members-elect as would take a prescribed oath of allegiance to the United States and to the restored government of Virginia, and providing for filling the vacancies of those who refused. A similar provision continued or substituted other State and county officers. After adding sundry other ordinances to this groundwork of restoration, the convention on the 25th took a recess till August. The newly constituted legislature soon met to enact laws for the provisional government; and on July 9 it elected two United States senators, who were admitted to seats four days later.

So far the work was simply a repudiation of secession and a restoration of the government of the whole State which had been usurped. But the main motive and purpose of the counter-revolution was not allowed to halt nor fail. In August the Wheeling convention reassembled, and on the 20th adopted an ordinance creating the new State of Kanawha (afterward West Virginia) and providing for a popular vote to be taken in the following October on the question of ratification.

The Richmond government had no thought of surrendering western Virginia to the Union without a struggle. Toward the end of June

they sent General Garnett to oppose the Federal forces. He took position in a mountain-pass at Laurel Hill with 3 or 4 regiments, and stationed Colonel Pegram in another pass at Rich Mountain, 17 miles south, with a regiment and 6 guns. Early in July, General McClellan, learning the weakness of the rebels, resolved to drive them from their positions. He sent General Morris with 5 or 6 regiments against Garnett, and himself moved with some 7 regiments upon Pegram's intrenched camp. General Rosecrans, commanding McClellan's advance, was fortunate enough to obtain a Union mountaineer, thoroughly familiar with the locality, who led a detachment of 1900 men to the rear of the rebel position, where they easily dispersed an outpost of 300 men with 2 guns stationed near the summit. This victory made Pegram's position untenable; and, hastily abandoning his intrenched camp and guns, he sought to join Garnett at Laurel Hill by a northward march along the mountain-top. Garnett, however, was already retreating; and Pegram, unable to escape, surrendered his command of between 500 and 600 to McClellan on the morning of the 13th of July.

A difficult route of retreat to the northward still lay open to Garnett, and he made diligent efforts to impede the pursuit, which was pushed with vigor. About noon of July 13 Captain Benham with three Union regiments came up with the rebel wagon train at Carrick's Ford, one of the crossings of Cheat River, twenty-six miles north-west of Laurel Hill. Here Garnett deployed his rear-guard of a regiment with three guns to protect his train; but by a sharp attack the Union forces drove the enemy, capturing one of the guns. In a desultory skirmish a little farther on Garnett himself was killed by a sharpshooter, and that incident terminated the pursuit. The Unionists secured the wagon train, and the remnant of rebels successfully continued their farther retreat.

Large political and military results followed this series of comparatively slight encounters. They terminated the campaign for the possession of western Virginia, and the movement for the establishment of a separate State thereafter went on unchecked. The most important result was upon the personal fortunes of General McClellan. These were the first decided Union

victories of the war, and they were hailed by the North with a feeling of triumph altogether disproportionate to their real magnitude. When on the following day McClellan summed up in a single laconic dispatch* the scattered and disconnected incidents of three different days, happening forty miles apart, the impression, without design on his part, was most naturally produced upon the authorities and the country that so sweeping and effective a campaign could only be the work of a military genius of the first order. McClellan was the unquestioned hero of the hour. The *éclat* of this achievement soon called him to Washington, and in a train of events which followed had no insignificant influence in securing his promotion, on the 1st of November following, without further victories, to the command of all the armies of the United States.

BULL RUN.†

It had been arranged that McDowell's advance against the enemy at Manassas should begin on July 9: by dint of extraordinary exertions he was ready and issued his marching orders on July 16.‡ But his organization was very imperfect and his preparations were far from complete. Many of his regiments reached him but two days before, and some only on the day he moved. He started with barely wagons enough for his ammunition and hospital supplies; tents, baggage, and rations were to follow.§ The utmost caution was enjoined to avoid another Vienna or Big Bethel disaster. Three things, his marching orders said, would be held unpardonable: *First*, to come upon a battery or a breastwork without knowledge of its position. *Second*, to be surprised. *Third*, to fall back. His army being a new, untried machine, his men unused to the fatigues and privations of a march, progress was slow. With a cumbersome movement it felt its way toward Fairfax Court House and Centreville, the outposts of the enemy having sufficient time to retire as it advanced. Tyler commanded his first division, of 4 brigades; Hunter the second division, of 2 brigades; Heintzelman the third division, of 3 brigades; and Miles the fifth division, of 2 brigades. The fourth division, under Runyon,

* HUNTSVILLE, VA., July 14, 1861.

COLONEL TOWNSEND: Garnett and forces routed; his baggage and one gun taken; his army demoralized; Garnett killed. We have annihilated the enemy in western Virginia, and have lost 13 killed and not more than 40 wounded. We have in all killed at least 200 of the enemy, and their prisoners will amount to at least 1000. Have taken seven guns in all. I still look for the capture of the remnant of Garnett's army by General Hill. The troops defeated are the crack regiments of eastern Virginia, aided by Georgians, Ten-

nesseans, and Carolinians. Our success is complete and secession is killed in this country.

GEO. B. MCCLELLAN,
Major-General Commanding.

[War Records.]

§ Committee on Conduct of the War.

was left behind to guard his communications. His total command embraced an aggregate of 34,320 men; his marching column proper consisted of a little less than 28,000 men, including artillery, a total of 49 guns, and a single battalion of cavalry.

When, on the morning of July 18, Tyler reached Centreville, he found that the enemy had everywhere retired behind the line of Bull Run, a winding, sluggish stream flowing south-easterly toward the Potomac, about thirty-two miles south-east of Washington. While it is fordable in many places, it generally has steep and sometimes precipitous and rocky banks with wooded heights on the west. Three miles beyond the stream lies Manassas Junction on a high, open plateau. Here the railroads, from Richmond on the south and the Shenandoah Valley on the west, come together. To protect this junction the rebels had some slight field-works, armed with 14 or 15 heavy guns, and garrisoned by about 2000 men. Beauregard, in command since the 1st of June, had gathered an army of nearly 22,000 men and 29 guns. The independent command of Holmes, called up from Aquia Creek, augmented his force to a little over 23,000 men and 35 guns. Instead of keeping this about the Manassas earth-works he had brought it close down to the banks of Bull Run and posted it along a line some eight miles in length, extending from the Manassas railroad to the stone bridge on the Warrenton turnpike, and guarding the five intermediate fords.

The enemy retired from Centreville as Tyler approached that place; and taking a light detachment to make a reconnaissance, he followed their main body toward the crossing of Bull Run at Blackburn's Ford, near the center of Beauregard's extended line. Tyler was under express orders to observe well the roads, but not to bring on an engagement.* Apparently lured on, however, by the hitherto easy approach, his reconnaissance became a skirmish, and calling up support, the skirmish became a preliminary battle. Before he was well aware of it 60 men had fallen, 2 exposed field-pieces had been with difficulty extricated, 1 regiment had retreated in confusion, and 3 others were deployed in line of battle, to make a new charge. At this point Tyler remembered his instructions and called off his troops. This engagement at Blackburn's Ford, so apparently without necessity or advantage, greatly exasperated the men and officers engaged in it, and seriously chilled the fine spirit in which the army started on its march. The attacking detachment did not then know that the enemy had suffered equal loss and demoralization.†

McDowell began his campaign with the

purpose of turning the flank of the enemy on the south; but the examinations made on the 18th satisfied him that the narrow roads and rough country in that direction made such a movement impracticable. When, in addition, he heard Tyler's cannonade on the same day, he hurried forward his divisions to Centreville; and the report of that day's engagement also seemed to prove it inexpedient to make a direct attack.‡ That night McDowell assembled his division commanders at Centreville and confidentially informed them that he had changed his original plan, and resolved to march northward and turn Beauregard's left flank.‡ All of Friday, the 19th, and Saturday, the 20th, were spent in an effort of the engineers to find an unfortified ford over Bull Run in that direction; and thus the main battle was postponed till Sunday, July 21. During those two days, while McDowell's army was refreshed by rest and supplied with rations, the strength of the enemy in his front was greatly increased.

McDowell's movement was based upon the understanding and promise that Patterson should hold Johnston in the Shenandoah Valley, and General Scott made every exertion to redeem this promise. On the 13th he directed Patterson to detain Johnston "in the valley of Winchester"; and as the critical time approached, and hearing no official report from him for three whole days, he sent him a sharp admonition: "Do not let the enemy amuse and delay you with a small force in front, whilst he reënforces the [Manassas] Junction with his main body."‡ And still more emphatically on the 18th, while the engagement of Blackburn's Ford was being fought by McDowell's troops: "I have certainly been expecting you to beat the enemy. If not, to hear that you had felt him strongly, or at least had occupied him by threats and demonstrations. You have been at least his equal, and, I suppose, superior in numbers. Has he not stolen a march and sent reënforcements toward Manassas Junction? A week is enough to win victories."§ Patterson was touched by the implied censure, and answered restively: "The enemy has stolen no march upon me. I have kept him actively employed, and by threats and reconnaissances in force have caused him to be reënforced."|| But the facts did not bear out the assertion. He had been grossly outwitted, and the enemy was at that moment making the stolen march which Scott feared, and of which

Patterson remained in profound ignorance till two days later.

Since the 9th of July his readiness to "offer battle," or to "strike" when the proper moment should arrive, had oozed away. He became clamorous for reinforcements, and profuse of complaints. Making no energetic reconnaissance to learn the truth, and crediting every exaggerated rumor, he became impressed that he was "in face of an enemy far superior in numbers." Understanding perfectly the nature and importance of his assigned task, and admitting in his dispatches that "this force is the key-stone of the combined movements"; ambitious to perform a brilliant act, and commanding abundant means to execute his plan, his courage failed in the trying moment. "To-morrow I advance to Bunker Hill," he reported on July 14, "preparatory to the other movement. If an opportunity offers, I shall attack."* Reaching Bunker Hill on the 15th, he was within nine miles of the enemy. His opportunity was at hand. Johnston had only 12,000 men all told; Patterson, from 18,000 to 22,000. All that and the following day he must have been torn by conflicting emotions. He was both seeking and avoiding a battle. He had his orders written out for an attack. But it would appear that his chief of staff, Fitz-John Porter, together with Colonels Abercrombie and Thomas, at the last moment persuaded him to change his mind. Making only a slight reconnaissance on the 16th, he late that night countermanded his orders, and on July 17 marched to Charlestown—nominally as a flank movement, but practically in retreat. Johnston, the Confederate commander, was at Winchester, in daily anticipation of Patterson's attack, when at midnight of July 17 he received orders to go at once to the help of Beauregard at Manassas. By 9 o'clock on the morning of the 18th his scouts brought him information that Patterson's army was at Charlestown. Relieved thus unexpectedly from a menace of danger which otherwise he could neither have resisted nor escaped, he lost no time. At noon of the same day he had his whole effective force of 9000 men on the march; by noon of Saturday, July 20, 6000 of them, with 20 guns, were in Beauregard's camp at Bull Run, ready to resist McDowell's attack.

The Union army lay encamped about Centreville; from there the Warrenton turnpike ran westward over a stone bridge, crossing Bull Run to Gainesville, several miles beyond. Unaware as yet that Johnston had joined Beauregard, McDowell desired to seize Gainesville, a station on the railroad, to pre-

vent such a junction. The stone bridge was thought to be defended in force, besides being mined, ready to be blown up. The engineers, however, late on Saturday, obtained information that Sudley Ford, two or three miles above, could be readily carried and crossed by an attacking column.

On Saturday night, therefore, McDowell called his officers together and announced his plan of battle for the following day. Tyler's division was ordered to advance on the Warrenton turnpike and threaten the stone bridge; while Hunter and Heintzelman, with their divisions, should make a circuitous and secret night march, seize and cross Sudley Ford, and descending on the enemy's side of Bull Run should carry the batteries at the stone bridge by a rear attack, whereby Tyler would be able to cross and join in the main battle.

Beauregard, on his part, also planned an aggressive movement for that same Sunday morning. No sooner had Johnston arrived than he proposed that the Confederates should sally from their intrenchments, cross the five fords of Bull Run they were guarding, march by the various converging roads to Centreville, and surprise and crush the Union army in its camps. The orders for such an advance and attack were duly written out, and Johnston, as ranking officer, signed his approval of them in the gray twilight of Sunday morning. But it proved wasted labor. At sunrise Tyler's signal guns announced the Union advance and attack. The original plan was thereupon abandoned, and Beauregard proposed a modification—to stand on the defensive with their left flank at the stone bridge, and attack with their right from the region of Blackburn's Ford. This suggestion again Johnston adopted and ordered to be carried out. There had been confusion and delay in the outset of McDowell's march, and the flanking route around by Sudley Ford proved unexpectedly long. Tyler's feigned attack at the stone bridge was so feeble and inefficient that it betrayed its object; the real attack by Hunter and Heintzelman, designed to begin at daylight, could not be made until near 11 o'clock. The first sharp encounter took place about a mile north of the Warrenton turnpike; some five regiments on each side being engaged. The rebels tenaciously held their line for an hour. But the Union column was constantly swelling with arriving batteries and regiments. Tyler's division found a ford, and crossing Bull Run a short distance above the stone bridge, three of its brigades joined Hunter and Heintzelman. About 12 o'clock the Confederate line, composed mainly of Johnston's troops, wavered and broke, and was swept back across and out of the valley of the Warrenton turnpike, and down the road

* Patterson to Townsend, July 14, 1861. War Records.

running southward from Sudley Ford to Manassas Junction.

The commanders and other officers on both sides were impressed with the conviction that this conflict of the forenoon had decided the fortunes of the day. Beauregard's plan to make a counter-attack from his right flank against Centreville had failed through a miscarriage of orders; and leaving Johnston at headquarters to watch the entire field, he hastened personally to endeavor to check the tide of defeat. Jackson, afterward known by the sobriquet of "Stonewall," had already formed his fresh brigade, also of Johnston's army, on the crest of a ridge half a mile south of the Warrenton turnpike. Other regiments and batteries were hurried up, until they constituted a semicircular line of 12 regiments, 22 guns, and 2 companies of cavalry, strongly posted and well hidden in the edge of a piece of woods behind the screen of a thick growth of young pines.

At half-past 2 o'clock in the afternoon, McDowell attacked this second position of the enemy with an immediately available force of about 14 regiments, 24 guns, and a single battalion of cavalry. Here the advantages of position were all strongly against him. The enemy was posted, concealed, and his artillery concentrated, while McDowell's brigades were at the foot of the hill; not only where the ascent must be made in open view, but where the nature of the ground rendered a united advance impossible. A series of successive and detached assaults followed. Two batteries were lost by mistaking a rebel for a Union regiment; and because of the lax organization and want of discipline in the raw volunteer regiments, the strength of McDowell's command melted away in a rapid demoralization and disintegration. The scales of victory, however, yet vibrated in uncertainty, when at 4 in the afternoon the remainder of Johnston's army arrived, and seven fresh rebel regiments were thrown against the extreme right and partly in rear of the Union line.

This heavy numerical overweight at a decisive time and place terminated the battle very suddenly. The abundant rumors that Johnston was coming to the help of Beauregard seemed verified; and the Union regiments, ignorant of the fact that they had been successfully fighting part of his force all day, were now seized with a panic, and began by a common impulse to move in retreat. The suddenness of their victory was as unexpected to the rebel as to the Union commanders. Jefferson Davis, who had come from Richmond, arriving at Manassas at 4 o'clock, was informed that the battle was lost, and was implored by his companions not to endanger his

personal safety by riding to the front. Nevertheless he persisted, and was overjoyed to find that the Union army had, by a sudden and unexplained impulse, half marched, half run from the field. The rebel detachments of cavalry hung about the line of retreat, and by sudden dashes picked up a large harvest of trophies in guns and supplies, but they dared not venture a serious attack; and so unconvinced were they as yet of the final result, that that night the rebel commanders set a strong and vigilant guard in all directions against the expected return, and offensive operations, by McDowell next morning. The precaution was needless, for the Union army was so much demoralized that the commanders deemed it unsafe to make a stand at Centreville, where the reserves were posted; and a rapid though orderly retreat was continued through the night, and until all organized regiments or fragments reached their old camps within the fortifications on the Potomac, and the scattered fugitives made their way across the river into the city of Washington.

McDowell's defeat was wholly due to Patterson's inefficiency. He was charged with the task of defeating or holding Johnston in the Shenandoah Valley; he had a double force with which to perform his task. Had he done so, McDowell, who in that case would have been superior in numbers to Beauregard, and whose plans were in the main judicious, could easily have conquered. It was Johnston's army, which Patterson had permitted to escape, that principally fought the battle of Bull Run and defeated McDowell.* Nor is there any good sense in that criticism which lays the blame upon General Scott and the Administration for not having first united the two Federal armies. The Administration furnished a superior force against Beauregard at Bull Run, and an overwhelming force against Johnston at Winchester, and assured victory in each locality by the only reliable condition—other things being equal—an excess of numbers. Had Patterson held his foe, as he might, and McDowell defeated Beauregard, as he would have done, the capture of Johnston's force between the two Federal armies was practically certain, as General Scott intended.†

* The following analysis of the forces engaged in the main and decisive phases of the actual fighting shows it conclusively:

	JOHNSTON'S ARMY.		BEAUREGARD'S ARMY.

† Scott to McClellan, July 18, 1861. War Records.

Scott was aware of the danger which Patterson's negligence had created. "It is known that a strong reinforcement left Winchester on the afternoon of the 18th, which you will also have to beat," he telegraphed McDowell on the day of the battle, which it was then too late to countermand.* He also promised him immediate reinforcements. The confidence of the General-in-Chief remained unshaken, and he telegraphed McClellan: "McDowell is this forenoon forcing the passage of Bull Run. In two hours he will turn the Manassas Junction and storm it to-day with superior force."†

It may well be supposed that President Lincoln suffered great anxiety during that eventful Sunday; but General Scott talked confidently of success, and Lincoln bore his impatience without any visible sign, and quietly went to church at 11 o'clock. Soon after noon copies of telegrams began to come to him at the Executive Mansion from the War Department and from army headquarters. They brought, however, no certain information, as they came only from the nearest station to the battle-field, and simply gave what the operator saw and heard. Toward 3 o'clock they became more frequent, and reported considerable fluctuation in the apparent course and progress of the cannonade. The President went to the office of General Scott, where he found the general asleep, and woke him to talk over the news. Scott said such reports were worth nothing as indications either way — that the changes in the currents of wind and the variation of the echoes made it impossible for a distant listener to determine the course of a battle. He still expressed his confidence in a successful result, and composed himself for another nap when the President left.

Dispatches continued to come about every ten or fifteen minutes, still based on hearing and hearsay. But the rumors grew more cheering and definite. They reported that the battle had extended along nearly the whole line; that there had been considerable loss; but that the secession lines had been driven back two or three miles, some of the dispatches said, to the Junction. One of General Scott's aides now also came, bringing the telegram of an engineer, repeating that McDowell had driven the enemy before him, that he had ordered the reserves to cross Bull Run, and wanted reinforcements without delay.‡

The aide further stated substantially that the general was satisfied of the truth of this

report, and that McDowell would immediately attack and capture the Junction, perhaps tonight, but certainly by to-morrow noon. Deeming all doubt at an end, President Lincoln ordered his carriage, and went out to take his usual evening drive.

He had not yet returned when, at 6 o'clock, Secretary Seward came to the Executive Mansion, pale and haggard. "Where is the President?" he asked hoarsely of the private secretaries. "Gone to drive," they answered. "Have you any late news?" he continued. They read him the telegrams which announced victory. "Tell no one," said he. "That is not true. The battle is lost. The telegraph says that McDowell is in full retreat, and calls on General Scott to save the capital. Find the President and tell him to come immediately to General Scott's." Half an hour later the President returned from his drive, and his private secretaries gave him Seward's message — the first intimation he received of the trying news. He listened in silence, without the slightest change of feature or expression, and walked away to army headquarters. There he read the unwelcome report in a telegram from a captain of engineers: "General McDowell's army in full retreat through Centreville. The day is lost. Save Washington and the remnants of this army. . . . The routed troops will not re-form."§ This information was such an irreconcilable contradiction of the former telegram that General Scott utterly refused to believe it. That one officer should report the army beyond Bull Run, driving the enemy and ordering up reserves, and another immediately report it three miles this side of Bull Run, in hopeless retreat and demoralization, seemed an impossibility. Yet the impossible had indeed come to pass; and the apparent change of fortune had been nearly as sudden on the battle-field as in Washington.

The President and the Cabinet met at General Scott's office, and awaited further news in feverish suspense, until a telegram from McDowell confirmed the disaster.|| Discussion was now necessarily turned to preparation for the future. All available troops were hurried forward to McDowell's support; Baltimore was put on the alert; telegrams were sent to the recruiting stations of the nearest Northern States to lose no time in sending all their organized regiments to Washington; McClellan was ordered to "come down to the Shenandoah Valley with such troops as can be spared from western Virginia."¶ A great number of

civilians, newspaper correspondents, and several senators and representatives had followed McDowell's army to Centreville; one of the latter, Mr. Ely of New York, went to the battle-field itself, and was captured and sent for a long sojourn to Libby Prison in Richmond. Such of these non-combatants as had been fortunate enough to keep their horses and vehicles were the first to reach Washington, arriving about midnight. President Lincoln had by this time returned to the Executive Mansion, and reclining on a lounge in the Cabinet room he heard from several of these eye-witnesses their excited and exaggerated narratives, in which the rush and terror and unseemly stampede of lookers-on and army teamsters were altogether disproportionate and almost exclusive features. The President did not go to his bed that night; morning found him still on his lounge in the Executive office, hearing a repetition of these recitals and making memoranda of his own comments and conclusions.

As the night elapsed, the news seemed to grow worse. McDowell's first dispatch stated that he would hold Centreville. His second, that "the larger part of the men are a confused mob, entirely demoralized"; but he said that he would attempt to make a stand at Fairfax Court House.* His third reported from that point that "many of the volunteers did not wait for authority to proceed to the Potomac, but left on their own decision. They are now pouring through this place in a state of utter disorganization. . . . I think now, as all of my commanders thought at Centreville, there is no alternative but to fall back to the Potomac."† Reports from other points generally confirmed the prevalence of confusion and disorganization. Monday morning the scattered fugitives reached the bridges over the Potomac, and began rushing across them into Washington. It was a gloomy and dismal day. A drizzling rain set in which lasted thirty-six hours. Many a panic-stricken volunteer remembered afterward with gratitude, that when he was wandering footsore, exhausted, and hungry through the streets of the capital, her loyal families opened their cheerful doors to give him food, rest, and encouragement.

One of the principal reasons which prevented McDowell's making a stand at Centreville or Fairfax Court House was the important fact that the term of service of the three-months' militia, organized under President Lincoln's first proclamation, was about to expire. "In

the next few days," says McDowell in his report, "day by day I should have lost ten thousand of the best armed, drilled, officered, and disciplined troops in the army."‡ This vital consideration equally affected the armies at other points; and bearing it, as well as the local exigency, in mind, the President and the Cabinet determined on several changes of army leadership. McDowell was continued in command on the Virginia side of the Potomac, with fifteen regiments to defend and hold the forts. McClellan was called to Washington to take local command, and more especially to organize a new army out of the three-years' regiments which were just beginning to come in from the various States. Patterson was only a three-months' general, appointed by the governor of Pennsylvania; his time expired, and he was mustered out of service. Banks was sent to Harper's Ferry to succeed him. Dix was put in command at Baltimore, and Rosecrans in western Virginia.

By noon of Monday the worst aspects of the late defeat were known; and especially the reassuring fact that the enemy was making no pursuit; and so far as possible immediate dangers were provided against. The War Department was soon able to reply to anxious inquiries from New York:

Our loss is much less than was at first represented, and the troops have reached the forts in much better condition than we expected. We are making most vigorous efforts to concentrate a large and irresistible army at this point. Regiments are arriving. . . . Our works on the south bank of the Potomac are impregnable, being well manned with reinforcements. The capital is safe. §

On the following day Lincoln in person visited some of the forts and camps about Arlington Heights, and addressed the regiments with words of cheer and confidence.

Compared with the later battles of the civil war, the battle of Bull Run involved but a very moderate loss || in men and material. Its political and moral results, however, were widespread and enduring. The fact that the rebel army suffered about equal damage in numbers of killed and wounded, and that it was crippled so as to be unable for months to resume the offensive, could not be immediately known. The flushed hope of the South magnified the achievement as a demonstration of Southern invincibility. The event of a pitched battle won gave the rebellion and the Confederate government a standing and a sudden respect-

§ Cameron to Stetson, Grinnell, and others, July 22, 1861. War Records.

|| The official reports show a loss to the Union side in the battle of Bull Run of 25 guns (the Confederates claim 28), 481 men killed, 1011 men wounded, and 1460 (wounded and other Union soldiers) sent as prisoners to Richmond. On the Confederate side the loss was 387 killed, 1582 wounded, and a few prisoners taken.—War Records.

ability before foreign powers it had hardly dared hope for. With the then personal government of France, and with the commercial classes whose influence always rules the government of England, it gained at once a scarcely disguised active sympathy.

Upon the irritated susceptibilities, the wounded loyalty, the sanguine confidence of the North, the Bull Run defeat fell with a cruel bitterness. The eager hopes built on the victories of western Virginia were dashed to the ground. Here was a fresher and deeper humiliation than Sumter or Baltimore. But though her nerves winced, her will never faltered. She was both chastened and strengthened in the fiery trial. For the moment, however, irritation and disappointment found vent in loud complaint and blind recrimination. One or two curious incidents in this ordeal of criticism may perhaps be cited. A few days after the battle, in a conversation at the White House with several Illinois members of Congress, in the presence of the President and the Secretary of War, General Scott himself was so far nettled by the universal chagrin and fault-finding that he lost his temper and sought an entirely uncalled-for self-justification. "Sir, I am the greatest coward in America," said he. "I will prove it. I have fought this battle, sir, against my judgment; I think the President of the United States ought to remove me to-day for doing it. As God is my judge, after my superiors had determined to fight it I did all in my power to make the army efficient. I deserve removal because I did not stand up, when my army was not in a condition for fighting, and resist it to the last." The President said, "Your conversation seems to imply that I forced you to fight this battle." General Scott then said, "I have never served a President who has been kinder to me than you have been." Richardson, who in a complaining speech in Congress related the scene, then drew the inference that Scott intended to pay a personal compliment to Mr. Lincoln, but that he did not mean to exonerate the Cabinet; and when pressed by questions, further explained: "Let us have no misunderstanding about this matter. My colleagues understood that I gave the language as near as I could. Whether I have been correctly reported or not I do not know. If I did not then make the correct statement, let me do it now. I did not understand General Scott, nor did I mean so to be understood, as implying that the President had forced him to fight that battle."* The incident illustrates how easily history may be perverted by hot-blooded criticism. Scott's petulance drove him to an inaccurate statement

of events; Richardson's partisanship warped Scott's error to a still more unjustifiable deduction, and both reasoned from a changed condition of things. Two weeks before, Scott was confident of victory, and Richardson chafing at military inaction. The exact facts have already been stated. Scott advised against an offensive campaign into Virginia, but consented—was not forced—to prepare and direct it. He made success as certain as it ever can be made in war; but the inefficiency of Patterson foiled his plan and preparation. Even then victory was yet possible and probable but for the panic, against which there is no safeguard, and which has been fatal to armies in all times and in all countries.

Historical judgment of war is subject to an inflexible law, either very imperfectly understood or very constantly lost sight of. Military writers love to fight over the battles of history exclusively by the rules of the professional chess-board, always subordinating, often totally ignoring, the element of politics. This is a radical error. Every war is begun, dominated, and ended by political considerations; without a nation, without a government, without money or credit, without popular enthusiasm which furnishes volunteers, or public support which endures conscription, there could be no army and no war—neither beginning nor end of methodical hostilities. War and politics, campaigns and statecraft, are Siamese twins, inseparable and interdependent; and to talk of military operations without the direction and interference of an Administration is as absurd as to plan a campaign without recruits, pay, or rations. Applied to the Bull Run campaign, this law of historical criticism analyzes and fixes the relative responsibilities of government and commanders with easy precision. When Lincoln, on June 29, assembled his council of war, the commanders, as military experts, correctly decided that the existing armies could win a victory at Manassas and a victory at Winchester. General Scott correctly objected that these victories, if won, would not be decisive; and that in a military point of view it would be wiser to defer any offensive campaign until the following autumn. Here the President and the Cabinet, as political experts, intervened, and on their part decided, correctly, that the public temper would not admit of such a delay. Thus the Administration was responsible for the forward movement, Scott for the combined strategy of the two armies, McDowell for the conduct of the Bull Run battle, Patterson for the escape of Johnston, and Fate for the panic; for the opposing forces were equally raw, equally undisciplined, and as a whole fought the battle with equal courage and gallantry.

* "Globe," July 24 and Aug. 1, 1861, pp. 246 and 387.

But such an analysis of causes and such an apportionment of responsibilities could not be made by the public, or even by the best-informed individuals beyond Cabinet circles, in the first fortnight succeeding the Bull Run disaster. All was confused rumor, blind inference, seething passion. That the public at large and the touch-and-go newspaper writers should indulge in harsh and hasty language is scarcely to be wondered at; but the unseemly and precipitate judgments and criticisms of those holding the rank of leadership in public affairs are less to be excused. Men were not yet tempered to the fiery ordeal of revolution, and still thought and spoke under the strong impulse of personal prejudice, and with that untamed and visionary extravagance which made politics such a chaos in the preceding winter. That feeling, momentarily quelled and repressed by the rebel guns at Sumter, was now in danger of breaking out afresh. In illustration we need only to cite the words of prominent leaders in the three parties of the North, namely: Stanton, late Buchanan's attorney-general, and destined soon to become famous as Lincoln's War Secretary; Richardson, who had been the trusted lieutenant of Douglas, and now, since Douglas was dead, the ostensible spokesman of the faction which had followed that leader; and thirdly, Horace Greeley, exercising so prominent an influence upon the public opinion of the country through the columns of "The Tribune."

The Buchanan cabinet was still writhing under the odium which fell upon the late Administration, and much more severely upon the Breckinridge Democracy. Mr. Buchanan and his Cabinet were eager to seize upon every shadow of self-justification, and naturally not slow to emphasize any apparent shortcoming of their successors. Stanton, with his impulsive nature, was especially severe on the new President and Administration. In his eyes the only hope of the country lay in the members of Buchanan's reconstructed Cabinet. Thus he wrote to his colleague Dix, on June 11, in language that resembled a stump speech of the presidential campaign:

No one can imagine the deplorable condition of this city and the hazard of the Government, who did not witness the weakness and panic of the Administration, and the painful imbecility of Lincoln. We looked to New York in that dark hour as our only deliverance under Providence, and, thank God, it came. . . . But when we witness venality and corruption growing in power every day, and controlling the millions of money that should be a patriotic sacrifice for national deliverance, and treating the treasure of the nation as a booty to be divided among thieves, hope dies away: deliverance from this danger also must come from New York. . . . Of military affairs I can form no judgment. Every day affords fresh proof of the

design to give the war a party direction. The army appointments appear (with two or three exceptions only) to be bestowed on persons whose only claim is their Republicanism—broken-down politicians without experience, ability, or any other merit. Democrats are rudely repulsed, or scowled upon with jealous and ill-concealed aversion. The Western Democracy are already becoming disgusted, and between the corruption of some of the Republican leaders and the self-seeking ambition of others some great disaster may soon befall the nation. How long will the Democracy of New York tolerate these things? . . . We hoped to see you here, especially after you had accepted the appointment of major-general. But now that the Administration has got over its panic, you are not the kind of man that would be welcome.*

This letter plainly enough shows Mr. Stanton's attitude toward the new Administration. His letter of the following day to ex-President Buchanan reveals the state of feeling entertained by Dix:

The recent appointments in the army are generally spoken of with great disapprobation. General Dix is very much chagrined with the treatment he has received from the War Department, and on Saturday I had a letter declaring his intention to resign immediately.†

Again, July 16:

General Dix is still here. He has been shamefully treated by the Administration. We are expecting a general battle to be commenced at Fairfax to-day, and conflicting opinions of the result are entertained.†

And once more, on July 26:

The dreadful disaster of Sunday can scarcely be mentioned. The imbecility of this Administration culminated in that catastrophe: an irretrievable misfortune and national disgrace, never to be forgotten, are to be added to the ruin of all peaceful pursuits and national bankruptcy as the result of Lincoln's "running the machine" for five months. You perceive that Bennett is for a change of the Cabinet, and proposes for one of the new Cabinet Mr. Holt. . . . It is not unlikely that some change in the War and Navy Departments may take place, but none beyond these two departments until Jefferson Davis turns out the whole concern. The capture of Washington seems now to be inevitable: during the whole of Monday and Tuesday it might have been taken without any resistance. The rout, overthrow, and utter demoralization of the whole army is complete. Even now I doubt whether any serious opposition to the entrance of the Confederate forces could be offered. While Lincoln, Scott, and the Cabinet are disputing who is to blame, the city is unguarded and the enemy at hand. General McClellan reached here last evening. But if he had the ability of Cæsar, Alexander, or Napoleon, what can he accomplish? Will not Scott's jealousy, Cabinet intrigues, Republican interference, thwart him at every step? While hoping for the best, I cannot shut my eyes against the dangers that beset the Government, and especially this city. It is certain that Davis was in the field on Sunday, and the secessionists here assert that he headed in person the last victorious charge. General Dix is in Baltimore. After three weeks' neglect and insult he was sent there.†

While Stanton and Dix were thus nursing their secret griefs on behalf of one of the late

political factions, Richardson, as the spokesman of the Douglas wing of the Democracy, was indulging in loud complaints for the other. Charging that the division of the Democratic party at Charleston had brought the present calamity upon the Union, he continued:

This organization of the Breckinridge party was for the purpose of destroying the Government. That was its purpose and its object. What do we see? Without the aid and coöperation of the men of the North that party was powerless. The men from the Northern States who aided and encouraged this organization which is in rebellion are at the head to-day of our army. Butler of Massachusetts, Dix of New York and Patterson of Pennsylvania, and Cadwalader—all of them in this movement to break down and disorganize the Democratic party and the country. Why is it? This Douglas party furnished you one-half of your entire army. Where is your general, where is your man in command to-day who belongs to that party? Why is this? Have you Republicans sympathized with this Breckinridge party? Are you sympathizing with them, and lending your aid to the men who lead our armies into misfortune and disgrace?*

Richardson was easily answered. A member correctly replied that these and other three-months' generals had been selected by the governors of various States, and not by the President; moreover, that Patterson had been specially recommended by General Scott, whom Richardson was eulogizing, and that there would be plenty of opportunity before the war was over for the Douglas men to win honors in the field. But all this did not soothe Richardson's temper, which was roused mainly by his revived factional jealousy.

Unjust fault-finding was to be expected from party opponents; but it is not too much to say that it was a genuine surprise to the President to receive from a party friend, and the editor of the most influential newspaper in the Union, the following letter, conveying an indirect accusation of criminal indifference, and proposing an immediate surrender to rebellion and consent to permanent disunion:

NEW YORK, Monday, July 29, 1861.
Midnight.

DEAR SIR: This is my seventh sleepless night—yours, too, doubtless—yet I think I shall not die, because I have no right to die. I must struggle to live, however bitterly. But to business. You are not considered a great man, and I am a hopelessly broken one. You are now undergoing a terrible ordeal, and God has thrown the gravest responsibilities upon you. Do not fear to meet them. Can the rebels be beaten after all that has occurred, and in view of the actual state of feeling caused by our late, awful disaster? If they can,—and it is your business to ascertain and decide,—write me that such is your judgment, so that I may know and do my duty. And if they *cannot* be beaten,—if our recent disaster is fatal,—do not fear to sacrifice yourself to your country. If the rebels are not to be beaten,—if that is your judgment in view of all the light you can get,—then every drop of blood henceforth shed in this quarrel will be wantonly, wickedly

shed, and the guilt will rest heavily on the soul of every promoter of the crime. I pray you to decide quickly and let me know my duty.

If the Union is irrevocably gone, an armistice for 30, 60, 90, 120 days—better still for a year—ought at once to be proposed, with a view to a peaceful adjustment. Then Congress should call a national convention, to meet at the earliest possible day. And there should be an immediate and mutual exchange or release of prisoners and a disbandment of forces. I do not consider myself at present a judge of anything but the public sentiment. That seems to me everywhere gathering and deepening against a prosecution of the war. The gloom in this city is funereal,—for our dead at Bull Run were many, and they lie unburied yet. On every brow sits sullen, scorching, black despair. It would be easy to have Mr. Crittenden move any proposition that ought to be adopted, or to have it come from any proper quarter. The first point is to ascertain what is best that can be done—which is the measure of our duty, and do that very thing at the earliest moment.

This letter is written in the strictest confidence, and is for your eye alone. But you are at liberty to say to members of your Cabinet that you *know* I will second any move you may see fit to make. But do nothing timidly nor by halves. Send me word what to do. I will live till I can hear it at all events. If it is best for the country and for mankind that we make peace with the rebels at once and on their own terms, do not shrink even from that. But bear in mind the greatest truth: "Whoso would lose his life for my sake shall save it." Do the thing that is the highest right, and tell me how I am to second you.

Yours, in the depths of bitterness,
HORACE GREELEY.†

These few citations are noteworthy, because of the high quarters whence they emanated and the subsequent relations some of their authors bore to the war. They give us penetrating glimpses of how the Bull Run disaster was agitating the public opinion of the North. But it must not be hastily inferred that such was the preponderant feeling. The great tides of patriotism settled quickly back to their usual level. The army, Congress, and the people took up, a shade less buoyantly, but with a deeper energy, the determined prosecution of the war, and soon continued their cheerful confidence in the President, Cabinet, and military authorities. The war governors tendered more troops and hurried forward their equipped regiments; the Administration pushed the organization of the long-term volunteers; and out of the scattered débris of the Bull Run forces there sprang up that magnificent Army of the Potomac, which in a long and fluctuating career won such historic renown.

Meanwhile, in this first shadow of defeat, President Lincoln maintained his wonted equipoise of manner and speech. A calm and resolute patience was his most constant mood; to follow with watchfulness the details of the

* Richardson, Speech in House of Representatives, July 24, 1861.

† Unpublished Autograph MS.

JULY 27, 1861.

accumulation of a new army was his most eager occupation. He smiled at frettings like those of Scott, Dix, and Richardson; but letters like that of Greeley made him sigh at the strange weakness of human character. Such things gave him pain, but they bred no resentment, and elicited no reply. Already at this period he began the display of that rare ability in administration which enabled him to smooth mountains of obstacles and bridge rivers of difficulty in his control of men. From this time onward to the end of the war his touch was daily and hourly amidst the vast machinery of command and coordination in Cabinet, Congress, army, navy, and the hosts of national politics. To still the quarrels of factions, to allay the jealousies of statesmen, to compose the rivalries of generals, to soothe the vanity of officials, to prompt the laggard, to curb the ardent, to sustain the faltering, was a substratum of daily routine underlying the great events of campaigns, battles, and high questions of state.

On the night following the battle of Bull Run, while Lincoln lay awake on a sofa in the Executive office, waiting to gather what personal information he could from the many officers and prominent civilians who were arriving at Washington after their flight from the battle-field, he already began sketching a pencil memorandum of the policy and military programme most expedient to be adopted in the new condition of affairs. This memorandum sketch or outline he added to from time to time during the succeeding days. On the 27th of July he seems to have matured his reflections on the late disaster, and with his own hand he carefully copied his memorandum in this completed form:

JULY 23, 1861.

1. Let the plan for making the blockade effective be pushed forward with all possible dispatch.
2. Let the volunteer forces at Fort Monroe and vicinity, under General Butler, be constantly drilled, disciplined, and instructed without more for the present.
3. Let Baltimore be held as now, with a gentle but firm and certain hand.
4. Let the force now under Patterson or Banks be strengthened and made secure in its position.
5. Let the forces in western Virginia act till further orders according to instructions or orders from General McClellan.
6. General Frémont push forward his organization and operations in the West as rapidly as possible, giving rather special attention to Missouri.
7. Let the forces late before Manassas, except the three-months' men, be reorganized as rapidly as possible in their camps here and about Arlington.
8. Let the three-months' forces who decline to enter the longer service be discharged as rapidly as circumstances will permit.
9. Let the new volunteer forces be brought forward as fast as possible; and especially into the camps on the two sides of the river here.

When the foregoing shall have been substantially attended to,

1. Let Manassas Junction (or some point on one or other of the railroads nearest it) and Strasburg be seized, and permanently held, with an open line from Washington to Manassas, and an open line from Harper's Ferry to Strasburg—the military men to find the way of doing these.

2. This done, a joint movement from Cairo on Memphis; and from Cincinnati on east Tennessee.*

FRÉMONT.

MISSOURI had been saved from organized rebellion, but the smell and blackness of insurrectionary fire were strong upon her. While Governor Jackson and General Price, flying from the battle of Boonville as fugitives, were momentarily helpless, they nevertheless had reasonable hope of quick support. Whatever of latent rebellion and secret military preparation existed were set in motion by the governor's proclamation of June 12 and his order dividing the State into nine military districts and issuing commissions to a skeleton army under the provisions of the military bill passed by his rebel legislature before their expulsion from the capital by Lyon. Thus every one inclined to take up arms against the Union had the plausible excuse of authority and the guidance of a designated commander and rendezvous, and a simultaneous movement toward organization long preconceived immediately began. Missouri is a large State. She had over 68,000 square miles of territory, and a population of over a million souls; a trifling percentage would yield a formidable force. The spirit and impulse of revolution were at fever heat, and all the fire of the Border-Ruffian days smoldered along the frontier. The governor's brigadier-generals designated camps, and the hot-blooded country lads flocked to them, finding a charm of adventure in the very privations they were compelled to undergo. For half a year disloyalty had gone unpunished; the recent reports of march and battle served rather to sharpen their zeal.

Three railroads radiated from St. Louis—one toward the west, with its terminus at Sedalia; one toward the south-west, with terminus at Rolla; one toward the south, with terminus at Ironton. The first of these reached only about three-fourths, the last two scarcely half-way, across the State. Western Missouri, therefore, seemed beyond any quick reach of a military expedition from St. Louis. General Price, proceeding westward from Boonville, found one of these camps at Lexington; the governor, proceeding southward, was attended by a little remnant of fugitives from the bat-

* Lincoln, Autograph MS.

tle of Boonville. With such following as each could gather both directed their course toward the Arkansas line, collecting adherents as they went. Their pathway was not entirely clear. Before leaving St. Louis, Lyon had sent an expedition numbering about twenty-five hundred, commanded by Sweeny, a captain of regulars, by rail to Rolla and thence by a week's march to Springfield, from which point he had advanced a part of his force under Sigel to Carthage, near the extreme south-western corner of the State. Jackson and Price, having previously united their forces, thus found Sigel directly in their path. As they greatly outnumbered him, by the battle of Carthage, July 5,—a sharp but indecisive engagement,—they drove him back upon Springfield, and effected a junction with the rebel force gathered in the north-western corner of Arkansas, which had already assisted them by demonstrations and by capturing one of Sigel's companies.

Delayed by the need of transportation, Lyon could not start from Boonville on his south-western march until the 3d of July. The improvised forces of Jackson and Price, moving rapidly, because made up largely of cavalry, or, rather, unorganized horsemen, were far in advance of him, and had overwhelmed Sigel before Lyon was well on his way. Nevertheless he pushed ahead with energy, having called to him a detachment of regulars from Fort Leavenworth, and volunteers from Kansas numbering about 2200. These increased his column to about 4600 men. By July 13 he was at Springfield, and with the forces he found there was at the head of an aggregate of between 7000 and 8000 men.

The Confederate authorities had ambitious plans for the West. They already possessed Arkansas; the Indian Territory was virtually in their grasp; Missouri they looked upon with somewhat confident eyes; even the ultimate conquest of Kansas seemed more than a remote possibility. Nor were such plans confined to mere speculation. Major-General Polk was stationed at Memphis early in July to command the Mississippi region. The neutrality policy in Kentucky for the moment left the Tennessee contingent idle. Being appealed to by Governor Jackson, Polk made immediate preparations for a campaign in Missouri. On July 23 he reported to the Confederate government his purpose to send two strong columns into that State—one under McCulloch, of about 25,000 men, against Lyon at Springfield; another, under Pillow and Hardee, to march upon Ironton in south-east Missouri, where he estimated they would collect a force of 18,000. He wrote:

possession of the boats at that point, to proceed up the river Missouri, raising the Missourians as they go; and at such point as may appear most suitable to detach a force to cut off Lyon's return from the west. . . . If, as I think, I can drive the enemy from Missouri with the force indicated, I will then enter Illinois and take Cairo in the rear on my return.*

He was obliged a few days later to curtail this extravagant programme. Governor Jackson, he learned, to his chagrin, had exaggerated the available forces fully one-half.† Although he had already sent Pillow to New Madrid, he now "paused" in the execution of his plan; and the rivalry of the various rebel commanders seems soon to have completely paralyzed it. The "neutrality" attitude of the governors of both Missouri and Kentucky greatly delayed the progress of the war in the West. The middle of June came before Lyon chased the rebels from Jefferson City, and in Kentucky open and positive military action was deferred till the first weeks of September. Meanwhile, however, it was felt that the beginning of serious hostilities was only a question of time. The Mississippi River was blockaded, commerce suspended, Cairo garrisoned and fortified, gun-boats were being built, regiments were being organized and sent hither and thither, mainly as yet to keep the neighborhood peace. In the East the several Virginia campaigns were in progress, and General Scott's "anaconda" plan was well understood in confidential circles.

This condition of affairs made the whole Mississippi Valley sensitive and restless. The governors of the North-west met, and, by memorial and delegation, urged the Administration to make the Ohio line secure by moving forward and occupying advanced posts in Kentucky and Tennessee. Especially did they urge the appointment of a competent commander who could combine the immense resources of the West, and make them effective in a grand campaign southward to open the Mississippi.

Almost universal public sentiment turned to John C. Frémont as the desired leader for this duty. He was about forty-eight years of age. As student, as explorer, as a prominent actor in making California a State of the Union, he had shown talent, displayed energy, and conquered success in situations of difficulty and peril. As senator for a brief term, his votes proved that the North could rely on his convictions and principles. As the presidential candidate of the Republican party in 1856, his name had broadened into national representative value. The post of honor then had brought him defeat. He might well claim the post of duty for a chance to win a victory.

* Polk to Walker, July 23, 1861. War Records.

† War Records.

They are directed to pass in behind Lyon's force by land, or to proceed to St. Louis, seize it, and, taking Vol. XXXVI.—42.

The dash of romance in his career easily rekindled popular enthusiasm; political sagacity indicated that he should be encouraged to change this popularity into armies, and lead them to military success in aid of the imperiled nation. The inclination of the Administration coincided with the sentiment of the people. Seward had proposed him for Secretary of War, and Lincoln mentioned him for the French mission; but in the recent distribution of offices no place at once suitable to his abilities and adequate to his claims had been found available. This new crisis seemed to have carved out the work for the man.

He had passed the previous winter in France, but upon the outbreak of rebellion at once returned to his country. On his arrival in the city of New York, about the 1st of July, President Lincoln appointed him a major-general in the regular army, and on the 3d created the Western department, consisting of the State of Illinois and all the States and Territories between the Mississippi and the Rocky Mountains, and placed it under his command, with headquarters at St. Louis.

For a man whose genius could have risen to the requirements of the occasion it was a magnificent opportunity, an imperial theater. Unfortunately, the country and the Administration had overrated Frémont's abilities. Instead of proceeding at once to his post of duty, he remained in New York, absorbed largely in his personal affairs. Two weeks passed before he sent his letter of acceptance and oath of office. "Please proceed to your command without coming here," telegraphed General Scott, two days later. Postmaster-General Blair testified:

As soon as he was appointed, I urged him to go to his department. . . . The President questioned me every day about his movements. I told him so often that Frémont was off, or was going next day, according to my information, that I felt mortified when allusion was made to it, and dreaded a reference to the subject. Finally, on the receipt of a dispatch from Lyon by my brother, describing the condition of his command, I felt justified in telegraphing General Frémont that he must go at once. But he remained till after Bull Run; and even then, when he should have known the inspiration that would give the rebels, he traveled leisurely to St. Louis.*

When, on July 25, he finally reached his headquarters, and formally assumed command, he did not find his new charge a bed of roses. The splendid military strength of the North-west was only beginning its development. Recruiting offices were full; but commanders of departments and governors of States quarreled over the dribblets of arms and equipments remaining in the arsenals, and which were needed in a dozen places at once.

* Committee on Conduct of the War.

The educated and experienced officers and subalterns of the old regular army, familiar with organization and routine, did not suffice to furnish the needed brigadier-generals and colonels, much less adjutants, commissaries, quartermasters, and drill-sergeants. Error, extravagance, delay, and waste ensued. Regiments were rushed off to the front without uniforms, arms, or rations; sometimes without being mustered into service. Yet the latent resources were abundant in quantity and excellent in quality, and especially in the qualities of mind, ambition, earnestness, and talent competent through practical service to rise to every requirement of duty and sacrifice—genius which could lead, and patriotic devotion ready to serve, suffer, and die. What magnificent capabilities in those early Western volunteers; what illustrious talent in those first regiments found by Frémont and coming at his call!—Lyon, Grant, Blair, McClelland, Pope, Logan, Schofield, Curtis, Sturgis, Palmer, Hurlbut, and a hundred others whose names shine on the records of the war, to say nothing of the thousands who, unheralded, went gloriously to manful duty and patriotic death.

The three weeks loitered away in New York already served to quadruple Frémont's immediate task. Lyon had taken the field, and Blair had gone to Washington to take his seat in the special session of Congress as representative. The whole service immediately felt the absence from headquarters of these two inspiring and guiding leaders. At three points in Frémont's new department matters were a threatening aspect. The plentiful seeds of rebellion sown by Governor Jackson throughout Missouri were springing up in noxious rankness. Amidst dominant loyalty existed a reckless and daring secession minority, unwilling to submit to the control of superior sentiment and force. Following the battle of Boonville there broke out in many parts of the State a destructive guerrilla warfare, degenerating into neighborhood and family feuds, and bloody personal reprisal and revenge, which became known under the term of "bushwhacking." Houses and bridges were burned, farms were plundered, railroads were obstructed and broken, men were kidnapped and assassinated. During the whole period of the war few organized campaigns disturbed the large territory of the State; but disorder, lawlessness, crime, and almost anarchy were with difficulty repressed from beginning to end.

The local administration charged with the eradication of these evils was greatly embarrassed and often thwarted through the unfortunate jealousy and rivalry between the

factions of radicals and conservatives, both adherents of the Union. Equally loyal, equally sincere in their devotion to the Government, they paralyzed each other's efforts by a blind opposition and recrimination. As events progressed these factions increased in their animosity toward each other, and their antagonistic attitude was continued throughout the whole war period. This conflict of local sentiment—personal, political, and military—produced no end of complications requiring the repeated direct interference of President Lincoln, and taxed to the utmost his abounding forbearance. Neighborhood troubles were growing in northern Missouri before Frémont left New York; and Lyon's adjutant selected Brigadier-General Pope to take command there and restore order. Frémont gave the permission by telegraph; and when he reached St. Louis, General Pope had eight Illinois regiments employed in this duty.*

Frémont's second point of difficulty was the strong report of danger to Cairo. The rebel general Polk, at Memphis, was in the midst of his preparations for his Missouri campaign, already mentioned. About the time of Frémont's arrival Pillow had just moved six thousand Tennesseans to New Madrid, and reported his whole force "full of enthusiasm and eager for the 'Dutch hunt.'" News of this movement, and the brood of wild rumors which it engendered, made General Prentiss, the Union commander at Cairo, exceedingly uneasy, and he called urgently for assistance. Cairo, the strategic key of the whole Mississippi Valley, was too important to be for a moment neglected; and in a few days after his arrival Frémont gathered the nearest available reinforcements, about eight regiments in all, and, loading them on a fleet of steamboats, led them in person in a somewhat ostentatious expedition to Cairo; and the demonstration, greatly magnified by rumor, doubtless had much influence in checking the hopes of the rebel commanders for an early capture of Missouri and Illinois.

The reinforcement of Cairo was very proper as a measure of precaution. It turned out, however, that the need was much less urgent than Frémont's third point of trouble, namely,

* General Pope, under date of August 3, makes a graphic statement of the methods of the bushwhackers: "The only persons in arms, so far as I could learn, were a few reckless and violent men in parties of twenty or thirty, who were wandering about, committing depredations upon all whose sentiments were displeasing, and keeping this whole region in apprehension and uneasiness. . . . So soon as these marauders found that troops were approaching, which they easily did, from the very persons who ask for protection, they dispersed, each man going to his home, and, in many cases, that home in the very town occupied by the troops. . . . When troops were sent

the safety of Lyon at Springfield, in southwestern Missouri. When Lyon left St. Louis he had conceived this campaign to the southwest, not merely to control that part of the State and to protect it against invasion, but also with the ultimate hope of extending his march into Arkansas. For this he knew his force in hand was inadequate; but he believed that from the troops being rapidly organized in the contiguous free States he would receive the necessary help as soon as it was needed. We have seen that he reached Springfield with an aggregate of about 7000 or 8000 men. It was, for those early days, a substantial, compact little army, somewhat seasoned, well commanded, self-reliant, and enthusiastic. Unfortunately it also, like the armies at every other point, was under the strain and discouragement of partial dissolution. The term of enlistment of the three-months' militia regiments, raised under the President's first proclamation, was about to expire. In every detachment, army, and at every post, throughout the whole country, there occurred about the middle of July, 1861, the incident of quick succession of companies and regiments going out of the service. Many of these corps immediately reorganized under the three-years' call; many remained temporarily in the field to take part in some impending battle. But despite such instances of generous patriotism, there was at all points a shrinkage of numbers, an interval of disorganization, a paralysis of action and movement.

On the whole, therefore, Lyon found his new position at Springfield discouraging. He was 120 miles from a railroad; provisions and supplies had not arrived as expected; half his army would within a brief period be mustered out of service; McClellan† was in western Virginia, Frémont in New York, Blair in Washington. He scarcely knew who commanded, or where to turn. The rebels were in formidable force just beyond the Arkansas line. The dispatches at this juncture take on an almost despairing tone.

All idea of any farther advance movement, or of even maintaining our present position, must soon be abandoned, unless the Government furnish us promptly out against these marauders, they found only men quietly working in the field or sitting in their offices, who, as soon as the backs of the Federal soldiers were turned, were again in arms and menacing the peace." [Pope to Sturgeon, August 3, 1861. War Records.]

† While McClellan was yet at Cincinnati, organizing the Ohio contingent of three-months' men, Missouri had been temporarily attached to his department. Beyond a few suggestions by telegraph, however, he did not give it any attention in detail, because his hands were already full of work. His Virginia campaign soon required his presence and entire time.

with large reinforcements and supplies. Our troops are badly clothed, poorly fed, and imperfectly supplied with tents. None of them have as yet been paid.*

Two days later Lyon wrote:

If it is the intention to give up the West, let it be so; it can only be the victim of imbecility or malice. Scott will cripple us if he can. Cannot you stir up this matter and secure us relief? See Frémont, if he has arrived. The want of supplies has crippled me so that I cannot move, and I do not know when I can. Everything seems to combine against me at this point. Stir up Blair.†

Lyon's innuendoes against the Administration and against General Scott were alike unjust. Both were eager to aid him, but there was here, as elsewhere, a limit to possibilities. It was Frémont who needed stirring up. Appointed by the President on July 1, he had not even sent his official acceptance till the 16th, the day before Lyon wrote this appeal; and, after final and emphatic urging by Postmaster-General Blair, it was the 25th before he entered on his duties at St. Louis. Three special messengers from Lyon awaited him on his arrival, and repeated the tale of need and of danger. But Frémont listened languidly and responded feebly. Urgent calls indeed came to him from other quarters. As already stated, Cairo was represented to be seriously threatened, and he had chosen first to insure its safety. He had the means, by a judicious rearrangement of his forces, to have aided effectually both these exposed points. Under the critical conditions fully pointed out to him, he could at least have recalled Lyon and assisted his safe withdrawal to his railroad base at Rolla. But he neither recalled him nor substantially reinforced him. Two regiments were set in motion toward him, but it proved the merest feint of help. No supplies and no troops reached Lyon in season to be of the slightest service. Lyon's danger lay in a junction of the various rebel leaders just beyond the Arkansas line. The Confederate government had sent Brigadier-General McCulloch to conciliate or conquer the Indian Territory as events might dictate, and had given him three regiments—one from Louisiana, one from Texas, and one from Arkansas—for the work. Finding it bad policy for the present to occupy the Indian Territory, he hovered about the border with permission to move into either Kansas or Missouri.

Even before Polk's ambitious programme was found to be impracticable, McCulloch made haste to organize a campaign on his own account. On July 30 he reported that he was on his way toward Springfield with his own

brigade of 3200 troops, the command of General Pearce, with 2500 Arkansas State troops, and the somewhat heterogeneous gathering of Missourians under Price, which he thought could furnish about 7000 effective men, generally well mounted, but badly commanded, and armed only with common rifles and shotguns. It was the approach of this large force which had given Lyon such uneasiness, and with good cause. Moving steadily upon him, they soon approached so near that his position became critical. His own command had dwindled to less than five thousand effective men; the combined enemy had nearly treble that number of effectives, and probably more than three to one, counting the whole mass. If he remained stationary, they would slowly envelop and capture him. If he attempted to retreat through the 120 miles of barren mountainous country which lay between him and Rolla, they would follow and harass him and turn his retreat into a rout. Counting to the last upon reinforcements which did not come, he had allowed events to place him in an untenable position.

As a final and desperate resource, and the only one to save his army, he resolved to attack and cripple the enemy. As at Bull Run, and as so often happens, both armies, on the evening of August 9, were under orders to advance that night and attack each other. Some showers of rain in the evening caused McCulloch temporarily to suspend his order; but Lyon's little army, moving at nightfall, marched ten miles south of Springfield to Wilson's Creek. At midnight they halted for a brief bivouac. Dividing into two columns they fell upon the enemy's camp at daylight, Sigel, with 1200 men and a battery, marching against their right flank, in an endeavor to get to the rear, while Lyon in person led the remaining 3700 men, with two batteries, to a front attack against their left center. The movement was a most daring one, and the conflict soon became desperate. Sigel's attack, successful at first, was checked, his detachment put to flight, and 5 of his 6 guns captured and turned against Lyon.

Lyon, on the contrary, by an impetuous advance, not only quickly drove the enemy out of their camp, but gained and occupied a strong natural position, which he held with brave determination. His mixed force of regulars and volunteers fought with admirable coöperation. McCulloch, confident in his overwhelming numbers, sent forward line after line of attack, which Lyon's well-posted regular batteries threw back. The forenoon was already well spent when a final unusually heavy assault from the enemy was thus repulsed, largely by help of the inspiring per-

* Schofield to Harding, July 15, 1861. War Records.

† Lyon to Harding, July 17, 1861. War Records.

sonal example of Lyon himself, who led some fragments of reserves in a bayonet charge. The charge ended the conflict; but it also caused the fall of the commander, who, pierced by a ball, almost immediately expired. It was his fourth wound received in the action. Though the battle was substantially won, Sturgis, upon whom the command devolved, deemed it too hazardous to attempt to hold the field, and a retreat to Springfield was agreed upon by a council of officers. An unmolested withdrawal was effected in the afternoon, and upon further consultation a definite retreat upon Rolla was begun the following day. As Lyon had anticipated, the enemy was too much crippled to follow. The Union forces had 223 killed, 721 wounded, and 291 missing. The Confederate loss was 265 killed, 800 wounded, and 30 missing.

The battle of Wilson's Creek, the death of Lyon, and the retreat of the army to Rolla turned public attention and criticism sharply upon Frémont's department and administration, and that commander was suddenly awakened to his work and responsibility. He now made haste to dispatch reinforcements to Rolla, and sent urgent telegrams for help to Washington and to the governors of the neighboring free States. His new energy partook a little too much of the character of a panic. He declared martial law in the city of St. Louis, and began an extensive system of fortifications; which, together with directions to fortify Rolla, Jefferson City, and several other places, pointed so much to inaction, and a defensive policy, as to increase rather than allay public murmur.

His personal manners and methods excited still further and even deeper dissatisfaction. A passion for display and an inordinate love of power appeared to be growing upon him. He had established his headquarters in an elegant mansion belonging to a wealthy secessionist; his personal staff consisted largely of foreigners, new to the country, and unfamiliar with its language and laws. Their fantastic titles and gay trappings seemed devised for show rather than substantial service. He organized a special body-guard. Sentinels and subordinates unpleasantly hedged the approach to his offices. Instead of bringing order into the chaotic condition of military business, he was prone to set method and routine at defiance, issuing commissions and directing the giving out of contracts in so irregular a way as to bring a protest from the proper accounting officers of the Government. Though specially requested by the President to cooperate with the provisional governor, he continued to ignore him. A storm of complaint soon arose from all except the little

knot of flatterers who abused his favor and the newspapers that were thriving on his patronage. The Unionists of Missouri became afraid that he was neglecting the present safety of the State for the future success of his intended Mississippi expedition, and wild rumors even floated in the air of a secret purpose to imitate the scheme of Aaron Burr and set up an independent dictatorship in the West.*

Reports came to President Lincoln from multiplied sources, bringing him a flood of embarrassment from the man to whom he had looked with such confidence for administrative aid and military success. It was his uniform habit, when he had once confided command and responsibility to an individual, to sustain him in the trust to the last possible degree. While he heard with pain the cumulating evidence of Frémont's unfitness, instead of immediately removing him from command, he sought rather to remedy the defect. In this spirit he wrote the following letter to General Hunter, which letter peculiarly illustrates his remarkable delicacy in managing the personal susceptibilities of men:

MY DEAR SIR: General Frémont needs assistance which it is difficult to give him. He is losing the confidence of men near him, whose support any man in his position must have to be successful. His cardinal mistake is that he isolates himself, and allows nobody to see him; and by which he does not know what is going on in the very matter he is dealing with. He needs to have by his side a man of large experience. Will you not, for me, take that place? Your rank is one grade too high to be ordered to it; but will you not serve the country and oblige me by taking it voluntarily? †

With this letter of the President, Postmaster-General Blair—hitherto Frémont's warm personal friend—and Meigs, the quartermaster-general of the army, went to St. Louis, to make a brief inspection and report of matters, and to give friendly advice and admonition to the commander of the Department of the West. While they were on their way, Mrs. Frémont was journeying toward Washington, bearing her husband's reply to a letter from the President sent him by special messenger about a week before.

Her mind was less occupied with the subject of the missive she bore than with the portent of a recent quarrel which the general had imprudently allowed to grow up between Colonel Frank Blair and himself. Blair had finally become convinced of Frémont's incapacity, and in public print sharply criticised his doings. Indeed, the quarrel soon progressed so far that Frémont placed him under arrest; then Blair preferred formal charges against the general for maladministration, and

* Meigs, Diary. MS.

† Lincoln to Hunter, Sept. 9, 1861. Unpublished MS.

the general in turn entered formal counter-charges against Blair.

Arrived at her destination Mrs. Frémont took the opportunity, in her interview with Mr. Lincoln, to justify General Frémont in all he had done, and to denounce his accusers with impetuous earnestness. She even asked for copies of confidential correspondence concerning her husband's personal embroilment. In these circumstances it was no light task for Mr. Lincoln to be at once patient, polite, and just; yet the following letter will testify that he accomplished even this difficult feat:

WASHINGTON, D. C., Sept. 12, 1861.

MRS. GENERAL FRÉMONT.

MY DEAR MADAM: Your two notes of to-day are before me. I answered the letter you bore me from General Frémont, on yesterday, and not hearing from you during the day, I sent the answer to him by mail. It is not exactly correct, as you say you were told by the elder Mr. Blair, to say that I sent Postmaster-General Blair to St. Louis to examine into that department and report. Postmaster-General Blair did go, with my approbation, to see and converse with General Frémont as a friend. I do not feel authorized to furnish you with copies of letters in my possession, without the consent of the writers. No impression has been made on my mind against the honor or integrity of General Frémont, and I now enter my protest against being understood as acting in any hostility towards him.

Your obedient servant,

A. LINCOLN.*

It will be interesting to read in addition a graphic, verbal recapitulation of these incidents, made by President Lincoln in a confidential evening conversation with a few friends in the Executive office a little more than two years afterward, and which one of his secretaries recorded:

The Blairs have to an unusual degree the spirit of clan. Their family is a close corporation. Frank is their hope and pride. They have a way of going with a rush for anything they undertake; especially have Montgomery and the old gentleman. When this war first began they could think of nothing but Frémont; they expected everything from him, and upon their earnest solicitation he was made a general and sent to Missouri. I thought well of Frémont. Even now I think well of his impulses. I only think he is the prey of wicked and designing men, and I think he has absolutely no military capacity. He went to Missouri the pet and protégé of the Blairs. At first they corresponded with him and with Frank, who was with him, fully and confidentially, thinking his plans and his efforts would accomplish great things for the country. At last the tone of Frank's letters changed. It was a change from confidence to doubt and uncertainty. They were pervaded with a tone of sincere sorrow and of fear that Frémont would fail. Montgomery showed them to me, and we were both grieved at the prospect. Soon came the news that Frémont had issued his emancipation order, and had set up a bureau of abolition, giving free papers, and occupying his time apparently with little else. At last, at my suggestion, Montgomery Blair went to Missouri to look at and talk over matters. He went as the friend of Frémont. He passed, on the way, Mrs. Frémont, coming to see me. She sought an audience with me at midnight, and tasked me so violently with many things, that I had to exercise all the awkward tact I have to avoid quarrel-

ing with her. She surprised me by asking why their enemy, Montgomery Blair, had been sent to Missouri. She more than once intimated that if General Frémont should decide to try conclusions with me, he could set up for himself.†

MILITARY EMANCIPATION.

NOT only President Lincoln, but the country at large as well, was surprised to find, in the newspapers of August 30, a proclamation from the commander of the Department of the West of startling significance. The explanations of its necessity and purpose were altogether contradictory, and its mandatory orders so vaguely framed as to admit of dangerous variance in interpretation and enforcement. Reciting the disturbed condition of society, and defining the boundaries of army occupation, it contained the following important decrees:

Circumstances, in my judgment of sufficient urgency, render it necessary that the commanding general of this department should assume the administrative powers of the State. . . . In order, therefore, to suppress disorder, to maintain as far as now practicable the public peace, and to give security and protection to the persons and property of loyal citizens, I do hereby extend and declare established martial law throughout the State of Missouri. . . . All persons who shall be taken with arms in their hands within these lines shall be tried by court-martial, and, if found guilty, will be shot. The property, real and personal, of all persons in the State of Missouri directly proven to have taken an active part with their enemies in the field is declared to be confiscated to the public use, and their slaves, if any they have, are hereby declared freemen. . . . The object of this declaration is to place in the hands of the military authorities the power to give instantaneous effect to existing laws, and to supply such deficiencies as the conditions of war demand. But this is not intended to suspend the ordinary tribunals of the country, where the law will be administered by the civil officers in the usual manner, and with their customary authority, while the same can be peaceably exercised.‡

Despite its verbiage and confusion of subjects, it was apparent that this extraordinary document was not a measure of military protection, but a political manœuvre. Since the first movement of the armies the slavery question had become a subject of new and vital contention, and the antislavery drift of public opinion throughout the North was unmistakably manifest. There was no room for doubt that General Frémont, apprehensive about his loss of prestige through the disaster to Lyon and the public clamors growing out of his mistakes and follies in administration, had made this appeal to the latent feeling in the public mind as a means of regaining his waning popularity. Full confirmation was afforded by his immediately convening under his

* Unpublished MS.

† Unpublished MS.

‡ Frémont, Proclamation. War Records.

proclamation a military commission to hear evidence, and beginning to issue personal deeds of manumission to slaves.* The proceeding strongly illustrates his want of practical sense: the delay and uncertainty of enforcement under this clumsy method would have rendered the theoretical boon of freedom held out to slaves rare and precarious, if not absolutely impracticable. As soon as an authentic text of the proclamation reached President Lincoln, he wrote and dispatched the following letter:

WASHINGTON, D. C., Sept. 2, 1861.

MAJOR-GENERAL FRÉMONT.

MY DEAR SIR: Two points in your proclamation of August 30 give me some anxiety:

First. Should you shoot a man, according to the proclamation, the Confederates would very certainly shoot our best men in their hands in retaliation; and so, man for man, indefinitely. It is, therefore, my order that you allow no man to be shot under the proclamation without first having my approbation or consent.

Second. I think there is great danger that the closing paragraph, in relation to the confiscation of property and the liberating slaves of traitorous owners, will alarm our Southern Union friends and turn them against us; perhaps ruin our rather fair prospect for Kentucky. Allow me, therefore, to ask that you will, as of your own motion, modify that paragraph so as to conform to the first and fourth sections of the act of Congress entitled, "An act to confiscate property used for insurrectionary purposes," approved August 6, 1861, and a copy of which act I herewith send you.

This letter is written in a spirit of caution, and not of censure. I send it by special messenger, in order that it may certainly and speedily reach you.

Yours very truly,

A. LINCOLN.†

It was the reply to the above which the general sent to Washington by the hand of Mrs. Frémont, and which contained a very lame apology for the dictatorial and precipitate step he had taken. He wrote:

Trusting to have your confidence, I have been leaving it to events themselves to show you whether or not I was shaping affairs here according to your ideas. The shortest communication between Washington and St. Louis generally involves two days, and the employment of two days in time of war goes largely towards success or disaster. I therefore went along according to my own judgment, leaving the result of my movements to justify me with you. And so in regard to my proclamation of the 30th. Between the rebel armies, the Provisional Government, and home traitors, I felt the position bad and saw danger. In the night I decided upon the proclamation and the form of it. I wrote it the next morning and printed it the same day. I did it without consultation or advice with any one, acting solely with my best judgment to serve the country and yourself, and perfectly willing to receive the amount of censure which should be thought due if I had made a false movement. This is as much a movement in the war as a battle, and in going into these I shall have to act according to my judgment of the ground before me, as I did on this occasion. If, upon reflection, your better judgment still decides that I am wrong in the article respecting

the liberation of slaves, I have to ask that you will openly direct me to make the correction. The implied censure will be received as a soldier always should the reprimand of his chief. If I were to retract of my own accord, it would imply that I myself thought it wrong, and that I had acted without the reflection which the gravity of the point demanded. But I did not. I acted with full deliberation, and upon the certain conviction that it was a measure right and necessary, and I think so still. In regard to the other point of the proclamation to which you refer, I desire to say that I do not think the enemy can either misconstrue or urge anything against it, or undertake to make unusual retaliation. The shooting of men who shall rise in arms against an army in the military occupation of a country is merely a necessary measure of defense, and entirely according to the usages of civilized warfare. The article does not at all refer to prisoners of war, and certainly our enemies have no ground for requiring that we should waive in their benefit any of the ordinary advantages which the usages of war allow to us. ‡

Frémont thus chose deliberately to assume a position of political hostility to the President. Nevertheless Mr. Lincoln, acting still in his unflinching spirit of dispassionate fairness and courtesy, answered as follows:

WASHINGTON, Sept. 11, 1861.

MAJOR-GENERAL JOHN C. FRÉMONT.

SIR: Yours of the 8th in answer to mine of the 2d instant is just received. Assuming that you, upon the ground, could better judge of the necessities of your position than I could at this distance, on seeing your proclamation of August 30 I perceived no general objection to it. The particular clause, however, in relation to the confiscation of property and the liberation of slaves appeared to me to be objectionable in its non-conformity to the act of Congress passed the 6th of last August upon the same subjects; and hence I wrote you, expressing my wish that that clause should be modified accordingly. Your answer, just received, expresses the preference on your part that I should make an open order for the modification, which I very cheerfully do. It is therefore ordered that the said clause of said proclamation be so modified, held, and construed as to conform to, and not to transcend, the provisions on the same subject contained in the act of Congress entitled, "An act to confiscate property used for insurrectionary purposes," approved August 6, 1861, and that said act be published at length, with this order.

Your obedient servant,

A. LINCOLN.§

As might have been expected, Frémont's proclamation of military emancipation, and Lincoln's order revoking it, produced a fresh and acrimonious discussion of the slavery question. The incident made the name of Frémont a rallying cry for men holding extreme anti-slavery opinions, and to a certain extent raised him to the position of a new party leader. The vital relation of slavery to the rebellion was making itself felt to a degree which the great body of the people, so long trained to a legal tolerance of the evil, could not yet bring themselves to acknowledge. Men hitherto conservative and prudent were swept along by the relentless logic of the nation's calamity

* "Rebellion Record."

† War Records.

‡ Frémont to Lincoln, Sept. 8, 1861. War Records.

§ War Records.

to a point where they were ready at once to accept and defend measures of even the last necessity for the nation's preservation.

With admirable prudence Lincoln himself added nothing to the public discussion, but a confidential letter written to a conservative friend who approved and defended Frémont's action will be found of enduring interest.

EXECUTIVE MANSION,
WASHINGTON, Sept. 22, 1861.

HON. O. H. BROWNING.

MY DEAR SIR: Yours of the 17th is just received; and coming from you, I confess it astonishes me. That you should object to my adhering to a law, which you had assisted in making, and presenting to me, less than a month before, is odd enough. But this is a very small part. General Frémont's proclamation, as to confiscation of property, and the liberation of slaves, is *purely political*, and not within the range of *military law* or necessity. If a commanding general finds a necessity to seize the farm of a private owner, for a pasture, an encampment, or a fortification, he has the right to do so, and to so hold it, as long as the necessity lasts; and this is within military law, because within military necessity. But to say the farm shall no longer belong to the owner, or his heirs forever, and this, as well when the farm is *not* needed for military purposes as when it is, is purely political, without the savor of military law about it. And the same is true of slaves. If the general needs them he can seize them and use them, but when the need is past, it is not for him to fix their permanent future condition. That must be settled according to laws made by lawmakers, and not by military proclamations. The proclamation in the point in question is simply "dictatorship." It assumes that the general may do *anything* he pleases — confiscate the lands and free the slaves of *loyal* people, as well as of disloyal ones. And going the whole figure, I have no doubt, would be more popular, with some thoughtless people, than that which has been done! But I cannot assume this reckless position, nor allow others to assume it on my responsibility.

You speak of it as being the only means of saving the Government. On the contrary, it is itself the surrender of the Government. Can it be pretended that it is any longer the Government of the United States — any government of constitution and laws — wherein a general or a president may make permanent rules of property by proclamation?

I do not say Congress might not, with propriety, pass a law on the point, just such as General Frémont proclaimed. I do not say I might not, as a member of Congress, vote for it. What I object to is, that I, as President, shall expressly or impliedly seize and exercise the permanent legislative functions of the Government.

So much as to principle. Now as to policy. No doubt the thing was popular in some quarters, and would have been more so if it had been a general declaration of emancipation. The Kentucky legislature would not budge till that proclamation was modified; and General Anderson telegraphed me that on the news of General Frémont having actually issued deeds of manumission, a whole company of our volunteers threw down their arms and disbanded. I was so assured as to think it probable that the very arms we had furnished Kentucky would be turned against us. I think to lose Kentucky is nearly the same as to lose the whole game. Kentucky gone, we cannot hold Missouri, nor, as I think, Maryland. These all against us, and the job on our hands is too large for us. We would as well consent to separation at once, including the surrender of this capital. On the contrary, if you will give

up your restlessness for new positions, and back me manfully on the grounds upon which you and other kind friends gave me the election, and have approved in my public documents, we shall go through triumphantly.

You must not understand I took my course on the proclamation *because* of Kentucky. I took the same ground in a private letter to General Frémont before I heard from Kentucky.

You think I am inconsistent because I did not also forbid General Frémont to shoot men under the proclamation. I understand that part to be within military law, but I also think, and so privately wrote General Frémont, that it is impolitic in this, that our adversaries have the power, and will certainly exercise it, to shoot as many of our men as we shoot of theirs. I did not say this in the public letter, because it is a subject I prefer not to discuss in the hearing of our enemies.

There has been no thought of removing General Frémont on any ground connected with his proclamation, and if there has been any wish for his removal on any ground, our mutual friend Sam. Glover can probably tell you what it was. I hope no real necessity for it exists on any ground. . . .

Your friend, as ever,

A. LINCOLN.*

The reader will not fail to note that the argument of this letter seems diametrically opposed to the action of the President, when, exactly one year later, he issued his preliminary Proclamation of Emancipation, as well as to that of the final one, on the first day of January, 1863. Did Mr. Lincoln change his mind in the interim? The answer is two-fold. He did not change his mind as to the principle; he did change his mind as to the policy of the case.

Rightly to interpret Mr. Lincoln's language we must imagine ourselves in his position, and examine the question as it presented itself to his mind. Congress, by the act of August 6, 1861, had authorized him to cause property used or employed in aid of insurrection to be "seized, confiscated, and condemned"; providing, however, that such condemnation should be by judicial proceeding. He saw that Frémont by mere proclamation assumed to confiscate all property, both real and personal, of rebels in arms, whether such property had been put to insurrectionary use or not, and, going a step further, had annexed a rule of property, by decreeing that their slaves should become free. This assumption of authority Lincoln rightly defined as "simply dictatorship," and as being, if permitted, the end of constitutional government. The case is still stronger when we remember that Frémont's proclamation began by broadly assuming "the administrative powers of the State"; that its declared object was mere individual punishment, and the measure a local police regulation to suppress disorder and maintain the peace; also that it was to operate throughout Missouri, as well within as without the

*MS. Also printed in "Proceedings of Illinois Bar Association, 1882," pp. 40, 41.

portions of the State under his immediate military control. Military necessity, therefore, could not be urged in justification. The act was purely administrative and political.

The difference between these extra-military decrees of Frémont's proclamation and Lincoln's acts of emancipation is broad and essential. Frémont's act was one of civil administration, Lincoln's a step in an active military campaign; Frémont's was local and individual, Lincoln's national and general; Frémont's partly within military lines, Lincoln's altogether beyond military lines; Frémont's an act of punishment, Lincoln's a means of war; Frémont's acting upon property, Lincoln's acting upon persons. National law, civil and military, knew nothing of slavery, and did not protect it as an institution. It only tolerated State laws to that effect, and only dealt with fugitive slaves as "persons held to service." Lincoln did not, as dictator, decree the abrogation of these State laws; but in order to call persons from the military aid of the rebellion to the military aid of the Union, he, as Commander-in-Chief, armed by military necessity, proclaimed that persons held as slaves within rebel lines should on a certain day become free unless rebellion ceased.

Thus no real distinction of principle exists between his criticism of Frémont's proclamation and the issuing of his own. On the other hand, there is a marked and acknowledged change of policy between the date of the Browning letter and the date of his preliminary Emancipation Proclamation. In September, 1861, he stood upon the position laid down in the Chicago platform; upon that expressed in the constitutional amendment and indorsed in his inaugural; upon that declared by Congress in July, in the Crittenden resolution, namely: that the General Government would not interfere directly or indirectly with the institution of slavery in the several States. This policy Lincoln undertook in good faith to carry out, and he adhered to it so long as it was consistent with the safety of the Government. His Browning letter is but a reaffirmation of that purpose. At the time he wrote it military necessity was clearly against military emancipation, either local or general. The revocation of Frémont's decree saved Kentucky to the Union, and placed forty thousand Kentucky soldiers in the Federal army. But one year after the date of the Browning letter, the situation was entirely reversed. The Richmond campaign had utterly failed; Washington was menaced; the country was despondent; and military necessity now justified the policy of general military emancipation.

Whatever temporary popularity Frémont

gained with antislavery people by his proclamation was quickly neutralized by the occurrence of a new military disaster in his department. The battle of Wilson's Creek and the retreat of the Union army to Rolla left the Confederate forces master of south-west Missouri. The junction of rebel leaders, however, which had served to gain that advantage was of short duration. Their loosely organized and badly supplied army was not only too much crippled to follow the Union retreat, but in no condition to remain together. Price, as major-general of Missouri State forces, had only temporarily waived his rank and consented to serve under McCulloch, holding but a brigadier-general's commission from Jefferson Davis. Both the disagreement of the leaders and the necessities of the troops almost immediately compelled a separation of the rebel army. General Pearce with his Arkansas State forces returned home, and General McCulloch with his three Confederate regiments also marched back into Arkansas, taking up again his primary task of watching the Indian Territory. General Price held his numerous but heterogeneous Missouri followers together, and, busying himself for a time in gathering supplies, started back in a leisurely march northward from Springfield toward the Missouri River. The strong secession feeling of south-western Missouri rapidly increased his force, liberally furnished him supplies, and kept him fully informed of the numbers and location of the various Union detachments. There were none in his line of march till he neared the town of Lexington, on the Missouri River. The rebel governor, Jackson, had recently convened the rebel members of his legislature here, but a small Union detachment sent from Jefferson City occupied the place, dispersing them and capturing their records, and the great seal of the State, brought by the governor in his flight from the capital. About the 1st of September the Union commander at Jefferson City heard of the advance of Price, and sent forward the Chicago Irish Brigade under Colonel Mulligan to reënforce Lexington, with directions to fortify and hold it. Mulligan reached Lexington by forced marches, where he was soon joined by the Union detachment from Warrensburg retreating before Price. The united Federal force now numbered 2800 men, with 8 guns. Price pushed forward his cavalry, and made a slight attack on the 12th, but was easily repulsed and retired to await the arrival of his main body, swelled by continual accessions to some 20,000 with 13 guns; and on the 18th he again approached and formally laid siege to Lexington.

Mulligan made good use of this interim,

gathering provisions and forage, casting shot, making ammunition for his guns, and inclosing the college building and the hill on which it stood, an area of some fifteen acres, with a strong line of breastworks. Price began his attack on the 18th, but for two days made little headway. Slowly, however, he gained favorable positions; his sharp-shooters, skilled riflemen of the frontier, drove the Federals into their principal redan, cut off their water supply by gaining and occupying the river shore, and finally adopted the novel and effective expedient of using movable breastworks, by gradually rolling forward bales of wet hemp. On September 20, after fifty-two hours of gallant defense, Mulligan's position became untenable. The reinforcements he had a right to expect did not come, his water cisterns were exhausted, the stench from dead animals burdened the air about his fort. Some one at length, without authority, displayed a white flag, and Price sent a note which asked, "Colonel, what has caused the cessation of the fight?" Mulligan's Irish wit was equal to the occasion, and he wrote on the back of it, "General, I hardly know, unless you have surrendered." The pleasantry led to a formal parley; and Mulligan, with the advice of his officers, surrendered.*

The uncertainty which for several days hung over the fate of Lexington, and the dramatic incidents of the fight, excited the liveliest interest throughout the West. Newspaper discussion soon made it evident that this new Union loss might have been avoided by reasonable prudence and energy on the part of Frémont, as there were plenty of disposable troops at various points, which, during the slow approach and long-deferred attack of Price, could have been hurried to Mulligan's support. There were universal outcry and pressure that at least the disaster should be retrieved by a prompt movement to intercept and capture Price on his retreat. Frémont himself seems to have felt the sting of the disgrace, for, reporting the surrender, he added:

"I am taking the field myself, and hope to destroy the enemy, either before or after the junction of forces under McCulloch. Please notify the President immediately."

"Your dispatch of this day is received," responded General Scott. "The President is glad you are hastening to the scene of action; his words are, 'he expects you to repair the disaster at Lexington without loss of time.'"

This hope was not destined to reach a fulfillment. Price almost immediately retreated southward from Lexington with his captured booty, among which the pretentious great seal

* "Rebellion Record."

of the State figures as a conspicuous item in his report. On September 24 Frémont published his order, organizing his army of five divisions, under Pope at Boonville, McKinstry at Syracuse, Hunter at Versailles, Sigel at Georgetown, Asboth at Tipton. On paper it formed a respectable show of force, figuring as an aggregate of nearly 39,000; in reality it was at the moment well-nigh powerless, being scattered and totally unprepared for the field. Frémont's chronic inattention to details, and his entire lack of methodical administration, now fully revealed themselves. Even under the imperative orders of the general, nearly a month elapsed before the various divisions could be concentrated at Springfield; and they were generally in miserable plight as to transportation, supplies, and ammunition. Amidst a succession of sanguine newspaper reports setting forth the incidents and great expectations of Frémont's campaign, the convincing evidence could not be disguised that the whole movement would finally prove worthless and barren.

Meanwhile, acting on his growing solicitude, President Lincoln directed special inquiry, and about the 13th of October the Secretary of War, accompanied by the Adjutant-General of the Army, reached Frémont's camp at Tipton. His immediate report to the President confirmed his apprehension. Secretary Cameron wrote:

I returned to this place last night from the headquarters of General Frémont at Tipton. I found there and in the immediate neighborhood some 40,000 troops, with 1 brigade (General McKinstry's) in good condition for the field and well provided; others not exhibiting good care, and but poorly supplied with munitions, arms, and clothing. I had an interview with General Frémont, and in conversation with him showed him an order for his removal. He was very much mortified, pained, and, I thought, humiliated. He made an earnest appeal to me, saying that he had come to Missouri, at the request of the Government, to assume a very responsible command, and that when he reached this State he found himself without troops and without any preparation for an army; that he had exerted himself, as he believed, with great energy, and had now around him a fine army, with everything to make success certain; that he was now in pursuit of the enemy, whom he believed were now within his reach; and that to recall him at this moment would not only destroy him, but render his whole expenditure useless. In reply to this appeal, I told him that I would withhold the order until my return to Washington, giving him the interim to prove the reality of his hopes as to reaching and capturing the enemy, giving him to understand that, should he fail, he must give place to some other officer. He assured me that, should he fail, he would resign at once.

It is proper that I should state that after this conversation I met General Hunter, who, in very distinct terms, told me that his division of the army, although then under orders to march, and a part of his command actually on the road, could not be put in proper condition for marching for a number of days. To a question I put to him, "whether he believed General Frémont fit for the command," he replied that he did not think

that he was; and informed me that though second in command, he knew nothing whatever of the purposes or plans of his chief.*

The opinion of another division commander, General Pope, was freely expressed in a letter of the previous day, which Hunter also exhibited to the Secretary:

I received at 1 o'clock last night the extraordinary order of General Frémont for a forward movement of his whole force. The wonderful manner in which the actual facts and condition of things here are ignored stupefies me. One would suppose from this order that divisions and brigades are organized, and are under immediate command of their officers; that transportation is in possession of all; that every arrangement of supply trains to follow the army has been made; in fact, that we are in a perfect state of preparation for a move.

You know, as well as I do, that the exact reverse is the fact; that neither brigades nor divisions have been brought together, and that if they were there is not transportation enough to move this army one hundred yards; that, in truth, not one solitary preparation of any kind has been made to enable this advance movement to be executed. I have never seen my division, nor do I suppose you have seen yours. I have no cavalry even for a personal escort, and yet this order requires me to send forward companies of pioneers protected by cavalry. Is it intended that this order be obeyed, or rather, that we try to obey it, or is the order only designed for Washington and the papers? . . . I went to Jefferson City, the last time I saw you, for the express purpose of getting transportation for my division, and explained to General Frémont precisely what I have said above. How in the face of the fact that he knew no transportation was furnished, and that Kelton has none, he should coolly order such a movement, and expect it to be made, I cannot understand on any reasonable or common-sense hypothesis.

Another letter to the President from a more cautious and conservative officer, General Curtis, exercising a local command in St. Louis, gave an equally discouraging view of the situation:

Your Excellency's letter of the 7th inst., desiring me to express my views in regard to General Frémont frankly and confidentially to the Secretary of War, was presented by him yesterday, and I have complied with your Excellency's request. . . . Matters have gone from bad to worse, and I am greatly obliged to your Excellency's letter, which breaks the restraint of military law, and enables me to relieve myself of a painful silence. In my judgment General Frémont lacks the intelligence, the experience, and the sagacity necessary to his command. I have reluctantly and gradually been forced to this conclusion. His reserve evinces vanity or embarrassment, which I never could so far overcome as to fully penetrate his capacity. He would talk of plans, which, being explained, only related to some move of a general or some dash at a shadow, and I am now convinced he has no general plan. Forces are scattered and generally isolated without being in supporting distance or relation to each other, and when I have expressed apprehension as to some, I have seen no particular exertion to repel or relieve, till it was too late. I know the demand made on him for force everywhere is oppressive; but remote posts have improperly stood out, and some still stand, inviting assault, without power to retreat, fortify, or reën-

force. Our forces should be concentrated, with the rivers as a base of operation; and these rivers and railroads afford means for sudden and salutary assaults on the enemy. . . . The question you propound, "Ought General Frémont to be relieved from or retained in his present command?" seems easily answered. It is only a question of manner and time. Public opinion is an element of war which must not be neglected. . . . It is not necessary to be precipitate. A few days are not of vast moment, but the pendency of the question and discussion must not be prolonged. Controversies in an army are almost as pernicious as a defeat.†

Thus the opinions of three trained and experienced army officers, who had every means of judging from actual personal observation, coincided with the general drift of evidence which had come to the President from civilian officials and citizens, high and low. Frémont had frittered away his opportunity for usefulness and fame; such an opportunity, indeed, as rarely comes to men. He had taken his command three months before with the universal good-will of almost every individual, every subordinate, every official, every community in his immense department. In his brief incumbency he not only lost the general public confidence, but incurred the special displeasure or direct enmity of those most prominent in influence or command next to him, and without whose friendship and hearty coöperation success was practically impossible.

Waiting and hoping till the last moment, President Lincoln at length felt himself forced to intervene. On the 24th of October, just three months after Frémont had assumed command, he directed an order to be made that Frémont should be relieved and General Hunter be called temporarily to take his command. This order he dispatched by the hand of a personal friend to General Curtis at St. Louis, with the following letter:

WASHINGTON, Oct. 24, 1861.

BRIGADIER-GENERAL S. R. CURTIS.

DEAR SIR: On receipt of this, with the accompanying inclosures, you will take safe, certain, and suitable measures to have the inclosure addressed to Major-General Frémont delivered to him with all reasonable dispatch, subject to these conditions only, that if, when General Frémont shall be reached by the messenger,—yourself or any one sent by you,—he shall then have, in personal command, fought and won a battle, or shall then be actually in a battle, or shall then be in the immediate presence of the enemy in expectation of a battle, it is not to be delivered, but held for further orders. After, and not till after, the delivery to General Frémont, let the inclosure addressed to General Hunter be delivered to him.

Your obedient servant,

A. LINCOLN.‡

It will be seen that the conditions attending the delivery of this order were somewhat peculiar. If General Frémont had just won a battle, or were on the eve of fighting one,

* Cameron to Lincoln, Oct. 14, 1861. Unpublished MS.

† Curtis to Lincoln, Oct. 12, 1861. MS.

‡ War Records.

then both justice to himself, and more especially the risk or gain to the Union cause, rendered it inexpedient to make a sudden change in command. But the question also had another and possibly serious aspect. Amid all his loss of prestige and public confidence, Frémont had retained the clamorous adhesion and noisy demonstrative support of three distinct elements. First, a large number of officers to whom he had given irregular commissions, issued by himself, "subject to the approval of the President." These commissions for the moment gave their holders rank, pay, and power; and to some of them he had assigned extraordinary duties and trusts under special instructions, regardless of proper military usage and method. The second class was the large and respectable German population of St. Louis, and other portions of Missouri, forming the nucleus of the radical faction whose cause he had especially espoused. The third class comprised the men of strong antislavery convictions throughout the Union who hailed his act of military emancipation with unbounded approval. The first class composed about his person a clique of active sycophants, wielding power and dispensing patronage in his name; the other two supplied a convenient public echo. Out of such surroundings and conditions there began to come a cry of persecution and a vague hum of insubordination, coupled with adulations of the general. Some of his favorites talked imprudently of defiance and resistance to authority; * occasional acts of Frémont himself gave a color of plausibility to these mutterings. He had neglected to discontinue the expensive fortifications and barracks when directed to do so by the Secretary of War. Even since the President ordered him to modify his proclamation, he had on one occasion personally directed the original document to be printed and distributed. Several of his special appointees were stationed about the city of St. Louis, "so they should control every fort, arsenal, and communication, without regard to commanding officers or quartermasters." † Suspicions naturally arose, and were publicly expressed, that he would not freely yield up his command; or, if not actually resisting superior authority, that he might at least, upon some pretext, temporarily prolong his power.

There was, of course, no danger that he could successfully defy the orders of the President. The bulk of his army, officers and sol-

diers, would have spurned such a proposition. But the example of delay or doubt, any shadow of insubordination, would have had an extremely pernicious effect upon public opinion. General Curtis therefore sent a trusted bearer of dispatches, who, by an easy stratagem, entered Frémont's camp, gained a personal audience, and delivered the official order of removal. Duplicates of the President's letters were at the same time, and with equal care, dispatched to the camp of General Hunter, at a considerable distance, and he traveled all night to assume his new duties. When he reached Frémont's camp, on the following day, he learned that ostensible preparations had been made and orders issued for a battle, on the assumption that the enemy was at Wilson's Creek advancing to an attack. Taking command, Hunter sent a reconnaissance to Wilson's Creek, and obtained reliable evidence that no enemy whatever was there or expected there. Frémont had been duped by his own scouts; for it is hardly possible to conceive that he deliberately arranged this final bit of theatrical effect.

The actual fact was that while Price, retreating southward, by "slow and easy marches," ‡ kept well beyond any successful pursuit, his army of twenty thousand which had captured Lexington dwindled away as rapidly as it had grown. His movement partook more of the nature of a frontier foray than an organized campaign: the squirrel-hunters of western Missouri, whose accurate sharp-shooting drove Mulligan into his intrenchments to starvation or surrender, returned to their farms or their forest haunts to await the occasion of some new and exciting expedition; the whole present effort of General Price, now at the head of only 10,000 or 12,000 men, being to reach an easy junction with McCulloch on the Arkansas border, so that their united force might make a successful stand, or at least insure a safe retreat from the Union army.

President Lincoln, however, did not intend that the campaign to the south-west should be continued. Other plans were being discussed and matured. With the order to supersede Frémont he also sent the following letters, explaining his well-considered views and conveying his express directions:

WASHINGTON, Oct. 24, 1861.

BRIGADIER-GENERAL S. R. CURTIS.

MY DEAR SIR: Herewith is a document — half letter, half order — which, wishing you to see, but not

* To remove Mr. Frémont will be a great wrong, as the necessary investigation following it will prove. It will make immense confusion, and require all his control over his friends and the army to get them to do as he will, — accept it as an act of authority, not of justice, — but in time of war it is treason to question authority. To leave him here without money, without

the moral aid of the Government, is treason to the people. I cannot find smoother phrases, for it is the death struggle of our nationality, and no time for fair words. [Mrs. Frémont to Lamon, St. Louis, Oct. 20, 1861. Unpublished MS.]

† Curtis to Lincoln, Nov. 1, 1861. MS.

‡ Price, Official Report. War Records.

to make public, I send unsealed. Please read it, and then inclose it to the officer who may be in command of the Department of the West at the time it reaches him. I cannot now know whether Frémont or Hunter will then be in command.

Yours truly,
A. LINCOLN.*

WASHINGTON, Oct. 24, 1861.

TO THE COMMANDER OF THE DEPARTMENT OF THE WEST.

SIR: The command of the Department of the West having devolved upon you, I propose to offer you a few suggestions. Knowing how hazardous it is to bind down a distant commander in the field to specific lines and operations, as so much always depends on a knowledge of localities and passing events, it is intended, therefore, to leave a considerable margin for the exercise of your judgment and discretion.

The main rebel army (Price's) west of the Mississippi is believed to have passed Dade County in full retreat upon north-western Arkansas, leaving Missouri almost freed from the enemy, excepting in the south-east of the State. Assuming this basis of fact, it seems desirable, as you are not likely to overtake Price, and are in danger of making too long a line from your own base of supplies and reinforcements, that you should give up the pursuit, halt your main army, divide it into two corps of observation, one occupying Sedalia and the other Rolla, the present termini of railroad; then recruit the condition of both corps by reestablishing and improving their discipline and instructions, perfecting their clothing and equipments, and providing less uncomfortable quarters. Of course both railroads must be guarded and kept open, judiciously employing just so much force as is necessary for this. From these two points, Sedalia and Rolla, and especially in judicious coöperation with Lane on the Kansas border, it would be so easy to concentrate and repel any army of the enemy returning on Missouri from the south-west that it is not probable any such attempt to return will be made before or during the approaching cold weather. Before spring the people of Missouri will probably be in no favorable mood to renew for next year the troubles which have so much afflicted

and impoverished them during this. If you adopt this line of policy, and if, as I anticipate, you will see no enemy in great force approaching, you will have a surplus of force, which you can withdraw from these points and direct to others, as may be needed, the railroads furnishing ready means of reinforcing their main points, if occasion requires. Doubtless local uprisings will for a time continue to occur, but these can be met by detachments and local forces of our own, and will ere long tire out of themselves. While, as stated in the beginning of the letter, a large discretion must be and is left with yourself, I feel sure that an indefinite pursuit of Price, or an attempt by this long and circuitous route to reach Memphis, will be exhaustive beyond endurance, and will end in the loss of the whole force engaged in it.

Your obedient servant,
A. LINCOLN.*

The change of command occasioned neither trouble nor danger. Frémont himself acted with perfect propriety. He took leave of his army in a brief and temperate address, and returned to St. Louis, where he was welcomed by his admirers with a public meeting and eulogistic speeches. The demonstration was harmless and unimportant, though care had been taken to send authority to General Curtis to repress disorder, and specially to look to the safety of the city and the arsenal.†

In accordance with the policy outlined by the President, General Hunter soon drew back the Federal army from Springfield to Rolla, and the greater part of it was transferred to another field of operations. Hearing of this retrograde movement, McCulloch rapidly advanced, and for a season occupied Springfield. One of the distressing effects of these successive movements of contending forces is described in a sentence of his report, "The Union men have nearly all fled with the Federal troops, leaving this place almost deserted."‡

BY TELEPHONE.

It was a suggestion of Hawthorne's—was it not?—that in these more modern days Cupid has no doubt discarded his bow and arrow in favor of a revolver.

There are ladies of a beauty so destructive that in their presence the little god would find a Gatling gun his most useful weapon. It is safe to say that the son of Venus does not disdain the latest inventions of Vulcan for the use of Mars, and that he slips off his bandage whenever he goes forth to replenish his armory. Lovers are quick

to follow his example, and the house of love has all the modern improvements. Nowadays the sighing swain may tryst by telegraph and the blushing bride must elope by the lightning-express; and if ever there were an Orlando in the streets of New York, he would have to carve his Rosalind's name on the telegraph poles.

If the appliances of modern science had been at the command of Cupid in the past as they are in the present, the story of many a pair of famous lovers would be other than it is. Leander surely would not have set out to swim to his mistress had international storm-warnings been sent across the Atlantic, which Hero could have conveyed to him by the

Hellespont Direct Cable Company. Paris might never have escaped scot-free with the fair Helen if the deserted husband and monarch had been able to pursue the fugitives at once in his swift steam yacht, the *Menelaus*. And had Friar Laurence been a subscriber to the Verona Telephone Association, that worthy priest would have been able to ring up Romeo and to warn him that the elixir of death which Juliet had taken was but a temporary narcotic, and then might Romeo find that

Beauty's ensign yet
Is crimson in thy lips and in thy cheeks,
And death's pale flag is not advanced there.

II.

AS THE centuries succeed one another, society becomes more complicated and science develops in all directions; thus is an equilibrium maintained, and the modern lover is aided by the appliances of science as he is hampered by the intricacies of society. Even the charity fair, that final triumph of the amateur swindler, and the telephone, that unpoetic adjunct of the shop and the office, can be forced to do love's bidding and to serve as instruments in the cunning hands of Cupid.

When the young ladies who were spending the summer at the seaside hotel at Sandy Beach resolved to get up a fair for the benefit of the Society for the Supply of Missionaries to Cannibal Countries, they had no more hearty helper than Mr. Samuel Brassey, a young gentleman recently graduated from Columbia College. He was alert, energetic, ingenious, and untiring; and when at last the fair was opened the young ladies declared that they did not know what they would have done without him. He it was who helped to decorate the ball-room, and to arrange it as a mart for the vending of unconsidered trifles. He it was who devised the Japanese tea-stall for Mrs. Martin, and suggested that this portly and imposing dame should appear in a Japanese dressing-gown. He it was who aided the three Miss Pettitoes, then under Mrs. Martin's motherly wing, to set up their stands—the Well, where Miss Rebecca drew lemonade for every one that thirsted; the Old Curiosity Shop, where Miss Nelly displayed a helter-skelter lot of orts and ends; and the Indian Wigwam, in the dark recesses of which Miss Cassandra, in the garb of Pocahontas, told fortunes.

To Miss Cassandra, who was the eldest and most austere of the three Miss Pettitoes, he suggested certain predictions for certain young men and maidens who were sure to apply to the soothsayer,—predictions which seemed to her sufficiently vague and oracular, but

which chanced to be pertinent enough to excite the liveliest emotions when they were imparted to the applicants. For Miss Nelly he wrote out many autographs of many famous persons, from Julius Cæsar and Cleopatra to Queen Elizabeth and George Washington; the signatures of Shakspere, of which there were a dozen, he declared to be eminently characteristic, as no two were spelled alike; and the sign-manual of Confucius he authorized her to proclaim absolutely unique, as he had copied it from the only tea-chest in the hotel. To him also the sirens of the bazar owed their absolute conviction of the necessity of giving no change. Furthermore, he elaborated a novel reversal of the principle of a reduction on taking a quantity: the autographs at the Old Curiosity Shop, the glasses of attenuated lemonade at the well, and the little fans at the Japanese tea-stall were all twenty-five cents each, three for a dollar. This device alone stamped him as a young man with a most promising head for business; and so Mr. Martin declared him, after asking if the autographs were genuine and being promptly offered a "written guarantee from the maker."

From these details it will be seen that Mr. Samuel Brassey was on most friendly terms, not to say familiar, with Mrs. Martin and with her charges, the three Miss Pettitoes. He was equally frank and open with all the other young ladies in the hotel, except, it may be, with Miss Bessy Martin. In his relations with Mrs. Martin's handsome niece a persistent observer might have detected a constraint, often cast aside and often recurring. The rest of the girls met him with the sincerity and the unthinking cordiality which are marked characteristics of the young women of America, especially when they chance to be at a summer hotel. So indeed did Miss Martin,—but to her his bearing was different. Towards the others he was kindly. To her he was devoted and yet reserved at times, as though under duress. The least bashful of young men ordinarily, in her presence he found himself shy and not always able to compel his tongue to do his bidding. If she looked at him—and he was a pleasant-faced young fellow—he found himself wondering whether he was blushing or not. Out of her sight he was often miserable; and under her eyes he suffered an exquisite agony. He hovered about her as though he had words of the deepest import trembling on his tongue, but when he sat by her side on the piazza, or danced a Virginia reel opposite to her of a Saturday night, or walked with her to church of a Sunday morning, he had nothing to say for himself.

Whether or not Miss Martin had noted

these symptoms, or what her opinion of Mr. Brassey might be or her feelings towards him, no man might know; these things were locked in her breast. The face of a virgin before the asking of the question is as inscrutable as the visage of the Sphinx propounding its riddle. Miss Martin treated Sam as she treated the other young men. She allowed him to help her in the organization of the post-office department of the fair. She was to be the post-mistress; and with Sam aiding and abetting, a letter was prepared for every person who could possibly apply for one,—a missive not lacking in spice, and not always shown about by the recipient.

At Sam Brassey's suggestion the post-office had been arranged as a public pay station of the Seaside Hotel Telephone Company—so a blue and white sign declared which hung over the corner of the ball-room where the letters were distributed. He had set up a toy telephone in the post-office with a line extending to a summer-house in the grounds about two hundred feet from the hotel. Any person who might pay twenty-five cents at the post-office was entitled to go to the summer-house and hold a conversation by wire. The questions which this casual converser might choose to put were answered promptly and pointedly, for Bessy Martin was a quick-witted and a keen-sighted girl.

So it happened that these telephone talks were a captivating novelty, and during the final evening of the fair the bell in the post-office rang frequently, and Miss Martin's conversation charmed many a quarter into the little box which Sam Brassey had contrived for her to store her takings.

Sam himself was constant in his attendance at the post-office. Although Mrs. Martin or the three Miss Pettitoes might claim his services, he returned to Bessy as soon as he could. Yet he did not seem altogether pleased at the continual use of the telephone. As the evening wore on, a shadow of resolution deepened on his face. It was as though he had made a promise to himself and thereafter was only biding his time before he should keep it.

About 10 o'clock the ball-room began to empty as the crowd gathered in the dining-room, where the drawing for the grand prize was to take place. The Committee of Management had decided, early in the organization of the fair, not to allow any lotteries. Nevertheless a "subscription" had been opened for a handsome pair of cloisonné vases which Mr. Martin had presented, and every subscriber had a numbered ticket; and now on the last evening of the fair there was to be a "casting of lots" to discover to whom the vases might belong. This much the Committee

of Management had permitted. The interest in the result of the "casting of lots" was so intense that most of the ladies who had charge of stalls abandoned them for a while and deserted into the dining-room.

Then Sam Brassey stepped up to the window of the post-office.

"Are you going to see the drawing of the prize, Miss Bessy?" he asked.

"No," she answered; "I shall stick to my post."

"That 's all right!" he returned, and a smile lightened his face. "That 's all right. Then here 's my quarter."

So saying, he placed the coin before her and hurried away.

"But what 's it for?" she cried. There was no reply, as he had already left the house.

The ball-room was almost empty by this time. Mr. Harry Brackett, who had been writing most amusing letters from Sandy Beach to the "*Gotham Gazette*," was standing before the well and sipping a glass of lemonade for which he had just handed Miss Rebecca a two-dollar bill, receiving no change.

"How much of this tippie have you had?" he asked her.

"Two big buckets full," she answered. "Why?"

Mr. Brackett made no reply, but began to peer earnestly among the vines which formed the bower and draped the well.

"What are you doing?" asked Miss Rebecca.

"I was looking for the other half of that lemon," he replied.

Then he offered her his arm, and they went off together into the dining-room to see who should win the prize.

Miss Bessy Martin was left quite alone in her corner of the ball-room. She was counting up her gains when the telephone bell rang sharply. Before she could put the money down and go to the instrument, there came a second impatient ting-a-ling.

"Somebody seems to be in a hurry," she said, as she took her station before the box and raised the receiver to her ear.

Then began one of those telephonic conversations which are as one-sided as any discussion in which a lady takes part, and which are quite as annoying to the listener. The torture of Tantalus was but a trifle compared with the suffering of an inquisitive person who is permitted to hear the putting of a question and debarred from listening to the answer. Fortunately, there was no one left in the ball-room near enough to the post-office corner to hear even the half of the conversation now to be set down.

"Hello, hello!" was the obligatory remark

with which Bessy Martin began the colloquy across the wire.

Of course the response of her partner in the confabulation was as inaudible as he was invisible.

"Oh, it 's you, Mr. Brassey, is it?"

"Yes. I wondered why you had run off so suddenly."

"You have paid your quarter, and you can talk to me just two minutes."

"I like to listen to you too."

"Of course, I did n't mean *that*! You ought to know me better."

"What did you say?"

"Not lately."

"Yes, she had on a blue dress, and I thought she looked like a fright—did n't you?"

"Who *were* you looking at then?"

"At me? O Mr. Brassey!"

"No; they are not here now."

"There 's nobody here at all."

"Yes; I 'm *all* alone—there is n't a creature in sight."

"I love secrets! Tell me!"

"Tell me now!"

"Why can't you tell me now? I 'm just dying to know."

"I don't believe *you* 'll die."

"No, there is n't anybody here at all—nobody, nobody!"

"Besides, nobody can hear you but me."

"Of course, I 'm glad to talk; what girl is n't?"

"Well, it is lonely here, just now."

"I can't chat half as well through a telephone as I can face to face."

"Oh, thank you, sir. That was really very pretty indeed! If you could see me, I 'd blush!"

.....?

"Can you *really* see me in your heart?"

.....?

"How poetic you are to-night!"

.....?

"I just *doat* on poetry!"

.....?

"Well, I do love other things too."

.....?

"O Mr. Brassey!"

.....?

"You take me so by surprise!"

.....?

"You really have startled me so!"

.....?

"I never *thought* of such a thing at all!"

.....?

"You *do*?"

.....?

"Really?"

.....?

"Very much?"

.....?

"With your whole heart?"

.....?

"I don't know *what* to say."

.....?

"But I can't say 'yes' all at once!"

.....?

"Well—I won't say 'no.'"

.....?

"But I really must have time to *think*!"

.....?

"An hour? No, a month at least—or a week, certainly!"

.....?

"It 's cruel of you to want me to make up my mind all at once."

.....?

"No—no—*no*! I can't give you an answer right now."

.....?

"Don't be so unreasonable."

.....?

"Well—of course—I don't *hate* you!"

.....?

"Perhaps I do like you."

.....?

"Well—just a little, little, weeny, teeny bit."

.....?

"You are very impatient."

.....?

"Well, if you *must*, you can speak to Aunt."

.....?

"She 's somewhere about."

.....?

"Of course, she is n't going away all of a sudden."

.....?

"Yes, I'll keep her if she comes here."

.....?

"Yes—yes—I'm all alone still."

.....?

"Good-bye, Sam!"

Miss Bessy Martin hung up the receiver and turned away from the instrument. There was a flush on her cheeks and a light in her eyes. She recognized the novelty of her situation. She had just accepted an offer of marriage, and she was engaged to a young man whom she had not seen since he asked her to wed him. Her heart was full of joy—and yet it seemed as though the betrothal were incomplete. She was vaguely conscious that something was lacking, although she knew not what.

Before she could determine exactly what might be this missing element of her perfect happiness, Mr. Samuel Brassey rushed in through the open door, flew across the ball-room, and sprang inside the partition of the post-office. Ere she could say "O Sam!" he had clasped her in his arms and kissed her.

She said "O Sam!" once more; but she was no longer conscious of any lacking ingredient of an engagement.

A minute later a throng of people began to pour back from the dining-room, and there were frequent calls for "Mr. Brassey" and "Sam."

With a heightened color, and with an ill-contained excitement, Mr. Samuel Brassey came out of the post-office in answer to this summons.

He found himself face to face with Mr. Martin, who held out his hand and cried:

"I congratulate you, Sam!"

The scarlet dyed the countenances of both Bessy and Sam, as he stammered,

"How—how did you know anything about it?"

Before Mr. Martin could answer, the three Miss Pettitoes and Mr. Harry Brackett came forward. Mr. Brackett bore in his arms the pair of cloisonné vases for which there had just been a "casting of lots."

Then Sam Brassey knew why Mr. Martin had congratulated him.

"You have won the prize!" cried Harry Brackett.

"I have—for a fact!" Sam Brassey answered as he looked at Bessy Martin. Their eyes met, and they both laughed.

"SOME Cupid kills with arrows, some with traps." Some he compels to sign the bond with pen and ink in black and white, and some he binds with a wire.

Brander Matthews.

KANSAS BIRD-SONGS.

A MOCKING-BIRD.

YON mocking-bird that whistling soars
 Borrows his little music-scores,
 And mimics every piping tone
 By sylvan lovers lightly blown,
 To make his morning-gladness known,—
 Till down that molten silver pours,
 Globule on globule, fast and faster:
 Dare any blame the blithe tune-master,
 Who counts all minstrelsy his own?

But daylight ended—then indeed,
 As jet by jet a wound will bleed,
 His very singing self breaks through!
 Even so (lost Eden shut from view),
 Some wildered soul, to sighing new,
 When human lips first touched the reed—
 Heart-pierced with rending love and sorrow—
 Breathed notes too god-like sweet to borrow.
 So, poet, shall it be with you.

THE THRUSH.

THROUGH half a June day's flight,
 Upon the prairie, thirsting for the showers,
 The cactus-blooms and prickly poppies white,
 The fox-gloves and the pink-tinged thimble-flowers,
 Drooped in the Lord's great light.
 Now, suddenly, straight to the topmost spray
 Of a wild plum-tree (I thereunder lying),
 Darted a thrush and fided his roundelay,
 Whimsey on whimsey — not a stave denying.
 Quoth I: "From regions measureless miles away
 He hears the souging winds and rain-clouds flying;
 And, gathering sounds my duller ears refuse,
 He sets the rills a-rush,
 This way and that, to ripple me the news
 (Right proud to have his little singing say!),
 And brings the joy to pass with prophesying." . . .
 So gladly trilled the thrush!

Soon was I made aware
 Of his small mate, that from the Judas-tree
 Dropped softly, flitting here and flitting there,
 And would not seem to hear or seem to see.
 He, in that upper air,
 All mindful of her wayward wandering
 (Primrose and creamy-petaled larkspur bending,
 And yellow-blossomed nettle, prone to sting),
 Shook out his red-brown wings as for descending,
 But lightly settled back, the more to sing.
 "O bird!" I sighed, "thy heedless love befriending
 With that celestial song-burst — whirling swift
 As Phaeton's chariot-rush! —
 Should my dear angel's voice so downward drift,
 Quick would my music-lifted soul take wing!" . . .
 Now had earth's happiest song a heavenly ending —
 Fled with his mate the thrush.

THE PURPLE FINCH.

WHILE lurked the coyote in his root-bound burrow,
 Through haunts of the hare and the badger gray,
 Where never the share of a plow turned furrow,
 I, gathering silk-flowers, went my way.
 Wide-rimmed were the trumpets of silver-blue,
 Their slim tubes slipping out, wet with honey:
 Thence blown by the winds through the spaces sunny,
 White butterflies high as the elm-tops flew.

The ground-squirrel under the elders scampered,
 Or wheeled to show me his gold-brown bars:
 Not I with the eggs of the pedees tampered,
 Nor caught the green beetles that blazed like stars.
 The shy, scarlet birds, where the long boughs meet,
 Looked out, and went on with their trolling merry,
 Till down came the finch from the sun-burnt prairie,
 And silenced them all with a chanson sweet.

So secret is he, not a boy discovers
 That home he has built for the nestlings dear;
 So softly he carols, the hawk that hovers,
 Intent upon murder, can hardly hear.
 Now trimming his crimson in coverts dim,
 Now perching wherever his mood was suited,
 He sang in the sumac velvet-fruited,
 Or sprang to the oak of the twisted limb.

Till "Higher, mount higher," I cried, "dear pleader!
 The sum of delights shall be granted thee."
 Therewith, from the height of the one dead cedar,
 The linnet sped out like a soul set free.
 Ah, why need the souls of the blest fly far! —
 Pure honey the humming-bird moth went sipping;
 Pale gold was the sky where the sun was dipping;
 Came out the new moon and a great white star.

CHEWINK.

SING me another solo, sweet —
 I have learnt the one by rote;
 The endless merry-go-round repeat
 Of the tuneful, tender, teasing note:
 "Che-wink, che-wink! —
 Che-wink, che-wink!"
 A moment's rest for the tired throat
 (Just long enough for a heart to beat),
 And at it again: "Che-wink, che-wink!"

O bird, dear bird with the outspread wings
 And little to chant about! —
 When death reaches over the wrecks of things
 To stifle the soft, delighted shout:
 "Che-wink, che-wink! —
 Che-wink, che-wink!"
 And, all unruffled by dread or doubt,
 Your musical mite of a soul upsprings,
 Will you still go crying: "Che-wink, che-wink"?

Little I know; but this I hold:
 If the rushing stars should meet, —
 Their crystal spheres into chaos rolled, —
 Let only this one pure voice entreat:
 "Che-wink, che-wink! —
 Che-wink, che-wink!"
 Great Love would answer the summons sweet,
 And a universe fresh as the rose unfold.
 So — at it again: "Che-wink, che-wink!"

Amanda T. Jones.

TOPICS OF THE TIME.

Reform in our Legislative Methods.

IT is a fact, universally admitted, that our laws are badly drawn, that our legislative work is usually slipshod and defective, that our statute-books are full of contradictions because new laws are passed without reference to old, and that many of our laws are merely disguised schemes for public plunder.

The reason for this unsatisfactory condition of affairs, as has repeatedly been pointed out, is our present legislative system, which puts the delicate business of law-making into the hands of men who, as a rule, are wholly unfitted for it. Thus, in the lower house of Congress we make a complete change of membership every two years. We send home nearly all the men who have become possessed of a knowledge of the legislative business, and put in their places men who have no knowledge of it whatever. A few of them are lawyers, which is far from being an adequate qualification for the work before them, but the great mass are politicians, with no expert qualification whatever for their new duties. These men are divided up into committees, without sufficient reference to their fitness, and into their hands is put the task of making new laws and amending old ones. At Albany the case is much worse. We send to the Senate there a new lot of men every two years and to the Assembly a new lot every year. The ratio of intelligence, to say nothing of expert knowledge, is much smaller there than it is at Washington. The committees are divided up entirely on the basis of political influence. A man is chosen Speaker who has secured his election by promising committee chairmanships and positions in return for members' votes. The railway, insurance, and other corporations have usually taken a hand also and picked out in advance the chairmen for those committees which are to have corporate interests in charge. The result is that the Legislature is organized, not in the interest of the people, but against it. Thus organized, Congress and the Legislature proceed with a rush to the making of laws. They are poured into the committees in a great flood; they there receive little or no expert examination and criticism, because of the committee's incapacity, and they are returned to the House for action without ever having passed anything like an adequate scrutiny. The worst of them, those the defects and evils of which are so great as to be perceptible in even an ignorant assemblage, are held back till the closing hours of the session, with a good chance of being put through in the rush of unconsidered legislation which annually occurs then.

It is no wonder that under such a system we have defective laws. Most of the bills are not drawn by the men who present them, and at no time from the moment of their inception till they become laws do many of them come under the inspection of what could be called expert authority. There are, of course, in the United States Senate and House of Representatives, a few chairmen and committeemen who, through long experience, have become experts in law-making. These are

invaluable public servants, but they are exceptions to the general rule. But even if we had better committees and better chairmen, we should still be in trouble with the great mass of local and private legislation which is thrown in, in almost illimitable mass, side by side with measures of the highest public importance, and has equal rights in demanding consideration. We attempt to legislate upon almost every subject in the universe, and to have the work done by men who have neither knowledge of the work nor fitness for it. Moreover, we try to do within a few months work which could not all be done well in as many years.

What is the remedy? Students of the problem who have given it most thought agree that the only adequate remedy to be found is in the application to American legislative methods of the principle which has operated successfully in English parliamentary procedure for half a century. This is the remedy which was very ably advocated by Simon Sterne of New York City, in a striking paper which he read before the American Bar Association in August, 1884; and he subsequently incorporated it in a report which he drew up for the New York City Bar Association, and which that body formally accepted in March, 1885. Under the English system all private bills are kept separate from public bills, and are subjected to a rigid expert scrutiny of so judicial a character as virtually to amount to a court inquiry, before coming to the committees of Parliament at all. Petitions for private bills have to be filed sixty days before the meeting of Parliament and ample notice given to all parties in any way interested, in order that they may file objections if they desire. A sufficient sum of money has to be deposited to defray all the expenses of this preliminary procedure. After they have passed this scrutiny they are referred to the committees of Parliament, and by them referred to joint-trial committees which are composed of experts in the technical elements of the subject-matter of the bills. When a bill finally comes from these bodies it is known to be correctly drawn, to harmonize rather than conflict with existing legislation, and to be desirable, as well as in proper form to become a law. As a result, the House usually adopts such bills without question. The fees required pay all the expenses of such legislation, the time of Parliament is left for the consideration of public measures solely, and the statute-books of England are models of clearness.

For the introduction of this reform in this country we should probably need amendments both to our national and State constitutions. Senator Edmunds and Speaker Carlisle, at the close of the session of Congress in 1885, spoke of the necessity for some method being adopted to relieve Congress of the burden of private legislation; and in his message to the Legislature in the same year, Governor Hill of New York recommended the appointment of a Counsel to the Legislature to act as an adviser in the drafting of bills. The Bar Association report, referred to above, recommended for New York State a Commission of

Revision, to be appointed by the governor, whose duty it should be to decide that the laws were properly drafted and were not inconsistent with existing laws. It also recommended the complete separation of private from public bills, and the adoption of the English principle of advance notice, examination, and fees. Something of this kind has been introduced in Massachusetts and is working satisfactorily. Constitutional amendments could be drawn to meet the case completely, and this is probably the source from which relief will have to come.

The American Flag for America.

INSTITUTIONS are to a people what habits are to the individual. They are born unperceived; they strengthen and ripen insensibly; but, in their ripened strength, they condition the people on every side, and are as completely characteristic of them, for good or evil, as habits are of the individual. They become an integral factor of the people's ways of thinking and acting; and they thus often influence or even control the thought and action of the mass of the people or of its parts, at every point of daily life, as well as in the great critical moments of national history.

It is important to bear in mind that the full meaning of the word "institutions" is very far from being covered by the mere word "laws." It is true that very many of the naturally developed institutions of a country are, in process of time, crystallized into laws and constitutions, and thus become tangible to the senses; but back of all laws and constitutions is the mass of customary and habitual thinking and acting, summed up in this convenient word "institutions," from which laws and constitutions derive all their working force. The Constitution of the United States would have been no better than a bit of waste paper in 1861 had it not been for the smoldering but intense popular feeling which was fanned into flame by the concrete act of "firing on the flag." In so far, the flag of the United States is even a more fundamentally American "institution" than the Constitution itself. If the American people in 1876-77 preferred to compromise an insoluble case rather than drift into war about it, and if they have met in a similar spirit other political problems upon which other systems have for centuries been stultifying themselves at every opportunity, it is because of the institutions which have come down to each American generation through centuries of consistent political thought and action. If all men are wiser than any one man, it is because the personal passions and prejudices of a multitude balance and neutralize one another, leaving, as the only safe guide, the institutions which are guaranteed by long experience. And if Americans are to have any such measure of success in the future, it behooves them to disdain any feeble leaning upon laws and constitutions alone, and to keep clear and full the institutional springs which feed our whole social and political system.

One may well agree, then, to compromise a difficulty in the case of the passage or interpretation of a law; he cannot too persistently cavil on the ninth part of a hair in the case of the smallest American institution. If it is worth while for the assailant to make a point of it, it is even more worth while for the American to

make a point of it. Our forefathers, said Webster, "went to war against a preamble. They fought seven years against a declaration. They poured out their treasures and their blood like water, in a contest against an assertion which those less sagacious and not so well schooled in the principles of civil liberty would have regarded as barren phraseology, or mere parade of words. They saw in the claim of the British Parliament a seminal principle of mischief, the germ of unjust power; they detected it, dragged it forth from underneath its plausible disguises, struck at it; nor did it elude either their steady eye or their well-directed blow until they had extirpated and destroyed it to the smallest fiber." The principle of self-government by representatives had become an American institution in 1775; and the jealousy with which it was guarded, the intensity with which it was defended, by the men who then had to deal with it, may well stand as a lesson in political science to their descendants of all generations.

There remains, however, the difficulty that so large a percentage of the American people is no longer American, and has no fitting sense of the nature and dignity of the underlying American institutions; it no longer thinks and acts instinctively as Americans have habitually thought and acted. The figures submitted by Mayor Hewitt to the New York Board of Aldermen last winter, showing the large proportions of the alien-born population of New York city, seem to have excited an astonishment which is an evidence of an unfortunate lack of public interest in that fascinating and suggestive work, the "Compendium of the Tenth Census." Similar figures will be found in it for some fifty cities of the United States, and they are impressive. They are misleading as well, as figures often are. "Irish-born," "one or both parents Irish," "German-born," "one or both parents German," are misleading phrases when used under this head. Thousands, probably rather millions, whose parents were foreign-born, have breathed in the American spirit with every breath of their life, and are as intense, some would say as bigoted, in their American feeling, as any of those who fought at Concord or Bunker Hill. Even the phrase "foreign-born" is misleading. Were Alexander Hamilton or Richard Montgomery less American than Aaron Burr or Benedict Arnold? Figures, in this case, must be taken with a large margin of allowance, for they were meant to bear on entirely different questions. This question is not one of birth merely, but of feeling, of training, of habits, of institutions.

But on the general question, the mayor was right in maintaining the dignity of the American flag within the American jurisdiction. Every nation, as a member of the great family of nations, must show a proper and cordial respect for the emblems of other nationalities; and there is a peculiar propriety in the occasional exhibition, at private or unofficial gatherings, of the emblems of those nationalities which have gone to make up the American people. But the case is vitally different with every exhibition of a foreign flag or emblem which goes to show, or is intended to show, that the American people is still nothing more than a heterogeneous mass of jarring nationalities. In such a case, the public opinion, of adopted no less than of native citizens, should promptly and unequivocally condemn any attempt to substitute any foreign flag in the place

which belongs properly only to the American flag. The new generation, which has never known anything of the memories of armed conflicts, may disparage the importance of a bit of bunting; those who saw it through the smoke of war, or in the trials and triumphs of 1861-65, will not. It is the right of the American people to enjoy a monopoly for the use of the American flag within their own jurisdiction; it is their own flag within their own jurisdiction; it is their own right, and should be the duty, of those who follow other flags to follow them elsewhere.

The case becomes far stronger with the appeals to the Irish vote, or the German vote, or any other alien vote. What standing have such appeals in the United States? There should be no "Know-Nothingism" in this matter. It is the high privilege of those Americans who are foreign-born, or are the children of foreign-born parents, to empty the vials of American political wrath on the demagogues who undertake to rise by fostering anti-American classes. American institutions have made us what we are; the American spirit is as the breath of our life; and, though the republic is no longer menaced by open foes, there are enemies here against whom we may all vindicate our right to speak of the great American dead as our forefathers. It is our privilege, in Webster's phrase, to detect such enemies, to drag them forth from under their plausible disguises, to strike at them, and never to cease until we have extirpated and destroyed them to the smallest fiber.

Art Revival in American Coinage.

THE bill to secure an improvement in our coinage, which has been drawn in accordance with the views of Mr. Kimball, the Director of the Mint, and introduced simultaneously in the Senate and the House by Senator Morrill and Mr. Bland, is in the line of a reform which has constantly been urged by those intelligent in such matters. The United States does not issue to-day a single coin which possesses sound artistic merit, while most of the types are simply grotesque caricatures. The best of them, the so-called "buzzard dollar" of 1873, presents manifest crudities of design which public intuition perceived at once upon its appearance.

The responsibility for the ugliness of our coinage does not fall entirely upon the Mint. Some of the earlier types of American coins, seen, for instance, in the large copper cents of the end of the last century and

the beginning of this, which still occasionally appear in circulation, are by no means devoid of excellence; but by the coinage act of 1873, the devices and designs of current coins were fixed by statute, and all power to change or modify them was thus removed from the authorities of the Mint.

The present bill authorizes the Director of the Mint to employ the best artists and to select new designs for all coins, with the approval in each case of the Secretary of the Treasury, and with a proviso against too frequent changes of design. The bill is clear and simple, and well adapted to secure the improvement sought, and to leave us free to make our coinage again, as was that of the ancients and the work of the Renaissance medalists, representative of the best art of our time. The hope that it may easily become thus representative is not chimerical. There are modern coins—as some of Cromwell, of Napoleon I., and of the French Republic—which are satisfactory examples of their contemporary art. It has been urged that the intrinsic excellence of the wonderful coins of ancient Greece—as refined and dignified, many of them, as the Parthenon itself, and as graceful in design as the Praxitelean Hermes—lies in their high relief, which is incompatible with the convenient use of coins under modern requirements. But some of the most beautiful of Greek coins are in sufficiently low relief; and these are no more inferior to those in high relief than the Phidian frieze is inferior.

If ancient needs had required it, we may be sure that all Greek coins would have been in low relief, and that with no sacrifice of beauty; and now that American sculpture can show work in low relief so admirable as almost to constitute a new discovery in art, we shall have none but ourselves to blame if we fail to provide for ourselves coins of which even the Greeks need not have been ashamed.

Coins, from their great number, their enduring material, and their small size, are among the most lasting of human monuments; and those which to our regret we now have will, with those which under the new bill we may hope to produce, remain as memorials of America in our time when most of our other material records will have perished. We may well seek to redeem, in the eyes of our remote posterity, our reputation in æsthetics, which none could wish to rest on any piece of money which we use to-day.

OPEN LETTERS.

Mr. Arnold and American Art.

THE announcement of the sudden death of Mr. Matthew Arnold, at an age when one hoped he might still live many years in beneficial activity, must have brought a sense of personal bereavement to thousands. Arnold's writings, to a higher degree, perhaps, than those of any author of our time except Carlyle, Emerson, and Ruskin, are infused with that personal quality which excites an interest in the man no less than in his printed pages; and, like Emerson's and Carlyle's and Ruskin's writings, their influence has been both intellectual and moral. Upon many of the younger gen-

eration in America they have had an extraordinarily tonic, stimulating, illuminating effect—not merely furnishing the mind but opening the eyes of the soul. For my own part I rejoice in this opportunity to say that to no book in the world do I owe so much as to "Literature and Dogma," unless it be to the great Book with which it so largely deals.

Under these circumstances—with Mr. Arnold's recent death in mind, and the consciousness of our immense debt to him thereby made doubly vivid—it is not the most pleasant of tasks to find fault with any of his utterances, or to take him to task for any shortcomings in his methods of observation and exposition.

But if such words are to be spoken at all, they must be spoken at once; and it seems to me that the obligation to speak them, although made painful, is not removed by the fact of our fresh sorrow.

Remembering the severity of the strictures which Mr. Arnold passed upon the civilization of his own country, Americans surely need not resent the fact that in one of his last published articles* he denied to their civilization the quality of "interest"—more especially as interest is a quality which must always largely depend upon the eye of the observer as well as upon the essence of the things observed. Yet, while we need not protest against Mr. Arnold's general verdict, it is nevertheless worth while to say in how far he was mistaken in some of the special statements of fact by which he endeavored to sustain it. It is worth while, for example, briefly to review his dicta with regard to American art and to the conditions of American civilization as affecting art.

"Americans of cultivation and wealth visit Europe more and more constantly," writes Mr. Arnold, in a connection which explains that they do so in the search for æsthetic gratification. This is certainly true, just as it is true of the same class of persons in England with regard to continental travel. But it is a mistake to say that "American artists chiefly live in Europe." Many American artists live in Europe during their student years, some remain there permanently, and others make frequent visits after their return to America. But the sum total which results from these facts by no means justifies Mr. Arnold's "chiefly"; nor is it justified if we weigh by the quality of the work produced instead of by the numbers of its producers—I mean, of course, applying the standards of intrinsic excellence and not of that European reputation which as yet depends almost altogether upon European residence. Nor is the inference which Mr. Arnold draws from his statement more nearly correct than the statement itself. American conditions do not seem to all observers distinctly worse for the artist than those of all other civilized lands. If the *tu quoque* argument were not so disagreeable a one to use, I might cite many reasons—and feel sure of the agreement of many artists therein—why New York is a better place to-day for artists with high aims and serious ambitions than London. But it will perhaps be better to confine myself to a verdict of more general bearing, pronounced by an observer who cannot possibly be accused of partiality or of lack of insight into artistic matters. I met not long ago a Japanese gentleman who was an artist by instinct, as seem to be all the men of his race, an art-critic by profession, a profound student of æsthetic theories and of the artistic history of the Western as well as of the Eastern world, and the bearer of a commission from his Government to inquire into the present state of art in foreign lands. Arriving for the second time in America after a long stay in Europe, he said,—with the use, be it observed, of Mr. Arnold's own word,—“I find things more interesting here than in Europe.” What he had in mind was not, of course, the comparative richness of Europe and America in the accumulated treasures of other days, but the comparative interest of the living issues of to-day—of the conditions which are influencing and molding art at this moment,

and in which a prophecy of future developments may be read. It would have been too much to expect that Mr. Arnold should have seen things from this point of view as fully and clearly as this Japanese specialist; but we were surely justified in feeling disappointed that he did not recognize it as the right point of view from which to look. And this for his own sake as a philosophic observer much more than for our sake; for surely the vital significance of our civilization is missed by one who thinks the backward as important as the forward gaze—who fails to take great account of the youth of the country, to test the speed of its advance at the present hour, and to try at least to discern the true promise of the future. Had Mr. Arnold seen that this was the right point of view while he was in America, and after his return home had he asked a few questions of persons whose opportunities for observation in matters of art and whose preparation for passing judgment upon them had been greater than his own—then, I believe, his verdict would not have been that we had as yet produced “very little” of the “really beautiful,” or that our conditions were such as to discourage hopeful prophecies. It would have been well, for example, had he asked the most famous manufacturer of stained-glass in France what he thought of American stained-glass as compared with French, or English, or German; had he asked the proprietors of the chief art-journal of Paris what they thought of American wood-engraving and of its influence upon foreign wood-engraving, and why they had sent their representatives to New York a few years ago to study methods of wood-cut printing; had he considered to how great a degree the success of our popular magazines in England has been due to the quality of their illustrations; had he compared the works of monumental sculpture in this country with those erected during the same space of time in England; had he looked into such books as André's “*L'Art des Jardins*” and Jaeger's “*Gartenkunst*,” to see what their authors think of our success in the once preëminently English art of landscape-gardening, and asked himself how it happens that there is a popular journal in America largely devoted to this subject, while there is none in England, France, or Germany; and had he inquired of Parisian professors what are the aptitudes and the early productions of American as compared with other students. And, as regards that public appreciation of art which is largely synonymous with the conditions upon which the success of art depends, he might have asked Parisian dealers and critics what is the state of America as a market for the highest class of modern paintings. He would have found that the old sneer of the French artist, “*Bon pour l'Amérique*,” is as out of date as the old sneer of the English author, “*Who reads an American book?*” If he had heard the words at all, it might well have been as meaning, “*Too good to be kept in France.*”

Mr. Arnold's most definite dictum upon a question of art was pronounced, however, with regard to architecture; and of all his dicta it is the one which has the least support in facts. I may say once more that a really philosophic observer would have weighed to-day in America against to-day in England—not against that past which produced Somerset House and Whitehall. Yet there need be no objection on our part to admitting Somerset House and Whitehall as standards of comparison; for an observer with a keener artistic

* “Civilization in America.” “*Nineteenth Century*,” April, 1888.

sense than Mr. Arnold would assuredly grant that they at least among the old buildings of England have their equals in America—not their counterparts, which is what Mr. Arnold seems to have looked for, but their equals in buildings as commendable for all the essentials of architectural excellence. Such an observer would also have found something else to say of our country-houses than that they are often “original and very pleasing,” but are “pretty and coquettish, not beautiful.” He would have said, A great many of them are not even this, but many are a good deal more than this. Nor, assuredly, would he have cited our country-houses alone as witnesses to the interest of the recent renaissance of architectural art in America; nor, above all, would he have failed to remark the fact of this renaissance, to contrast the work of to-day as a whole with the work of twenty or thirty years ago as a whole, and to read in the contrast a most interesting promise for the future—a more interesting promise, I cannot but think, than he could read in any foreign land.

But the singularly limited field of observation and inquiry which Mr. Arnold must have thought sufficient to serve as a basis for emphatic speech is nowhere so distinctly shown as in the few lines which he devotes to Richardson. Premising that he was our one “architect of genius,” he adds: “Much of his work was injured by the conditions under which he was obliged to execute it; I can recall but one building, and that of no great importance, where he seems to have had his own way, to be fully himself; but that is indeed excellent.” It would be hard to condense into words so few a larger amount of misconception. It is probable that no architect in any land, in any age, ever expressed himself in so unfettered a way, was so little dominated by any outside influence, as Richardson. This is clear to every one who knows what individuality means in architecture and who has looked at Richardson’s buildings, and it is doubly clear to every one who knew the man himself, the way in which he did his work, and the way in which he judged of the conditions under which it was done. If any of Richardson’s buildings seem uncharacteristic, it is because they were built at a time when he had not yet discovered how he really wanted to express himself in art; they expressed his personality at the moment just as truthfully as his later buildings expressed the fully developed personality which to-day we recognize as his. He was never under the influence of the artistic creeds current in America or in foreign lands, and was never swayed by the example of other artists; and he was distinguished to a phenomenal degree by his power of persuading all persons with whom he came in contact to give him the chance to do what he wished to do.

If I seem to speak very confidently I may explain that I have spent many months in a careful study of Richardson’s works and of the conditions under which each one of them was produced; and I may add that in the biography which has been the outcome of this study the two things which it seemed to me most important to make plain were, that his talent developed in an unfettered way to which the history of modern architecture offers no parallel, and that he gratefully realized the fact and was never tired of congratulating himself that he had been born to work in America and not in Europe. When, during the last years of his life, he visited Europe and saw the work of French and

English architects, and the conditions amid which it was produced, his one thought was a thought of pity for men whose talents had no such free outlet as his own. “There is not one of them,” I have heard him say of the friends of his student years in Paris, risen to the highest places in their profession,—“there is not one of them who can find out exactly what he wants most to do and then venture to do it. What might they not do if their opportunities were only as good as ours!” No one can have been so surprised at Mr. Arnold’s description of Richardson and his opportunities as Richardson himself would have been—unless, indeed, it may be the English architects who, at the meeting of the Royal Institute, in 1884, discussed his work and American work, and American conditions in general.*

In conclusion, it is a somewhat curious question: What was the one unimportant building which to Mr. Arnold seemed really characteristic of this man of genius? In his smallest buildings the man of genius shows clearly, it is true, but in his more important buildings still more clearly; and if we were compelled to judge him by one alone we might well select the one which he himself declared he was most willing to be judged by—the largest of all, the Court-house in Pittsburg.

M. G. van Rensselaer.

“The Workingman’s School and Free Kindergarten.”

A GREAT step is taken for educational reform when public interest is aroused and stimulated by discussion and suggestion. THE CENTURY has taken this step, and we feel justified in calling the attention of your readers to a school which has as yet received no notice in your pages and which seems to us to invite special study from all who would further this great movement. The Workingman’s School and Free Kindergarten has been in existence for eight years in the city of New York. As its name implies, it is intended for the children of the working-people who are too poor to pay for tuition; its pupils number about three hundred and seventy. Although a philanthropic scheme it aims at the same time to be a model and pioneer school, and it has already put to practical test many of the questions which are now forcing themselves upon the attention of our public educators. Its basis is the kindergarten, about which a few words may not be here amiss, for among Americans generally rather vague notions prevail in regard to the kindergarten. Most persons, even parents, look upon it as a place where they may send their children, to be amused and kept out of mischief, to play games and sing, and learn, perhaps, to fashion little shapes and fancies with their tiny fingers. The system has been almost universally adopted, and yet its profound psychological value and significance have been but little understood or appreciated.

It was Pestalozzi who insisted that the world must be made afresh for each fresh mind; the child must discover and explore it for himself, and make himself acquainted, not with the names of things, but with the things themselves, their properties and laws. Froebel took a step further and affirmed that it is as natural and as necessary to create as to observe, and that from

* See “American Architecture in English Eyes,” Topics of the Time, in this magazine for March, 1888.

infancy the creative faculty is latent within us, only waiting to be called out and exercised. The world is made for the child's use as well as for his study, and this very use, properly trained and directed, becomes mind-power, intellectual stimulus, and experience. Make the conditions right, the atmosphere and surroundings suitable, and like a plant the child will grow, putting forth flower and fruit. So Fröbel devised the kindergarten, and the child-world became a center of resource and activity and of beautiful joyous expression. Since Fröbel's time the kindergarten has been developed and perfected, but the organic and fundamental idea underlying it has been allowed to remain in embryo. The child steps out of this fresh, new field back again into the old routine track and methods of instruction. The Workingman's School is a notable attempt, the first of its kind, to carry the principles and practice of the kindergarten into the higher branches of education; to connect the development of the child with the development of the man and the woman, and to secure a complete and harmonious unfolding of the whole humanity. In such a school the workshop and the art-room are the salient features, for here are the tools and material as well as the field for production; here the child is trained, not to be a carpenter, a printer, a skilled mechanic, not to be ticketed with any particular trade,—although he will probably learn in this way what he is best fitted to do,—but to come to the full use and play of his faculties.

With this end in view manual training becomes an intimate and essential process of mind-culture. A system of work-instruction has been planned which aims to bring into constant correlation and interdependence these two usually distinct factors. Drawing is made, as it were, "the common denominator," the basis of instruction—mechanical drawing in the workshop, and free-hand drawing in the art-room. Through all the classes, and consistently with the intellectual progress, the drawing-exercises connect the work of the hand with the work of the brain. The pupil is made to draw the object which he afterwards reproduces from his own drawing. "Thus the work is the concrete representation of the drawing, the drawing is the abstract representation of the work," and both are the symbol and illustration of science and law. Treated in this way, the so-called dry and rigid sciences, mathematics, geometry, and the like, become plastic and instinct with life and form, while, on the other hand, manual labor is dignified and lifted upon the plane of intellectual achievement. In the art-room the analogy is obvious, for here is the true realm of expression. In the perception and reproduction of beautiful forms and the apprehension of harmony and design man's creative insight and freedom fully assert themselves, and spirit stands clearly revealed.

"Through the idea, lo, the immortal reality! Through the reality, lo, the immortal idea!"

To bring such advantages as we have described within reach of the poor — of the poorest — is a task of no small difficulty and magnitude, and one which we think should commend itself to the intelligent sympathy and attention of all who have at heart the better status and adjustment of society, for it is to this larger end that such a scheme finally points. Let us add, however, that it is the children of the rich who could profit most by these methods. Unhampered by sordid circumstance,

they could respond more freely to the improved conditions and lightly lift themselves into better modes of thought and action. The special plea which we would make through these pages is for a wider, more liberal, and "disinterested" interest in education in general.

"Man cannot propose a higher object for his study than education and all that pertains to education." So says Plato; but in America, in spite of public schools and compulsory instruction, this would not seem to be the common verdict and attitude. Education has grown perfunctory, political. It has become one of the "machines" of the state and of an industrial society. Teaching is too often looked upon as a drudgery, a means of livelihood when all others fail. "Will it pay? Can one get a living by it?" This is the test to which many a high calling must descend in these days. With the poor it cannot be otherwise, for the stress is always upon them, and the cry is ever ringing in their ears. But the rich—have they no place to fill, and no duties to perform in this direction? If not actually within the ranks, why should they not take the lead as superior and commanding officers?

We have captains of industry and finance. Why have we not captains of education—men of leisure and culture, capable of enthusiasm and initiative, ready to throw themselves into such a cause and give it their earnest consideration, their generous and active support!

Among the Greeks, Plato, Socrates, and Epictetus were the teachers. Where shall we look for our great leaders, masters, patrons, even, who will see education in its true light, and force us to recognize teaching as one of the grandest of the arts—the art of arts, for it goes to the building up of the artist himself, and of ever nobler types of humanity?

* *

A Democratic Government in the Colleges.

THREE general systems of the government of college students are now practiced. One may be called the monarchical. It is the traditional and the more common system. Under it each student is the subject of certain rules, in the making of which he had no voice, and obedience to which is a condition of his remaining in college. A second system is the absence of any system. Under it the college abdicates all attempts at the personal supervision of the moral character and behavior of its students. It tacitly declares that its purpose is simply intellectual. When it has provided instruction and offered opportunities for examination, its duty is done. This view is a favorite of the German universities. A professor at Halle told the president of an American college that "the professors assume no responsibility for the personal character or behavior of students; they are employed to give lectures and not to govern students." The third system may, for the lack of a better term, be called the republican or democratic system. According to its provisions the student may have some voice in forming the college laws; if he breaks these laws, he may be judged by a jury of his peers; and he may exert a constant and strong influence upon the official action of the college Faculty.

That the monarchical system of college government is not well adapted to the present generation of students is evident. It is the product of a time when students were boys of the age of fifteen, and not men of nineteen, as they now are at the close of their freshman year. Its application is liable to result in the

"rebellions," the disorders, and the disturbances, either petty or serious, which characterize too many colleges. It is also evident that neither the college nor the parent is willing for the student to pass four years free from all guidance and restraint. The experience of the German universities in granting their members such liberty does not furnish a recommendation for its adoption in the American college. The republican system, however, appears to possess many and great advantages and few and slight defects.

As long ago as 1870 the students of the Illinois Industrial University, at the suggestion of its president, voted to try the experiment of self-government. They made laws regarding all those forms of disorder to which the colleges are generally subject. The penalties consisted of fines varying from a few cents to five dollars. Certain officers for the execution of these provisions were elected by the students, and others were appointed by the president. "Obstinate culprits," writes the president, "and those who refuse to pay the fines, were to be reported to the Faculty, who retained all power to suspend or expel a student." Several years ago Amherst College introduced a similar system into the government of its students. It is based upon the principle that a man admitted to the college "is received as a gentleman, and as such is trusted to conduct himself in truthfulness and uprightness, in kindness and respect, in diligence and sobriety, in obedience to law and maintenance of order, and regard for Christian institutions as becomes a member of a Christian college. The privileges of the college are granted only to those who are believed to be worthy of this trust, and are forfeited whenever this trust is falsified." This principle, so admirably conceived, resulted in granting to the students greater liberties than they had before enjoyed, and also allowed them to elect a representative body who should consult about such matters as the president might bring before it.

Although Williams College and Harvard have introduced no system of such elaborateness as are the methods just named, yet they have provided for a standing committee of the students which consults with the officers relative to questions of mutual interest. The Harvard body consists of twenty-four students, and, if its influence in fostering good order has not been great, the reason is that of late years the college has been free from many forms of disorder with which sister institutions are afflicted. The representative body of Williams' students is composed of three members chosen from each class. Selected at first to consult with the Faculty regarding a serious college disturbance, it has become at the present writing a permanent feature of the administration.

These systems of college democracy differ. Each possesses peculiar advantages and defects. An advantage common to all is that they tend to promote right feeling between the students and the officers. The general method tends to remove that misunderstanding which lies at the basis of most disturbances. It tends to dissipate that sentiment, which students so naturally entertain, of unjust treatment on the part of their officers. It tends to assure students that the Faculty chiefly desires their welfare. In the common relation of professor and student indifference gives way to regard, and perhaps antipathy to friendship. The system, also, is of special worth in fitting students for the

responsibilities of active life. It fosters a proper spirit of independence. By it, moreover, the officers are relieved of many harassing cares and perplexities. The task of administration is greatly simplified and lightened. The greatest advantage, however, consists in the simple fact that the order and discipline of the college are promoted. President Seelye writes that "it is believed by all here that never before was there such good and healthy work done in college, nor such pleasant relations between the students and teachers, or among the students themselves, as since the new system was adopted."

A peril to which this system is liable lies in the danger of over-elaboration. It may be made so heavy as to fall of its own weight; so intricate that only an undue proportion of attention can secure its effective operation. To this peril the method as practiced in the Illinois Industrial University, after thirteen years of use, finally yielded. Other perils also might be pointed out; but the advantages are of so great weight that the system in some form should be applied in every one of the four hundred colleges of the United States.

MINNEAPOLIS, MINN.

An Attempted Division of California.

IN the History of Lincoln, in the last July (1887) number of this magazine, the authors say:

"Still, the case of the South was not hopeless, . . . there remained the possible division of California."

In this connection it may be of interest to your readers to recall a fact now generally forgotten, even by the oldest inhabitants of this State, that the "division of California" was actually attempted, and preliminary steps thereto consummated.

In "The Statutes of California, passed at the tenth session, begun on Monday, the 3d day of January, and ended on Tuesday, the 19th day of April, 1859," may be found an act, the title and first section of which read as follows:

"Chapter cclxxxviii: An act granting the consent of the Legislature to the formation of a different Government for the southern counties of this State.

"Approved April 18th, 1859.

"Be it enacted, etc.,

"Section 1.—That the consent of the Legislature of this State is hereby given, to the effect that all of that part or portion of the present territory of this State, lying all south of a line drawn eastward from the west boundary of the State, along the sixth standard parallel south of the Mt. Diabolo Meridian, east to the summit of the Coast Range; thence southerly, following said summit to the seventh standard parallel; thence due east on said standard, parallel to its intersection with the north-west boundary of Los Angeles County; thence north-east along said boundary to the eastern boundary of the State, including the counties of San Luis Obispo, Santa Barbara, Los Angeles, San Diego, San Bernardino, and a part of Buena Vista, be segregated from the remaining portion of the State for the purpose of the formation by Congress, with the concurrent action of said portion,—the consent for the segregation of which is hereby granted,—of a territorial or other government, under the name of the 'Territory of Colorado,' or such other name as may be deemed meet and proper."

Under this statute the governor submitted the question to the people of the southern part of the State at the next election. The two-thirds vote required by the act was cast in favor of a division of the State, and this result was duly certified by the governor to the President of the United States.

Only the "southern portion" was allowed to vote, and there was the usual beautiful disregard of constitutions.

Why the scheme was carried no further, the history of subsequent events shows.

Leon F. Moss.

LOS ANGELES, CAL.

NOTE.

SINCE the appearance of the paper on Colonel Rose's Tunnel at Libby Prison, in this magazine for March, we have been informed that the address of one of the participants in the escape, Captain John Lucas, is Rowland, Limestone Co., Alabama.

BRIC-À-BRAC.

Ole Settlers' Meetun.

BE'N to that ole settlers' meetun !
An' of all the reg'lar beatun
Times, I think 'at beat 'em holler !
I jist bust that paper collar
Into flinters—I jist laft
Till I thought I 'd go plum daft!
Who wus there? Now ast me that—
Tell ye who *wa'n't* there, right spat!
Ever' man I ever knowed
Come by the load.
Down ever' road!
Oh, the county fair
Wus jist nowhere !
I shuk hands, an' *shuk*, an' *shuk* !
Thought 't wus jist my ornry luck
To shake my hands off then an' there !
Blame sight harder 'n shuckun corn—
Biggest time sence I be'n born !

Well, ole Zenas Gumper thrum
Hoosierville, ye know, *he* come—
Ole Squire Truitt an' his darter—
Reason Brown, an' Increase Carter—
All the Jinkses!—ole Aunt Sue!—
Womern' childern, all come too!—
Amos Cockefair jist sailed in,
Pullun that long beard on his chin—
Then Nat Womsley—you know how:
Chawun the cood jist like a cow !
Well, I could n' name 'em thoo,
They wus jist a reg'lar sloo
Of the Hinkles, Potters, Skinners—
With their famblies an' their dinners!
An' them dinners 'd cure sore eyes:
Valler-legged chickens 'n' punkun pies—
Dumpluns big 's a feller's head—
Honey, 'n' *ole salt-risun bread* !

Uncle Johnny tuk the cheer—
Did n't speak o' him? Don't keer,
You might *spusun* he was *som'ers* near!
Think I set the census down
Of the county or the town?
Talkun 'bout the census now,
Ole Squire Truitt ups an' 'low:
"I jist taken the fust 'at ever
Ware tuk on the Wabash River,
'Fore the ole canal ware dug,
When the Injuns come an' drug
Fellers jist right outen bed,
By the top ha'r o' their head,
Sculped 'em thar an' killed 'em dead!
Nothun like the ole times now—
Time goes back'ards anyhow!
Ole folks mostly passed away
With the good things o' their day,
When we all wore homespun clothes
Jist as happy, I suppose,
As the young folks air to-day,
Jist as peart, too, ever' way!

Schools ware better when we had
Jist log cabins an' a gad,
Winders jist a hole 'n the wall,
An' no dests or books at all!
Silver dollars then was scaice,
Blame sight bigger 'n full moon's face!
Whisky ware the rulun speart—
Coon-skins good, but nothun near 't,—
Run like worter at elections
An' house raisuns, in these sections!
Piety ware stronger then—
Seemed 'at hardships *mellered* men,
Made 'em more onselfish like—
Best uv neighbors you could strike—
Set on the fence a-whittlun sticks,
Talkun Scripter 'n' polutics—
An' they sometimes differed too,
An' I tell *you*
Air was sometimes middlun blue!
But they 'd smooth it out again,
'N' 'en swap hosses 'n' part like *men*!"

Uncle Johnny tuk the prize
As the oldest settler heur,
An' he dainced a hornpipe thur,
Right on the platform 'fore our eyes,
Yessir, 'n' 'at man knows more lies
'N any feller anywhur!
Killed more Injuns, wolves, an' bear—
Built first cabin, raised first corn,
Hilt first meetun, fit first fight,
Got up the first county fair—
Brung first circus 'n' side-show there,
His son Ben first Hoosier born,
Uncle Johnny 's jist a *sight*!
Jist to show ye—some un told
How they laid some wolves out cold:
Said one time they met a pack,
They jist whack 'em in the back
With the butt-end uv their gun,
An' they killed 'em ever' one—
Well, they said,
Wus so many laid thar dead
Could n' count 'em—not one lef',—
They wus well nigh caved theirse'f!
Then Uncle Johnny *ris*, an' holler:
"At 'ere yarn's too tough to swaller,
But I know one 'at air a fack!
Somp'm' lack
Forty yur back, my big dog
Fell in the worter off'n a log,
Jist up heur on Raccoon Crick—
Jist that quick
Fish as big as ary a whale
Grabbed that whelp jist by the tail—
Well, I *mistook* ef 't did n' swaller
That dog clean to its arn collar!
Fish swnm off an' dog jist ye'pt—
I did n' see how 't could be he'pt!
Party soon the dog got mad—
Fish ware feelun *middlun* bad!
What ye think that 'ere dog do?

Turned an' chawed 'at fish in two!
Then he struck out fur the shore—
Never gut him a-fishun no more!"

While the ole man was a-tellun
'At 'ere tale the folks kep' yellun,
Till he put the cap-sheaf on,
'En he seen 'at he had gone
Leetle furdur 'an he orter—
If ye 'd th'owed a st'eam of worter
On that crowd they would n' be'n
Any glummer 'n they was then!
You 'd 'a' laft like anything
If you 'd 'a' heern ole Aunt Sue sing
Ole-time love-songs fur a prize—
Good 'eal smoothe 'n you 'd surmisel
Cain't jist reecollect—
I cain't carry a chune, nohow—
Make a mess uv it, I speck—
Try it though, I vow,
If 't breaks my neck!

"As I was a-walking one morning in June,
Fur to view the fair fields an' the meadows in bloom,
I met a fair damsel, she looked like a queen,
With her costly fine robes an' her mantle uv green."
That 's as near as I can git—
Hearun her was funnier yit!
Then ole Uncle Johnny got
A feller—kindo heavy sot—
Majors was his name—to play
Fiddle-chunes the rest o' the day;
Played ole "Rye-Straw" an' "Gray Eagle."
'N' 'en the geurls commenced to giggle
When they called fur "Leather Britches,"
An' a string o' ole chunes sich as
That, an' then he let 'er loose
On "Lost Injun" an' "Wild Góose,"
"Big Piny," "Walls o' Jericho!"
Lord! our feet commenced to go!
'Fore he 'd hardly drawed his bow!
Cur'us how a feller feels
Daincun them ole rattlun reels!
Wusht ye could 'a' seen them folks
Hoppun round an' crackun jokes,
Gray ole womern an' ole men
Jist as young 's they 'd ever be'n,
Rakun up the ole-time fun:
Apple-paruns 'n' quilun-bees,
Spellun matches, an' times like these—
Never thinkun of the sun
Till they noticed it was gone
An' the night was comun on!
An' ole Johnny says to me,
As we started home, says 'e:
"Now, dog-on, ef 't did n' seem
Ole times come back in a dream!"

Richard Lew Dawson.

A Lost Opportunity.

"SHE comes!" I hear the murmur of
The leaves that rush to meet her,
The joyous carol of a thrush
That splits his throat to greet her.

Through Autumn's shimmering mist she comes,
That veil for Summer's dresses,
With Winter's diamonds at her throat,
And Spring flowers in her tresses.

The baby stars laugh out in glee,
The jasmine buds wax brightly,
The moonbeams dance about her feet,
The night-breeze fans her lightly.

Ah! well I know those cloudy skirts,
And laces that enfold her!—
That graceful poise of dainty head,
Those curves of cheek and shoulder!

With rapturous joy I think that I
Shall soon have held and kissed her—

A spring—a clasp—a little shriek—
Confound it! 't was my sister!

G. Courtenay Walker.

To John Burroughs.

O GENIAL John! beneath the shade
Why do you grope and peer and creep so?
Aha! you seek the winsome maid,
The dainty, darling nymph, Calypso.

But vain your quest from east to west,
From Marblehead to Tallahassee;
For long ago I sought her, John,
And found, and wooed, and won the lassie.

She's mine! she's mine! and mine has been
More years than e'er she knew Ulysses.
For me she waits her bower within,
For me she keeps her ruby kisses.

In *Arbor vite's* deepest shade
With other fairy forms I found her.
The shamrock was her waiting-maid,
And *Hypnum splendens* nestled round her.

So coy, so pure, my word upon 't
Not e'en a humble-bee had kissed her—
But come in May-time to Vermont,
I 'll introduce you to her sister.

F. Blanchard.

PEACHAM, VERMONT.

June 21st.

SAID he: "Did you recollect, my dear,
That this is the longest day in the year,
And so happy a one, that I 'll never regret it?"
"I did know," said she, "but you made me forget it!"

George Birdseye.

Uncle Esek's Wisdom.

VICES, like misfortunes, seldom, if ever, come singly.

HE who has no enemies has no friends—that he can
rely upon.

THE most economical man is the one who can spend
the most money to advantage.

HUMOR is perennial, but a jest won't bear laughing
at but once.

BEAUTY has no rules; or, rather, it has so many that
no one can define them.

DEBT is a good deal like the old-fashioned wire
mouse-trap—the hole to get in is four times as big as
the one to get out at.

IF I could write three lines that could not be im-
proved upon, I would limit my literary fame to them
as long as time lasts.

SINAI AND THE WILDERNESS.

SINCE more or less peril attends the long journey over the traditional route of the Israelites from the "Land of Goshen" to the "Mount of God," the first care should be to secure an honest and brave dragoman.

My trust was placed in Mohammed Achmed Effendi Hedayah of Alexandria. We left Cairo one morning in February and rode through the land of Goshen by rail. We arrived at Suez before dark, and took up our quarters in a street as curious as the Mouskee in Cairo. Our coming had been heralded by our body-servant Abdullah, who preceded us to take care of our camp equipage and to secure a boat for our passage across the Red Sea.

The sail was a lovely one of about two hours, including a halt at quarantine. Our camels awaited us at the Asiatic quay, and in an hour they had carried us to the "Wells of Moses." Only a small spring of brackish water was found at the foot of a palm, but, said our devout dragoman, "it is the very place where the Israelites first encamped." Moses here sang the song of deliverance, and here Miriam's sweet tones led the hearts of the Israelites away from their tribulations.

What an event in my life it was, that first night in the desert! Everything looked larger and farther off than usual, except the stars, which seemed to come down into the clear atmosphere like incandescent lights inside their globes. The pages of a new, great volume were turned over before me, presenting all the strange, vague images of the Arabian Nights' Entertainment with lifelike realism.

The Bedouin attendants had arranged their camels on the ground in semicircular groups. Against the inward-turned haunches of the beasts our camp luggage was placed for protection from marauders. In the center of each semicircle a fire of brush and twigs had been kindled. Around these fires the more idle of the swarthy fellows squatted, and toasted their bare shins while they spun their wondrous tales and waited for their evening meal of barley cakes to bake in the hot ashes. A few of the more industrious pounded beans in stone mortars for camel fodder. This weird night-scene was made to look all the more picturesque by the red glare caught upon the faces of the Arabs, and by the twinkling high-lights which played from one awkward, protruding camel-joint to another.

We dined at 6 o'clock P. M. Our first meal in the desert was like that which followed at the end of each day—soup, boiled chicken, mutton, beans, potatoes, lettuce, bread and butter, rice pudding, oranges, nuts, figs, mandarins, and Mocha coffee. Of course as the days went on the supply of delicacies became exhausted, but we always had food enough to satisfy our enormous appetites. Breakfast consisted of meat, potatoes, oatmeal, fruit, and coffee. At noon a halt was always made, a small tent pitched, and a cold lunch partaken of chicken, eggs, fruit, and tea sufficient to sustain life until a new camp was reached at the close of the day.

Our tents were supplied with Persian rugs, an iron bedstead, a small table, and a metal pitcher and basin.

Our first sleep under cover of the tent was undisturbed until daybreak, when the growling of the camels caused us to abandon all hope of further rest. An early start was made. When our caravan rose from the desert I could see the net result of Hedayah's care and tact

and enterprise. There were seventeen camels and twenty-one attendants.

When I first saw the camels, one foreleg of each was bent up and a strong cord tied around the joint, so that the beasts, thus hobbled, could not stray out of sight. When all was made ready for the march, these bands were loosened. Upon the camels' humps were tied our tents and tent poles; casks of water, padlocked to prevent the camel drivers from stealing the scanty fluid; great boxes of provisions; sacks of charcoal and a sheet-iron stove; crates of oranges and hampers with eggs and cooking-utensils; coops of live chickens, pigeons, and turkeys; beds and bedding; and twenty solid leather trunks of photographic plates. In the caravan went two live sheep to provide fresh mutton when wanted. Six riding-camels brought up the rear. These last were saddled for the four "howadji," Hedayah, and Abdullah, whenever, tired of walking, we chose to mount them. Each camel was attended by its driver, who was usually its owner also, and took good care that it was not overtaxed.

Every night all this "outfit" had to be taken apart, assorted, and shaped into the conveniences of camp. Every morning it had to be loaded for the day's travel amidst the growls of the camels, the screeches of the

Bedouins, and the earnest commands of our dragoman. I never could decide which was the best camel or who the least profane of the Arabs. If I fixed upon one as my good camel, the next morning I would find him protesting against every pound placed upon his ugly hump. If I ventured to call Ali or Yusef my good boy, the next time we broke up camp I would find them trying to sneak off with a light load. Moreover, it cost me fifteen days of anxious watching to find the rooster whose crowing awakened me before light every morning. Each morning on hearing him outside my tent I quickly peered through the door and detected him. Abdullah was thereupon ordered to "off with his head" for the coming lunch. The next morning a cheerful voice greeted me as usual. Not until fifteen premature and unjust executions had been perpetrated was the correct chanticler caught. He was the last of his company, and died because he could not take a hint.

The first day of travel was one of rare pleasures and surprises. Instead of having to plow knee-deep through desert sand, as I had anticipated, there was a gravelly bottom to travel upon. The air was clear and fresh, but the sun was merciless and the heat reflected from below was intense. Nearly all day the blue sea was in sight. The mirage lifted long groves of tall palm-trees, which seemed to beckon us to a welcome shade; but when we diverged a little from the track to see if they were real, the delusion disappeared and only the mountains of Tih, far over on the Egyptian side, were seen.

The second night we encamped at Wady Sürdür, where the bitter wells of Marah were visited. Only by digging in the sand could we find even salt water. But at Elim, "where were twelve wells of water and three-score and ten palm-trees," we found abundance of fresh water and a lovely spot upon which to pitch our tents for the third night. During the day we met a caravan of fifty Russian pilgrims returning to Suez from Mount Sinai. All but three were women, and all were mounted upon camels. They came from St. Petersburg. Halting,

THE WELLS OF MOSES.

they saluted us and commended us for our "holy zeal in undertaking the dangerous and difficult pilgrimage to the Mount of God."

They were in charge of a number of Bedouins, headed by Sheik Mousa, the king of all the Bedouins in the Sinai peninsula. He had been engaged as our escort and now joined us. How noble and patriarchal he looked seated upon his fleet dromedary! He was my ideal of a Bedouin chief. For forty-five days we were together, and I found him as kind and true as he had been represented to me. He came to our lunch tent at noon to plan for the journey, and after the usual time-absorbing salute had been made a presentation ceremony followed.

A rich scarlet robe of silk, lined with green, had been brought from Cairo as a gift to the Arab king, and it fell to my lot to make the presentation speech. At the close I was requested by the king first to try on the royal robe that he might for himself see how it looked. I was a little taller than he, and if the robe fitted me nicely, it would do for him. I assented, whereupon he promised me a brother's protection through the tribes of his kingdom, and agreed to intercede with the sheik at Akabah for our safe conduct to Petra.

This ceremony ended, a still more picturesque scene followed—the discussion of the journey to be taken. With his fingers Mousa drew upon the sand a map of the pear-shaped Sinai peninsula. A depression at the right was the Red Sea. A similar one on the left served for the Gulf of Akabah. An English walnut served to mark the locality of Mount Sinai, and the oases were indicated by chicken-bones. An egg-shell served for Akabah and an orange-peel stood for Petra, while bits of stones served to show where tribes of Bedouins were probably encamped. Winding lines were drawn in the sand to represent the

wadies which led from one place to the other, the sand which rose at each side of the royal finger serving to mark the chains of mountains over which we must travel. Then the whole map, thus laid out, was discussed, and the chances of escape from unfriendly tribes were considered. The map I could readily

THE WELLS OF ELIM.

understand, and the eloquent gestures of my two companions—for such they became—were not hard to interpret. It was finally decided to follow the coast where practicable, and at other times to keep to the wadies nearest to the sea.

After the consultation closed we moved on through Wady Gharandel to Elim. Each hour the country about us grew more and more picturesque. The red light of the setting sun shone upon some rocky cliffs in the distance near the sea, until, the sun gone, the Arabian moon changed them into silvery profiles. At about 8 P. M. we found our tents at Elim, with those of another American party pitched near them.

The hills about Elim are several hundred feet high. The oasis seems charming to one after having traveled over the dead desert for

several days. Groves of palm, acacia, juniper, tamarisk, and colocynth abound; and among the wells is one living, bubbling spring, from which we drank and took a fresh supply of "sweet water."

Here and there tiny wild-flowers were found. At every turn in the wady the hills grew more shapely, and lovelier in color. Elim is a lovely spot, the clear waters and shade-giving palms of which delight the desert traveler. On the

like an immense wall, a great mountain range arose, and cast a grateful shadow over our pathway. It led us directly to the gorgeous colored side of Jebel Taiyibeh, whose cones and cliffs were built up of strata running diagonally from the sea, of brown, amber, orange, red, purple, white, gray, marl green, and black.

How glorious was the sight of so much water once more! We could not drink it, but it was cool and clean, and we could enjoy a

BY THE RED SEA.

way to the sea, south and east, two rivals to "the true Elim" were found. The first is but a flat, damp spot, scarcely worth mentioning; the second is a somewhat extensive oasis, and has a tiny stream running through it out into the wady and thence to the sea. But our unanimous vote accorded with tradition in believing that all the honors of Elim belong to the first oasis.

Now came a series of surprises. As we broke through the grove of palms, suddenly,

bath in it. It united its hoarse bass notes with the plaintive treble of the tiny stream which near by gave up its individuality to the waves. Here the mountains seemed to halt and draw back. Passing them, we turned to the left and followed down the coast. Beyond a long line of naked peaks we caught the first glimpse of Mount Serbal. Over the sea, we could once more make out the Egyptian hills, just as the murmuring Israelites saw them when moving along this very shore.

BEDOUIN TYPES.

That night we also "encamped by the Red Sea," in "the very place," we were assured, "where the children of Israel encamped after leaving Elim." An extensive plateau is here, bounded on three sides by picturesque hills and on the west by the Red Sea. It is an enchanting spot. The colored hills resemble long rows of towers with pointed roofs, one tier reaching above another, while the peaks on the Egyptian side seemed then like faint gray clouds. It is truly a desert place compared with Elim. It proved much less friendly in its treatment of the stranger, for twice during the night it sent airy emissaries ashore to pull out my tent-pins from the conniving sand and to tumble my tent down upon my head.

Next morning the camera caught the choicest of the curious rock-pictures. Nature had been in a freakish mood—it was one of those efforts of hers which defy pen, palette, and photography. Sometimes the elevations seemed like the heaped-up refuse of a foundry; at other times as if the entire circuit had been undermined and thrown back by the searcher for gems as he delved into the mysteries of the mountain. The spaces between gave the shadows a chance to help bring out the admirable forms into bold relief. Sometimes the mountains fairly stepped into the sea, or had tumbled down great masses from their steep inclines to make it rougher for the pilgrim. The sea, too, presented some fine studies in iridescence. One moment the glistening water lies as calm and placid as a lake of ice; suddenly it is all in a quiver, and its broad expanse becomes broken up into belts of the most striking colors.

Towards midday we began to move in an easterly direction and our path ascended. Frequently we climbed to what resembled the crater of a volcano. Grouped together below was usually found a varied collection of forms

Bedouin Rock house.

PEDDLING IBEX HEADS.

like spires, pinnacles, domes, and stalagmites of color reminding one of the scene within the awful throat of Mount Vesuvius.

Towards night the old-time Egyptian copper mines of Māghāra, in Wady Kenēh, were reached. The ruins of an old temple near by bear the cartouches of Rameses II.

We encamped that night in a deep valley the surroundings of which reminded me of those of Crawford Notch, only the mountains were bare of all foliage, and there was no lake nor any tumbling cascade.

During the next day we passed through the "Written Valley," where Sinaitic inscriptions are found plentifully upon the rocks. In other respects the surrounding mountains are less interesting than those already passed on the way.

A small land-slide came tumbling down on the left. It was started by a line of sheep and goats which stood, with an amused sort of look, watching our caravan. Their shepherdess attempted to hide from our sight, but persuasive backsheesh induced her to submit to the ordeal of the camera. She refused to remove her face-veil, but permitted a full view of her trinkets. While posing her I made the following inventory of her neck and head gear. On the top of her head four trousers-buttons were united by cords in the form of a Greek cross. Near each temple was an iron harness ring, one and one-quarter inch in diameter and one-eighth inch thick, tied to the lower combination. From these rings down to the edges of the face-veil ran two pieces of iron and brass jack-chain. From the rear button, over the part in the hair, a cord ran backwards. Bunches of beads hung from the cords at her temples, and a lot of beads with a silver disk as large as a Bland dollar hung from each ear. Three bracelets of turquoise and amber graced each arm, and from one of them dangled a brass navy button. There were rings on her fingers and thumbs. Nineteen dazzling necklaces hung around her neck—some of turquoise, some of amber, while some were of silver, and one was made up of the iron ferules from the sticks of tourists' umbrellas.

Mount Serbal was often seen during this afternoon. Before night we came to "the rock struck by Moses," as recorded in Exodus xvii. 6, and referred to so graphically in Numbers xx. 7-11. The rock is isolated. It is 20 feet wide by 12 feet high. A deep cut runs down its side—"the mark of Moses' rod"—whence flowed the waters of Meribah and Massah. The mountains on all sides appeared more and more impressive as we climbed the steep pass which led us to the oasis of Pharan, or Wady Feiran. Above all others we saw the jagged peaks of the giant

Jebel Serbal—different in form and in color from its neighbors.

Here we came to a steep, narrow defile, and our carefully stepping camels were made more careful by the quick, sharp cries of their drivers—"Ooah! edock! hutta!" ("Look out! step carefully!") which admonition seemed to be repeated to us by the echoing peaks as though warning us not to approach. But the odor of apricot, orange, peach, and cherry persuaded us upward and onward. Soon we arrived at the oasis and heard the song of a tiny brook, and soon saw small gardens and rude stone houses. A lad met us and gave us some cherries which tasted like apples. The lovely bulbuls were flitting among the trees, and regaled us with their sweet, wild notes, and for the first time we heard the plaintive bleat of a baby camel. Our baggage camels had arrived before us and our tents had been pitched near the stream. My own tent door opened upon the wide, steep Wady Aleyāt, which is lined by lofty peaks of gneiss, the varied colors and eccentric shapes of which reminded me of the fantastic trickery of the kaleidoscope.

We were among the relics of the ancient city of Pharan, or Paran, and could see monastic ruins on nearly every mountain incline. Carefully irrigated palm groves, rice fields, and fruit orchards abounded, and all were in their spring-time glory. We saw a Bedouin gathering manna. We could see the very crags upon which the sentinels stood, whence, in olden times, when danger approached, they gave the alarm to their fellow-townsmen below. It was here that Mr. George Ebers placed the scene of his charming romance "*Homo Sum*."

In front of my tent, at the right, I could see the battle-field where Israel contested with Amalek for possession of the very stream which was singing to me at that moment. In the distance the five points of majestic Serbal rose far above the intervening mountains. I was "pitched in Rephidim," and remained four days. The points of interest there are almost as numerous as they are at Mount Sinai.

The ruined houses of ancient Pharan are all built closely together, and are of unquarried stone, except the doorways. Here dwelt the persecuted Christians and those who came here to shun the temptations of the world by hiding from them.

Near by, in the face of a neighboring jebel, or mountain, are the caves of the anchorites. In each of these numerous narrow excavations, sheltered only by the low stone roof, once dwelt, year after year, a man whose only bed was of dried herbs, and whose only garment was a sheepskin. Men who had grown tired of

the world came here to carry out their own independence and particular mode of penance without subjection to any other authority than their own conscience. Almost every rock has been an altar or has echoed the amens of an anchorite. From the fertile plateau an

summit of the mountain affords a magnificent view of the surrounding country. The wadies which encircle it are as level as a race-course. Joshua and Amalek could have pursued one another endlessly there but for the uplifted hands of Moses.

WADY FEIRAN, SITE OF THE BATTLE BETWEEN ISRAEL AND AMALEK.

isolated hillock rises which, seen from a height, looks like an island in the oasis. On its top are the ruins of a church and of the "Oratorium." Lining the pathway leading to the church are several ruined chapels. This island, so to speak, is Jebel El Meharrat—the "Mountain of Moses."

Here Moses was stationed during the battle of Rephidim, and prayed for the success of Joshua against Amalek, while Aaron and Hur held up his hands. On all sides are remains of the walls constructed by the citizens of Pharan to fortify themselves against the attacks of the marauding Saracens. The

The whole battle could be witnessed by the great commander, no matter at which side of the mountain the skirmishes took place. The largest space, and therefore the most probable place, is on the side towards Mount Serbal. Close by, still full of life and health and good cheer, is "the innocent cause of the war," the lovely brook which waters the palm groves and gardens of Wady Feiran.

The climb to the highest peak of Mount Serbal is avoided by many tourists because they do not believe it is the true Sinai, or because it is too laborious. We started up the wady on camels, at 5:40 A. M. The nearly

THE ASCENT OF MOUNT SERBAL.

full moon was still shining, and bathed with a tender radiance the rugged cliffs. Two hours of slow winding and climbing over the porphyry-strewn path brought us to a deep ravine between two of the five peaks of the noble mountain. There we dismounted and continued the ascent on foot.

The ascent grew more and more difficult — sometimes almost perpendicular. After much hard work a crag was mastered that looked from below as though it reached the clouds; but

beyond it was disclosed another height more difficult to gain and more dangerous than the first. Finally a narrowing of the gorge was reached, and we turned about to obtain a backward view. We could then overlook many of the points referred to, and see the whole line of the Wady Áleyát, up which we came on our camels. Beyond are hundreds of peaks, over whose granite shapes narrow lines of red porphyry creep like enormous serpents. At the left was a bare perpendicular cliff, fully

three thousand feet high, with not an inch friendly enough to offer a foothold. The sight was appalling. We now turned to our work again and clambered on, sometimes on all fours, resting wherever a hospitable rock offered us shade. Frequently we found small quantities of ice and snow, and made some iced tea.

At last the summit of the highest peak was gained. So clear was the atmosphere that we could overlook almost the whole of the Sinai peninsula. On the one side was the sea where Pharaoh's host wrestled with the returning waves. On the other, Solomon had sailed his fleets. On the south side the "Mountain of the Law" stood forth, and I know not how far one could see through the clear atmosphere beyond. There seemed to be hundreds of mountains in view sleeping at our feet. Among them crept the light serpentine wadies innumerable, including those we had traveled during our journey from Suez and the ones we must follow to reach Mount Sinai and Akabah. It was down towards the south where Moses lost his way.

To me the most expansive view seemed to be towards the west, where the line of the Red Sea glistened like a silver cord bordered by the mountains beyond, and fringed more roughly by a line on this side. We saw the two caravan routes which led through deep and stony gorges to the sea, and through which pilgrims for thousands of years had come to worship God; they were sometimes followed by natives of the peninsula who came to sacrifice to *their* gods—the sun, moon, and stars—upon the very peak where my camera was placed. Upon the same height great beacon-fires were often kindled to guide and warn the mariners of both seas. It is still called "El Madhawwa" (light-house) by the Arabs. Sinaitic inscriptions are plentiful upon the rocks.

Grand as the views are, they did not impress me as much as those obtained at the base of the perpendicular cliff during the ascent. Several hours were occupied with resting, work, and observation, and then, reluctantly, the perilous descent was undertaken. Sometimes a rock was started that would crash and split into a thousand pieces as it rolled. Hedayah called it "a good Roman road," but our attendants were nearer right when they named it "the road of the sweater." Just as we reached our waiting camels at the base, the sun was again playing upon the five points of Serbal. Then the light went out; the wady grew cool. With delight we hailed the rising moon, for then our sure-footed camels stepped with more confidence and we felt safer.

Next day, at 7:30 A. M., we broke camp at Wady Feiran. The gardens and groves of

the oasis continued for over a mile. A fellah was seen irrigating the land with an Egyptian shadoof. Flocks of sheep and goats were numerous. Frequently the Sinai group could be seen for a moment, though far to the south. The day was so hot that we did not venture to pitch our lunch tent at noon. We ate and rested beneath the shadow of a great rock, much to the amazement of a Bedouin shepherdess who watched us on the sly.

Early in the afternoon we reached two perpendicular cliffs about sixty feet high and only a few feet apart. They form the "Gate of Sinai." About 6 P. M. we arrived at a point in Wady Hawá where we expected to find our tents ready for the night, but no tents were to be seen. Abdullah had misunderstood his master, and had camped in a more distant wady with a similar name. We were not lost, but our tents were, and it took three hours of tired riding to discover our camp.

We reached Nagb Hawá the next afternoon. (A nagb is a rough mountain pass, filled with rocky debris driven down by the torrents from the steep inclines on either side.) No one who has climbed it will ever complain that "Jordan is a hard road to travel." Moreover, he will acknowledge that one of the greatest blessings accorded the murmuring children of Israel was that "their shoes waxed not old upon their feet." Frequently, while ascending this nagb, it was more comfortable for us to dismount and walk. It was more merciful to the camels too. The ascent of Mount Serbal was scarcely more difficult. At times the way seemed almost past finding out, and a "dead-lock" occurred. Trees had grown up among the rocks so as to form an impregnable wall in places. To flank these was the only way to advance.

At one point we found a tiny spring among the juniper bushes. There we quenched our thirst, lunched, and photographed the welcome little "fountain." Then the camels came, and drank the spring dry. Some of the camel drivers were indignant that we did not allow the camels to have all the water. Long before emerging from the nagb, while climbing its last ascent, the isolated group of mountains called the "true Sinai" loomed up in the distance.

It does not seem high, because it was yet half hidden from our view by the intervening hill. As soon as this hill was mastered the plain of El Raha, or "Plain of Assemblage," came into full view, with the Sinai range at its southern extreme. The combination was satisfying—convincing. Here was the one great feature the want of which prevented Mount Serbal from contesting for the honors of Sinai. There is no plain in the vicinity of

Serbal extensive enough to accommodate an assemblage as large as Moses led. But here is a vast plateau of sufficient extent, and, as we shall presently see when we view it from Mount Sinai summit, so lo-

driver, sat down beside me. He hardly seemed to understand my actions, and at last interrupted my reverie by exclaiming, as he pointed to the lofty group, "Jebel Mousa—Tayeeb!" ("Mountain of Moses—good!") He also revered it, for he was a Mohammedan.

What impresses the American traveler most sensibly here is the fact that although mountains abound, and stream-beds are more plenty than in our own White Hills, a cascade or a waterfall is never heard. When the rains fall, the water rolls down these bare, rough diagonals uninterrupted, and empties into the wadies,

WORKING THE ELEVATOR.

THE WAY INTO THE CONVENT IN TIME OF TROUBLE.

cated that Moses could overlook it all when he read the Law. This must be the "true Sinai,"—the very mountain upon which the glory of the Lord rested in the sight of the people. When facing its awful, stately grandeur, I felt as if I had come to the end of the world. How many pilgrims had come from all parts of the earth to this very spot to reverence, to sacrifice, and to worship!

I dismounted to contemplate the sublime panorama, and Elihuel, my camel

which in turn impetuously roll the torrents into the sea with great speed, before the parched earth has time to absorb more than a mere surface supply.

What a surprise, then, when, arrived at the highest ridge of the vast plateau of Er Raha, to see a bright oasis full of trees laden with the rich blossoms of spring, backed by the strange, contrasting, gloomy walls of the Convent of Saint Catherine. No location could be more charming—in the narrowing valley, nestled at the feet of the closely protecting mountains. Upon the highest ramparts are set both the cannon and the cross. It was both castle and convent we were approaching. More than once the inmates have been obliged to defend themselves against the marauder. At one time every monk was massacred. Since then more care has been exercised. We were obliged to prove our friendship before we could gain admittance. We could not even encamp in the neighborhood until our credentials were examined and approved.

Arriving at the convent wall we sent up a shout to the top. In the course of time the voice of a monk sent down a squeaky response. To a point near the top of the wall a tiny structure shaped like a dog-kennel is attached. From this a small rope was let down, to which

we attached our firman, or letter of introduction, obtained at the branch institution at Suez. This was hauled up slowly and soon answered by a great noise in the aerial kennel. Then a thick cable was lowered to us and we

and pounded upon by mallets to call the devout monks to prayer.

At the left of the campanile is a Mohammedan mosque, suffered here to pacify the Bedouins, but not used. Under the curious roofs

RAS-SUFSAFEH, FROM THE PLAIN OF ASSEMBLAGE.

were asked to "Get in and come up." But the low gate in the wall was swung open at that moment, and we chose to enter the convent by it rather than to go up by cable.

When we arrived at the quarters of the superior we saw that the cable was not let down hand over hand, but that a clumsy windlass, worked and turned by Bedouin serfs, was the power behind the throne. The combination is believed to be the first passenger elevator in the world.

From the veranda near the "lift" a fine view of the convent buildings outside the walls was had. On the right is the chapel, with its lead roof, built more than 1300 years ago. Near it is a modern campanile, reminding one of Venice. Several bells hang in it, but their ringing irritates the Bedouins, so beams of hard, sonorous wood are swung from ropes

of other buildings are the living-rooms of the monks. From the several verandas open the dormitories. A waggish sort of uncertainty prevails in the architecture.

The plain of Er Raha lies on the north in full view from the superior's piazza. On the left, or west, is the "Mount of God and of Moses." It seems as though no semblance of humanity should remain in a place made sacred by so many holy associations, but the convent is inhabited by about sixty monks varying in grades of sanctity. Nine of them yielded to our camera. A beardless youth afforded us considerable amusement. Repeatedly he came to me, with tears in his eyes, and begged for some recipe to make his beard grow. He said that he would not be allowed to read chapel service until he had a beard; that nearly all the monks but him had beards,

THE INTERIOR OF THE CONVENT CHAPEL.

been made to it, and many a costly offering has been left behind. Hanging here is one of the most valuable collections of lamps in the world, of gold and silver, richly jeweled. Screens of "crazy-quilt" wrought by queenly hands adorn the altar, while candelabra of richest bronze stand on either side; the stalls are curiously carved; the mosaic floor is of Roman richness; an old pendulum clock is here which has clicked since the time of Galileo; paintings and architectural decorations all attest to the wealth of those who have worshiped here. In the rear of the chapel is "the scene of the burning bush," backed by a rock, through a rift in which the sun enters a single cheerful gleam but once a year. In the next room, in an alabaster sarcophagus, lie the remains of St. Catherine.

The chapel services are frequent and exacting, often requiring the monks to be present in the small hours of the night. Nasal intonations, uneasy undulations, and incense-swinging make up the cheerless performance.

Many valuable books and manuscript copies of the Scriptures are in the convent library. The superior has been very chary of these since Tischendorf got away the manuscript of the Codex Sinaiticus. I found a copy of

but God withheld the boon from him. It looked to me like a case of soap and water; but I desired to be charitable, and suggested a remedy, for which he gave me his benediction.

Few places are more interesting than the interior of the chapel of the convent. Ever since the time of Justinian royal pilgrimages have

the famous "Book of the Gospels," dating from the time of Theodosius II., A. D. 766. The whole work was written in Greek letters with gold on parchment. The cover was of metal. Colored portraits of the apostles em-

The next thing to do was to ascend Mount Sinai. There are three or four routes, all of which are full of interest. We were led by one of the monks. The fraternity had constructed a rude stone stairway part of the distance,

PLAIN OF ASSEMBLAGE, FROM THE CONVENT.

bellished it, with backgrounds of burnished gold. I asked the privilege of photographing some of the pages, but the superior said, "I cannot allow it to go out of my hands."

"Very well, then," I said; "bring it out into the light of the court and hold it in your hands while I photograph it."

He generously assented to this, and I thus secured two pages of the precious Codex Aureus.

which out of respect for them we followed. The morning was glorious. We started early, that we might have the help of the clear, cool, sweet air in climbing the heights before the merciless Asiatic sun had so shortened the shadows as to deprive us of any protection by them.

After twenty minutes the old "Shrive Gate" was reached. Here in former days the pilgrims partook of the sacrament, received ab-

solution, and a certificate of church standing which enabled them to pass the second gate unchallenged. This shrive service was rendered for many years by an old monk whose devotion won for him the name of "Saint Stephen." His skeleton is preserved prominent among the bones of his brethren in the crypt near the garden gate.

party, during my stay in the neighborhood, preferred, "for the sake of novelty," to live in the convent rather than in tents. When they made their departure they assured me that they had had plenty of novelty, including a startling abundance that seemed to prove that the good work of the Virgin was intended for a former time.

"THE BOOK OF THE GOSPELS," KEPT IN THE CONVENT.

The crags and peaks which now came into view ahead and on every side were all the more impressive because the sun had not yet penetrated the shadows. In one shady place we found a small spring called "Jethro's Well," but not believed to be the "true" well. The monks have arranged so many "holy" places convenient to their convent that one may have the privilege of making a selection.

At this point I turned and looked down the gorge we had been climbing, when a most startling view rewarded me. On each side were the dark walls of the ravine. In full view below was the monastery, and the mountains east covered with the glory of the morning sun. The coloring was superb. I could not reproduce it by my art, but I caught the light and shade.

In a quarter of an hour the "Chapel of the Virgin" was reached. It is a small, homely structure of granite, and was erected by the grateful monks in honor of the occasion when the Virgin relieved the convent perpetually from a plague of fleas. Another American

The second gateway was reached just as the god of day flamed his ruddy glow up the ravine at our left. It scarcely changed the gray old stones of the massive gateway, but through its arch we saw a wondrous display of shape and color. At this gate the ancient pilgrim presented the credentials received from Saint Stephen. Then, with sins absolved and heart full of new resolves for the future, he was allowed to pass and to finish his journey to the summit of the "holy Mount of Moses."

Two little chapels erected in memory of the prophets Elisha and Elijah are next reached. In one the grotto where Elijah hid after he had slain the priests of Baal is shown. Near at hand is a depression in a rock, in shape resembling a camel's track. "It is the foot-mark of the camel of Mohammed, made when ascending to heaven with his master on his back."

Climbing on amidst the natural glories which surrounded us, we came to the "true well of Jethro." A tiny oasis surrounded it, where some flocks of sheep and goats were grazing. These made a realistic picture, and called to

THE ASCENT OF MOUNT SINAI.

mind the Bible story of the gallant young fugitive from Pharaonic justice who came here and drove away the Arab shepherds that annoyed the daughters of Jethro while they were watering their flocks. And here it must have been that Moses wooed Zipporah and won her Arab heart. Surely it was a charming trysting-place for patriarchal lovers, and even now is the beauty-spot of the climb, kept fresh and lovely as it is by the perennial snows of the sacred mountain.

Only the rugged beauties of nature allured during the next half-hour. The hardest climbing of all followed, for the blazing sun was full upon us at the left.

At last the summit of Jebel Mousa, the "Mount of God and of Moses," was reached, and we could look beyond.

In the Sinaitic group there are three points which are claimed to be the true spot where Moses met Jehovah and received the tablets of the Law. These are the summits of "Jebel Mousa," "Jebel Katherina," and "Jebel Sufsafeh." On the summit of Jebel Mousa is a rude chapel and a rudermosque, both of stone. Neither would afford much protection to a traveler during a mountain storm. Any one of the three caves under the rocks shown as "the true cave where Moses hid when Jehovah passed by" would be safer. One of these caves is triangular in shape, and is located near the chapel.

The summit of Jebel Mousa is 7359 feet above sea level, and 2360 feet higher than the convent. It requires 3000 steps to reach it. Jebel Katherina is 8526 feet high, and more alpine in its character than its rivals. From all of them the views are glorious. But the view from Jebel Mousa is disappointing, for the same reason that Jebel Serbal's outlook is — there

THE CONVENT, FROM MOUNT SINAI.

is no plain in sight where Israel could have had room to assemble. The view from Jebel Katharina is alike unsatisfactory. Let us make an observation from the summit of Jebel Sufsafeh. To obtain it we retraced our steps as far as Jethro's Well and then entered a wady to the left. Two small ravines were crossed when a third and deeper one was found, wherein a rude chapel stands, partly shaded by a small willow-tree. From this tree the peak we are about to ascend takes its name — Ras es Sufsafeh (the "Mount of the Willow"). Climbing the steep and rocky gorge ascending from the tree, we gained the summit of Sufsafeh. From that standpoint one mighty prospect of barren peaks is presented, bounded only by the desert and the seas; and there, at the foot of the

mountain, lies a vast plateau — the plain of Er Raha. It must be the "Plain of Assemblage," and it must be that this is the "Mount of God and of Moses."

I could hear the voices of the natives living in the tiny oasis at the base, more than a mile away.

The beauty of the scene is very great. No accessories of snow or river or foliage are there, and none are needed — nor distance — to "lend enchantment to the view." Would that I could picture what I saw! The rugged "Rock of Moses" lay at my feet, as black as the shadow at its side. Across the plain, on each side, the crag-crowned mountains were glowing with streams of ruby color. Nature seemed preparing for some great spectacle.

The "Pass of the Winds."

PLAIN OF ASSEMBLAGE, FROM THE ROCK OF MOSES.

The horizon was submerged in a molten sea of flame, while the sea, now blue, now green, now golden, now as red as blood, was all in a tremor. Now gray veils of misty fabric began to rise from the shadowed plain, moving to and fro like specters. Then the solid amethyst of the western sky was rent, and stripes of turquoise were discovered between. There was not a sound. Quickly, as though by the deft turning of some mighty wheel, the glorious coloring disappeared. Not even the sea could be discerned. The lights went out. The metamorphosis was hastened, the after-glow was shortened, by the prompt appearance of the pale Arabian moon. Its soft light seemed to have no influence over the deeper hollows and shadows, for the blackness of night, now spread over them, was too closely set for such gentle persuasion.

But the glorious peaks about us were clothed in a new attire. Catching the mellow light as it arose, half their height was submerged by the fog. Like a sea of silver it caught the light, and reminded me of a tented field, or of toss-

ing mounds of snow as I have seen them from Mount Washington in winter. Who wonders at the wild fancies of a people whose home is amidst such scenes?

How reluctantly I gave up my seat on the "Rock of Moses!" Again and again I turned to look upon the glories surrounding, and then descended to my tent.

An after-visit was made to the willow-tree; and then, instead of descending by the monks' stone stairway, we followed the gorge down the side of Jebel Sufsafeh opposite to the one from which we saw the "Plain of Assemblage."

Then I secured an isolated view of the summit of Jebel Sufsafeh from its eastern side. This proved a prize. On the right of the foreground a great mass of rocky debris was caught, which had thundered down from the steep inclines, no one could tell me when. The monks say, "when the golden calf was broken." To the left, beneath a pile of huge rocks, is the largest spring in the Sinai district. It is also called "Jethro's Well." I found its brink fringed with a growth of maidenhair fern as

green and lovely as any I had ever gathered in the Colosseum or in the White Mountains.

In the distance is Jebel Sufsafeh. Between the two peaks is "the very ravine down which Moses and Joshua were picking their way

"Hill of the Golden Calf," is located. Without a single trumpet-blast to warn them, the noisy idolaters were destroyed by the torrents which came down, or were buried under the confusion of rocks which followed.

RAS-SUFSAFEH, FROM AARON'S HILL.

when they heard the shouts of the worshipers of the golden calf come up from the base of the mountain." Joshua, soldier that he was, declared they were as the sounds of war. Moses, with a clearer knowledge of humanity, knew better, and was so overcome that he dashed the tablets of the Law upon the rocks.

The monks aver that it was at the very spring I have described that this scene of just and mighty wrath took place. Here the forked lightning flashed from the hands of Jehovah. It tore open the earth, twisted and turned the veins of steel-hard diorite as though they were but ribbons of green, fissured the great cliffs of granite and poured into them from the bursted arteries of rough, red porphyry, and sent the streams boiling and seething like hot lava to the base, where "Aaron's Hill," or the

The monks tell us further that "Moses and Joshua were directed by Jehovah to stay beneath the great rocks which cover 'Jethro's Well' until his mighty wrath had subsided, and that since then the supply of water has not failed." To all of these places the ages of monks have had abundance of time to fasten some tradition. "Aaron's Hill" is also revered by the Bedouins, who come once a year to the little chapel on its summit to sacrifice a camel.

The Sinai mountains and their wild surroundings seem to be just as the Book describes them—as the Great Architect constructed them. No change appears to have taken place since the followers of Moses made their departure for the Promised Land.

Edward L. Wilson.

THE GRAYSONS: A STORY OF ILLINOIS.*

BY EDWARD EGGLESTON,

Author of "The Hoosier Schoolmaster," "The Circuit Rider," "Roxy," etc.

XXVII.

LIGHT IN A DARK PLACE.

THE people who had seats in the court-room were, for the most part, too wise in their generation to vacate them during the noon recess. Jake Hogan clambered down from his uncomfortable window-roost for a little while, and Bob McCord took a plunge into the grateful fresh air, but both got back in time to secure their old points of observation. The lawyers came back early, and long before the judge returned the ruddy-faced Magill was seated behind his little desk, facing the crowd and pretending to write. He was ill at ease; the heart of the man had gone out to Tom. He never for a moment doubted that Tom killed Lockwood, but then a sneak like Lockwood "richly deserved it," in Magill's estimation. Judge Watkins's austere face assumed a yet more severe expression; for though pity never interfered with justice in his nature, it often rendered the old man unhappy, and therefore more than usually irascible.

There was a painful pause after the judge had taken his seat and ordered the prisoner brought in. It was like a wait before a funeral service, but rendered ten times more distressing by the element of suspense. The judge's quill pen could be heard scratching on the paper as he noted points for his charge to the jury. To Hiram Mason the whole trial was unendurable. The law had the aspect of a relentless boa-constrictor, slowly winding itself about Tom, while all these spectators, with merely a curious interest in the horrible, watched the process. The deadly creature had now to make but one more coil, and then, in its cruel and deliberate fashion, it would proceed to tighten its twists until the poor boy should be done to death. Barbara and the mother were awfully entwined by this fate as well, while Hiram had not a little finger of help for them. He watched Lincoln as he took seat in moody silence. Why had the lawyer not done anything to help Tom? Any other lawyer with a desperate case would

have had a stack of law-books in front of him, as a sort of dam against the flood. But Lincoln had neither law-books nor so much as a scrap of paper.

The prosecuting attorney, with a taste for climaxes, reserved his chief witness to the last. Even now he was not ready to call Sovine. He would add one more stone to the pyramid of presumptive proof before he capped it all with certainty. Markham was therefore put up to identify the old pistol which he had found in Tom's room. Lincoln again waived cross-examination. Blackman felt certain that he himself could have done better. He mentally constructed the questions that should have been put to the deputy sheriff. Was the pistol hot when you found it? Did it smell of powder? Did the family make any objection to your search?—Even if the judge had ruled out such questions the jury would have heard the questions, and a question often has weight in spite of rulings from the bench. The prosecuting attorney began to feel sure of his own case; he had come to his last witness and his great stroke.

"Call David Sovine," he said, wiping his brow and looking relieved.

"David Sovine! David Sovine! David Sovine!" cried the sheriff in due and ancient form, though David sat almost within whispering distance of him.

The witness stood up.

"Howld up your roight hand," said the clerk.

Then when Dave's right hand was up Magill rattled off the form of the oath in the most approved and clerkly style, only adding to its effect by the mild brogue of his pronunciation.

"Do sol'm swear 't yull tell th' truth, th' 'ole truth, en nuthin' b' th' truth, s' yilpye God," said the clerk, without once pausing for breath.

Sovine ducked his head and dropped his hand, and the solemnity was over.

Dave, who was evidently not accustomed to stand before such a crowd, appeared embarrassed. He had deteriorated in appearance lately. His patent-leather shoes were bright as ever, his trousers were trimly held down by straps, his hair was well kept in place by bear's oil or what was sold for bear's oil, but there

* Copyright, 1887, by Edward Eggleston. All rights reserved.

was a nervousness in his expression and carriage that gave him the air of a man who has been drinking to excess. Tom looked at him with defiance, but Dave was standing at the right of the judge, while the prisoner's dock was on the left, and the witness did not regard Tom at all, but told his story with clearness. Something of the bold assurance which he displayed at the inquest was lacking. His coarse face twitched and quivered, and this appeared to annoy him; he sought to hide it by an affectation of nonchalance, as he rested his weight now on one foot and now on the other.

"Do you know the prisoner?" asked the prosecutor, with a motion of his head toward the dock.

"Yes, well enough"; but in saying this Dave did not look toward Tom, but out of the window.

"You've played cards with him, have n't you?"

"Yes."

"Tell his Honor and the jury when and where you played with him."

"We played one night last July, in Wooden & Snyder's store."

"Who proposed to Tom to play with you?"

"George Lockwood. He hollered up the stove-pipe for Tom to come down an' take a game or two with me."

"What did you win that night from Tom?"

"Thirteen dollars, an' his hat an' coat an' boots, an' his han'ke'chi'f an' knife."

"Who, if anybody, lent him the money to get back his things which you had won?"

"George Lockwood."

Here the counsel paused a moment, laid down a memorandum he had been using, and looked about his table until he found another; then he resumed his questions.

"Tell the jury whether you were at the Timber Creek camp-meeting on the 9th of August."

"Yes; I was."

"What did you see there? Tell about the shooting."

Dave told the story, with a little prompting in the way of questions from the lawyer, substantially as he had told it at the coroner's inquest. He related his parting from Lockwood, Tom's appearance on the scene, Tom's threatening speech, Lockwood's entreaty that Tom would not shoot him, and then Tom's shooting. In making these statements Dave looked at the stairway in the corner of the court-room with an air of entire indifference, and he even made one or two efforts to yawn, as though the case was a rather dull affair to him.

"How far away from Grayson and Lock-

wood were you when the shooting took place?" asked the prosecutor.

"Twenty foot or more."

"What did Tom shoot with?"

"A pistol."

"What kind of a pistol?"

"One of the ole-fashion' sort — flint-lock, with a ruther long barrel."

The prosecuting lawyer now beckoned to the sheriff, who handed down to him, from off his high desk, Tom's pistol.

"Tell the jury whether this looks like the pistol."

"T'was just such a one as that. I can't say 't was that, but it was hung to the stock like that, an' about as long in the barrel."

"What did Grayson do when he had shot George, and what did you do?"

"Tom run off as fast as his feet could carry him, an' I went up towards George, who'd fell over. He was dead ag'inst I could get there. Then purty soon the crowd come a-runnin' up to see what the shootin' was."

After bringing out some further details Allen turned to his opponent with an air of confidence and said:

"You can have the witness, Mr. Lincoln."

There was a brief pause, during which the jurymen changed their positions on the hard seats, making a little rustle as they took their right legs from off their left and hung their left legs over their right knees, or vice versâ. In making these changes they looked inquiringly at one another, and it was clear that their minds were so well made up that even a judge's charge in favor of the prisoner, if such a thing had been conceivable, would have gone for nothing. Lincoln at length rose slowly from his chair, and stood awhile in silence, regarding Sovine, who seemed excited and nervous, and who visibly paled a little as his eyes sought to escape from the lawyer's gaze.

"You said you were with Lockwood just before the shooting?" the counsel asked.

"Yes." Dave was all alert and answered promptly.

"Were you not pretty close to him when he was shot?"

"No, I was n't," said Dave, his suspicions excited by this mode of attack. It appeared that the lawyer, for some reason, wanted to make him confess to having been nearer to the scene and perhaps implicated, and he therefore resolved to fight off.

"Are you sure you were as much as ten feet away?"

"I was more than twenty," said Dave, huskily.

"What had you and George Lockwood been doing together?"

"We 'd been — talking." Manifestly Dave took fresh alarm at this line of questioning.

"Oh, you had?"

"Yes."

"In a friendly way?"

"Yes, tubby shore; we never had any fuss."

"You parted from him as a friend?"

"Yes, of course."

"By the time Tom came up you 'd got — how far away? Be careful now."

"I 've told you twiste. More than twenty feet."

"You might have been mistaken about its being Tom then?"

"No, I was n't."

"Did you know it was Tom before he fired?"

"Tubby shore, I did."

"What time of night was it?"

"Long towards 10, I sh'd think."

"It might have been 11?"

"No, 't was n't later 'n about 10." This was said doggedly.

"Nor before 9?"

"No, 't was nigh onto 10, I said." And the witness showed some irritation, and spoke louder than before.

"How far away were you from the pulpit and meeting-place?"

"'Twixt a half a mile an' a mile."

"Not over a mile?"

"No, skiereely a mile."

"But don't you think it might have been a little less than half a mile?"

"No, it's nigh onto a mile. I did n't measure it, but it's a mighty big three-quarters."

The witness answered combatively, and in this mood he made a better impression than he did on his direct examination. The prosecuting attorney looked relieved. Tom listened with an attention painful to see, his eyes moving anxiously from Lincoln to Dave as he wondered what point in Dave's armor the lawyer could be driving at. He saw plainly that his salvation was staked on some last throw.

"You did n't have any candle in your hand, did you, at any time during the evening?"

"No!" said Dave, positively. Forsome reason this question disconcerted him and awakened his suspicion. "What should we have a candle for?" he added.

"Did either George Lockwood or Tom have a candle?"

"No, of course not! What 'd they have candles for?"

"Where were the lights on the campground?"

"Clost by the preachers' tent."

"More than three-quarters of a mile away from the place where the murder took place?"

"Any way as much as three-quarters," said

Dave, who began to wish that he could modify his previous statement of the distance.

"How far away were you from Lockwood when the murder took place?"

"Twenty feet."

"You said 'or more' awhile ago."

"Well, 't was n't no less, p'raps," said Dave, showing signs of worry. "You don't think I measured it, do yeh?"

"There were no lights nearer than three-quarters of a mile?"

"No," said the witness, the cold perspiration beading on his face as he saw Lincoln's trap opening to receive him.

"You don't mean to say that the platform torches up by the preachers' tent gave any light three-quarters of a mile away and in the woods?"

"No, of course not."

"How could you see Tom and know that it was he that fired, when the only light was nearly a mile away, and inside a circle of tents?"

"Saw by moonlight," said Sovine, snapshly, disposed to dash wildly at any gap that offered a possible way of escape.

"What sort of trees were there on the ground?"

"Beech."

"Beech-leaves are pretty thick in August?" asked Lincoln.

"Ye-es, ruther," gasped the witness, seeing a new pitfall yawning just ahead of him.

"And yet light enough from the moon came through these thick beech-trees to let you know Tom Grayson?"

"Yes."

"And you could see him shoot?"

"Yes."

"And you full twenty feet away?"

"Well, about that; nearly twenty, anyhow." Dave shifted his weight to his right foot.

"And you pretend to say to this court that by the moonlight that you got through the beech-trees in August you could even see that it was a pistol that Tom had?"

"Ye-es." Dave now stood on his left foot.

"And you could see what kind of a pistol it was?" This was said with a little laugh very exasperating to the witness.

"Yes, I could," answered Dave, with dogged resolution not to be faced down.

"And just how the barrel was hung to the stock?" There was a positive sneer in Lincoln's voice now.

"Yes." This was spoken feebly.

"And you twenty feet or more away?"

"I 've got awful good eyes, an' I know what I see," whined the witness, apologetically.

Here Lincoln paused and looked at Sovine, whose extreme distress was only made

the more apparent by his feeble endeavor to conceal his agitation. The counsel, after regarding his uneasy victim for a quarter of a minute, thrust his hand into the tail-pocket of his blue coat, and after a little needless fumbling drew forth a small pamphlet in blue covers. He turned the leaves of this with extreme deliberation, while the court-room was utterly silent. The members of the bar had as by general consent put their chairs down on all-fours, and were intently watching the struggle between the counsel and the witness. The sallow-faced judge had stopped the scratching of his quill, and had lowered his spectacles on his nose, that he might study the distressed face of the tormented Sovine. Mrs. Grayson's hands were on her lap, palms downward; her eyes were fixed on Abra'm, and her mouth was half open, as though she were going to speak.

Barbara found it hard to keep her seat, she was so eager for Lincoln to go on, and Tom was leaning forward breathlessly in the dock; his throat felt dry, and he choked when he tried to swallow; it seemed to him that he would smother with the beating of his heart. But it was worth while to turn away from these more interested parties to look for a moment at the ruddy face of Bob McCord, which was puckered to a kind of focus with an expression that was customary with him in a moment of supreme interest, as when he was drawing a sure bead on a bear or a deer. It was worth while to regard Rachel Albaugh, who had lifted the veil from her face radiant with interest. Lincoln appeared to be the only perfectly deliberate person in the room. He seemed disposed to protract the situation as long as possible. He held his victim on the rack and he let him suffer. He would turn a leaf or two in his pamphlet and then look up at the demoralized witness, as though to fathom the depth of his torture and to measure the result. At last he fixed his thumb firmly at a certain place on a page and turned his eyes to the judge.

"Now, your Honor," he said to the court, "this witness," with a half-contemptuous gesture of his awkward left hand toward Sovine, "has sworn over and over that he recognized the accused as the person who shot George Lockwood, near the Union camp-meeting on the night of the 9th of last August, and that he, the witness, was standing at the time twenty feet or more away, while the scene of the shooting was nearly a mile distant from the torches inside the circle of tents. So remarkably sharp are this witness's eyes that he even saw what kind of pistol the prisoner held in his hands, and how the barrel was hung to the stock, and he is able to identify this pistol of Grayson's as precisely like and probably the identical weapon." Here Lincoln

paused and scrutinized Sovine. "All these details he saw and observed in the brief space of time preceding the fatal shot,—saw and observed them at 10 o'clock at night, by means of moonlight shining through the trees—beech-trees in full leaf. That is a pretty hard story. How much light does even a full moon shed in a beech woods like that on the Union camp-ground? Not enough to see your way by, as everybody knows who has had to stumble through such woods." Lincoln paused here, that the words he had spoken might have time to produce their due effect on the judge, and especially on the slower wits of some of the jury. Meanwhile he turned the leaves of his pamphlet. Then he began once more: "But, may it please the court, before proceeding with the witness I would like to have the jury look at the almanac which I hold in my hand. They will here see that on the night of the 9th of last August, when this extraordinary witness"—with a sneer at Dave, who had sunk down on a chair in exhaustion—"saw the shape of a pistol at twenty feet away, at 10 o'clock, by moonlight, the moon did not rise until half-past 1 in the morning."

Sovine had been gasping like a fish newly taken from the water while Lincoln uttered these words, and he now began to mutter something.

"You may have a chance to explain when the jury get done looking at the almanac," said the lawyer to him. "For the present you'd better keep silence."

There was a rustle of excitement in the court-room, but at a word from the judge the sheriff's gavel fell and all was still. Lincoln walked slowly toward the jury-box and gave the almanac to the foreman, an intelligent farmer. Countrymen in that day were used to consulting almanacs, and one group after another of the jurymen satisfied themselves that on the night of the 9th, that is, on the morning of the 10th, the moon came up at half-past 1 o'clock. When all had examined the page, the counsel recovered his little book.

"Will you let me look at it?" asked the judge.

"Certainly, your Honor"; and the little witness was handed up to the judge, who with habitual caution looked it all over, outside and in, even examining the title-page to make sure that the book was genuine and belonged to the current year. Then he took note on a slip of paper of the moon's rising on the night of August 9 and 10, and handed back the almanac to Lincoln, who slowly laid it face downward on the table in front of him, open at the place of its testimony. The audience in the court-room was utterly silent and expectant. The prosecuting attorney got half-way to his

feet to object to Lincoln's course, but he thought better of it and sat down again.

"Now, may it please the court," Lincoln went on, "I wish at this point to make a motion. I think the court will not regard it as out of order, as the case is very exceptional—a matter of life and death. This witness has solemnly sworn to a story that has manifestly not one word of truth in it. It is one unbroken falsehood. In order to take away the life of an innocent man he has invented this atrocious web of lies, to the falsity of which the very heavens above bear witness, as this almanac shows you. Now why does David Sovine go to all this trouble to perjure himself? Why does he wish to swear away the life of that young man who never did him any harm?" Lincoln stood still a moment, and looked at the witness, who had grown ghastly pale about the lips. Then he went on, very slowly. "Because that witness shot and killed George Lockwood himself. I move, your Honor, that David Sovine be arrested at once for murder."

These words, spoken with extreme deliberation and careful emphasis, shook the audience like an explosion.

The prosecutor got to his feet, probably to suggest that the motion was not in order, since he had yet a right to a re-direct examination of Sovine, but, as the attorney for the State, his duty was now a divided one as regarded two men charged with the same crime. So he waved his hand irresolutely, stammered inarticulately, and sat down.

"This is at least a case of extraordinary perjury," said the judge. "Sheriff, arrest David Sovine! This matter will have to be looked into."

The sheriff came down from his seat, and went up to the now stunned and bewildered Sovine.

"I arrest you," he said, taking him by the arm.

The day-and-night fear of detection in which Dave had lived for all these weeks had wrecked his self-control at last.

"God!" he muttered, dropping his head with a sort of shudder. "'T ain't any use keepin' it back any longer. I—did n't mean to shoot him, an' I would n't 'a' come here ag'in'st Tom if I could 'a' got away."

The words appeared to be wrung from him by some internal agony too strong for him to master; they were the involuntary result of the breaking down of his forces under prolonged suffering and terror, culminating in the slow torture inflicted by his cross-examination. A minute later, when his spasm of irresolution had passed off, he would have retracted his confession if he could. But the sheriff's

deputy, with the assistance of a constable, was already leading him through the swaying crowd in the aisle, while many people got up and stood on the benches to watch the exit of the new prisoner. When at length Sovine had disappeared out of the door the spectators turned and looked at Tom, sitting yet in the dock, but with the certainty of speedy release before him. The whole result of Lincoln's masterful stroke was now for the first time realized, and the excitement bade fair to break over bounds. McCord doubled himself up once or twice in the effort to repress his feelings out of respect for the court, but his emotions were too much for him; his big fist, grasping his ragged hat, appeared above his head.

"Goshamity! Hooray!" he burst out with a stentorian voice, stamping his foot as he waved his hat.

At this the whole court-roomful of people burst into cheers, laughter, cries, and waving of hats and handkerchiefs, in spite of the sheriff's sharp rapping and shouts of "Order in court!" And when at length the people were quieted a little, Mrs. Grayson spoke up, with a choking voice:

"Jedge, ain't you a-goin' to let him go now?"

There was a new movement of feeling, and the judge called out, "Sheriff, order in court!" But his voice was husky and tremulous. He took off his spectacles to wipe them, and he looked out of the window behind him, and put his handkerchief first to one eye, then to the other, before he put his glasses back.

"May it please the court," said the tall lawyer, who had remained standing, waiting for the tempest to subside, and who now spoke in a subdued voice, "I move, your Honor, that the jury be instructed to render a verdict of 'Not guilty.'" The judge turned to the prosecuting attorney.

"I don't think, your Honor," stammered Allen, "that I ought to object to the motion of my learned brother, under the peculiar circumstances of this case."

"I don't think you ought," said the judge, promptly, and he proceeded to give the jury instructions to render the desired verdict. As soon as the jury, nothing loath, had gone through the formality of a verdict, the sheriff came and opened the door of the box to allow Tom to come out.

"O Tom! they are letting you out," cried Janet, running forward to meet him as he came from the dock. She had not quite understood the drift of these last proceedings until this moment.

This greeting by little Janet induced another burst of excitement. It was no longer of any use for the judge to keep on saying

"Sheriff, command order in court!" All the sheriff's rapping was in vain; it was impossible to arrest and fine everybody. The judge was compelled to avail himself of the only means of saving the court's dignity by adjourning for the day, while Mrs. Grayson was embracing her Tommy.

As for Barbara, overcome by the reaction of feeling, she sat still in passive happiness which she did not care to show to this crowd, whose late unfriendly manifestations toward Tom she could not yet quite forgive. Hardly conscious of what was passing around her, she did not observe that her mother had presently let go her hold on Tom, and that Tom had come near and was standing in front of her. Her natural reserve made her wish to avoid a scene in public, but there are times when natural reserve is not a sufficient barrier. Tom gently put his hand on her shoulder and said "Barb," then all sense of the presence of others was obliterated in an instant. The only fact that she took note of was that her brother was there before her with unmanacled hands, free to go where he listed and forever delivered from the danger that had hung over him so imminently. Of what she did you must not expect a description; embraces and passionate kisses of joy on his cheeks would seem hysterical if set down here in black and white for readers of our time, who like the color washed out of human passion before it is offered to them. No! no! let us turn away—we do not like such things. But those hearty Illinois folk who looked on that scene between Barbara and Tom, and whose quick sympathies made them part of it, did not feel the slightest disapproval when they saw the faithful sister put her arms about Tom's neck; and every one of her kisses they seconded with clapping of hands and cheers, and some of the people were even foolish enough to shed tears.

XXVIII.

FREE.

THE lawyers presently congratulated Lincoln, Barbara tried to thank him, and Judge Watkins felt that Impartial Justice herself, as represented in his own person, could afford to praise the young man for his conduct of the case.

"Abr'am," said Mrs. Grayson, "d' yeh know I kind uv lost confidence in you when you sot there so long without doin' *anything*." Then, after a moment of pause: "Abr'am, I'm thinkin' I'd ort to deed you my farm. You've 'arned it, my son; the good Lord A'mighty knows you have."

"I'll never take one cent, Aunt Marthy—

not a single red cent"; and the lawyer turned away to grasp Tom's hand. But the poor fellow who had so recently felt the halter about his neck could not yet speak his gratitude. "Tom here," said Lincoln, "will be a help in your old days, Aunt Marthy, and then I'll be paid a hundred times. You see it'll tickle me to think that when you talk about this you'll say: 'That's the same Abe Lincoln that I used to knit stockings for when he was a poor little fellow, with his bare toes sticking out of ragged shoes in the snow.'"

Mrs. Grayson tried to say something more, but she could not.

Tom got his speech at length, when he saw the gigantesque form and big laughing red face of Bob McCord approaching him.

"Bob!" he said, "you dear old Bob! God A'mighty bless you, old fellow."

"I'm that tickled," said Bob, rocking to and fro with amusement. "Tom, you'd orto 'a' seed Jake Hogan's face. I watched it close. Go to thunder! How it did git mixed about the time you wuz let out! I'm a-goin' to find 'im un see how he feels agin this time"; and Bob let go of Tom's hand and moved off through the crowd to look for Jake.

Tom took mechanically all the congratulations offered to him. Rachel came with the rest; there were some traces of tears about her long lashes as she beamed on Tom the full effulgence of her beauty and friendliness. Tom gave a little start when he saw her; then he took her hand, as he did that of the others, in a half-unconscious way. He was everybody's hero in the reaction of feeling, but he had been so near to the gallows within an hour that he had difficulty yet in appreciating the change.

"You'll come back into the office again, won't you, Tom?" said Blackman, in a spurt of good feeling.

"I don't know, Mr. Blackman. I must go home and rest, and be sure I'm alive, before I know what I shall do."

Tom's uncle had been utterly surprised by the turn affairs had taken, for he had never really doubted Tom's guilt. Now he was, for the first time, almost effusive; he gave himself credit that he had stood by his nephew.

"We'd like to have you back, Tom," he said; "and you'd be a general favorite now."

"I want to go home first, Uncle Tom, and get the place out of debt, so mother and Barb'll be easy in their minds. Then I don't know what I *shall* do. I don't feel as if I could ever come to town again without fetching mother with me. But I can't tell; I want to get out of this town; I hate the very sight of it. Come, Barb; do let's get off. Where's the horse? I want to get home, where I won't

see any more of this crowd, and where I can be alone with you and mother."

Before they had made their way to the front door of the court-house the multitude outside had got firm hold of the fact of Tom's acquittal and the manner of it, and when he appeared they set up a shout; then there were cheers and more cheers. But Tom only looked worried, and sought to extricate himself from the people who followed him. At length he managed to get away from the last of them.

"You have n't ate anything to-day," said Janet, who clung to his hand and danced along by his side. "Come to our house to supper. I expect we'll have warm biscuits and honey."

"You dear little body!" said Tom. "I can't stop for suppert to-night, Janet; I must go home with mother. I want to get out of the ugly town. I'll come and see you sometimes, and I'll have you out at the farm lots of times." He stopped to put his pale, trembling hand under her pretty chin; he turned her face up to his, he stooped and kissed her. But no entreaty could prevail on him to delay his departure. Not even the biscuits and honey on which Janet insisted. Hiram Mason helped him to hitch up old Blaze-face to the wagon. Then Tom turned to Hiram and grasped both his arms.

"You're going with us," he said abruptly.

"Not to-night, Tom. I'll come in a few days, when I've finished my writing in the clerk's office. I'll stop on my way home."

"I want to thank you, but I can't; confound it," said Tom.

"Never mind, Tom; I'm almost happier than you are."

"I'm not exactly happy, Mason," said Tom; "I've got that plaguey feeling of a rope around my neck yet. I can't get rid of it here in Moscow. Maybe out at the farm I shall be able to shake it off. Janet, won't you run into the house and tell mother and Barbara to come out quick — I want to get away."

Tom had expected that Bob McCord would take a place in the wagon, but Bob was not so modest as to forego a public triumph. He first went and recovered the wagon-spoke from beneath the court-house steps, where he had hidden it the night before. This he put into the baggy part of his "wamus," or hunting-jacket — the part above the belt into which he had often thrust prairie-chickens when he had no game-bag. Then he contrived to encounter Jake Hogan in the very thick of the crowd.

"O Jake!" he called, "what's the price uh rope? How's the hangin' business a-gittin' along these days? Doin' well at it, ain't yeh?"

"Wha' joo inean?" asked Jake, as he half-turned about and regarded Bob with big eyes.

"Seems like 's ef you'd ort to be 'n ole han' by this time, Jake. You sot the time fer Tom's funeral three deffer'nt nights: wunst you wuz a-goin' to have it over 't Perrysburg, un wunst the Sunday night that Pete Markham throwed you off the track weth that air yarn about a wall-eyed man weth red whiskers, un wunst ag'in las' night. Ev'ry time you sot it they wuz some sort uv a hitch; it did n't seem to come off rightly. S'pose un you try yer hand on Dave Sovine awhile. They's luck in a change."

"I hain't had no han' in no hangin's nor nuthin' uh that sort," snarled Jake.

"You hain't? Jest you go un tell that out on Broad Run, sonny. Looky h-yer, Jake. I've got the evidence agin you, un ef you dare me I'll go afore the gran' jury weth it. I jest dare you to dare me, ef you dare."

But Jake did not dare to dare him. He only moved slowly away toward his horse, the excited crowd surging after him, to his disgust.

"Looky h-yer, Jake," Bob went on, following his retreat. "I want to gin you some advice as a well-wishin' friend un feller-citizen. Barb'ry knowed your v'ice las' night, un Barb'ry Grayson hain't the sort uv a gal to stan' the sort uv foolin' 't you've been a-doin' about 'Tom."

"Aw, you shet up yer jaw, now wonchoo?" said Jake.

"I say, Jake," said McCord, still pursuing the crestfallen leader of Broad Run, while the crowd moved about Big Bob as a storm center. "I say there, Jake; liker 'n not Barb'ry 'll stay in town to-night un go afore the gran' jury to-morry. Now ef I wuz you I'd cl'ar the county this very identical night. Your ornery lantern-jawed face would n' look half 's han'some as 'Tom's in that air box in front uv the sher'f."

"You shet up!" said Jake.

"Come un shet me up, wonch you?" said Bob, rubbing his hands and laughing.

Jake had reached his horse now, and without another word he mounted and rode away. But Bob kept walking about with his fists in his pockets, his big elbows protruding, and his face radiant with mischief until Sheriff Plunkett came out of the court-house.

"I say, Sher'f," he called, "how many men'd you say they wuz in that air fust mob?"

"Nigh onto forty, I should think," said Plunkett; "but of course I can't just exactly say." And he walked away, not liking to be catechised. There was something mysterious about that mob, and he was afraid there might be something that would count in the next election.

"They had pistols, did n't they?" Bob continued, following him.

"Yes, to be sure," said Plunkett, pausing irresolutely.

"Now looky h-yer, Sher'f; I know sumpin' about that air mob. They wuz n't but jest on'y two men in the whole thing. I don't say who they wuz"; and here Bob looked about on the crowd, which showed unmistakable signs of its relish for this revelation.

"Un as fer pistols, they did have 'em. I 've got one of 'em h-yer." Bob here pulled the wagon-spoke from the depths of his hunting-shirt. "That 's one of the identical pistols that wuz p'inted at your head las' night. Felt kind-uh cold un creepy like, did n't it now, Hank Plunkett, when its muzzle was agin yer head, un it cocked, besides? Ha-a! ha!"

The crowd jeered and joined in Bob's wild merriment.

"I 'll have you arrested," said the sheriff severely. "You 've confessed enough now to make the grand jury indict you."

"Fer what? Fer savin' the life uv a inner-cent man? That 'd be a purty howdy-do, now would n't it? Un it would be a lovely story to tell at my trial, that the sher'f uv this yere county gin up his keys to two men, *two lonesome men weth on'y wagon-spokes!* He-e! An' the wagon-spokes cocked! A wagon-spoke 's a mighty bad thing when it does go off, especially ef it 's loaded with buckshot."

Plunkett came close to McCord, and said in an undertone loud enough to be heard by others: "Ah, Bob, I knowed it wuz your voice, un I knowed your grip. They ain't any other man in this county that can put me down the way you did las' night. But don't you tell Jake ur any of his crowd about it"; and he winked knowingly at Bob.

"Aw, go to thunder, now!" said Bob, speaking loudly and not to be cajoled into giving up his fun. "Sher'f, you can't come no gum games on me. By jeementley crickets, you wuz skeered, un that 's all they is about it. You wilted so 't I wuz afeerd you 'd clean faint away afore I could git out uv yeh where the keys was. Why did n't you hide Tom summers? You wuz afeerd Broad Run 'd vote agin you, un you as good as tole Jake Hogan ut you would n' make no trouble when he come to lynch Tom."

"No, I did n't; I did n't have anything to say to Jake."

"Ef you take my case afore the gran' jury un I 'm tried, I 'll prove it on yeh. Now, Hank Plunkett, they 's two things that 'll never happen." Here Bob smote his right fist into his left palm. "One is 't you 'll ever fetch my case afore the gran' jury. That 's as shore 's you 're born. T' other is that you 'll ever be elected ag'in! Wha 'd joo turn off Pete Markham fer? Fer tryin' to save Tom, un to please

Broad Run. Now you 're come up weth, ole hoss. Markham 'll be the nex' sher'f. You jest cut a notch in a stick to remember 't Big Bob McCord tole you so. Ef 't had n' been fer me 'n' Abe Lincoln, you 'n' Jake, 'twext and 'tween yeh, 'd 'a' hung the wrong feller. Now I jest want to see you fetch me afore the court wunst. Ef you pester me too much, I 'm derned 'f I don't go on m' own hook."

"You 've been drinking, Bob," said Plunkett, as he hurried away; but the people evidently sided with McCord, whose exploit of mobbing the sheriff almost single-handed had made him more than ever the champion of the county.

That night Jake Hogan, afraid of arrest, succeeded in trading his cabin, with the front door still unhinged, and his little patch of rugged ground for a one-horse wagon and some provisions. Over the wagon he stretched his only two bed-sheets of unbleached domestic for covering. Before noon the next day, he had passed safely out of the county. The raw-boned horse, the rickety wagon, the impoverished and unwilling cow tied on behind, the two yellow mongrel pups between the wagon wheels, and the frowsy-headed wife alongside of him were token enough to every experienced eye that here was a poor whitey on his travels. To all inquiries regarding his destination, Jake returned:

"I 'm boun' fer *Missouri*. Yeh see they hain't no kind of a chance fer a poor man in this yer daudrautted Eelinoys country."

Once an example of migration had been set, his neighbors grew restless also, and in a year or two nearly all of them had obeyed their hereditary instinct and followed him to Pike County in Missouri. The most of the Broad Run neighborhood is now included in a great grazing farm; here a few logs, there some tumble-down ruins of a stick-chimney, and in another place a stone hearth, only remain to indicate the resting-place for a few years of a half-nomadic clan, whose members or their descendants are by this time engaged, probably, in helping to rid the Pacific coast of its unchristian Chinese. For the poor whitey can tolerate no heathens but those of his own sort.

XXIX.

THE CLOSE OF A CAREER.

DAVE SOVINE's partial confession, which had served to acquit Tom, was sufficient at the next term of the court to condemn him, for no plea of accidental shooting could save him after he had tried to escape at the expense of another man's life. During his trial the motive for shooting Lockwood remained an inexplicable mystery. But when once Dave was con-

vinced that his execution was inevitable and there was an end to all the delights of deviltry, he proceeded to play the only card remaining in his hand, and to euchre Justice on her own deal. Like other murderers of his kind he became religious, and nothing could be more encouraging to criminals than the clearness and fervor of his religious experience, and his absolute certainty of the rewards of paradise. His superiority in wickedness had made him the hero of all the green goslings of the village; his tardy conversion and shining professions made him an object of philanthropic interest to sentimental people and gave him the consolations of conspicuity to the last.

It was during this lurid sunset period of his unnecessary existence that Dave made confessions. These were not always consistent one with another; the capacity for simple and direct truth-telling is a talent denied to men of Sovine's stamp, nor can it be developed in a brief season of penitence. It is quite probable that Sovine failed to state the exact truth even when narrating his religious experiences. But by a comparison of his stories, with some elimination of contradictory elements, the main facts regarding the death of George Lockwood were made out with passable clearness. Being of a thrifty turn of mind, Lockwood had, by a series of careful observations, detected one of the principal tricks employed by Dave to win the money of the unwary. It had been Lockwood's purpose to play the trick back on Dave at some favorable opportunity, but this he found quite impossible. To bring himself to Dave's proficiency in manipulation no end of assiduous practice would be needful. There remained one other way in which he might utilize his discovery. It was an established rule in that part of the country that he who detected his opponent in the very act of cheating at cards might carry off the stakes.

When Lockwood went to the camp-meeting he put into his pocket a bit of candle, in order to have a game with Dave; and when on encountering him Dave proposed the game, the two went out into the woods, remote from the meeting, Lockwood lighted his candle and they sat down on a log to play. Lockwood won at first and doubled the stakes at every game, until Dave, seeing that his pocket-money was running short, and the candle fast wasting in the breezes, concluded to sweep in the stakes with his favorite trick. George Lockwood exposed the cheat at the very instant, and put the stakes in his pocket. But Dave had received his education in its higher branches in the South-west of half a century ago, and he had no notion of suffering himself to be bankrupted so easily. He

drew his pistol and demanded the stakes, following Lockwood with reiterated threats, until, in a moment of exasperation, he shot him. A crowd came quickly at the sound of the pistol, and Dave had the shrewdness not to run away and not to attempt to take any money from George Lockwood's person. Remembering Tom Grayson's threats, he declared, with his usual alertness in mendacity, that he had seen Grayson do the shooting and thus diverted attention from himself.

He had no further thought at the time than to get out of a present difficulty; it was his purpose to leave the country before the trial should come on. But he found himself watched, and he imagined that he was suspected. He saw no chance to move without making sure of his own arrest; he became alarmed and unfitted for decision by the sense of his peril; as the trial approached, his nerves, shaken by dissipations, were unstrung by the debate within him. He saw ghosts at night and his sleep almost entirely forsook him. This horror of a doom that seemed perpetually to hang over him was greatly enhanced by the cross-examination to which he was subjected; from the first he misdoubted that Lincoln had penetrated his whole secret and possessed the means of making it known. And when he heard himself charged publicly with the murder and as publicly arrested, he believed that some evidence against him had been found; he did not draw the line between the charge and the proof, and the half confession escaped him in the first breakdown produced by sudden despair.

But at the last he spoke edifyingly from the scaffold, and died with as much composure and more self-complacency than Tom would have shown had he fallen a victim to Dave's rascality. What becomes of such men in another world is none of my business. But I am rather pleased to have them depart, be it to paradise, or purgatory, or limbo, or any other compartment of the world of spirits. In some moods I could even wish them a prosperous voyage to the Gehenna of our forefathers, now somewhat obsolescent, if only they would begone and cease to vex this rogue-ridden little world of ours.

XXX.

TOM AND RACHEL.

WHEN Tom rode home from the trial with his mother and Barbara, his emotions were not just what one might expect; the events of the day and the tremendous strain on his nerves had benumbed him. He was only conscious that it gave him a great pleasure to leave the village behind, and to get once more

upon the open prairie, which was now glorified by the tints and shadows of the setting sun. The fields of maize, with their tassels growing brown and already too ripe and stiff to wave freely, and with their long blades becoming harsh and dry, so that the summer rustle had changed to a characteristic autumnal rattling, seemed to greet him like old friends who had visibly aged in his absence. Tom found his mind, from sheer strain and weariness, fixing itself on unimportant things; he noted that the corn-silk which protruded from the shucks was black, and that the shucks themselves were taking on that sear look which is the sure token of the ripeness of the ear within the envelope. Now and then he marked an ear that had grown so long as to push its nose of cob quite beyond the envelope. The stretches of prairie grass too showed a mixture of green and brown; the September rains had freshened a part of the herbage, giving it a new verdure, but the riper stalks and blades had maintained their neutral colors. These things interested Tom in a general way, as marking the peaceful changes that had taken place in the familiar face of nature during his period of incarceration. What he felt in regarding these trifles was simply that he was alive and once more free to go where he pleased. He said little, and replied to the remarks of his mother and Barbara briefly, and he drove old Blaze-face at a speed quite unbecoming a horse at his time of life. The people whom he passed cheered him, or called out their well-meant congratulation, or their bitter remarks about Dave Sovine, but Tom on his part was not demonstrative; he even drove past Rachel Albaugh and her brother Ike with only a nod of recognition. To any remark of his mother and Barbara about Dave's villainy, and to any allusion to the case, he returned the briefest answers, giving the impression that he wished to get mentally as well as physically away from the subject. When he got home he asked for an old-fashioned country hoe-cake for supper, and he would have the table set out on the kitchen porch; he said it seemed so delightful to be permitted to go out-of-doors again. After supper he turned old Blaze into the pasture, with a notion that he too might prefer his liberty, and he sought the barnyard, where he patted the cows. Then, in the cool night air, he strolled up and down the road in front of the house, and at length, when Barbara besought him to come in, he only sat down on the front steps. It was after 10 o'clock when he persuaded Barbara to walk with him down the meadow path to the brook, and at 11 he reluctantly consented to go to bed.

"It feels good to be free, Barb," he said, as

he went upstairs. This was his only allusion to his feelings.

In reflecting on the events of the day, Barbara remembered with pleasure that Rachel had congratulated Tom. It made his vindication complete that the young woman who had refused his attentions when he was accused of nothing worse than foolish gambling had now taken pains to show her good-will in public. But when the question of a possible renewal of the relations between Tom and his old sweetheart came up in Barbara's mind, there was always a doubt. Not that there was anything objectionable about Rachel Albaugh. Barbara said to her mother over and over again, in the days that followed Tom's acquittal, that there was nothing against Rachel. If Rachel was not very industrious she was certainly "easy-tempered." In her favor it could be said that she had a beautiful face, and that she would be joint heiress with her brother to a large and well-improved prairie farm, to say nothing of her father's tract of timber-land.

After a while Barbara came to wish that Tom's old affection for Rachel might be kindled again. She did not like to see him so changed. He plodded incessantly at farm work, and he seemed to have lost his relish for society. If any one came to the house, he managed to have business abroad. He was not precisely gloomy, but the change in him was so marked that it made his sister unhappy.

"Why don't you go to see Rachel?" she asked, a week after the trial. Barbara was straining her eyes down the road, as she often did in those days. "Rachel would be glad to see you again, Tom, like as not."

"Maybe she would," answered Tom, as he picked up the pail and started to the spring for water by way of cutting off all further talk on the question.

The days went by without Tom's showing by any sign that he cared to see Rachel, and to Barbara's grief the days went by without Hiram Mason's promised arrival at the Graysons'. But there came presently a note from Hiram to Barbara, saying that he had been detained by the necessity he was under of finishing Magill's writing, and by the difficulty he found in getting his pay from the easy-going clerk for what he had done. But he hoped to stop on his way home in three or four days. This note was brought from Moscow by Bob McCord, who also brought Janet. The child had teased her father into letting her come out in Aunt Martha's wagon with Bob, whom she had seen driving past the house on his way in.

Janet spent her time in the country wholly

with Tom. She followed him afield, she climbed with him into the barn lofts, she sat on the back of old Blaze when Tom led him to water, she went into the forest when Tom went to fell trees for fire-wood, she helped him to pick apples, and she was as happy in all this as she would have been in the Elysian Fields.

"Cousin Tom," she said, the day after her arrival, as she leaned out of the high, open window of the hay-loft, "yonder's a lady getting down on the horse-block at the house."

Tom climbed up from the threshing-floor to the mow, and, standing well back out of sight in the gloom of the loft, he recognized Rachel Albaugh's horse. Then he went back again to his wheat-fanning on the threshing-floor.

"Are n't you going to go and help her?" said Janet, when Tom stopped the noisy fanning-mill to shovel back the wheat and to rake away the cheat.

"Pshaw!" said Tom. "A country girl does n't need any help to get off a horse."

Rachel had come to call on Barbara, nor did she admit to herself that her visit had anything to do with Tom. But she found herself in an attitude to which she was unaccustomed. From the moment that Tom had been charged with murder her liking for him increased. The question of his guilt or innocence did not disturb her—except in so far as it jeopardized his life; he was at least a dashing fellow, out of the common run. And now that he had been acquitted, and was a hero of everybody, Rachel found in herself a passion that was greater than her vanity, and that overmastered even her prudence. She was tormented by her thoughts of Tom in the day, she dreamed of him at night. Tom would not come to her, and she felt herself at length drawn by a force she could not resist to go to him.

Barbara asked Rachel to stay to dinner, and promised that Tom would put away her horse as soon as he knew that she had come. This was but the common hospitality of the country, but Barbara hoped that Rachel's presence might evoke Tom's old buoyant self again. And so, while Barbara sat on the loom-bench weaving a web of striped linsey, Rachel sat by her side knitting. It appeared to Barbara that Rachel had undergone almost as great a change as Tom. She had lost her taciturnity. Her tongue kept pace with the click of her needles. She only broke the thread of her talk when she paused to take the end of one needle out of the quill of her knitting-case and put another in. Under color of sympathy for the Graysons in their troubles she talked of what was in her mind. How

dreadful it must have been for Tom to be in jail! How anxious he must have been at the trial! How well he bore up under it all! How proud he must have been when he was acquitted! These and such remarks were web and woof of her talk, while Barbara was throwing her nimble shuttle to and fro and driving the threads home with the double-beat of her loom-comb.

By half-past 11 the early farm dinner was almost ready, and Mrs. Grayson blew a blast on the tin horn which hung outside of the door, to let Tom and Janet know that they were to come in.

When Tom heard the horn he went and led Rachel's horse to the stable, after perching Janet in the saddle; and then he delayed long enough to shuck out and give him eight or ten ears of corn. After this he came to the house and washed his hands and face in the country way, with much splash and spatter, in a basin that sat on a bench outside of the door, and Janet washed hers, imitating to the best of her ability Tom's splattering way of dashing the water about. Then the two used the towel that hung on a roller in the kitchen porch, and Tom entered the kitchen with his clothes soiled by labor and with that look of healthful fatigue which comes of plentiful exercise in the open air.

"Howdy, Rachel? All well 't your house?" This was the customary and almost invariable formula of country politeness, and it was accompanied by a faint smile of welcome and a grasp of her hand.

"Howdy, Tom?" said Rachel, cordially. "I hope you are well." Rachel regarded him a moment, and then let her eyes droop. Had Rachel discovered that her face was at its best when her long eyelashes were lowered in this fashion, or was the action merely instinctive?

"Oh, so-so!" answered Tom, uneasily, as he seated himself with the rest at the table. Rachel sat next to him, and he treated her with hospitable politeness, but she looked in vain for any sign of his old affection. She hardly once fairly encountered his eye during the meal. He seemed more indifferent to her attractions than she had ever known any man, old or young, to be. And yet she knew that her charms had lost nothing of their completeness. That very morning she had gone into the rarely opened Albaugh parlor and examined herself in the largest looking-glass in the house—the one that hung between the parlor windows, and that had a print of Mount Vernon in the upper panel of the space inclosed between the turned frames. Her fresh and yet delicate complexion was without a speck or flaw, her large eyes were as lustrous as

ever, and there was the same exquisite symmetry and harmony of features that had made her a vision of loveliness to so many men. But Tom seemed more interested in his cousin, whom he kept laughing with a little childish by-play while talking to his sister's guest. Rachel felt herself baffled, and by degrees, though treated cordially, she began to feel humiliated. When dinner was finished by a course of pumpkin pie and quince preserves, served with cream, Tom pushed back his chair and explained that he was just going to begin building some rail pens to hold the corn when it should be gathered and shucked, and that he could not allow himself the usual noon-time rest. The days were getting so short, you know. Would Rachel excuse him? Barbara would blow the horn so that he could put the saddle on Rachel's horse when she wanted it. But would n't she stay to supper?

Rachel declined to stay to supper, and she was visibly less animated after dinner than she had been before. The conversation flagged on both sides; Barbara became preoccupied with her winding-blades, her bobbins, and her shuttle, while Rachel was absorbed in turning the heel of her stocking. By half-past 1 o'clock the guest felt bound to go home; the days were getting shorter and there was much to be done at home, she remembered. The horn was blown, and Tom led her horse out to the block and helped her to mount. As he held her stirrup for her to place her foot, it brought to his memory, with a rush, her refusal to let him ride home with her from the Timber Creek school-house after the "singing." When he looked up he saw that Rachel's mind had followed the same line of association; both of them colored at this manifest encounter of their thoughts.

"I suppose I ought n't to have said 'no' that day at the school-house," Rachel spoke with feeling, moved more by the desperate desire she felt to draw Tom out than by any calculation in making the remark.

"Yes, you ought," said Tom. "I never blamed you."

Then there was an awkward pause.

"Good-bye, Tom," said Rachel, extending her hand. "Won't you come over and see us sometime?"

"I'm generally too tired when night comes. Good-bye, Rachel"; and he took her hand in a friendly way. But this was one of those adieux that are aggravated by mental contrast, and Rachel felt, as she looked at Tom's serious and preoccupied face, that it was to her the end of a chapter.

Tom started up the pathway toward the

house, but stopped half-way and plucked a ripe seed-pod from the top of a poppy-stalk, and rubbed it out between his two hands as he looked a little regretfully after Rachel until she disappeared over the hill. Then he turned and saw Barbara standing on the porch regarding him inquiringly.

"You are n't like yourself any more, Tom," she said.

"I know that," he answered, meditatively, at the same time filiping the minute poppy-seeds away, half a dozen at a time, with his thumb. "I don't seem to be the same fellow that I was three months ago. Then I'd 'a' followed Rachel like a dog every step of the way home."

"She's awfully in love with you, poor girl."

"Oh! she'll get over that, I suppose. She's been in love before."

"And you don't care for her any more?"

"I don't seem to care for anything that I used to care for. I would n't like to be what I used to be."

This sentence was rather obscure, and Barbara still looked at Tom inquiringly and waited for him to explain. But he only went on in the same inconsequential way, as he plucked and rubbed out another poppy-head. "I don't care for anything nowadays, but just to stay with you and mother. When a fellow's been through what I have, I suppose he is n't ever the same that he was; it takes the *ambition* out of you. Hanging makes an awful change in your feelings, you know"; and he smiled grimly.

"Don't say that; you make me shiver," said Barbara.

"But I say, Barb," and with this Tom sowed broadcast in the dooryard all the poppy-seed in his hand, "yonder comes somebody over the hill that'll get a warmer welcome than Rachel did, I'll guarantee."

How often in the last week had Barbara looked to see if somebody were not coming over the hill! Now she found her vision obstructed by a "laylock" bush, and she came down the path to where her brother stood. As soon as she had made out that the pedestrian was certainly Hiram Mason, she turned and went into the house, to change her apron for a fresher one, and with an instinctive wish to hide from Mason a part of the eagerness she had felt for his coming. But when he had reached the gate and was having his hand cordially shaken by Tom, Barbara came back to the door to greet him; and just because she could n't help it, she went out on the porch, then down the steps and half-way to the gate to tell him how glad she was to see him.

(To be continued.)

Edward Eggleston.

THE STEPPES OF THE IRTISH.

DECIDED, after careful consideration, to proceed from Tiumen to Tomsk through the steppes of the Irtish by way of Omsk, Pavlodar, Semipalatinsk, Ust-Kamenogorsk, and Barnaul. This route would take us through the best agricultural part of the provinces of Tobolsk and Tomsk, as well as the districts most thickly settled by exiles; it would enable us to see something of the Mohammedan city of Semipalatinsk and of the great nomadic and pastoral tribe of natives known as the Kirghis; and finally it would afford us an opportunity to explore a part of the Russian Altai—a high, picturesque, mountainous region on the Mongolian frontier, which had been described to me by Russian army officers, in terms of enthusiastic admiration, as “the Siberian Switzerland.” I had, moreover, another reason for wishing to keep as far away as possible from the regular through routes of travel. I supposed when we left St. Petersburg that we should be obliged to go from Tiumen to Tomsk either by steamer or over the great Siberian road. The Minister of the Interior understood that such would be our course, and he caused letters to be written to all the local officials along these routes, apprising them of our coming and furnishing them with such instructions concerning us as the circumstances seemed to require. What these instructions were I could never ascertain; but they anticipated us at every important point on the great Siberian road from Tiumen to the capital of the Trans-Baikal. In eastern Siberia the local authorities knew all about us months before we arrived. I first became aware of these letters and this system of official surveillance at Tiumen; and as they seemed likely to interfere seriously with my plans,—particularly in the field of political exile,—I determined to escape or elude them as far as possible, by leaving the regular through route and going into a region where the authorities had not presumably been forewarned of our coming. I had reason afterward to congratulate myself upon the exercise of sound judgment in making this decision. The détour to the southward brought us not only into the part of Siberia where the political exiles enjoy most freedom, and where it is easiest to make their acquaintance, but into a province which was then governed by a liberal and humane man.

On the morning of Tuesday, June 30, having made our farewell calls, purchased a tarantas, and provided ourselves with a “padorozhnaya,” or order for horses, we left Tiumen for Semipalatinsk by the regular Government post. The Imperial Russian Post is now perhaps the most extensive and perfectly organized horse-express service in the world. From the southern end of the peninsula of Kamtchatka to the most remote village in Finland, from the frozen, wind-swept shores of the Arctic Ocean to the hot, sandy deserts of central Asia, the whole empire is one vast net-work of post routes. You may pack your portmanteau in Nizhni Novgorod, get a padorozhnaya from the postal department, and start for Petropavlovsk, Kamtchatka, seven thousand miles away, with the full assurance that throughout the whole of that enormous distance there will be horses, reindeer, or dogs ready and waiting to carry you on, night and day, to your destination. It must, however, be borne in mind that the Russian post route is a very different thing from the old English post route, and that the Russian horse express differs widely, not only from our own western “pony express,” but from the horse expresses of most other countries. The characteristic feature of the west European and American systems is the stage-coach or diligence, which leaves certain places at certain stated hours, or, in other words, runs upon a prearranged time schedule. It is precisely this feature which the Russian system does not have. There are, generally speaking, no stage-coach lines in Russia; the vehicles which carry the mails do not carry passengers, and, away from the railroads, there is no such thing as traveling upon a fixed time schedule. You are never obliged, therefore, to wait for a public conveyance which leaves at a certain stated hour, and then go through to your destination in that conveyance, stopping when it stops and starting when it starts, without regard to your own health, comfort, or convenience. On the contrary, you may ride in your own sleigh or carriage, and have it drawn by post horses. You may travel at the rate of 175 miles in 24 hours, or 24 miles in 175 hours, just as you feel inclined. You may stop when you like, where you like, and for as long a time as you like, and when you are ready to move on, you have only to order out your horses and get into your vehicle. It makes no difference in what part of the empire you may happen to be, nor

SKETCH MAP OF SIBERIA, SHADED PORTION SHOWING ROUTE DESCRIBED IN THIS ARTICLE.

to what part you may wish to go. Send your *padorozhnaya* to the nearest post station, and in twenty minutes you will be riding away at the rate of ten miles an hour, with your postal order in your pocket and a hundred relays of fresh horses distributed at intervals along your route.

The established rate of payment for transportation over the post routes of western Siberia seems to an American absurdly low. It amounts, including the compensation of the driver, to $1\frac{1}{8}$ cents per mile for every horse, or $3\frac{3}{8}$ cents per mile for the usual "troika," or team of three. In other words, two persons can travel in their own carriage with a team of 3 horses a distance of 20 miles for 68 cents, or 34 cents each. I used to feel almost ashamed sometimes to wake up a driver at a post station, in the middle of a stormy night, compel him to harness three horses and drive us 20 miles over a dark, miry, and perhaps dangerous road, and then offer him for this service the pitiful sum of 68 cents. Trifling and inadequate, however, as such compensation may seem, it is large enough to tempt into this field of enterprise hundreds of peasant farmers who compete with the Government post by furnishing what are known as "volni" or "free" horses, for the transportation of travelers from one village to another. As these free horses are generally better fed and in better condition than the over-driven animals at the post stations, it is often advantageous to employ them; and your driver, as you approach a village, will almost always turn around and inquire whether he shall take you to the Government post station or to the house of a "friend." Traveling with "drushki," or "friends," costs no more than traveling by post, and it enables one to see much more of the domestic life of the Siberian peasants than one could see by stopping and changing horses only at regular post stations.

The first part of our journey from Tiumen to Omsk was comparatively uneventful and uninteresting. The road ran across a great marshy plain, full of swampy lakes, and cov-

ered with a scattered growth of willow and alder bushes, small birch-trees, and scrubby firs and pines, which in every direction limited the vision and hid the horizon line. All this part of the province of Tobolsk seems to have been, within a comparatively recent geological period, the bottom of a great inland sea which united the Caspian and the sea of Aral with the Arctic Ocean, along the line of the shallow depression through which now flow the rivers Irtish and Ob. Everywhere between

Tiumen and Omsk we saw evidences, in the shape of sand-banks, salt-marshes, beds of clay, and swampy lakes, to show that we were traveling over a partly dried up sea bottom.

About a hundred versts from Tiumen, just beyond the village of Zavodo-ukofskaya, we stopped for two hours early in the evening at the residence and estate of a wealthy Siberian manufacturer named Kolmakoff, to whom I had a letter of introduction from a Russian friend. I was surprised to find in this remote part of the world so many evidences of comfort, taste, and luxury as were to be seen in and about Mr. Kolmakoff's house. The house itself was only a two-story building of logs, but it was large and comfortably furnished, and its windows looked out over an artificial lake, and a beautiful garden, with winding walks, rustic arbors, long lines of currant and raspberry bushes, and beds of flowering plants. At one end of this garden was a spacious conservatory, filled with geraniums, verbenas, hydrangeas, cacti, orange and lemon trees, pine-apples, and all sorts of tropical and semi-tropical shrubs, and near at hand was a large hot-house, full of cucumbers and ripening cantaloupes. In the middle of the garden

ENLARGED MAP OF ROUTE COVERED BY THIS ARTICLE.

stood a square building, sixty feet long by forty or fifty feet wide, which was composed almost entirely of glass, which had no floor except the earth, and which served, Mr. Kolmakoff said, as a sort of winter garden and a place of recreation during cold or stormy weather. In this miniature Crystal Palace stood a perfect grove of bananas and young palms, through which ran winding walks bordered by beds of flowers, with here and there amidst the greenery a comfortable lounging-place or rustic seat. The trees, flowers, and shrubs were not planted in tubs or pots, but grew directly out of the earthen floor of the greenhouse, so that the effect was almost precisely that of a semi-tropical garden inclosed in glass.

"Who would have thought," said Mr. Frost, as he threw himself into one of the rustic seats beside a bed of blossoming verbenas, "that we should come to Siberia to sit under palm-trees and in the shade of bananas!"

After a walk through the spacious wooded park which adjoined the garden, we returned to the house, and were served with a lunch or cold supper consisting of caviar, pickled mushrooms, salmon, cold boiled fowl, white bread, sweet cakes, and wild strawberries, with vodka, two or three kinds of wine, and tea.

It had grown quite dark when, about 11 o'clock, the horses which we had ordered in the neighboring village arrived, and bidding our courteous host good-bye, we climbed into the tarantas and set out for a long, dark, and dreary night's ride. The road, which had never been good, was in worse condition than usual, owing to recent and heavy rains. Our driver urged four powerful horses over it at break-neck speed, and we were so jounced, jolted, and shaken that it was utterly impossible to get any sleep, and difficult enough merely to keep our seats in the vehicle. Early in the morning, sleepy, jaded, and exhausted, we reached the village of Novo Zaimskaya, entered the little log-house of our driver's "friend," threw ourselves on the bare floor, where half a dozen members of the friend's family were already lying, and for two or three hours lost consciousness of our aching spinal columns in the heavy dreamless slumber of physical exhaustion.

Throughout the next day and the following night we traveled, without rest, and of course without sleep, over a terribly bad steppe road, and at 6 o'clock Thursday morning arrived in a pelting rain-storm at the circuit town of Ishim. No one who has not experienced it can fully realize the actual physical suffering which is involved in posting night and day at high speed over bad Siberian roads. We made the 200 miles between Tiumen and

Ishim in about 35 hours of actual travel, with only 4 hours of sleep, and were so jolted and shaken that every bone in our bodies ached, and it was with difficulty that we could climb into and out of our mud-bespattered tarantas at the post stations.

It had been our intention to make a short stop at Ishim, but the bad weather discouraged us, and after drinking tea at a peasant's house on the bank of the Ishim river, we resumed our journey. As we rode out of the town through a thin forest of birch-trees, we began to notice large numbers of men, women, and children plodding along on foot through the mud in the same direction that we were going. Most of them were common "muzhiks," with trousers inside their boots and shirt-flaps outside their trousers, or sun-burned peasant women in red and blue gowns, with white kerchiefs over their heads; but there were also a few pedestrians in the conventional dress of the civilized world, who manifestly belonged to the higher classes, and who even carried umbrellas.

About four miles from the town we saw ahead a great crowd of men and women marching towards us in a dense, tumultuous throng, carrying big three-armed crosses, white and colored banners, and huge glass lanterns mounted on long black staves. As they came nearer I could see that the throng was densest in the middle of the muddy road, under what seemed to be a large gilt-framed picture which was borne high in air at the end of a long, stout wooden pole. The lower end of this pole rested in a socket in the middle of a square framework which had handles on all four sides, and which was carried by six bare-headed peasants. The massive frame of the portrait was made either of gold or of silver gilt, since it was manifestly very heavy, and half a dozen men steadied, by means of guy ropes, the standard which supported it, as the bearers, with their faces bathed in perspiration, staggered along under their burden. In front of the picture marched a bare-headed, long-haired priest with a book in his hands, and on each side were four or five black-robed deacons and acolytes, carrying embroidered silken banners, large three-armed gilt crosses, and peculiar church lanterns, which looked like portable street gas-posts with candles burning in them. The priest, the deacons, and all the bare-headed men around the picture were singing in unison a deep, hoarse, monotonous chant as they splashed along through the mud, and the hundreds of men and women who surged around the standard that supported the portrait were constantly crossing themselves, and joining at intervals in the chanted psalm or prayer. Scores of

peasant women had taken off their shoes and stockings and slung them over their shoulders, and were wading with bare feet and legs through the black, semi-liquid mire, and neither men nor women seemed to pay the slightest attention to the rain, which beat upon their unprotected heads and trickled in little rivulets down their hard, sun-burned faces. The crowd numbered, I should think, four or five hundred persons, more than half of whom were women, and as it approached the town it was constantly receiving accessions from the groups of pedestrians that we had overtaken and passed.

Since entering Siberia I had not seen such a strange and medieval picture as that presented by the black-robed priest and acolytes, the embroidered banners, the lighted lanterns, the gilded crosses, and the great throng of bare-headed and bare-legged peasants, tramping along the black, muddy road through the forest in the driving rain, singing a solemn ecclesiastical chant. I could almost imagine that we had been carried back to the eleventh century and were witnessing the passage of a detachment of Christian villagers who had been stirred up and excited by the eloquence of Peter the Hermit, and were marching with crosses, banners, and chanting to join the great host of the crusaders.

When the last stragglers in the rear of the procession had passed, and the hoarse, monotonous chant had died away in the distance, I turned to Mr. Frost and said, "What do you suppose is the meaning of all that?"

"I have n't the least idea," he replied. "It is evidently a church procession, but what it has been doing out here in the woods, I can't imagine."

By dint of persistent questioning I finally succeeded in eliciting from our driver an intelligible explanation of the phenomenon. There was, it appeared, in one of the churches of Ishim, a very old ikon, or portrait of "the Mother of God," which was reputed to have supernatural powers and to answer the prayers of faithful believers. In order that the country people who were unable to come to Ishim might have an opportunity to pray to this miracle-working image, and to share in the blessings supposed to be conferred by its mere presence, it was carried once a year, or once in two years, through all the principal villages of the Ishim okrug, or district. Special services in its honor were held in the village churches, and hundreds of peasants accompanied it as it was borne with solemn pomp and ceremony from place to place. It had been on such a tour when we saw it and was on its way back to the church in Ishim where it belonged, and our driver had stated the fact in the simplest

and most direct way when he said that "the Mother of God was coming home."

Rain fell at intervals throughout the day Thursday, but we pushed on over a muddy steppe road in the direction of Tiukalinsk, changing horses at the post stations of Borofskaya, Tushnolobova, Abatskaya, and Kamyshenka, and stopping for the night at a peasant's house in the village of Orlova. In the 60 hours which had elapsed since our departure from Tiumen we had traveled 280 miles, with only 4 hours of sleep, and we were so much exhausted that we could not go any farther without rest. The weather during the night finally cleared up, and when we resumed our journey on the following morning the sun was shining brightly in an almost unclouded sky, and the air was fresh, invigorating, and filled with fragrant odors.

Although the road continued bad, the country as we proceeded southward and eastward steadily improved in appearance, and before noon we were riding across a beautiful fertile and partly cultivated prairie, which extended in every direction as far as the eye could reach, with nothing to break the horizon line except an occasional clump of small birch-trees or a dark-green thicket of willow and alder bushes. The steppe was bright with flowers, and here and there appeared extensive tracts of black, newly plodded land, or vast fields of waving grain, which showed that the country was inhabited; but there was not a fence, nor a barn, nor a house to be seen in any direction, and I could not help wondering where the village was to which these cultivated fields belonged. My curiosity was soon to be satisfied. In a few moments our driver gathered up his muddy rope reins, braced himself securely in his seat, threw out behind and above his head the long heavy lash of his short-handled knout, and bringing it down with stinging force across the backs of his four horses shouted, in a high falsetto and a deep bass, "Heekh-ya-a-a!" The whole team instantly broke into a frantic, tearing gallop, which made me involuntarily hold my breath, until it was suddenly jounced out of me by a terrific jolt as the tarantas, going at the rate of fifteen miles an hour, dropped into a deep rut and rebounded with tremendous force, throwing me violently out of my seat, and making my head and back throb with the shock of the unexpected concussion. I needed no further evidence that we were approaching a village. A Siberian team never fully shows what it can do until it is within half a mile of its destination, and then it suddenly becomes a living tornado of energy. I shouted to the driver, "Pastoi! Teeshei!" ["Hold on! Don't go so fast!"] but it was of no use. Both driver and horses knew that this was the final

THE RETURN OF THE MIRACLE-WORKING IKON.

spurt, and exerted themselves to the utmost, the horses laying back their ears and tearing ahead as if pursued by a prairie fire, while the driver lashed them fiercely with his heavy knout to an accompaniment of shrill, wild cries, whoops, whistles, and shouts of "Ya-a-a-va!" "Ay doorak!" "Noo-oo-oo!" (with a falling inflection) "Heekh-ya-a-a!" All that we could do was to shut our eyes, trust in Providence, and hold on. The tarantas was pelted with a perfect storm of mud from the flying hoofs of four galloping horses, and

if, putting out my head, I opened my mouth to expostulate with the driver, I ran great risk of having it effectually closed by a teacupful of tenacious black mire, thrown like a semi-liquid ball from the catapult of a horse's hoof. In a moment we saw, barring the way ahead, a long wattled fence extending for a mile or more to the right and left, with a narrow gate at the point where it intersected the road. It was the fence which inclosed the pasture ground of the village that we were approaching. As we dashed, with a

COSSACK PEASANT GIRL.

wild whoop from our driver, through the open gateway, we noticed beside it a curious half-underground hut, roofed partly with bushes and partly with sods, out of which, as we passed, came the village gate-keeper—a dirty, forlorn-looking old man with inflamed eyes and a long white beard, who reminded me of Rip Van Winkle after his twenty-years' sleep. While he was in the act of bowing and touching the weather-beaten remains of what was once a hat, we whirled past and lost sight of him, with a feeling of regret that we could not stop and take a photograph of such a wild, neglected, picturesque embodiment of poverty and wretchedness clothed in rags. Just inside the gate stood an unpainted sign-post, upon the board of which had been neatly inscribed in black letters the words

VILLAGE OF KRUTAYA.

Distance from St. Petersburg, 2992 versts.

Distance from Moscow, 2526 versts.

Houses, 42. Male souls, 97.

Between the gate and the village there was a grassy common about half a mile wide, upon which were grazing hundreds of cattle and

sheep. Here and there stood a huge picturesque windmill, consisting of a small gable-roofed house with four enormous wind-vanes mounted on a pivot at the apex of a pyramid of cross-piled logs. Beyond the windmills appeared the village, a small collection of gray, weather-beaten log-houses, some with roofs of boards, some with a roofing of ragged birch-bark held in place by tightly lashed poles, some thatched with straw, and some the flat roofs of which had been overlaid with black earth from the steppe and supported a thrifty steppe flora of weeds, but-

tercups, and wild mustard. Through this cluster of gray log-houses ran one central street, which had neither walks nor gutters, and which, from side to side and from end to end, was a shallow lake of black, liquid mud. Into this wide street we dashed at a tearing gallop; and the spluttering of the horses' hoofs in the mud, the rumble of the tarantas, and the wild cries of our driver brought the whole population to the windows to see whether it was the governor-general or a special courier of the Tsar who came at such a furious pace into the quiet settlement. Presently our driver pulled up his reeking, panting horses before the court-yard gate of one of his friends and shouted, "Davai losheday!" ["Bring

out the horses!"] Then from all parts of the village came, splashing and "thlupping" through the mud, idlers and old men to see who had arrived and to watch the changing of teams. Strange, picturesque figures the old men were, with their wrinkled faces, matted, neglected hair, and long stringy gray beards. Some were bare-headed, some bare-footed, some wore tattered sheepskin "shubas" and top-boots, and some had on long-tailed butternut coats, gilt about the waist with straps or dirty colored sashes. While

A WEALTHY KIRGHIS.

A STEPPE VILLAGE.

they assembled in a group around the tarantas, our driver climbed down from his high seat and began to unharness his horses. The owner of the house in front of which we had stopped soon made his appearance, and inquired whether we wished to drink tea or to go on at once. I replied that we desired to go on at once. "Andre!" he shouted to one of his sons, "ride to the pasture and drive in the horses." Andre sprang on a bare-backed horse which another boy brought out of the court-yard and galloped away to the village common. In the mean time the assembled crowd of idlers watched our movements, commented upon our "new-fashioned" tarantas, and tried to ascertain from our driver who we were and where we were going. Failing to get from that source any precise information, one of them, a bare-headed, gray-haired old man, said to me, "Bahrin! Permit us to ask — where is God taking you to?" I replied that we were going to Omsk and Semipalatinsk. "A-a-ah!" murmured the crowd with gratified curiosity.

"Where do you condescend to come from?" inquired the old man, pursuing the investigation.

"From America," I replied.

"A-a-ah!" breathed the crowd again.

"Is that a Russian town?" persisted the old man.

"America is n't a town," shouted a bright-faced boy on the outskirts of the crowd. "It's a country. All the world," he continued mechanically, as if reciting from a school-book, "is divided into five parts, Europe, Asia, Africa, America, and Australia. Russia occupies two-thirds of Europe and one-half of Asia." Be-

yond this even the school-boy's geographical knowledge did not extend, and it was evident that none of the old inhabitants of the village had even so much as heard of America. A young man, however, who had happened to be in Omsk when the bodies of the dead members of the *Jeannette* Arctic expedition were carried through that city, undertook to enlighten the crowd upon the subject of the Americans, who, he said, "were the wisest people that God had ever created, and the only people that had ever sailed into the great Icy Sea." One of the old inhabitants contended that Russian navigators had also penetrated the Icy Sea, and that although they might not be so "wise" as the Americans, they were quite as good sailors in icy waters. This gave rise to an animated discussion of polar exploration, in the midst of which the young fellow who had been sent after the horses came back with whistle and whoop, driving the animals before him into the court-yard, where they were

A KIRGHIS GIRL.

soon harnessed, and were then brought out and fastened with long rope traces to the tarantas. Our new driver mounted the box, inquired whether we were ready, and gathering up his rope reins shouted "Noo-oo!" to his horses; and with a measured jangle of bells from the arch over the thill-horse's back, and a "splash-splatter-splash" of hoofs in the mud, we rolled out of the settlement.

Such, with trifling variations in detail, was the regular routine of arrival and departure in

foreground with millions of wild roses, white marguerites, delicate five-angled harebells, and dark red tiger-lilies. Between the villages of Krutaya and Kalmakova, on Friday, we rode across a steppe which was literally a great ocean of flowers. One could pick twenty different species and a hundred specimens within the area of a single square yard. Here and there we deserted the miry road and drove for miles across the smooth, grassy plain, crushing flowers by the score at every revo-

lution of our carriage-wheels. In the middle of the steppe I had our driver stop and wait for me while I alighted and walked away into the flowery solitude to enjoy the stillness, the perfumed air, and the sea of verdure through which ran the long, sinuous black line of the muddy highway. On my left, beyond the

WINDMILL AND THE
STEPPE.

all of the steppe villages where we changed horses between Tiumen and Omsk. The greater number of these villages were dreary, forlorn-looking places, containing neither yards, walks, trees, grass-plots, nor shrubbery, and presenting to the eye nothing but two parallel lines of gray, dilapidated log-houses and tumble-down court-yard walls rising directly out of the long pool of jet-black mud which formed the solitary street.

It is with a feeling of intense pleasure and relief that one leaves such a village and rides out upon the wide, clean, breezy steppe where the air is filled with the fragrance of clover and the singing of birds, and where the eye is constantly delighted with great sweeps of smooth, velvety turf, or vast undulating expanses of high steppe grass sprinkled in the

AN OASIS IN THE IRTISH STEPPE.

road, was a wide, shallow depression six or eight miles across, rising on the opposite side in a long, gradual sweep to a dark blue line of birch forest which formed the horizon. This depression was one smooth expanse of close, green turf dotted with grazing cattle and sheep, and broken here and there by a silvery pool or lake. Around me, upon the higher ground, the steppe was carpeted with flowers, among which I noticed splendid orange asters two inches in diameter, spotted tiger-lilies with strongly reflexed petals, white clover, daisies, harebells, spirea, astragalus, melilotus, and a peculiar flower growing in

POLICE STATION AND FIRE TOWER IN OMSK.

long, slender, curved spikes which suggested flights of miniature carmine sky-rockets sent up by the fairies of the steppe. The air was still and warm, and had a strange, sweet fragrance which I can liken only to the taste of wild honey. There were no sounds to break the stillness of the great plain except the drowsy hum of bees, the regular measured "Kate-did-Kate-did" of a few katydid in the grass near me, and the wailing cry of a steppe hawk hovering over the nest of some field-mice. It was a delight simply to lie on the grass amidst the flowers and see, hear, and breathe.

We traveled all day Friday over flowery steppes and through little log villages like those that I have tried to describe, stopping occasionally to make a sketch, collect flowers, or talk with the peasants about the exile system. Now and then we met a solitary traveler in a muddy tarantas on his way to Tiumen, or passed a troop of exiles in gray overcoats plodding along through the mud, surrounded by a cordon of soldiers; but as we were off

the great through line of travel, we saw few vehicles except the telegas of peasants going back and forth between the villages and the outlying fields.

The part of the province of Tobolsk through which we traveled from Tiumen to Omsk is much more productive and prosperous than a careless observer would suppose it to be from the appearance of most of its villages. The four "okroogs," or "circles,"* of Tiumen, Yalutorfsk, Ishim, and Tiukalinsk, through which our road lay, have an aggregate population of 650,000 and contain about 4,000,000 acres of cultivated land. The peasants in these circles own 1,500,000 head of live stock, and produce perhaps two-thirds of the 30,000,000 bushels of grain raised annually in the province. There are held every year in the four circles 220 town and village fairs or local markets, to which the peasants bring great quantities of products for sale. The transactions of these fairs in the circle of Yalutorfsk, for example, amount annually to \$2,000,000; in the circle of Ishim, to \$3,500,000; and in the whole

* An okroog, or circle, bears something like the same relation to a province that an American county bears to a State, except that it is proportionately much larger. The province of Tobolsk, with an area of 590,000 square miles, has only 10 okroogs, so that the average area of these subdivisions is about that of the State of Michigan. If all of the territory north of the Ohio River and the Potomac and east of the Mississippi

were one State, and each of the existing States were a county, such State and counties would bear to each other and to the United States something like the same relation which the province and okroogs of Tobolsk bear to each other and to Siberia. The highest administrative officer in a Siberian province is the governor, who is represented in every okroog by an ispravnik.

A KIRGHIS BRIDE.

province, to about \$14,000,000. From these statistics, and from such inquiries and observations as we were able to make along the road, it seemed to me that if the province of Tobolsk were honestly and intelligently governed, and were freed from the heavy burden of criminal exile, it would in a comparatively short time become one of the most prosperous and flourishing parts of the empire.

We drank tea Friday afternoon at the circuit town of Tiukalinsk, and after a short rest resumed our journey with four "free" horses. The road was still muddy and bad, and as we skirted the edge of the great marshy steppe of Baraba between Tiukalinsk and Bekisheva, we were so tormented by huge gray mosquitoes that we were obliged to put on thick gloves, cover our heads with calico hoods and horse-hair netting, and defend ourselves constantly

with leafy branches. Between the mosquitoes and the jolting we had another hard, sleepless night; but fortunately it was the last one, and at half-past 10 o'clock on the morning of Saturday, July 4, our tarantas rolled into the streets of Omsk. Both we and our vehicle were so spattered and plastered with black steppe mud that no one who had seen us set out from Tiumen would have recognized us. We had been four days and nights on the road, and had made in that time a journey of 420 miles, with only 11 hours of sleep.

Omsk, which is a city of about 30,000 inhabitants, is the capital of the "oblast," or territory, of Akmolinsk, and the seat of government of the steppe provinces. It is an administrative rather than a commercial or a manufacturing town, and its population is largely composed of officials and clerks employed in the various Government bureaus and departments. It has a few noticeable public buildings, among which are the enormous white "cadet school," the house of the governor-general, the police station,—a rather picturesque log building surmounted by a fire-alarm tower,—and the "krepost," or fortress. The streets of the city are wide and unpaved; the dwelling-houses are generally made of logs; there is the usual number of white-walled churches and cathedrals with green, blue, or golden domes; and every building which would attract a traveler's attention belongs to the Government. If I were asked to charac-

EXILE HILL IN OMSK.

A KIRGHIS WOMAN.

relations between the latter half and the former may be inferred from the fact that an intelligent and reputable citizen of this chinovnik-dominated city, who had been kind and useful to us, said to me when he bade me good-bye, "Mr. Kennan, if you find it necessary to speak of me by name in your book, please don't speak of me favorably."

"For Heaven's sake, why not?" I inquired.

"Because," he replied, "I don't think your book will be altogether pleasing to the Government; and if I am mentioned favorably in it, I shall be harried by the officials here more than I am now. My request may seem to you absurd, but it is the only favor I have to ask."*

We found little to interest us in Omsk except a small museum in the rooms of the Geographical Society, to which we were kindly taken by Colonel Pevtsof, and a wretched suburban colony of poor criminal exiles, living in half-underground huts on a steep hillside north of the river Om. I tried to find the ostrog, or prison, where the gifted Russian novelist Dostoyefski spent so many years of penal servitude and where he was twice flogged with the knout, but I was told that it had long before been torn down. I did not wonder that the Government should have torn down walls which had witnessed such scenes of misery and cruelty as those de-

A MIDDLE-CLASS KIRGHIS.

terize Omsk in a few words, I should describe it as a city of 30,000 inhabitants, in which the largest building is a military academy and the most picturesque building a police station; in which there is neither a newspaper nor a public library, and in which one-half the population wears the Tsar's uniform and makes a business of governing the other half. The nature of the re-

lations between the latter half and the former may be inferred from the fact that an intelligent and reputable citizen of this chinovnik-dominated city, who had been kind and useful to us, said to me when he bade me good-bye, "Mr. Kennan, if you find it necessary to speak of me by name in your book, please don't speak of me favorably."

On Wednesday, July 8, having fully recovered from the fatigue of our journey from Tiumen, we left Omsk with three post horses and a Cossack driver for Semipalatinsk. The road between the two cities runs everywhere along the right bank of the Irtish through a line of log villages not differing materially from those north of Omsk, but inhabited almost exclusively by Cossacks. Whenever the Russian Government desires to strengthen a weak frontier line so as to prevent the incursions of hostile or predatory natives, it forcibly colonizes along that line a few hundred or a few thousand families of armed Cossacks. During the last century it formed in this way the "armed line of the Terek," to protect south-eastern Russia from the raids of the Caucasian mountaineers, and the armed line of the Irtish, to hold in check the Kirghis. The danger which was apprehended from these half-

A JIBOGA.

wild tribes long ago passed away, but the descendants of the Cossack colonists still remain in the places to which their parents or their grandparents were transported. They have all the hardy virtues of pioneers and frontiersmen, are ingenious, versatile, and full of resources, and adapt themselves quickly to almost any environment. There are thirty or forty settlements of such Cossacks along the line of the Irtish between Omsk and Semipalatinsk, and as many more between Semipalatinsk and the Altai.

Almost immediately after leaving Omsk we noticed a great change in the appearance of

* This was said to me upon our return from eastern Siberia in the following winter, and was called out by an account which I had given to Mr. X— of our experience and the results of our observations. I should be glad to give some illustrations of the "harrying" to which Mr. X— referred, if I could do so without disclosing his identity.

A KIRGHIS ENCAMPMENT.

the country. The steppe, which in the province of Tobolsk had been covered either with fresh green grass or with a carpet of flowers, here became more bare and arid, and its vegetation was evidently withering and drying up under the fierce heat of the midsummer sun. Flowers were still abundant in low places along the river, and we crossed now and then wide areas of grass which was still green, but the prevailing color of the high steppe was a sort of old gold — a color like that of ripe wheat. The clumps of white-stemmed birch-trees, which had diversified and given a park-like character to the scenery north of Omsk, became less and less frequent; cultivated fields disappeared altogether, and the steppe assumed more and more the aspect of a central Asiatic desert.

A few stations beyond Omsk, we saw and visited for the first time an "aoul," or encampment of the wandering Kirghis, a pastoral tribe of natives who roam with their flocks and herds over the plains of south-western Siberia from the Caspian Sea to the mountains of the Altai, and who make up more than three-fourths of the population of the steppe provinces. The aoul consisted of only three or four small "kibitkas," or circular tents of gray felt, pitched close together at a distance from the road in the midst of the great ocean-like expanse of dry, yellowish grass which stretched away in every direction to the horizon. There

was no path leading to or from the encampment, and the little gray tents, standing alone on that boundless plain, seemed to be almost as much isolated, and as far removed from all civilized human interests, as if they were so many frail skin coracles floating in the watery solitude of the Pacific.

It was evident from the commotion caused by our approach that the encampment had not often been visited. The swarthy, half-naked children, who had been playing out on the grass, fled in affright to the shelter of the tents as they saw our tarantas coming towards them across the steppe; women rushed out to take a startled look at us and then disappeared; and even the men, who gathered in a group to meet us, appeared to be surprised and a little alarmed by our visit. A few words in Kirghis, however, from our Cossack driver reassured them, and upon the invitation of an old man in a red and yellow skull-cap, who seemed to be the patriarch of the band, we entered one of the kibitkas. It was a circular tent about fifteen feet in diameter and eight feet high, made by covering a dome-shaped framework of smoke-blackened poles with large overlapping sheets of heavy gray felt. The slightly curved rafters which formed the roof radiated like the spokes of a wheel from a large wooden ring in the center of the dome, and were supported around the circumference

INSIDE THE TENT.

of the tent by a skeleton wall of wooden lattice-work in which there was a hinged door. The ring in the center of the dome outlined the aperture left for the escape of smoke and the admission of air, and directly under this aperture a fire was smoldering on the ground inside a circle of flat stones, upon which stood a few pots, kettles, and other domestic uten-

sils. The furniture of the tent was very scanty, and consisted of a narrow, unpainted bedstead opposite the door, two or three cheap Russian trunks of wood painted blue and decorated with strips of tin, and a table about four feet in diameter and eight inches high, intended evidently to be used by persons who habitually squatted on the ground. Upon the table

were a few dirty wooden bowls and spoons and an antique metal pitcher, while here and there, hanging against the lattice wall, were buckets of birch bark, a harness or two, a flint-lock rifle, a red, white, and golden saddle of wood with silver inlaid stirrups, and a pair of carpet saddle-bags.

The first duty which hospitality requires of a Kirghis host is the presentation of koumiss to his guests, and we had no sooner taken seats on a sheet of gray felt beside the fire than one of the women went to the koumiss

another; and when I told him that a single quart was all that I permitted myself to take at one time, and suggested that he reserve the second bowlful for my comrade, Mr. Frost, he looked so pained and grieved that in order to restore his serenity I had to go to the tarantas, get my banjo, and sing "There is a Tavern in the Town." Mr. Frost, meanwhile, had shirked his duty and his koumiss by pretending that he could not drink and draw simultaneously, and that he wanted to make a likeness of the patriarch's six-year-old son.

This seemed to be a very adroit scheme on Mr. Frost's part, but it did not work as well as he had expected. No sooner had he begun to make the sketch than the boy's mother, taking alarm at the peculiar, searching way in which the artist looked at his subject, and imagining perhaps that her offspring was being mes-

KIRGHIS GRAVES.

churn,—a large, black, greasy bag of horse-hide hanging against the lattice wall,—worked a wooden churn-dasher up and down in it vigorously for a moment, and then poured out of it into a greasy wooden bowl fully a quart of the great national Kirghis beverage for me. It did not taste as much like

sour milk and soda-water as I expected that it would. On the contrary, it had rather a pleasant flavor; and if it had been a little cleaner and cooler, it would have made an agreeable and refreshing drink. I tried to please the old Kirghis patriarch and to show my appreciation of Kirghis hospitality by drinking the whole bowlful; but I underestimated the quantity of koumiss that it is necessary to imbibe in order to show one's host that one does not dislike it and that one is satisfied with one's entertainment. I had no sooner finished one quart bowlful than the old patriarch brought me

A STEPPE GRAVEYARD.

merized, paralyzed, or bewitched, swooped down upon the ragged little urchin, and kissing him passionately, as if she had almost lost him forever, carried him away and hid him. This untoward incident cast such a gloom over the subsequent proceedings that after singing four verses of "Solomon Levi," in a vain attempt to restore public confidence in Mr. Frost, I put away my banjo and we took our departure. I should like to know what traditions are now current in that part of the Kirghis steppe with regard to the two plausible but designing Giaours who went about visiting the aouls of the faithful, one of them

WASHING-DAY.

singing unholy songs to the accompaniment of a strange stringed instrument, while the other cast an "evil eye" upon the children, and tried to get possession of their souls by making likenesses of their bodies.

For four days and nights we traveled swiftly southward over a good road through the illimitable steppes of the Irtish, stopping now and then to pick snowy pond-lilies in some reed-fringed pool, to make a hasty sketch of a lonely, fort-shaped Kirghis grave, or to visit an aoul and drink koumiss with the hospitable nomads in their gray felt tents. Sometimes the road ran down into the shallow valley of the Irtish, through undulating seas of golden-rod and long wild grass whose wind-swept waves seemed to break here and there in foaming crests of snowy spirea; sometimes it made a long détour into the high, arid steppe back from the river, where the vegetation had been parched to a dull uniform yellow by weeks of hot sunshine; and sometimes it ran suddenly into a low, moist oasis around a blue steppe lake, where we found ourselves in a beautiful natural flower-garden crowded with rose-bushes, hollyhocks, asters, daisies, fringed

pinks, rosemary, flowering pea, and splendid dark blue spikes of aconite standing shoulder high.

After we passed the little Cossack town of Pavlodar on Friday, the weather, which had been warm ever since our departure from Omsk, became intensely hot, the thermometer indicating ninety-one degrees Fahrenheit at 1 p. m. As we sat, without coats or waistcoats, under the sizzling leather roof of our tarantas, fanning ourselves with our hats, panting for breath, fighting huge green-eyed horseflies, and looking out over an illimitable waste of dead grass which wavered and trembled in the fierce glare of the tropical sunshine, we found it almost impossible to believe that we were in Siberia.

Many of the Cossack villages along this part of our route were situated down under the high, steep bank of the Irtish at the very water's edge, where the soil was moist enough to support a luxuriant vegetation. As the result of such favorable situation, these villages were generally shaded by trees and surrounded by well-kept vegetable and flower gardens. After a ride of twenty miles over an arid steppe in

A STREET IN SEMIPALATINSK.

the hot, blinding sunshine of a July afternoon, it was indescribably pleasant and refreshing to come down into one of these little oases of greenery, where a narrow arm of the Irtish flowed tranquilly under the checkered shade of leafy trees; where the gardens of the Cossack housewives were full of potato, cucumber, and melon vines, the cool, fresh green of which made an effective setting for glowing beds of scarlet poppies; and where women and girls with tucked-up skirts were washing clothes on a little platform projecting into the river, while half-naked children waded and splashed in the clear, cool water around them.

We made the last stretches of our journey to Semipalatinsk in the night. The steppe over

which we approached the city was more naked and sterile than any that we had crossed, and seemed in the faint twilight to be merely a desert of sun-baked earth and short dead grass, with here and there a ragged bush or a long, ripple-marked dune of loose, drifting sand. I fell asleep soon after midnight, and when I awoke at half-past 2 o'clock Sunday morning day was just breaking, and we were passing a large white building with lighted lanterns hung against its walls, which I recognized as a city prison. It was the "tiuremni zamok," or "prison castle" of Semipalatinsk. In a few moments we entered a long, wide, lonely street, bordered by unpainted log-houses, the board window-shutters of which were all closed, and

the steep, pyramidal roofs of which loomed high and black in the first gray light of dawn. The street was full of soft, drifted sand, in which the hoofs of our horses fell noiselessly, and through which our tarantas moved with as little jar as if it were a gondola floating along a watery street in Venice. There was something strangely weird and impressive in this noiseless night ride through the heart of a ghostly and apparently deserted city, in the streets of which were the drifted sands of the desert, and where there was not a sound to indicate the presence of life save the faint, distant throbbing of a watchman's rattle, like the rapid, far-away beating of a wooden drum. We stopped at last in front of a two-story building of brick, covered with white stucco, which our driver said was the hotel "Sibir." After pounding vigorously for five minutes on the front door, we were admitted by a sleepy waiter, who showed us to a hot, musty room in the second story, where we finished our broken night's sleep on the floor.

The city of Semipalatinsk, which has a population of about 15,000 Russians, Kirghis, and Tartars, is situated on the right bank of the river Irtish, 480 miles south-east of Omsk and about 900 miles from Tiumen. It is the seat of government of the province of Semipalatinsk, and is commercially a place of some importance, owing to the fact that it stands on one of the caravan routes to Tashkend and central Asia, and commands a large part of the trade of the Kirghis steppe. The country tributary to it is a pastoral rather than an agricultural region, and of its 547,000 inhabitants 497,000 are nomads who live in 111,000 kibitkas or felt tents, and own more than 3,000,000 head of live stock, including 70,000 camels. The province produces annually, among other things, 45,000 pounds of honey, 370,000 pounds of tobacco, 100,000 bushels of potatoes, and more than 12,000,000 bushels of grain. There are held every year within the limits of the province 11 commercial fairs, the transactions of which amount in the aggregate to about \$1,000,000. Forty or

fifty caravans leave the city of Semipalatinsk every year for various points in Mongolia and central Asia, carrying Russian goods to the value of from \$150,000 to \$200,000.

It is hardly necessary, I suppose, to call the attention of persons who think that all of Siberia is an arctic waste to the fact that honey and tobacco are not arctic products, and that the camel is not a beast of burden used by Eskimos on wastes of snow. If Mr. Frost and I had supposed the climate of south-western Siberia to be arctic in its character, our minds would have been dispossessed of that erroneous idea in less than twelve hours after our arrival in Semipalatinsk. When we set out for a walk through the city about 1 o'clock Sunday afternoon, the thermometer indicated eighty-nine degrees Fahrenheit in the shade with a north wind, and the inhabitants seemed to regard it as rather a cool and pleasant summer day. After wading around in the deep sand under a blazing sun for an hour and a half, we were

A KIRGHIS HORSEMAN.

A CAMEL TEAM CROSSING A FORD.

more than ready to seek the shelter of the hotel and call for refrigerating drinks. The city of Semipalatinsk fully deserves the nickname which has been given to it by the Russian officers there stationed, viz., "The Devil's Sand-box." From almost any interior point of view it presents a peculiar gray, dreary appearance, owing partly to the complete absence of trees and grass, partly to the ashy, weather-beaten aspect of its unpainted log-houses, and partly to the loose, drifting sand

with which its streets are filled. We did not see in our walk of an hour and a half a single tree, bush, or blade of grass, and we waded a large part of the time through soft, dry sand which was more than ankle-deep, and which in places had been drifted, like snow, to a depth of four or five feet against the walls of the gray log-houses. The whole city made upon me the impression of a Mohammedan town built in the middle of a north African desert. This impression was deepened by the

Tartar mosques here and there with their brown candle-extinguisher minarets; by the groups of long-bearded, white-turbaned mullas who stood around them; and by the appearance in the street now and then of a huge two-humped Bactrian camel, ridden into the city by a swarthy, sheepskin-hooded Kirghis from the steppes.

Monday morning I called upon General Tseklinski, the governor of the province, presented my letters from the Russian Minister of the Interior and the Minister of Foreign Affairs, and was gratified to find that he had apparently received no private instructions with regard to us and knew nothing whatever about us. He welcomed me courteously, granted me permission to inspect the Semipalatinsk prison, said he would send the chief of the police to go with us to the mosques and show us about the city, and promised to have prepared for us an open letter of recommendation to all the subordinate officials in the Semipalatinsk province.

From the house of the governor I went, upon his recommendation, to the public library, an unpretending log-house in the middle of the town, where I found a small anthropological museum, a comfortable little reading-room supplied with all the Russian newspapers and magazines, and a well-chosen collection of about one thousand books, among which I was somewhat surprised to find the works of Spencer, Buckle, Lewes, Mill, Taine, Lubbock, Tylor, Huxley, Darwin, Lyell, Tyndall, Alfred Russel Wallace, Mackenzie Wallace, and Sir Henry Maine, as well as the novels and stories of Scott, Dickens, Marryat, George Eliot, George MacDonald, Anthony Trollope, Justin McCarthy, Erckmann-Chatrian, Edgar Allan Poe, and Bret Harte. The library was particularly strong in the departments of science and political economy, and the collection of books, as a whole, was in the highest degree creditable to the intelligence and taste of the people who made and used it. It gave me a better opinion of Semipalatinsk than anything that I had thus far seen or heard.*

From the library I strolled eastward along the bank of the Irtish to the pendulum ferry by which communication is maintained between Semipalatinsk and a Kirghis suburb on the other side of the river. The ferry-boat starts from a wooded island in mid-stream, which is reached either by crossing a foot-

bridge, or by fording the shallow channel which separates it from the Semipalatinsk shore. Just ahead of me were several Kirghis with three or four double-humped camels, one of which was harnessed to a Russian telega. Upon reaching the ford the Kirghis released the draught camel from the telega, lashed the empty vehicle, wheels upward, upon the back of the grunting, groaning animal, and made him wade with it across the stream. A Bactrian camel, with his two loose, drooping humps, his long neck, and his preposterously conceited and disdainful expression of countenance, is always a ridiculous beast, but he never looks so absurdly comical as when crossing a stream with a four-wheeled wagon lashed bottom upward on his back. The shore of the Irtish opposite Semipalatinsk is nothing more than the edge of a great desert-like steppe which stretches away to the southward beyond the limits of vision. I reached there just in time to see the unloading of a caravan of camels which had arrived from Tashkend with silks, rugs, and other central Asiatic goods for the Semipalatinsk market.

Late in the afternoon I retraced my steps to the hotel, where I found Mr. Frost, who had been sketching all day in the Tartar or eastern end of the town. The evening was hot and sultry, and we sat until 11 o'clock without coats or waistcoats, beside windows thrown wide open to catch every breath of air, listening to the unfamiliar noises of the Tartar city. It was the last night of the great Mohammedan fast of Ramazan, and the whole population seemed to be astir until long after midnight. From every part of the town came to us on the still night air the quick staccato throbbing of watchmen's rattles, which sounded like the rapid beating of wooden drums, and suggested some pagan ceremony in central Africa or the Fiji Islands. Now and then the rattles became quiet, and then the stillness was broken by the long-drawn, wailing cries of the muezzins from the minarets of the Tartar mosques.

Tuesday morning when we awoke we found the streets full of Tartars and Kirghis in gala dress, celebrating the first of the three holidays which follow the Mohammedan Lent. About noon the chief of police came to our hotel, by direction of the governor, to make our acquaintance and to show us about the city, and under his guidance we spent two or three

* Most of the works of the scientific authors above named were expurgated Russian editions. Almost every chapter of Lecky's "History of Rationalism" had been defaced by the censor, and in a hasty examination of it I found gaps where from ten to sixty pages had been cut out bodily. Even in this mutilated form, and in the remote Siberian town of Semipalatinsk, the book was such an object of terror to a cowardly Gov-

ernment, that it had been quarantined by order of the Tsar and could not be issued to a reader without special permission from the Minister of the Interior. A similar taboo had been placed upon the works of Spencer, Mill, Lewes, Lubbock, Huxley, and Lyell, notwithstanding the fact that the censor had cut out of them everything that seemed to him to have a "dangerous" or "demoralizing" tendency.

A TARTAR WRESTLING MATCH.

hours in examining the great Tartar mosque and making ceremonious calls upon mullas and Tartar officials. He then asked us if we would not like to see a Tartar and Kirghis wrestling match. We replied, of course, in the affirmative, and were at once driven in his droshky to an open sandy common at the eastern end of the city, where we found a great crowd assembled and where the wrestling had already begun. The dense throng of spectators—mostly Kirghis and Tartars—was arranged in concentric circles around an open space twenty-five or thirty feet in diameter. The inner circle was formed by two or three lines of men, squatting on their heels; then came three or four lines of standing men, and behind the latter was a close circle of horsemen sitting in their saddles, and representing the gallery. The chief of police made a way for us through the crowd to the inner circle, where we took orchestra seats in the sand under a blazing sun and in a cloud of fine dust raised by the wrestlers. The crowd, as we soon discovered, was divided into two hostile camps, consisting respectively of Kirghis and Tartars. Ours was the Kirghis side, and opposite us were the Tartars. There were four masters of ceremonies, who were dressed in long green "khalats" and carried rattan wands. The two Tartar officials would select a champion in their corner, throw a sash over his head, pull him out into the arena, and then challenge the Kirghis officials to match him. The latter would soon find a man about equal to the Tartar champion in size and weight, and then the two contestants would prepare for the struggle. The first bout after we arrived was between a good-looking, smooth-faced young Kirghis, who wore a blue skull-cap and a red sash, and an athletic, heavily built Tartar, in a yellow skull-cap and a green sash. They eyed each other warily for a moment, and then clinched fiercely, each grasping with one hand his adversary's sash, while he endeavored with the other to get an advantageous hold of wrist, arm, or shoulder. Their heads were pressed closely together, their bodies were bent almost into right angles at their waists, and their feet were kept well back to avoid trips. Presently both secured sash and shoulder holds, and in a bent position backed each other around the arena, the Kirghis watching for an opportunity to trip and the Tartar striving to close in. The veins stood out like whip-cords on their foreheads and necks, and their swarthy

faces dripped with perspiration as they struggled and maneuvered in the scorching sunshine, but neither of them seemed to be able to find an opening in the other's guard or to get any decided advantage. At last, however, the Tartar backed away suddenly, pulling the Kirghis violently towards him; and as the latter stepped forward to recover his balance, he was dexterously tripped by a powerful side-blow of the Tartar's leg and foot. The trip did not throw him to the ground, but it did throw him off his guard; and before he could recover himself, the Tartar broke the sash and shoulder hold, rushed in fiercely, caught him around the body, and, with a hip-lock and a tremendous heave, threw him over his head. The unfortunate Kirghis fell with such violence that the blood streamed from his nose and mouth and he seemed partly stunned; but he was able to get up without assistance and walked in a dazed way to his corner, amidst a roar of shouts and triumphant cries from the Tartar side.

As the excitement increased new champions offered themselves, and in a moment two more contestants were locked in a desperate struggle, amidst a babel of exclamations, suggestions, taunts, and yells of encouragement or defiance from their respective supporters. The hot air was filled with a dusty haze of fine sand, which was extremely irritating to the eyes; our faces and hands burned as if they were being slowly blistered by the torrid sunshine; and the odors of horses, of perspiration, and of greasy old sheepskins, from the closely packed mass of animals and men about us, became so overpowering that we could scarcely breathe; but there was so much excitement and novelty in the scene, that we managed to hold out through twelve or fifteen bouts. Two police officers were present to maintain order and prevent fights, but their interference was not needed. The wrestling was invariably good-humored, and the vanquished retired without any manifestations of ill-feeling, and often with laughter at their own discomfiture. The Kirghis were generally overmatched. The Tartars, although perhaps no stronger, were quicker and more dexterous than their nomadic adversaries, and won on an average two falls out of every three. About 5 o'clock, although the wrestling still continued, we made our way out of the crowd and returned to the hotel, to bathe our burning faces and, if possible, get cool.

George Kennan.

DISEASE GERMS, AND HOW TO COMBAT THEM.*

AT the very confines of organic nature, the lowliest of the low among plants, comes a series of minute and simply formed bodies called bacteria. From them we receive great benefits, and from them also proceed some of our greatest evils. They are the active agents in producing that circulation of matter so essential to the continuance of organic life, since by the decompositions they effect the earth is freed from the dead matter which would otherwise encumber it, while the matter itself is turned into the great reservoir from which all life draws. In addition to this, recent experiments make it doubtful whether our seeds could germinate without their aid; and yet, it must be confessed that, as a class, they are not in good repute. They spoil our meats in warm weather, turn sour our milk, and vex the housewife by exciting revolt among her choicest preserves; and we are now in possession of facts which prove that some among them actually cause disease of an infectious nature. This is no longer inferential, but proved for at least half a dozen diseases; and the proof is positive and absolute in that number of cases, while in many others we need but a few more facts that we may be equally assured.

Taking a little filtered beef bouillon, clear as crystal to the eye, and showing under the microscope not a trace of life, let us place it in a glass flask and, boiling it repeatedly to destroy any germs it may contain, set it aside in a warm place with the mouth of the flask open. In a few days the liquid previously so limpid becomes very turbid. If we take a drop and magnify it 1000 diameters we shall see that the liquid is crowded with life, and the few ounces of bouillon contain a vaster population than our greatest city can boast. All is incessant activity; the whole field of the microscope is crowded with moving bodies, some shooting rapidly past in straight lines, others moving slowly backward and forward, while others twirl and spin during the whole time of observation. The sight itself is interesting, but the question that springs at once to the mind is still more so. Whence comes all this active life? It was here that the theory of spontaneous generation took its last stand; it was

* When not otherwise credited, the drawings were made by the author directly from the microscope.

here that it made its most desperate resistance; here also it has been most signally defeated. Has the life sprung from some new arrangement of the complex principles in the broth? No. Science again reiterates the dictum that there can be no life without antecedent life. The broth has been contaminated by air germs, and from a few falling into it has come this prodigal life. Starting from no matter how complex a substance, once kill all the germs it contains and supply it with air freed from germs, and no life will ever appear. Here, then, is a test for the number of germs air or water may contain in seeing how much is required to start life in an infusion perfectly free from germs. On this principle the numbers presently to be stated have been obtained. We must clearly understand, lest we become needlessly alarmed, that the majority of bacterial life, as such, is perfectly harmless to man. Almost every fermentation and putrefaction has a special bacterium inducing it. The ripening of cheese is produced by bacteria and yet is perfectly harmless. What, then, does it signify to count bacteria in air and in water? It is useful simply because where harmless bacteria are found multiplying there we are assured conditions are generally favorable for the increase of harmful varieties too.

1. *Bacterium Termo* X 1000 Diameters. 2. *Hay Bacillus* X 1000 D. 3. Same (zoogloea) X 1000 D. 4. *Bacterium Termo* X 3000 D. (Dallinger.)

Returning to our infusions and microscope, let us look more closely at this lowly life. We have shown in Figure 1 the appearance of beef bouillon in which bacteria called "*bacterium termo*" are growing, while Figures 2 and 3 show a growth of what is called "*hay bacillus*," since the germs are very abundant in hay; and here, so our readers may not become

confused with the different names, we will say that bacteria are divided according to their *shape* into four classes: the micrococci (the word means little grains) are round, bacteria proper are very short cylinders, bacilli are longer, while the spirillum is shown in Figure 6. The micrococci, of which we show the species inhabiting the mouth in health (Figure 5), are always seen as small spherical bodies about $\frac{1}{3000}$ of an inch in diameter. Like all the bacteria, they are little masses of vegetable protoplasm surrounded by a thin cell wall. Their number in the mouth is almost incredible, but to human beings they are perfectly harmless; however, if we inoculate a few drops of saliva under the skin of a rabbit, in about two days it dies and we find its blood crowded with these minute cells.

spores forming in the bacilli look sometimes like peas in a pod, and escape through the cell wall.

Some of the bacteria are motionless; others seem to possess untiring activity, caused in some cases by flagellata, as shown in Figures 4 and 6.

Let us now pass to some of the forms accompanying disease. Those figured are the bacillus anthracis, causing splenic fever, in Figure 8; the comma bacillus, the probable cause of cholera, according to Koch, shown in Figure 9; the spirillum, causing relapsing fever, in Figure 11; while in No. 10 is seen the bacillus tuberculosis of consumption.

5. Micrococci from Mouth X 1000 D. 6. Spirillum Volutans X 500 D. (Cohn.)

7. Sarcina Ventriculi X 1000 D. 8. Bacillus Anthracis X 1000 D. 9. Comma Bacillus (Cholera) X 1000 D. 10. Bacillus of Consumption X 1000 D.

The bacterium and the bacillus (Figures 1, 2, and 3) resemble one another, the bacterium being shorter, however, while the spirillum is totally different, much larger and twisted, and in the species figured attains a length of $\frac{1}{300}$ of an inch, which makes it a giant among the bacteria. The method by which these little plants multiply deserves notice. The chains formed by the micrococcus (Figure 5) first attract attention, and show a very common method of growth among the bacteria. This is called fission: the cell elongates and then divides, the new cell does likewise, and so a long string is formed, the micrococci under the microscope looking like minute pearls. Sometimes the division takes place in two directions, and we then have — what Figure 7 shows very plainly — a grouping in squares. The method which interests us most, however, is reproduction by spores, which are to the adult bacilli as seeds to a plant; and as the seed can survive what will kill the plant, so spores withstand degrees of heat, dryness, and disinfection fatal to full-grown bacteria: the

It will be asked, How do these minute plants kill? In diseases like splenic fever their rapid multiplication actually fills and plugs the capillaries; in their life processes many of the disease germs evolve poisonous products. The mechanical effect of foreign matter in the blood must not be overlooked; and, as bacteria cannot grow without nutriment, all this must come from the fluids and the tissues of the body.

We have spoken of the methods of growth and must now mention its marvelous rapidity. Cohn has seen the hay bacillus in infusions at blood heat divide every twenty minutes. We have calculated this rate for twenty-four hours, and have found that at the end of the first day there would be as the descendants of a single bacillus 4,722,366,482,869,645,213,696 individuals; and though we can pack a trillion (1,000,000,000,000) in a cubic inch, this number would fill about 2,500,000 cubic feet. This is clearly not what they do, but simply what they are capable of for a short time when temperature and food supply are favorable.

Since the multiplication of bacteria is so favored by warmth, the summer season requires special sanitary precautions; but plants

need soil as well as warmth, and the soil which best fosters these is an accumulation of vegetable or animal refuse. The longer such garbage is kept, the better for their growth and the worse for the neighborhood. In summer, therefore, it is of the first importance that garbage should be removed daily. A great step would be gained if garbage could be burned as soon as made; and as this is almost impossible in its wet state, we notice with pleasure an invention by which it is dried and then burnt, a water seal, it is claimed, preventing the escape of all odors in either operation. This is certainly a desideratum in country places with no garbage collection, where from this cause the immediate surroundings of a house often nullify the benefits of the otherwise pure air. Miquel has found that air at Montsouris (outside of Paris) contains, as an average, 1092 microbes, while in a Paris street there are in a cubic meter (35 cubic feet) 9750. The upper air in a city is, however, much purer than that of the streets. Thus Miquel found on top of the Pantheon but 364 germs to the meter, which is thus freer than country air near the ground. But if street air is so full of germs, what can be said of the houses? In Miquel's own house each cubic meter contained in summer 49,800, while in winter there were 84,500. This increase in winter over summer is due to the much smaller ventilation allowed. In free air, country or city, the germs are three to four times more numerous in summer than in winter. These figures help us to appreciate the necessity for thorough ventilation, especially in cases of infectious disease. Tightly closing the room to prevent the contagion from spreading will but add to its concentration and greatly increase the danger to the attendants. Doors and windows opening into halls or other rooms are wisely closed, but those communicating with outside air should be opened as widely as possible, and if the patient is in an upper room, much of the danger of infection is avoided. It would seem best, where hospitals are built in a thickly inhabited section of the city, to take the air supply used in ventilation, especially of the surgical wards, from a superior level by means of a tall chimney. With such air, and with walls of glazed brick instead of absorbent plaster, unfavorable results after operations, already so reduced in number by antiseptic methods, would be still further diminished.

That sunshine is a germicide as well as a tonic has but recently been proved: if we take two flasks containing the bacillus anthracis with spores, and keep one in the direct sunshine for a long time, while the other exposed to the same heat is kept from the sun, we find the sun-exposed spores have lost their virulence, while the others remain active. Is there need to

further press so patent a lesson? As bacteria grow best in the presence of considerable moisture, we may expect to encounter them in greater abundance in water than in air. Rain water contains 60,000 to a quart, the Vanné four times as many, while the polluted Seine from 5,000,000 to 12,000,000.

Our readers will wish to know if sewage itself can be worse; but this, when fresh, contains 75,000,000 to a quart, and, allowed to stagnate, would soon show itself a hundred times as bad, since it contains an abundant food supply for the microbes. The necessity, therefore, for rapid and complete removal of all bodies entering the sewer becomes apparent: this is best effected by having the sewer of comparatively small size (which will admit of frequent flushing), of sufficient pitch, and as smooth as possible within. It is in putrefaction that the danger to health resides. Fresh sewage cannot to any great extent pollute the air, since the germs have no way of reaching the atmosphere; but in putrefying, bubbles of gas rise and produce each its little spray. These small particles of water, carrying the germs of the sewage, evaporate, and leave their germs floating. This it is which makes sewer gas a carrier of disease. While sewers should be properly ventilated, the practice of leaving the end of a large sewer directly open to the wind, as is often done, permits during gales considerable back pressure, which is a grave source of peril.

The minute size of the bacteria renders it very difficult to effect by mechanical means the purification of waters containing them. While strongly insisting upon the use of the purest water attainable, necessity may forbid a choice and compel the use of a doubtful supply. Two methods are then open for improvement—filtration and boiling. No disease-producing bacteria or spore can withstand a boiling temperature for an hour, so that it is advisable to boil all doubtful water. To the question whether filtration, which is much more convenient than boiling, and which also avoids the flat taste, will not purify, I would answer both yes and no. Yes, if done rightly; no, as generally effected. Figure 12 shows filter paper and bacteria submitted to the same magnification. The folly of using a small filter of some loose material to purify a large stream of water is at once apparent; it may stop off sand or straws, but not disease germs. A filter close grained enough properly to purify must be of good size to supply a family with drinking-water. Tiles of unglazed porous porcelain give by filtration water free from germs, but for an adequate quantity a good size must be used. Animal charcoal was formerly in good repute,

but porous iron has great oxidizing power, will last longer, and yields nothing, while charcoal yields much to the water. Small filters yielding a large amount of water are to be uniformly mistrusted; spongy iron, unglazed porcelain, and close-grained natural porous stones are among our best filtering agents, and all filter slowly. The filtering material, whatever the form used, should be accessible for cleaning, since in time all become fouled. If water is positively bad, boiling is the safer course.

11. Blood-Corpuscles and Spirilla Obermeyer's X 700 D. Relapsing Fever. (Koch.) 12. Filter Paper and Bacterium Terino X 500 D.

It is certainly fighting fire with fire to combat an infectious malady with its own contagium, but it has now been demonstrated past cavil that in splenic fever and fowl cholera, both due to specific germs, we can so mitigate the virus that by its inoculation animals and fowls may be protected against the original severe form. Mitigating virus is simply reducing the vital power of the bacteria by surrounding them with unfavorable conditions of growth. Oxygen is not congenial to some bacteria; hence Pasteur, in modifying the virus of fowl cholera,

exposed cultures of this microbe to air for weeks and months. In the case of the bacillus anthracis of splenic fever, heat and antiseptic substances have both been used with success. Two vaccinations with varying strengths of this modified virus protect for at least a year against the acute form of the disease. As the virulence is diminished by unfavorable so will it return by cultivation under specially favorable circumstances. Unsanitary conditions may thus not only afford a suitable medium for multiplying the germs, but may also increase their virulence. In regard to hydrophobia, Pasteur, proceeding on the supposition of its germ origin, has endeavored to modify the virus by exposure to dry air. The results obtained, especially in his experiments on animals, go far to prove the supposition true and the mitigation real; but since the germ has not been differentiated nor obtained in pure cultures, we think the time for presenting the subject to the public among things proved in bacteriology is not yet come. Will protective inoculation become in the future our great safeguard against disease? We confess that we are not so sanguine as Pasteur, who, having contributed so much to our knowledge of the subject, is naturally enthusiastic at its promise. The most extensive experiments in this direction have been in protecting animals from splenic fever, which, successful in the majority of cases, has so far been accompanied by a percentage of deaths not altogether insignificant. There is thus the chance of the germ regaining its lost virulence and spreading the disease among unprotected animals, so that protection, while possible in anthrax, may not be so expedient as a vigorous warfare by means of isolation and thorough disinfection. The method will prove of value, we think, rather in special cases than as a universal safeguard.*

Not so, however, is it with disinfection and

* The life-history of Louis Pasteur belongs to the romance of science.

Born in the French town of Dolé in 1822, his father, the village tanner, had hopes and plans for his boy far beyond the common.

"He shall be a professor at Arbois," the father would say; and a professor he indeed became, but not for Arbois, a small provincial college, but in the faculty of the celebrated *École Normale*. Here it was that he attended as a scholar, devoting himself chiefly to chemistry, and accepting the position of assistant in that department in 1846. During the next few years Pasteur was occupied by investigations on tartaric acid, and at the age of thirty-two was made Dean of the *Faculté des Sciences* at Lille, one of the chief industries of which is the manufacture of alcohol. Desirous of rendering his course popular, Pasteur devoted his time to the study of fermentation, and henceforward his life was to be connected with that microscopic life which, according to its character, induces here a fermentation, there a putrefaction, and again a disease.

Studying first the ferment of lactic acid, Pasteur soon

advanced to acetic fermentation — that by which vinegar is produced. Both of these he proved to be due to microscopic life, and his researches led not only to the overthrow of the old theories of fermentation, but also to practical improvements in the manufacture of vinegar. In 1857 Pasteur was called to Paris, and given a chair in the *École Normale*, and was soon in the thick of the fight concerning spontaneous generation, carrying off the prize offered in that subject by the Academy of Sciences.

Resuming his studies on fermentation, the diseases of wine were investigated and found to be caused by microbes, each special disease having its own germ, and the cause once known the remedy was not long in forthcoming.

The silk industries of France are so enormous that when an epidemic appeared among the silk-worms in 1849, and steadily increased, it became a national disaster. By the entreaties of Dumas, Pasteur was induced to study the disorder, and again microscope life was found at the root of the disease, again was a remedy indicated and the industry saved; but Pasteur

isolation. The latter needs no discussion; and while the value of disinfection is as universally admitted, its practice is in most cases exceedingly faulty. The policy of intimidation does not affect disease germs, and the smell of carbolic acid from a little in a saucer on the mantel does not so much frighten them as annoy us. The solutions and methods recommended are from actual experiments on germs by the American Public Health Association committee on disinfection. As to the many solutions and preparations sold in the pharmacies for disinfecting purposes, this committee reports that of fourteen such articles tried nine of them failed in a fifty per cent. solution, while of the five showing disinfecting power three owed their strength to corrosive sublimate, which, while a good disinfectant, is much cheaper to buy under its proper name. This disinfectant we recommend, but it is a powerful poison and must be kept out of children's reach. The high price, odor, and low germ-destroying power of carbolic acid accounts for its omission in the list of disinfectants, although as an antiseptic it may have considerable value. To the directions appended to this article we refer those who require the detailed information given; the more general reader we will not weary, but conclude by saying that as all germ diseases are contests for supremacy between the normal cells of the body and the foreign cells invading it, all that tends to heighten our vitality is of direct aid in enabling us to withstand the inception of these maladies. It is by depressing the system that fear operates so injuriously in epidemics. He who fears, therefore, in such crises more than the fear which is the parent of caution is simply surrendering to the enemy before being attacked. Looking to the future we can at least hope for the time when such a fear will be as impossible as it is now injurious—impossible because of the conquests made in the realm of preventable disease by our further study of microorganisms.

himself, worn out by incessant work, was stricken by paralysis (October, 1868). Then came the war, and for several years, broken in health and crushed in spirits by his country's disasters, but little was done; but with returning strength work was again begun, and after a couple of years at his old favorite fermentation studies, the problem of contagious disease was attacked. Pasteur's paper on splenic fever was read in 1877, and since that time this department of research has absorbed all his energies. The later work on hydrophobia is well enough known through the newspapers, but before beginning this an exhaustive investigation of fowl cholera was made.

Pasteur was not the first to enter his later field, the German Koch having, in 1876, contributed a very remarkable paper on splenic fever, and since that time has been, so to speak, Pasteur's rival, the work of Koch on cholera and consumption being marked by the clearness and conclusiveness which were the prominent characteristics of Pasteur's earlier researches.

PRACTICAL HINTS ON DISINFECTION.

First. Corrosive sublimate (mercuric chloride), sulphate of copper, and chloride of lime are among our best disinfectants, the first two being poisonous. At wholesale drug houses in New York single pounds can be obtained, mercuric chloride costing seventy-five cents, the others ten cents, a pound.

Second. A quarter of a pound of corrosive sublimate and a pound of sulphate of copper in one gallon of water makes a concentrated solution to keep in stock. We will refer to it as "solution A."

Third. For the ordinary disinfecting solution add half a pint of "solution A" to a gallon of water. This, while costing less than a cent and a half per gallon, is a good strength for general use. Use in about equal quantity in disinfecting choleraic or typhoid fever excreta.

Fourth. A four per cent. solution of good chloride of lime or a quarter pint of "solution A" to a gallon of water is used to wash wood-work, floors, and wooden furniture, after fumigation and ventilation.

Fifth. For fumigating with sulphur, three to four pounds should be used to every thousand cubic feet air space. Burn in an old tin basin floating in a tub of water; keep room closed twelve hours, to allow the fumes to penetrate all cracks. Then open a window from the outside and allow fumes to escape into air.

Sixth. Soak sheets, etc., in chloride of lime solution, wring out, and boil.

Seventh. Cesspools, etc., should be well covered on top with a mixture of chloride of lime with ten parts of dry sand.

Eighth. Isolate the patient in an upper room from which curtains, carpets, and stuffed furniture have been removed.

Ninth. The solution of mercuric chloride must not be placed in metal vessels, since the mercury would plate them.

Lucius Pitkin.

The technique of the German school of bacteriology differs considerably from the method in vogue in France, and commands greater confidence among scientific men. The important feature of Pasteur's later work has been his discovery of the mitigation of virus and its possible use as a "vaccine," which is briefly outlined in the article. Viewed both as to their scientific and their commercial value, the discoveries made and the results achieved by Pasteur rank very high. Professor Huxley is quoted as saying that the indemnity of 5,000,000,000 francs paid to Germany is covered by the value to France of Pasteur's discoveries. But France alone has not been the gainer, nor indeed can the future prove less in value than the past. Concerning what has been done for humanity, it will be enough to say that the antiseptic system of Lister was, according to its author, based on the researches of Pasteur. For what of suffering has been saved to mankind by this improvement in surgery thanks must be given not only to Lister but also to Louis Pasteur.

LICHFIELD CATHEDRAL.

SEAL OF THE SEE.

FROM the Norman cathedrals of the eastern counties it was a natural step to the cathedral of Salisbury, which explains the earliest Gothic style. From Salisbury it is as natural a step to Lichfield, where the next succeeding style, the Decorated Gothic, rules. But even if there were no such close historic sequence, memory would take us the same road. To think of the unequalled single spire at Salisbury is to think perforce of the unrivaled group of three at Lichfield; and to remember the majestic power, the great virility, which marks most of England's greatest churches means instinctively to recall in contrast the lovelier, more feminine grandeur of these two.

I.

LICHFIELD is neither a large, nor a busy, nor an attractive town. Its site shows no striking natural features, and the country through which we approach it pleases by placid greenness only. Nor is its history much more interesting than its aspect. The guide-book tells us, indeed, that it is "rich in associations with Samuel Johnson"; but this means little more than that he was born here, that we may see the house where the event took place, and find a monument to him in the market-square which for pure ugliness and artistic imbecility is the most extraordinary work in England. Those who really care about their Johnson can walk more closely with his spirit in London than in Lichfield; the same may be said of Garrick, who also chanced to be born here, and of Addison, who studied at the grammar-school; and the attractions of a dismal hostelry are not vividly enhanced by the information that it was the scene of Farquhar's play, "The Beau's Stratagem." In short, the literary associations of Lichfield are of a third-rate, musty sort; it never made dramatic appearance before the world except in the sieges of Cromwellian times; and these sieges concern the history of the cathedral, not of the town itself. The cathedral, and the cathedral only, makes Lichfield worth visiting or remembering. And the fact is curiously typified by the station of the

church, which does not stand in the middle of the city but beside it, a broad stretch of water called the Cathedral Pool dividing its precincts from the torpid streets.

II.

LICHFIELD lay of old in the center of Mercia — the Middle Kingdom — and thus lies to-day in the very center of united England. As we find so frequently, a church first marked the site and then a town grew up around it. Tradition says that the name is derived from the Old-English *lic* (a dead body) and perpetuates the martyrdom of a thousand Roman or British Christians who suffered under Diocletian on the spot where the cathedral stands. But it is a far cry from Diocletian's time to the time when the light of actual history first falls on Lichfield and shows Christianity existing. The Middle Kingdom was slow to be converted after the heathen conquest; it was not until half a century later than the landing of St. Augustine that it had a baptized prince and a consecrated bishop. In 669 Ceadda, or St. Chad, a holy man of extensive fame, succeeded as fourth bishop to the still unlocated chair. He fixed his seat at Lichfield, and the cathedral church still bears his name conjointly with the Blessed Virgin's. In the eighth century the bishop of Lichfield was given archiepiscopal rank with jurisdiction over six sees, all but four being taken away from Canterbury. But another pope soon undid the act of his predecessor; and in the eleventh century fate took its reprisals, and Lichfield was left without even the episcopal name. The unprotected little town in the middle of its wide flat country seemed to William the Conqueror no proper center of a diocese. The first Norman bishop migrated to Chester, and the second moved again to Coventry — being attracted, it is said, by the riches of the monastery which had been founded by Godiva and her repentant earl. Lichfield, however, still preserved its prominence; its church seems to have been again considered the cathedral church in the earlier years of the twelfth century; and — apparently without special decree, by mere force of its central position — it gradually overshadowed Coventry until the latter's rôle in the diocese became nominal only. At the time of the Reformation the

bishops of the see still styled themselves "of Lichfield and Coventry," but for generations no one had questioned where their chair should stand.

Coventry's house was monastic, Lichfield's was collegiate, and there were hot jealousies between them. Just before the year 1200 Bishop Hugh determined to drive out the monks from Coventry and succeeded by force of arms, being wounded himself as he stood by the high-altar. A few years later they came back again, and jealousies grew to bitter quarrels, especially when a bishop's election befell. But the story of such wranglings grows duller in proportion to the growth of civilized manners; and dull, too, it must be confessed, is the story of most of the prelates who filled this chair. Walter Langton (1296-1321) led a stormily picturesque life as an outspoken enemy of Edward II.; Robert Stretton, a *protégé* of the Black Prince, had a certain queer prominence in his day as a bishop who could not read or write; and Rowland Lee is even yet remembered, because he assisted Cranmer at the marriage of Anne Boleyn, and as President of Wales secured the franchise for its inhabitants. But most of their fellows were inconspicuous at Lichfield, and only after the Reformation were many of them translated to more prominent chairs.

III.

THE little church of St. Chad stood on the other side of the Pool, at some distance from the site of the present cathedral. When this site was first built upon we do not know, but a Norman church preceded the one we see to-day. No great catastrophe seems to have overtaken it; it was simply pulled down piece by piece until not a visible stone of its fabric remained. Eastward it ended in a semicircular apse. Beyond this apse a large chapel was erected in the Transitional period, and soon afterwards the Norman choir and apse were removed, and the whole east limb was brought into architectural concord. In the first half of the thirteenth century the transepts were reconstructed in the Lancet-Pointed style, and in the second half the nave and west-front in the Decorated. Then about 1300 another chapel was thrown out to the eastward; and finally the Transitional chapel, and for the second time the choir, were demolished and rebuilt. These last alterations also befell in the Decorated period, so that the whole longer arm of the cross illustrates this style—westward in its earlier, eastward in its later phases—while the shorter arm is still Early English. In the latest days of Gothic art Perpendicular windows were freely inserted in

the choir and transepts, and the central tower was rebuilt by Sir Christopher Wren, after the restoration of the monarchy.

IV.

DEPLORABLE indeed must have been the condition of the church when the second Charles came back to his own. The wildest havoc wrought elsewhere by the civil war was little to the ruin wrought at Lichfield. Bishop Langton—he who was so long at feud with King Edward II.—had seen fit to embattle the Close, around which the town lay flat and defenseless. But as a knight of old was sometimes slain by the weight of his protecting armor, so the walls of Lichfield worked its undoing. When Lord Brooke, with his Puritans, was coming from Warwick in 1643, the royalists threw themselves into the Close, manned the causeways across the Pool, pierced the ecclesiastical houses for cannon and musket-barrels, and made the church itself their chief redoubt. Brooke prayed fervently in front of his troops that God would assist him to destroy the House of God which man had now made a stronghold of tyranny as well as a haunt of superstition. His prayers were answered by a shot from the spire which ended his own life; but the next day the spire and tower fell into the church, and the next the Close was surrendered. Then for a month there was riot and ravage. Everything breakable was broken, everything valuable was purloined. The organ was shattered like the windows, the seats, the monuments, and even the floor, which had been curiously paved with lozenge-shaped blocks of cannel-coal and alabaster. In the tomb of a bishop some lucky thief found a silver cup and a crozier; and this meant, of course, that no other tomb remained unpillaged, no saint's ashes undisturbed. But in the midst of the sacrilegious revelry word came that Prince Rupert was near. Again there was a siege, this time lasting for ten days; again a surrender and an occupation by the royalist troops when King Charles tarried with them for a moment after his defeat at Naseby; and then a third and still longer siege and final possession by the Parliament army.

John Hacket was the first bishop after the Restoration. He found the roof of his cathedral almost altogether gone, its exterior scarred by iconoclastic axes and pock-marked by cannon-ball and musket-shot, and its interior a mass of rain-washed rubbish—piled with the fragments of the furniture and the great stones of the spire. Its piteous appeal for immediate action fell upon a sympathetic ear. The very next morning after his arrival Hacket set to

work, and the very first work was done by his episcopal fingers. From year to year he contributed generously in money too—some ten thousand pounds in all—while the canons gave up half their income, and King Charles sent timber from his forests. In eight years the whole work was done, including Sir Christo-

qualities which mark it and in the quantity of the work which it has left us.

The lines of architectural effort ran pretty close together in all the north of Europe during the Norman period. Then for a while they diverged, Germany still clinging to her Romanesque and England developing her

LICHFIELD CATHEDRAL FROM THE EAST.

pher's spire, and just before his death, in 1675, the doughty bishop joyfully reconsecrated his cathedral. The days of Romish consecrations were of course long since past; but even a Catholic may have rejoiced to see the havoc of the Puritan thus partly made good.

V.

THE essays of the great Renaissance architect with what we may call posthumous Gothic were not always successful; but his Lichfield spire is singularly good, and the church as he left it goes far to satisfy one's wish for an illustration of what the Decorated style could achieve in English hands.

It is not a style which interests us so much in England as those which came before and after—the Lancet-Pointed and the Perpendicular. It is not less beautiful; indeed, it is the most beautiful of all Gothic styles, the true, complete, and perfect Gothic; but it is less characteristically English, alike in the

Lancet-Pointed manner, while France began at once to master the difficulties of full-blown traceried Gothic. Then they converged again, through the nearer approach of Germany and England to the ideas of France; and finally once more parted, England creating the Perpendicular and France the Flamboyant Gothic. The height of the Decorated style thus means in England the least individual manifestation of national taste. Lancet-Pointed and Perpendicular work we can study nowhere but here; pure full-blown Gothic we can study elsewhere, and, it must be confessed, to better advantage. France not only practiced it much longer, but in many ways more ambitiously and more beautifully. Her great superiority in figure-sculpture might alone almost suffice to give her the foremost place, and she had other superiorities to add to this.

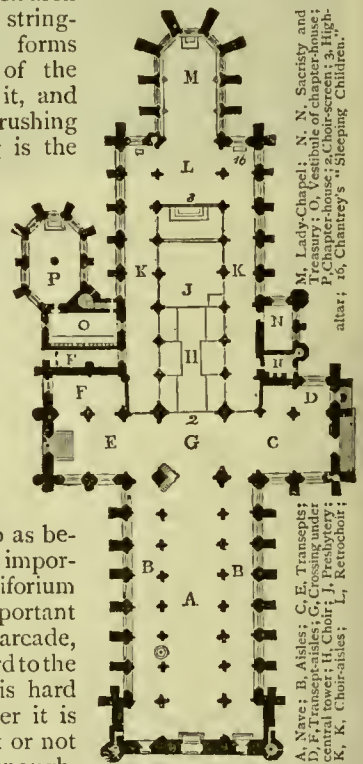

Then, as has been said, the Decorated work of England seems somewhat deficient in quantity, even when we compare it, not with the same kind of work in France, but with work of other kinds at home. The era during

which it reigned — 1300 may stand as the central date — was not a great church-building era. Such an one had opened with the coming of the Norman and had lasted until the middle of the thirteenth century. By this time almost a sufficiency of great churches had been built — at least what seemed almost a sufficiency to a generation whose minds and purse-strings the Church no longer undisputedly controlled. It was the time of the first vague stirrings of Protestant sap, the time of the first strong consciousness of national unity and of its correlative — national independence. It was the time of the first Edward — the first truly English king since Harold — and of his two namesakes, marked by splendid wars, legislative innovations, and a half-revolt against the dictatorship of Rome. The military and the domestic spirit now began to play a greater part in determining architectural effort. Not since the reign of the Norman Williams had there been so great a castle-building reign as that of Edward I.; but it saw the founding of no cathedral churches, and the most prolific time of church alteration did not begin till later. A few cathedrals show more or less conspicuous portions in the Decorated style; but none comes so near to being wholly in this style as Lichfield, nor is there any Decorated non-cathedral church which rivals it save Beverley Minster in Yorkshire. This is quite as large as Lichfield Cathedral and, except for its lack of spires and its prosaic situation, — two very large exceptions, — it is perhaps more beautiful. Certainly its interior has a vaster, grander air, an air more in accord with the sound of the word cathedral.

VI.

LICHFIELD is the smallest of the English cathedrals — 115 feet shorter than Salisbury, for example, and some 50 feet less in the spread of its transepts. Outside it looks larger than it is, but inside still smaller. Even a length of 336 feet will still be enough, we imagine, to give great spaciousness and majesty. But on entering the west portal it is charm, not size, that strikes us. We see a beautiful, noble, dignified church, but the words immensity, power, magnificence, do not occur to us, and hardly the word cathedral in the sense which other sees have taught us to read into it. It takes us some time to realize how long a reach of choir lies beyond the crossing and the screen — a longer reach than that of the nave itself; and when we realize it, the structure still lacks majesty, for its breadth is only 66 feet and its height is barely 60. Then this height means, of course, merely the apex of a vault which thence curves steeply downward; and

upon examination we find it is decreased to the eye by the character of the wall-design. The three stories of the nave of Lichfield are very beautiful stories, individually considered. On each side between the nave and aisles stretch eight somewhat sharply pointed arches, deeply cut, and encircled by many moldings borne on lovely clusters of slender shafts. Above each of these arches stand two in the triforium-gallery, still more richly molded, and subdivided into smaller lights by delicate columns bearing open traceries; and above each triforium-group is a triangular clere-story window, entirely filling the three-cornered space made by the curves of the vaulting and filled itself by traceries which form three circular lights, each cusped inside into a trefoil shape. Yet considered altogether, as a composition, these beautiful stories fail to satisfy the eye, especially if it has been trained upon French work with its wonderful feeling for proportion and for the organic interdependence of adjacent parts. The slender shafts which rise between the main arches from floor to cornice and support the chief ribs of the vaulting hardly suffice to bring the three superimposed ranges of openings into vital unity. Then there is not an inch of plain wall between these ranges; the apex of each arch touches the string-course which forms the support of the range above it, and an air of crushing and crowding is the result — an air as of an attempt to fit in features which are too large for their places. And finally there is no clear subordination of one story to another — no strong accentuation of one or of two as being of prime importance. The triforium seems too important for the main arcade, and with regard to the clere-story it is hard to say whether it is too important or not important enough. Given so low a main arcade, it might well

PLAN OF LICHFIELD CATHEDRAL.
(FROM MURRAY'S "HAND-BOOK
TO THE CATHEDRALS OF
ENGLAND.")

THE CATHEDRAL BY MOONLIGHT.

be more modest in expression; but given so noble a triforium, it ought to be much higher. In short, while no one could better have known what a beautiful feature should mean than the man who built this nave, we can hardly call him a great architect; for this name implies a stronger feeling for the architectural whole than for its parts, a keen appreciation of the virtues of accentuation and subordination, a frank acceptance of the chosen dimensions, and a knowledge of how to make the very most of them. Low as Lichfield is, it would not have seemed so low had a great master built its walls. As it stands we are glad to turn from a study of its proportions to a close examination of its lovely triforium-gallery, the richness of which is in interesting contrast to the severity of Salisbury's features. Here, instead of simply molded capitals we have round clusters of graceful, overhanging foliage, while along the arch-lines run repeated rows of that "dog-tooth" molding which was the happiest decorative motive that had been invented since the days of Hellenic art—rows of delicate little cone-shaped forms set zigzag, and shining as bright gleams of light against the dark hollows behind them. The traceried heads of these triforium openings, and of the aisle windows which we see through the main arcade as we stand in the nave, well explain the character of Decorated as distinct from the earlier forms of medieval art.

To follow the development of the true Gothic traceried window from the simple window of the Normans is the prettiest of all architectural problems—the points of starting and arriving lie so far asunder, yet the steps between are so clear and in retrospect seem to have been so inevitable.

Fancy first a plain tall window with a round-arched head; then the round exchanged for a pointed head; then two, or three, or five perhaps, of these pointed windows set close together; and then a projecting molding in the shape of an arch drawn around them, including them all and thus including, of necessity, a plain piece of wall above their heads. Then fancy this piece of wall pierced with a few small openings, and we have a group of connected lights in which, as a plant in its embryo, lies the promise of all after-developments. But we have not yet a true compound window—a single great window of many parts all vitally fused together. A process of gradual accretion has brought its elements together; a process of gradual change in the treatment of these elements now does the rest of the work.

The small lights in the upper field enlarge and multiply until they form a connected pattern which fills its whole area, and the jambs of the main lights diminish into narrow strips or very slender columns. The great arch, which in the first place did but encircle the

windows, thus becomes itself the window—the “plate-traceried”* window which was richly developed in early French Gothic but less richly in English, owing to the persistent local love for mere groups of lancets. Then all the stone-work shrinks still farther—the columnar character of the uprights is lost, and the flat surfaces between the upper openings change into moldings of complex section. Thus the original tall lights and upper pierce-

A CORNER IN THE CATHEDRAL.

ings surrender their last claim to independence; the uprights are no longer jambs or bits of wall but mullions, the arch-head is filled with genuine traceries, and all the elements of the design are vitally fused together within the sweep of the great window to form its multiple yet organic beauty.

At first simple geometrical patterns were adhered to in the traceries; such combinations of trefoiled circles, for example, as we find in the aisle windows at Lichfield and on a larger scale in the clere-story windows; and the integrity of the moldings which form each of the openings was strictly respected. But as time went on “geometrical” developed into “flowing” tracery. The lights were multiplied and their shapes more widely varied; and the moldings were given freer play—were treated as plastic strips which might be bent in any direction, and were carried over and under each other, so that we may choose a line at the window-sill, follow it thence to the arch-head and find it forming part of the boundary of several successive lights. This was the noblest, most imaginative, most beautiful period of window-design, and by gradual steps it passed into the latest—the Perpendicular period.

When we thus trace in words the genesis

* This term is unfortunately compounded. “Plate” clearly expresses the character of the upper part of the window—a flat surface pierced with openings; but there are no true “traceries” while it remains appropriate.

of Gothic windows it seems as though the most important step was taken when the including arch and the pierced tympanum were imagined. But when we study all the successive steps in the stone itself we find that the step from plate to geometrical tracery meant the most radical change; for it meant a complete reversal of the conception of a window’s character considered as a piece of design, considered not for its utility but for its effect upon the eye. Originally, I may say, it was the lights as such which made the window; later on it was the stone-work that framed the lights. Look from the inside at any early window (whether it has the simple Norman shape or well-developed plate-traceries) and the form of the openings will attract your eye; you will not notice the forms of the stone-work around them. But look thus at a Decorated or a Perpendicular window, and your eye will dwell upon the stone-work itself—upon the delicate lines of the upright mullions and of the circling moldings in the head, joining and parting and projecting into slender points to define the pattern—and will take small account of the shape of the openings themselves. That is, in the first case you will see the window as a group of bright spots upon the shadowed wall, as a pattern cut out in light upon a darker surface; in the second case you will see it as a tracery of dark lines upon a wide bright field, as a pattern done in black upon a lighter background. The difference is immense, radical even, for it is a difference not in the degree but in the kind of beauty which has been sought. To study its genesis, therefore, teaches us an architectural truth of broad and deep significance. It teaches us that a process of slow gradual experiment may mean a change from one artistic idea to another of an opposite sort—may mean a revolution while appearing to be no more than a process of mere development.

VII.

In the transepts of Lichfield we find beautiful Lancet-Pointed work, but so altered by the insertion of great Perpendicular windows that the general effect is hardly more the effect of the earliest than of the latest Gothic style. The lower portions of the three choir-bays next the tower are the oldest fragments of the cathedral—remaining not from the original Norman choir, but from that later Transitional one which was likewise swept away. Even a few bits of decoration of this period still exist—as in the arch which leads from the aisle of the north transept into the adjoining choir-aisle. On the face of the arch towards the choir-aisle there is a large zigzag

molding of the real Norman sort; the capitals of the piers towards the transept are of the Norman scallop-shape (more elaborately treated), and the square Norman abacus alternates very curiously with the round Early English form.

The design of the late-Decorated choir is wholly different from that of the early-Decorated nave. Instead of three stories each of great importance, we find two of even greater importance, while the third has shrunk to a mere semblance of itself. The whole height is divided into two almost equal portions, which are given up to the main arcade and to a range of vast clere-story windows, the triforium-gallery being in the strictest sense a gallery and nothing more — open behind a rich parapet in front of the clere-story windows, and running through the thick walls between them. We may regret for its own sake the beautiful triforium of the nave, but considered in its entirety the design of the choir is more beautiful and is much more appropriate under so low a roof. The main arcade, moreover, is far finer than in the nave, the clusters of shafts and the arch-moldings being still more numerous and graceful, and the piers being broad enough to give room between arch and arch for a splendid corbel line of richly ornamented colonettes which bears a great statue surmounted by a canopy — features that we find more frequently in continental than in English churches. The huge clere-story windows have very deep slanting jambs covered with a lace-like pattern of quatrefoils, and the original “flowing” tracery which remains in two of them is very charmingly designed. The others are filled with Perpendicular traceries which appear to have been inserted long after the true Perpendicular period, when Bishop Hacket took his shattered church in hand. At this time also the ceiling of the nave had to be in greater part rebuilt. Just how the work was done I can nowhere find recorded; the present sham vaults of wood and plaster were the work of our old friend Wyatt in the later years of the eighteenth century.

VIII.

BUT all the while we are examining the nave and choir of

Lichfield, the eye is irresistibly drawn eastward, where the Lady-Chapel shines as a splendid jewel — as a splendid great crown of jewels — at the end of the long dusk perspective. No east-end we have seen elsewhere has had a similar effect — not more as regards form than color. A glance at the plan will show why. At Peterborough there was a semicircular Norman apse with a later construction dimly discernible beyond it, at Ely a flat east-end, and at Salisbury a straight line of great arches bearing a flat wall above and showing beneath their curves an outlying chapel, also rectangular in shape; but here at Lichfield there is a polygonal termina-

THE NAVE AND THE WEST-END FROM WITHIN THE CHOIR.

tion, a true Gothic apse—in name a Lady-Chapel merely, but of equal height with the choir itself and forming to the eye its actual end. This is the only cathedral in England where we find a Gothic apse, and the only ancient church in England where we find it in just this shape. At Westminster and in one or two smaller churches we have the French apse-form with the choir-aisles carried around the polygon to make encircling chapels. At Lichfield the German type is followed—there are no aisles, and a single range of lofty windows absorbs the whole height, rising into the curves

of the vaulting, and filled with geometrical traceries. This is enough to surprise us and—since there is nothing which the tourist likes so well as novelty—to delight us also. But we marvel indeed when we see the beautiful glass with which this beautiful apse is lined, and remember again how Hacket found his church. In truth, these magnificent harmonies of purple and crimson and blue—of blue, it may better be said, spangled with purple and crimson—never threw their light on English Catholic, on Anglican or Puritan plunderer, or on Sir Christopher's workmen. While these were

building and shattering and building again, the glass upon which Lichfield now prides itself almost as much as upon its three stately spires was glorifying a quiet abbey of Cistercian nuns in Belgium. Only in 1802, at the dissolution of the abbey, was it purchased by Sir Brooks Boothby (surely one should not forget his name) and set up at Lichfield. It is late in date—not earlier than 1530—but unusually good for its time in both design and color; and nowhere in the world could it serve beauty better than in just this English church. The rich delicacy, the feminine loveliness, of Lichfield's interior needs such a final jewel more than does the severer charm of most English cathedrals. And the qualities which need its help, help in return its own effect; the apse reveals it better than a flat wall could, and the color of the whole interior—from which all traces of the ancient paint have been removed—is, fortunately, not the pale yellow or the shining white we most often see, but a dull soft red of very delightful tone. Thanks largely to this color, as well as to the apse and its glass, we find that after all we do not much regret at Lichfield the grandeur of which we dreamed but which failed to greet us. When a church is so beautiful, what matter whether it looks like a cathedral church or not? If it were only a little broader

THE LADY-CHAPEL FROM THE HIGH-ALTAR.

and a good bit loftier, we should indeed be content with the interior of Lichfield; and, it must be added, if the destroyer had done his work less well, and the restorer had done his a great deal better—for much of that richness which looks like beauty at a distance proves very poor stuff on near inspection, judged even by restorers' standards. This is notably the case with the vaulting, of course, and with the statues in the choir. Nor are most of the monuments introduced during the last century and a half to be considered works of art. There is one exception, however—Chantrey's famous group of two sleeping children. Certain works of art, and this is one of them, are so famous—are famous, rather, in so popular a way—that it is hard to credit them with genuine excellence. Knowing the average level of English sculpture in the first years of this century—knowing, indeed, the average level of Chantrey's own productions—and reading the sentimental delight of every tourist in this sentimental-sounding piece of work, how should we believe beforehand that it is so genuinely good—so graceful in design, so pleasing if not strong in execution, and so full of true and simple feeling; so full of sentiment yet so free from the feeble sentimentality of the time?

The chapter-house at Lichfield is another beautiful piece of early-Decorated work sadly marred by ruin and renewal—an elongated octagon with a central column to support its vaulting, and connected with the choir by a well-designed vestibule. Above it is the library, wholly stripped of its contents in the civil war, but now filled again with a goodly assortment of treasures. Chief among them is the so-called Gospel of St. Chad, a superb manuscript of Hibernian workmanship which may possibly be as old as the saint's own day.

IX.

MR. PENNELL, in his pictures, will show more clearly than I can in words the exterior look of Lichfield. It stands on somewhat higher ground than the town, the very dullness and insignificance of which throws its beauty into bright relief. Whether we approach it from one street or another we see it suddenly across the silver stretches of its Pool, and it is hard to

"WATCHING GALLERY" OVER THE SACRISTY DOOR.

determine whether the shining water at Lichfield or the green lake of turf at Salisbury makes the lovelier foreground. Standing on the causeway which leads towards the western entrance of the Close, it is not merely a fine view that we have before us—it is a picture so complete and perfect that the keenest artist need not ask to change one detail. Perhaps accident has had more to do than design with the planting of the greenery which borders the lake and above which spring the daring spires. But it is planting that a landscape-gardener might study to his profit, and if there is one wish we make when we see or think of Lichfield from this point of view, it is that the tall poplar may be as long-lived as the tree Ygdrasil—so pretty a measure does it give of the tallness of the spires, so exquisite is the completing accent which it brings into the scene.

If it is from the south-east that we approach the church, we cross another causeway on either hand of which the lake spreads out widely, and see not only the spires but the apse and the long stretch of the southern side. Enormously long it looks; longer, almost, than those cathedrals which are actually greater, owing to its peculiar lowness; too long, almost, for true beauty, especially as so much of its extent falls to the share of the choir.

THE SPIRES OF LICHFIELD FROM THE SOUTH-WEST.

To the north of the church the ground rises quickly into a broad, terrace-like walk flanked by rows of vast and ancient yet graceful lindens; and beyond the trees, behind low walls and verdurous gardens, lies a range of canons' homes. The place is not very picturesque to one who has come from Canterbury's precincts or from Peterborough's; but it is very charming, with a homely, sober, shadowy charm that makes a New Englander feel sud-

denly much at home. He may almost fancy himself at home, in fact, if he turns his back on the cathedral and sees only the trees and the houses — and if he knows so little of trees as to be able to take limes for elms or maples; for the row of sedate square dwellings, and even the Deanery in the middle, are similar in size and form to many in his own older towns, and are not more dignified in aspect. Indeed, there are certain streets in Salem, to name no

others, which show a much statelier succession of homes than this — than this, which we like all the better because it tempts us into drawing such comparisons and yet allows us to draw them to our own exalting.

There are no ruined buildings in the neighborhood of this cathedral. As a collegiate establishment it had no cloisters or important accessory structures to tempt King Henry's or Cromwell's wreckers, or to fall into gradual decay.

but that much has perished to be replaced by imitations of a particularly futile and distressing sort. The Early-English door into the north transept still remains nearly intact, and is one of the most singular and lovely bits of work in England, but its southern counterpart has been much injured; and though in design the west-front is one of the best in the country, its present adornments are without rivalry the worst.

It is only a small west-front — or would be so called across the Channel — but it is a true front to the church, not a mendacious screen, and its design has coherence and dignity and charm although no paramount degree of originality, force, or grace. Its doors are the chief

THE SOUTH SIDE OF THE CATHEDRAL.

In any and every aspect, but more especially when foliage comes close about it, Lichfield's color assists its other beauties. Gray is the rule in English churches — dark cold gray at Ely, for example, light yellow gray at Canterbury, pale pearly gray at Salisbury; and although dark grayness means great solemnity and grandeur, and light grayness great delicacy and charm, they both need the hand of time — the stain of the weather and the web of the lichen — to give them warmth and "tone"; and the work of the hand of time has almost everywhere in England been undone by the hand of the restorer. Red stone is warm and mellow in itself, and Lichfield is red with a beautiful soft ruddiness that could hardly be overmatched by the sandstone of any land.

X.

A NARROWER examination of the exterior of the church shows that much beauty remains,

VOL. XXXVI.—55.

entrances to the church — small ones, but delightful in shape and feature; and we may offset the too great heaviness of the corner pinnacles of the towers by noting the beauty of their parapets. The traceries of the great window were renewed in the seventeenth century — a gift from King James II.; and the big statue in the gable above pictures that very saintly monarch, the second Charles.

The statues which filled the multitudinous niches were defaced by the Puritans, but were not removed until the middle of the last century. About 1820 those which still remained were restored — which much-abused word could not possibly be more abused than by setting it in this connection. The restoration of Lichfield's statues meant that the ruined remnants of the ancient figures were overlaid with cement which was then molded into simulacra of the human form. For some years past attempts have been made to supplement these atrocities by better works; but

DOORWAY IN THE NORTH TRANSEPT.

it cannot be truthfully reported that many of even the newest comers are worthy of their places. The present royal lady of England stands in a conspicuous niche, portrayed by one of her royal daughters; and this piece of amateur art is not the worst of the company.

XI.

PERHAPS the New England tourist whom I have just imagined may find time to rest a while on some bench beneath the giant lime-trees of Lichfield, turning his back now on the canons' homes and his face to the church itself. Perhaps from contemplation he will be led to introspection — will think over the courses he has traveled and weigh the changes in his mental attitude that they have brought about. Then it will be strange if the figure of the seventeenth-century Puritan does not surge up in his thought, striking him with surprise, yea, smiting him with compunction. Here is a figure, typifying much more than itself, with regard to which his mental attitude will indeed seem a new one. At home the Puritan had been honored and revered. Patriotic pride and religious habit had joined to make him seem as venerable as mighty. His faults and shortcomings were acknowledged, but were piously laid to the spirit of his age; his virtues, so much greater than all his faults, were as piously credited to his personal account. The

work which he had done was thought the noblest, almost, that man had ever done — this breaking through a dogmatic, pinching creed, this oversetting of a mis-used, tyrant throne, this planting beyond the sea of a greater commonwealth whose blazon should mean freedom of action in the present world, freedom of accountability with the world to come. And if a contemptuous shrug at his narrowness or a half-smile at his grim formality was permitted, it was as though before the portrait of some excellent grandsire whose defects might be criticised under the breath, but should not be made a text for public reprobation.

But here, amidst these cathedrals, what is the

Puritan to his descendant's thought? A rude destroyer of things ancient and therefore to be respected; a vandal devastator of things rare and beautiful and too precious ever to be replaced; a brutal scoffer, drinking at the altar, firing his musket at the figure of Christ, parading in priests' vestments through the marketplace, stabling his horses amidst the handiwork of beauty under the roof of God.

Yet if the traveler takes time to think a little he will find that it is not his inner mental attitude which has changed so much as his outer point of view. The political, the moral, was the point of view at home; the artistic point of view is that of the cathedral precinct. He has not really come to think that the great benefits which the Puritan bought for him with a price were bought with too high a price. He merely grumbles at being called upon to pay a part of it again out of his own pocket — to pay in loss of the eye's delight for the opportunities which made him a freeman. But grumbling always grows by its own expression, and moreover, the very pain of the reaction in our feelings towards the Puritan leads us imperceptibly into an exaggeration of his crimes. Surprised at first, then shocked, enraged, by the blood of art which stains his footsteps, we lose our tempers, forget to make judicial inquiry, and end by crediting him with all the slaughter that has passed. And our injustice is fostered by the wholesale charges which are

brought against him by the Anglican guardians of the temples where his hammer and ax were plied. It is less trying to the soul of the verger, and, I may say, of his local superiors and of commentators in print, to abuse the alien Puritan than the fellow-Anglican of the sixteenth or the eighteenth century. Thus natural enemy and outraged friend unite in burdening the Puritan's broad shoulders with a load that in greater part should be borne by others.

I thought that in the course of these chapters I had avoided such injustice, though I

desecration of good churchmen in the century before our own, and how much by the well-meant but often inartistic renovations of the good churchmen of quite recent years. I thought I had made it plain that if we should add all their sins together, the sins of the Puritan would seem small in comparison. But it seems I was mistaken, for a kindly critic writes me from England that I am unjust to the Puritan, and even explains — to a descendant of New England pioneers! — that he was in fact a worthy personage, thoroughly conscientious after his lights and most serviceable to

THE CATHEDRAL FROM THE NORTH-WEST.

freely confess that there were moments in my English journey when I hated the Puritan with a holy hatred and wished that he had never shown his surly face to the world — a wish, however, which included the Anglican, too, as his fellow-fiend in destruction, his fellow-pillager of Catholic rights and destroyer of Catholic charms and graces. I thought I had explained how much of the ruin we see was wrought by the good churchmen of King Henry's reign and of Somerset's protectorate, how much by the hideous neglect or wanton

the best interests of humanity. I believe it as I believe in the worth and value of few other human creatures; and I hereby acknowledge that artistic sins and virtues are not those which the recording angel will place at the top of his tablets when he sums up the acts of men either as individuals or as citizens of the world. But it is impossible for any one merely human to hold all points of view at once — difficult for a mere recording tourist to remember that the artistic point of view is not of paramount interest.

THE MAIN DOORWAY, WEST FRONT.

Yet I will try once more to be impartial—to give my hereditary enemy his just meed of blame and to give no more than his just meed to that honored sire whose sins I may have exaggerated just because I could not perceive them without a feeling of personal abasement. I will point out more plainly, for example, that many of the beautiful ornaments of Lichfield had been shattered or removed by order of the early Anglican reformers; and that although Puritan shots ruined the spire, it was churchmen who had made the church a castle. I will repeat that the breaking of the statues of the front was a minor injury compared with their removal and their so-called restoration by Anglican hands, and will add that pages of sad description would be needed to tell what was done by these hands inside the church and inside every great church in England—to tell of the big pews that were built, the coats of white-wash that were roughly given, the chisels that were plied in senseless alterations, the glass that was destroyed, the birds that were allowed to enter through the broken panes, to nest in the sculptured capitals, to be fired at with shots each rebound of which meant another item of beauty gone. It is a piteous chronicle read all together; and read all together—I am glad and proud to say once more—the Puritan's pages do not seem the worst. If I have cited them more often than the others, it is simply because they are more picturesque, more dramatic, more incisive in their interest. The work of the Anglican ravager was done gradually, quietly, almost secretly—half by actual act, half by mere stupidity and neglect. The Puritan's was done all at once, and to the sound of the blaring trumpet of war.

M. G. van Rensselaer.

ABRAHAM LINCOLN: A HISTORY.*

LINCOLN AND MCCLELLAN.

BY JOHN G. NICOLAY AND JOHN HAY, PRIVATE SECRETARIES TO THE PRESIDENT.

THE ARMY OF THE POTOMAC.

ON the day after the battle of Bull Run, General McClellan was ordered to Washington. He arrived there on the 26th of July, and the next day assumed command of the division of the Potomac, comprising

the troops in and around Washington on both banks of the river. In his report he says:

There were about 50,000 infantry, less than 1000 cavalry, and 650 artillerymen, with 9 imperfect field-batteries of 30 pieces. . . . There was nothing to prevent the enemy shelling the city from heights within easy range, which could be occupied by a hostile column almost without resistance. Many soldiers had deserted, and the streets of Washington were crowded with straggling officers and men, absent from their stations without authority, whose behavior indicated the general want of discipline and organization.†

This picture is naturally drawn in the darkest colors, but the outlines are substantially accurate. There was great need of everything which goes to the efficiency of an army. There was need of soldiers, of organization, of drill, of a young and vigorous commander to give impulse and direction to the course of affairs.

All these wants were speedily supplied. The energy of the Government and the patriotism of the North poured into the capital a constant stream of recruits. These were taken in hand by an energetic and intelligent staff, assigned to brigades and divisions, equipped and drilled, with the greatest order and celerity. The infantry levies, on their first arrival, were sent to the various camps in the suburbs, and being there formed into provisional brigades were thoroughly exercised and instructed before being transferred to the forces on the other side of the river. These provisional brigades were successively commanded by Generals Fitz John Porter, Ambrose E. Burnside, and Silas Casey. The cavalry and the artillery, as they arrived, reported respectively to Generals George Stoneman and William F. Barry, chiefs of those arms. Colonel Andrew Porter was made Provost-Marshal of Washington, and

soon reduced the place to perfect order, which was never again disturbed during the war. Deserters were arrested, stragglers sent back to their regiments, and the streets rendered more quiet and secure than those of most cities in profound peace.

A great army was speedily formed. The 50,000 that General McClellan found in Washington were reinforced by the stalwart men of the North as fast as steam could bring them by water or land. Nothing like it had ever before been seen on the continent. The grand total of officers and men of the regular army before the war consisted of 17,000 souls. On the 27th of October, exactly three months after General McClellan assumed command, he reported an aggregate of strength for the army under him of 168,318, of which there were, he said, present for duty 147,695;‡ and he reported several other bodies of troops *en route* to him. The Adjutant-General's report, three days later, shows present for duty with the Army of the Potomac, inclusive of troops in the Shenandoah, on the Potomac, and at Washington, 162,737, with an aggregate present and absent of 198,238. This vast army was of the best material the country could afford. The three-months' regiments—which were, as a rule, imperfectly organized and badly officered, their officers being, to a great extent, the product of politics and personal influence—had been succeeded by the volunteer army of three-years' men, which contained all the best elements of the militia, with very desirable additions. Only the most able of the militia generals, those whom the President had recognized as worthy of permanent employment, returned to the field after the expiration of their three-months' service. The militia organization of brigades and divisions had of course disappeared. The governors of the States organized the regiments, and appointed regimental and company officers only. The higher organization rested with the President, who also had the appointing of general and staff officers. A most valuable element of the new army was the old regular organization, largely increased and improved by the addition of eleven regiments, constituting two divisions of two brigades each. This

created a great many additional vacancies, which were filled partly from the old army and partly from civil life, giving to the service a large number of valuable officers. Two classes of cadets were that year graduated from the military academy at West Point, many of whom became useful and distinguished in the regular and the volunteer service.

In brief, for three months the Government placed at the disposal of the young general more than a regiment a day of excellent troops. The best equipments, the best arms, the best artillery, the most distinguished of the old officers, the most promising of the young, were given him. The armies in every other part of the country were stinted to supply this most important of all the departments; and at first it was with universal popular assent that this bountiful provision was made for him. He had gained for the country the only victory it had yet to its credit. He enjoyed a high character for military learning and science, founded upon the report of his friends. He was capable of great and long-continued industry in executive affairs. He was surrounded by an able and brilliant staff, all heartily devoted to him, and inclined to give him the greater share of the credit for their own work. His alert and gallant bearing, as he rode from camp to camp about Washington, surrounded by a company of aides in uniforms as yet untarnished by campaign life, impressed the imagination of tourists and newspaper correspondents, who at once gave him, on this insufficient evidence, the sobriquet of "the young Napoleon." In addition to these advantages, he was a man of extraordinary personal attractiveness; strangers instinctively liked him, and those who were thrown much in his company grew very fond of him. In every one, from the President of the United States to the humblest orderly who waited at his door, he inspired a remarkable affection and regard, a part of which sprang, it is true, from the intense desire prevalent at the time for success to our arms, which naturally included an impulse of good-will to our foremost military leaders; but this impulse, in the case of General McClellan, was given

a peculiar warmth by his unusually winning personal characteristics. In consequence he was courted and caressed as few men in our history have been. His charm of manner, enhanced by his rising fame, made him the idol of the Washington drawing-rooms; and his high official position, his certainty of speedy promotion to supreme command, and the probability of great political influence to follow, made him the target of all the interests and ambitions that center in a capital in time of war.*

He can hardly be blamed if this sudden and dazzling elevation produced some effect upon his character and temper. Suddenly, as by a spell of enchantment, he had been put in command of one of the greatest armies of modern times; he had become one of the most conspicuous figures of the world; his portrait had grown as familiar as those of our great historic worthies; every word and act of his were taken up and spread broadcast by the thousand tongues of publicity. He saw himself treated with the utmost deference, his prejudices flattered, and his favor courted by statesmen and soldiers twice his age. We repeat that he can hardly be blamed if his temper and character suffered in the ordeal.

He has left in his memoirs and letters unquestionable evidence of a sudden and fatal degeneration of mind during the months he passed in Washington in the latter half of 1861.† At first everything was novel and delightful. On the 27th of July he wrote: "I find myself in a new and strange position here; President, Cabinet, General Scott, and all deferring to me. By some strange operation of magic I seem to have become the power of the land." Three days later he wrote: "They give me my way in everything, full swing and unbounded confidence. . . . Who would have thought when we were married that I should so soon be called upon to save my country?" A few days afterward: "I shall carry this thing on *en grand* and crush the rebels in one campaign." By the 9th of August his estimate of his own importance had taken such a morbid development that he was able to say: "I would cheerfully take

* General W. T. Sherman writes in his "Memoirs": "General McClellan arrived. . . . Instead of coming over the river, as we expected, he took a house in Washington, and only came over from time to time to have a review or inspection. . . . August was passing and troops were pouring in from all quarters; General McClellan told me he intended to organize an army of 100,000 men, with 100 field batteries, and I still hoped he would come on our side of the Potomac, pitch his tent, and prepare for real hard work, but his headquarters still remained in a house in Washington City." Vol. I., pp. 191, 192.

To show how differently another sort of general comprehended the duties before him at this time, we

give another sentence from Sherman's "Memoirs": "I organized a system of drills, embracing the evolutions of the line, all of which was new to me, and I had to learn the tactics from books; but I was convinced that we had a long, hard war before us, and made up my mind to begin at the very beginning to prepare for it."

† "McClellan's Own Story," p. 82. We should hesitate to print these pathetic evidences of McClellan's weakness of character, contained as they are in private letters to his family, if they had not been published by Mr. W. C. Prime, with a singular misconception of their true bearing, as a basis for attacking the administration of Mr. Lincoln.

the dictatorship and agree to lay down my life when the country is saved"; yet he added in the same letter,* "I am not spoiled by my unexpected new position." This pleasing delirium lasted only a few weeks, and was succeeded by a strange and permanent hallucination upon two points: one was that the enemy, whose numbers were about one-third his own, vastly exceeded his army in strength; and the other, that the Government—which was doing everything in its power to support him—was hostile to him and desired his destruction. On the 16th of August he wrote: "I am here in a terrible place; the enemy have from three to four times my force; the President, the old general, can not or will not see the true state of affairs." He was in terror for fear he should be attacked, in doubt whether his army would stand. "If my men will only fight I think I can thrash him, notwithstanding the disparity of numbers. . . . I am weary of all this." Later on the same day he wrote with exultation that "a heavy rain is swelling the Potomac; if it can be made impassable for a week, we are saved." All through the month he expected battle "in a week." By the end of August his panic passed away; he said he was "ready for Beauregard," and a week later began to talk of attacking him.

By this time he had become, to use his own language, "disgusted with the Administration—perfectly sick of it."† His intimate friends and associates were among the political opponents of the men at the head of affairs, and their daily flatteries had easily convinced him that in him was the only hope of saving the country, in spite of its incapable rulers. He says in one place, with singular *naïveté*, that Mr. Stanton gained his confidence by professing friendship for himself while loading the President with abuse and ridicule.‡ He professed especial contempt for the President; partly because Mr. Lincoln showed him "too much deference."§ In October he wrote: "There are some of the greatest geese in the Cabinet I have ever seen—enough to tax the patience of Job." In November his disgust at the Government had become almost intolerable: "It is sickening in the extreme, and makes me feel heavy at heart, when I see the weakness and unfitness of the poor beings who control the destinies of this great country." The affair of Mason and Slidell, with which he had no concern, and upon which his advice was not asked, agitated him at this time. He feels that his wisdom alone must save the country in this crisis; he writes that he must

spend the day in trying to get the Government to do its duty. He does not quite know what its duty is—but must first "go to Stanton's to ascertain what the law of nations" has to say on the matter, Stanton being at this time his friend, and, as he thinks, Lincoln's opponent. He had begun already to rank the President as among his enemies. He was in the habit of hiding at Stanton's when he had serious work to do, "to dodge," as he said, "all enemies in the shape of 'browsing' Presidents," etc. "I am thwarted and deceived by these incapables at every turn."||

He soon began to call and to consider the Army of the Potomac as his own. He assumed the habit, which he never relinquished, of asking that all desirable troops and stores be sent to him. Indeed, it may be observed that even before he came to Washington this tendency was discernible. While he remained in the West he was continually asking for men and money. But when he came to the Potomac he recognized no such need on the part of his successor, and telegraphed to Governor Dennison to "pay no attention to Rosecrans's demand" for reinforcements.¶ In the plan of campaign which he laid before the President on the 4th of August, 1861, which was, in general objects and intentions, very much the same plan already adopted by General Scott and the Government, he assigned the scantiest detachments to the great work of conquering the Mississippi Valley; 20,000, he thought, would be enough, with what could be raised in Kentucky and Tennessee, "to secure the latter region and its railroads, as well as ultimately to occupy Nashville"—while he demanded for himself the enormous aggregate of 273,000 men.** He wanted especially all the regular troops; the success of operations elsewhere, he said, was relatively unimportant compared with those in Virginia. These views of his were naturally adopted by his immediate associates, who carried them to an extent probably not contemplated by the general. They seemed to regard him as a kind of tribune, armed by the people with powers independent of and superior to the civil authorities. On the 20th of August his father-in-law, Colonel R. B. Marcy, being in New York, and not satisfied with what he saw in the way of recruitment, sent General McClellan a telegram urging him "to make a positive and unconditional demand for an immediate draft of the additional troops you require." "The people," he says, "will applaud such a course, rely upon it." The general, seeing

nothing out of the way in this explosive communication of his staff-officer, sent it to the Secretary of War with this indorsement: "Colonel Marcy knows what he says, and is of the coolest judgment"; and recommended that his suggestion be carried into effect. All this time every avenue of transportation was filled with soldiers on their way to Washington.

In connection with his delusion as to the number of the enemy in front of him, it grew a fixed idea in his mind that all the best troops and all the officers of ability in the army should be placed under his orders. On the 8th of September he wrote a remarkable letter to the Secretary of War embodying these demands. He begins, in the manner which at an early day became habitual with him and continued to the end of his military career, by enormously exaggerating the strength of the enemy opposed to him. He reports his own force, in the immediate vicinity of Washington, at 85,000, and that of the enemy at 130,000, which he says is a low estimate, and draws the inevitable conclusion that "this army should be reinforced at once by all the disposable troops that the East and West and North can furnish. . . . I urgently recommend," he says, "that the whole of the regular army, old and new, be at once ordered to report here," with some trifling exceptions. He also demands that the choicest officers be assigned to him, especially that none of those recommended by him be sent anywhere else.* Most of these requests were granted, and General McClellan seems to have assumed a sort of proprietary right over every regiment that had once come under his command. When General T. W. Sherman's expedition was about sailing for the South, he made an earnest request to the Government for the 79th New York Highlanders. The matter being referred to General McClellan, he wrote in the most peremptory tone to the War Department, forbidding the detachment of those troops. "I will not consent," he says roundly, "to one other man being detached from this army for that expedition. I need far more than I now have, to save this country. . . . It is the task of the Army of the Potomac to decide the question at issue."† The President accepted this rebuke, and telegraphed to General Sherman that he had promised General McClellan "not to break his army here without his consent."‡

Such an attitude towards the military and civil authorities is rarely assumed by a gen-

eral so young and so inexperienced, and to sustain it requires a degree of popular strength and confidence which is only gained by rapid and brilliant successes. In the case of General McClellan the faith of his friends and of the Government had no nourishment for a long time except his own promises, and several incidents during the late summer and autumn made heavy drafts upon the general confidence which was accorded him.

From the beginning of hostilities the blockade of the Potomac River below Washington was recognized on both sides as a great advantage to be gained by the Confederates, and a great danger to be guarded against by the national Government. For a while the navy had been able to keep the waters of the river clear by the employment of a few powerful light-draft steamers; but it soon became evident that this would not permanently be a sufficient protection, and even before the battle of Bull Run the Navy Department suggested a combined occupation, by the army and the navy, of Mathias Point, a bold and commanding promontory on the Virginia side, where the Potomac, after a horse-shoe bend to the east, flows southward again with its width greatly increased. On the 20th of August the Navy Department renewed its importunities to the War Department to coöperate in the seizure of this most important point, which was "absolutely essential to the unobstructed navigation of the Potomac."§ Eleven days later these suggestions were still more pressingly presented, without effect. In October, however, when rebel batteries were already appearing at different points on the river, and when it was in contemplation to send to Port Royal the steamers which had been policing the Potomac, an arrangement was entered into between the army and the navy to occupy Mathias Point. Orders were sent to Captain Craven to collect at that place the necessary boats for landing a force of 4000 men. He waited all night and no troops appeared. Captain Fox, the Assistant Secretary of the Navy, who had taken a great deal of interest in the expedition, went in deep chagrin to the President, who at once accompanied him to General McClellan's quarters to ask some explanation of this failure. The general informed him that he had become convinced it would not be practicable to land the troops, and that he had therefore not sent them. Captain Fox assured him that the navy would be responsible for that; and, after some discussion, it was concluded that the troops should go the next

§ Welles to Cameron. War Records.

night. Captain Craven was again ordered to be in readiness; the troops did not go. Craven came to Washington in great agitation, threw up his command, and applied for sea-service, on the ground that his reputation as an officer would be ruined by the closing of the river while he was in command of the flotilla.* The vessels went out one by one; the rebels put up their batteries at their leisure, and the blockade of the river was complete. When General McClellan was examined as to this occurrence by the Committee on the Conduct of the War, he did not remember the specific incidents as recited by Captain Fox, and as reported above, but said he never regarded the obstruction of the Potomac as of vital importance; its importance was more moral than physical.†

General McClellan was perhaps inclined to underrate moral effects. The affair at Ball's Bluff, which occurred on the 21st of October, produced an impression on the public mind and affected his relations with the leading spirits in Congress to an extent entirely out of proportion to its intrinsic importance. He had hitherto enjoyed unbounded popularity. The country saw the army rapidly growing in numbers and improving in equipment and discipline, and was content to allow the authorities their own time for accomplishing their purposes. The general looked forward to no such delays as afterward seemed to him necessary. He even assumed that the differences between himself and Scott arose from Scott's preference "for inaction and the defensive."‡ On the 10th of October he said to the President: "I think we shall have our arrangements made for a strong reconnaissance about Monday to feel the strength of the enemy. I intend to be careful and do as well as possible. Don't let them hurry me, is all I ask." The President, pleased with the prospect of action, replied: "You shall have your own way in the matter, I assure you."§ On the 12th he sent a dispatch to Mr. Lincoln from the front, saying that the enemy was before him in force, and would probably attack in the morning. "If they attack," he added, "I shall beat them."|| Nothing came of this. On the 16th the President was, as usual, at headquarters for a moment's conversation with General McClellan, who informed him that the enemy was massing at Manassas, and said that he was "not such a fool as to buck against that place in the spot designated by the rebels." But he seemed continually to be waiting merely for some slight additional

increment of his force, and never intending any long postponement of the offensive; while he was apparently always ready, and even desirous, for the enemy to leave their works and attack him, being confident of defeating them.

In this condition of affairs, with all his force well in hand, he ordered, on the 19th of October, that General McCall should march from his camp at Langley to Dranesville, to cover a somewhat extensive series of reconnaissances for the purpose of learning the position of the enemy, and of protecting the operations of the topographical engineers in making maps of that region. The next day he received a dispatch from General Banks's adjutant-general, indicating that the enemy had moved away from Leesburg. This information turned out to be erroneous; but upon receiving it General McClellan sent a telegram to General Stone at Poolesville informing him that General McCall had occupied Dranesville the day before and was still there, that heavy reconnaissances would be sent out the same day in all directions from that point, and directing General Stone to keep a good lookout upon Leesburg, to see if that movement had the effect to drive them away. "Perhaps," he adds, "a slight demonstration on your part would have the effect to move them."¶ General McClellan insists that this order contemplated nothing more than that General Stone should make some display of an intention to cross, and should watch the enemy more closely than usual. But General Stone gave it a much wider range, and at once reported to General McClellan that he had made a feint of crossing at Poolesville, and at the same time started a reconnoitering party towards Leesburg from Harrison's Island, and that the enemy's pickets had retired to their intrenchments. Although General McClellan virtually holds that this was in effect a disobedience of his orders, he did not direct General Stone to retire his troops—on the contrary, he congratulated him upon the movement; but thinking that McCall would not be needed to coöperate with him, he ordered the former to fall back from Dranesville to his camp near Prospect Hill, which order, though contradicted by later instructions which did not reach him until his return to Langley, was executed during the morning of the 21st. But while McCall, having completed his reconnaissance, was marching at his leisure back to his camp, the little detachment which General Stone had sent across the river had blundered into battle.

A careful reading of all the accounts in the

¶ McClellan, Report, p. 32.

archives of the War Department relating to this affair affords the best possible illustration of the lack of discipline and intelligent organization prevailing at that time in both armies. The reports of the different commanders seem hardly to refer to the same engagement; each side enormously exaggerates the strength of the enemy, and the descriptions of the carnage at critical moments of the fight read absurdly enough when compared with the meager official lists of killed and wounded. We will briefly state what really took place.

On the evening of the 20th General Gorman made a demonstration of crossing at Edwards Ferry, and a scouting party of the 20th Massachusetts crossed from Harrison's Island and went to within about a mile of Leesburg, returning with the report that they had found a small camp of the enemy in the woods. General Stone then ordered Colonel Charles Devens, commanding the 20th Massachusetts, to take four companies of his regiment over in the night to destroy this camp at daybreak. Colonel Devens proceeding to execute this order found that the report of the scouting party was erroneous, and reporting this fact waited in the woods for further orders. General Stone sent over a small additional detachment which he afterward reënforced by a larger body, the whole being in command of Colonel E. D. Baker of the California regiment—a Senator from Oregon, an officer of the highest personal and political distinction, and, as we have already related, not without experience in the Mexican war. General Stone had now evidently resolved upon a reconnaissance in force, and in case an engagement should result he confidently expected Colonel Baker to drive the enemy from his front, at which juncture General Stone expected to come in upon their right with Gorman's troops, which he was pushing over at Edwards Ferry, and capture or rout the entire command. He gave Colonel Baker discretionary authority to advance or to retire after crossing the river, as circumstances might seem to dictate.

Colonel Baker entered upon the work assigned to him with the greatest enthusiasm and intrepidity. The means of transportation were lamentably inadequate; but working energetically, though without system, the greater part of the troops assigned for the service were at last got over, and Baker took command on the field a little after 2 o'clock. The battle was already lost, though the brave and high-spirited orator did not suspect it, any more than did General Stone, who, at Edwards Ferry, was waiting for the moment to arrive when he should attack the enemy's right and convert his defeat into rout. Colonel Devens,

who had been skirmishing briskly with continually increasing numbers of the Confederates all the morning, had by this time fallen back in line with Baker's, Lee's, and Cogswell's regiments, and a new disposition was made of all the troops on the ground to resist the advancing enemy. The disposition was as bad as it could well be made; both flanks were exposed, and the reserves were placed in an unprotected position immediately in rear of the center, where they were shot down without resistance, and were only dangerous to their comrades in front of them. Colonel Baker, whose bravery marked him for destruction, was killed about 4 o'clock, being struck at the same moment by several bullets while striving to encourage his men, and after a brief and ineffectual effort by Colonel Cogswell to move to the left, the National troops retreated to the river bank. They were closely followed by the Confederates; the wretched boats into which many of them rushed were swamped; some strong swimmers reached the Maryland shore, some were shot in the water, a large number threw their arms into the stream and, dispersing in the bushes, escaped in the twilight; but a great proportion of the entire command was captured. The losses on the Union side were 10 officers and 39 enlisted men killed, 15 officers and 143 enlisted men wounded, 26 officers and 688 enlisted men missing.* The Confederate loss in killed and wounded was almost as great—36 killed and 117 wounded.*

As soon as the news of the disaster began to reach General Stone, he hurried to the right, where the fugitives from the fight were arriving, did what he could to reestablish order there, and sent instructions to Gorman to intrench himself at Edwards Ferry and act on the defensive. General Banks arrived with reënforcements at 3 o'clock in the morning of the 22d and assumed command. The Confederates made an attack upon Gorman the same day and were easily repulsed; but General McClellan, thinking "that the enemy were strengthening themselves at Leesburg, and that our means of crossing and recrossing were very insufficient," withdrew all the troops to the Maryland side.† It seems from the Confederate reports that he was mistaken in concluding that the enemy were strengthening themselves; they were also getting out of harm's way as rapidly as possible. General Evans, their commander, says:

Finding my brigade very much exhausted, I left Colonel Barksdale with his regiment, with 2 pieces

* War Records.

† McClellan to Secretary of War. War Records.

of artillery and a cavalry force, as a grand guard, and I ordered the other 3 regiments to fall back towards Carter's Mills to rest and to be collected in order."

The utter inadequacy of means for crossing was of course a sufficient reason to justify the cessation of active operations at that time and place.

Insignificant as was this engagement in itself, it was of very considerable importance in immediate effect and ultimate results. It was the occasion of enormous encouragement to the South. The reports of the Confederate officers engaged exaggerated their own prowess, and the numbers and losses of the National troops tenfold. General Beauregard, in his congratulatory order of the day, claimed that the result of this action proved that no disparity of numbers could avail anything as against Southern valor assisted by the "manifest aid of the God of battles."† It will probably never be possible to convince Confederate soldiers that here, as at Bull Run, the numbers engaged and the aggregate killed and wounded were about equal on both sides — a fact clearly shown by the respective official records. At the North the gloom and affliction occasioned by the defeat were equally out of proportion to the event. Among the killed and wounded were several young men of brilliant promise and distinguished social connections in New England, and the useless sacrifice of their lives made a deep impression upon wide circles of friends and kindred. The death of Colonel Baker greatly affected the public mind. He had been little known in the East when he came as Senator from Oregon, but from the moment that he began to appear in public his fluent and impassioned oratory, his graceful and dignified bearing, a certain youthful energy and fire which contrasted pleasantly with his silver hair, had made him extremely popular with all classes. He was one of Mr. Lincoln's dearest friends; he was especially liked in the Senate; he was one of the most desirable and effective speakers at all great mass-meetings. A cry of passionate anger went up from every part of the country over this precious blood wasted, this dishonor inflicted upon the National flag.

The first and most evident scape-goat was, naturally enough, General Stone. He cannot be acquitted of all blame, even in the calmest review of the facts; there was a lack of preparation for the fight, a lack of thorough supervision after it had begun. But these were the least of the charges made against him. The suspicions which civil war always breeds, and the calumnies resulting from them, were let loose upon

him. They grew to such proportions by constant repetition, during the autumn and winter following, that many people actually thought he was one of a band of conspirators in the Union army working in the interest of rebellion. This impression seized upon the minds of some of the most active and energetic men in Congress, friends and associates of Colonel Baker. They succeeded in convincing the Secretary of War that General Stone was dangerous to the public welfare, and on the 28th of January an order was issued from the War Department to General McClellan directing him to arrest General Stone. He kept it for several days without executing it; but at last, being apparently impressed by the evidence of a refugee from Leesburg that there was some foundation for the charges made by the committee of Congress, he ordered the arrest of General Stone, saying at the same time to the Secretary of War that the case was too indefinite to warrant the framing of charges.‡ The arrest was made without consulting the President. When Mr. Stanton announced it to him the President said: "I suppose you have good reasons for it; and having good reasons, I am glad I knew nothing of it until it was done." General Stone was taken to Fort Lafayette, where he remained in confinement six months; he was then released and afterward restored to duty, but never received any satisfaction to his repeated demands for reparation or trial.

For the moment, at least, there seemed no disposition to censure General McClellan for this misfortune. Indeed, it was only a few days after the battle of Ball's Bluff that he gained his final promotion to the chief command of the armies of the United States. A brief review of his relations to his predecessor may be necessary to a proper understanding of the circumstances under which he succeeded to the supreme command.

Their intercourse, at first marked by great friendship, had soon become clouded by misunderstandings. The veteran had always had a high regard for his junior, had sent him his hearty congratulations upon his appointment to command the Ohio volunteers, and although he had felt compelled on one occasion to rebuke him for interference with matters beyond his jurisdiction,§ their relations remained perfectly friendly, and the old general warmly welcomed the young one to Washington. But once there, General McClellan began to treat the General-in-Chief with a neglect which, though probably unintentional, was none the less galling. On the 8th of August, General McClellan sent to

§ War Records.

General Scott a letter* to the effect that he believed the capital "not only insecure," but "in imminent danger." As General McClellan had never personally communicated these views to his chief, but had, as Scott says, "propagated them in high quarters," so that they had come indirectly to the old general's ears, his temper, which was never one of the meekest, quite gave way, and declining to answer General McClellan's letter, he addressed an angry note to the Secretary of War, scouting the idea of Washington being in danger, calling attention to "the stream of new regiments pouring in upon us," complaining bitterly of the reticence and neglect with which his junior treated him, and begging the President, as soon as possible, to retire him from the active command of the army, for which his age, his wounds, and his infirmities had unfitted him.

Mr. Lincoln was greatly distressed by this altercation between the two officers. He prevailed upon General McClellan to write him a conciliatory note, withdrawing the letter of the 8th; and armed with this, he endeavored to soothe the irritation of Scott, and to induce him to withdraw his angry rejoinder of the 9th. But youth, sure of itself and the future, forgives more easily than age; and Scott refused, respectfully but firmly, to comply with the President's request. He waited two days and wrote again to the Secretary of War, giving his reasons for this refusal. He believed General McClellan had deliberately, and with the advice of certain members of the Cabinet, offended him by the letter in question, and

that for the last week, though many regiments had arrived and several more or less important movements of troops had taken place, General McClellan had reported nothing to him, but had been frequently in conversation with various high officers of the Government. "That freedom of access and consultation," he continued, "has, very naturally, deluded the junior general into a feeling of indifference towards his senior." He argues that it would be "against the dignity of his years to be filing daily complaints against an ambitious junior," and closes by reiterating his unfitness for command.†

The two generals never became reconciled. The bickering between them continued for two months, marked with a painful and growing bitterness on the part of Scott, and on the part of McClellan by a neglect akin to contempt. The elder officer, galled by his subordinate's persistent disrespect, published a general order on the 16th of September, which he says was intended "to suppress an irregularity more conspicuous in Major-General McClellan than in any other officer," forbidding junior officers on duty from corresponding with their superiors except through intermediate commanders; the same rule applying to correspondence with the President and the Secretary of War, unless by the President's request. General McClellan showed how little he cared for such an order by writing two important letters to the Secretary of War within three days after it was issued. On the same day a special order was given General

* This letter deserves a careful reading. It is extremely characteristic, as showing, in the first place, how early McClellan began to exaggerate the number of the enemy in front of him, and how large were his ideas as to the force necessary for the protection of Washington so long as the duty of protecting the capital devolved upon him.

HEADQUARTERS DIVISION OF THE POTOMAC,
WASHINGTON, Aug. 8, 1861.

LIEUT.-GEN. WINFIELD SCOTT,
Commanding U. S. Army.

GENERAL: Information from various sources reaching me to-day, through spies, letters, and telegrams, confirms my impressions, derived from previous advices, that the enemy intend attacking our positions on the other side of the river, as well as to cross the Potomac north of us. I have also received a telegram from a reliable agent just from Knoxville, Tenn., that large reinforcements are still passing through there to Richmond. I am induced to believe that the enemy has at least 100,000 men in front of us. Were I in Beauregard's place with that force at my disposal, I would attack the positions on the other side of the Potomac, and at the same time cross the river above this city in force. I feel confident that our present army in this vicinity is entirely insufficient for the emergency, and it is deficient in all the arms of the service — infantry, artillery, and cavalry. I therefore respectfully and most earnestly urge that the garrisons of all places in our rear be reduced at once to the minimum absolutely necessary to hold them, and that all the

troops thus made available be forthwith forwarded to this city; that every company of regular artillery within reach be immediately ordered here to be mounted; that every possible means be used to expedite the forwarding of new regiments of volunteers to this capital without one hour's delay. I urge that nothing be left undone to bring up our force for the defense of this city to 100,000 men, before attending to any other point. I advise that at least eight or ten good Ohio and Indiana regiments may be telegraphed for from western Virginia, their places to be filled at once by the new troops from the same States, who will be at least reliable to fight behind the intrenchments which have been constructed there. The vital importance of rendering Washington at once perfectly secure, and its imminent danger, impel me to urge these requests with the utmost earnestness, and that not an hour be lost in carrying them into execution. A sense of duty which I cannot resist compels me to state that in my opinion military necessity demands that the departments of North-eastern Virginia, Washington, the Shenandoah, Pennsylvania, including Baltimore, and the one including Fort Monroe, should be merged into one department, under the immediate control of the commander of the main army of operations, and which should be known and designated as such.

Very respectfully, your obedient servant,
GEO. B. MCCLELLAN,
Major-General, Commanding.

[War Records.]

† Scott to the President, Aug. 12, 1861.

McClellan to report to army headquarters the number and position of troops under his command, to which order he paid no attention whatever. General Scott felt himself helpless in the face of this mute and persistent disobedience, but he was not able to bear it in silence. On the 4th of October he addressed another passionate remonstrance to the Secretary of War, setting forth these facts, asking whether there were no remedy for such offenses, advising once more to his physical infirmities, and at last divulging the true reason why he had borne so long the contumely of his junior—that he was only awaiting the arrival of General Halleck, whose presence would give him increased confidence in the preservation of the Union, and thus permit him to retire.* On the 31st of October he took his final resolution, and addressed the following letter to the Secretary of War:

For more than three years I have been unable, from a hurt, to mount a horse or to walk more than a few paces at a time, and that with much pain. Other and new infirmities—dropsy and vertigo—admonish me that repose of mind and body, with the appliances of surgery and medicine, are necessary to add a little more to a life already protracted much beyond the usual span of man. It is under such circumstances, made doubly painful by the unnatural and unjust rebellion now raging in the Southern States of our so late prosperous and happy Union, that I am compelled to request that my name be placed on the list of army officers retired from active service. As this request is founded on an absolute right granted by a recent act of Congress, I am entirely at liberty to say it is with deep regret that I withdraw myself, in these momentous times, from the orders of a President who has treated me with distinguished kindness and courtesy, whom I know among much personal intercourse to be patriotic, without sectional partialities or prejudices, to be highly conscientious in the performance of every duty, and of unrivaled activity and perseverance. And to you, Mr. Secretary, whom I now officially address for the last time, I beg to acknowledge my many obligations for the uniform high consideration I have received at your hands."

His request was granted, with the usual compliments and ceremonies, the President and Cabinet waiting upon him in person at his residence. General McClellan succeeded him in command of the armies of the United States, and in his order of the 1st of November he praised in swelling periods the war-worn veteran† whose latest days of service he had so annoyed and embittered. When we consider the relative positions of the two officers—the years, the infirmities, the well-earned glory of Scott, his former friendship and kindness towards his junior; and, on the other hand, the youth, the strength, the marvelous good fortune of McClellan, his great promotion, his certainty of almost immediate succession to supreme command—it cannot be said that his demeanor towards his chief was magnanimous. Although General Scott's unfitness for com-

mand had become obvious, although his disposition, which in his youth had been arrogant and haughty, had been modified but not improved by age into irascibility, it would certainly not have been out of place for his heir presumptive to dissemble an impatience which was not unnatural, and preserve some appearance at least of a respect he did not feel. Standing in the full sunshine, there was something due from him to an old and illustrious soldier stepping reluctant into hopeless shadow.

The change was well received in all parts of the country. At Washington there was an immediate feeling of relief. The President called at General McClellan's headquarters on the night of the 1st of November and gave him warm congratulations. "I should feel perfectly satisfied," he said, "if I thought that this vast increase of responsibility would not embarrass you." "It is a great relief, sir," McClellan answered. "I feel as if several tons were taken from my shoulders to-day. I am now in contact with you and the Secretary. I am not embarrassed by intervention." "Very well," said the President; "draw on me for all the sense and information I have. In addition to your present command the supreme command of the army will entail an enormous labor upon you." "I can do it all," McClellan quickly answered.‡ Ten days later Blenker's brigade organized a torchlight procession, a sort of Fackel-tanz, in honor of the event. The President, after the show was over, went as usual to General McClellan's, and referring to the Port Royal expedition thought this "a good time to feel the enemy." "I have not been unmindful of that," McClellan answered; "we shall feel them tomorrow."§ Up to this time there was no importunity on the part of the President for an advance of the army, although for several weeks some of the leading men in Congress had been urging it. As early as the 26th of October, Senators Trumbull, Chandler, and Wade called upon the President and earnestly represented to him the importance of immediate action. Two days later they had another conference with the President and Mr. Seward, at the house of the latter. They spoke with some vehemence of the absolute necessity for energetic measures to drive the enemy from in front of Washington. The President and the Secretary of State both defended the general in his deliberate purpose not to move until he was ready. The zealous senators did not confine their visits to the civil authorities. They called upon General McClellan also,

* Scott to Cameron. War Records.

‡ J. H., Diary, Nov. 1, 1861.

§ Ibid., Nov. 11, 1861.

and in the course of an animated conversation Mr. Wade said an unsuccessful battle was preferable to delay; a defeat would be easily repaired by the swarming recruits—a thrust which McClellan neatly parried by saying he would rather have a few recruits before a victory than a good many after a defeat.* There was as yet no apparent hostility to McClellan, even among “these wretched politicians,” as he calls them. On the contrary, this conference of the 26th was not inharmonious; McClellan represented General Scott as the obstacle to immediate action, and skillfully diverted the zeal of the senators against the General-in-Chief. He wrote that night:

For the last three hours I have been at Montgomery Blair's, talking with Senators Wade, Trumbull, and Chandler about war matters. They will make a desperate effort to-morrow to have General Scott retired at once; until this is accomplished, I can effect but little good. He is ever in my way, and I am sure does not desire effective action.†

The President, while defending the generals from the strictures of the senators, did not conceal from McClellan the fact of their urgency. He told him it was a reality not to be left out of the account; at the same time he was not to fight till he was ready. “I have everything at stake,” the general replied. “If I fail, I will never see you again.” At this period there was no question of more than a few days' delay.

The friendly visits of the President to army headquarters were continued almost every night until the 13th of November, when an incident occurred which virtually put an end to them.‡ On that evening Mr. Lincoln walked across the street as usual, accompanied by one of his household, to the residence of the Secretary of State, and after a short visit there both of them went to General McClellan's house, in H street. They were there told that the general had gone to the wedding of an officer and would soon return. They waited nearly an hour in the drawing-room, when the general returned, and, without paying any special attention to the orderly who told him the President was waiting to see him, went upstairs. The President, thinking his name had not been announced to the general, again sent a servant to his room and received the answer that he had gone to bed. Mr. Lincoln attached no special importance to this incident, and, so far as we know, never asked nor received any explanation of it. But it was not unnatural that he should conclude his frequent visits had become irksome to the general, and that he should discontinue them. There was no cessation of their friendly relations, though

after this most of their conferences were held at the Executive Mansion.

On the 20th of November a grand review of the Army of the Potomac took place at Upton's Hill. There were about 50,000 men in line, drawn up on a wide, undulating plain, which displayed them to the best advantage, and a finer army has rarely been seen. The President, accompanied by Generals McClellan and McDowell, and followed by a brilliant cavalcade of a hundred general and staff officers, rode up and down the entire extent of the embattled host. Mr. Lincoln was a good horseman, and was received with hearty cheers by the troops, thousands of whom saw him that day for the first and last time. The reviewing officers then took their stand upon a gentle acclivity in the center of the plain, and the troops filed past in review through the autumnal afternoon until twilight. It had certainly all the appearance of a great army ready for battle, and there was little doubt that they would speedily be led into action. But after the review drilling was resumed; recruits continued to pour in, to be assigned and equipped and instructed. The general continued his organizing work; many hours of every day he passed in the saddle, riding from camp to camp with tireless industry, until at last he fell seriously ill, and for several weeks the army rested almost with folded hands awaiting his recovery.

EUROPEAN NEUTRALITY.

ONE of the gravest problems which beset the Lincoln administration on its advent to power was how foreign nations would deal with the fact of secession and rebellion in the United States; and the people of the North endured a grievous disappointment when they found that England and France were by active sympathy favorable to the South. This result does not seem strange when we consider by what insensible steps the news from America had shaped their opinion.

Europeans were at first prepared to accept the disunion threats of Southern leaders as mere transient party bravado. The non-coercion message of President Buchanan, however, was in their eyes an indication of serious import. Old World statesmanship had no faith in unsupported public sentiment as a lasting bond of nationality. The experience of a thousand years teaches them that, under their monarchical system, governments and laws by “divine right” are of accepted and permanent force only when competent physical power stands behind them to compel obedience. Mr. Buchanan's dogma that the Federal Government had no authority to keep a State in the Union was to them, in

* J. H., Diary, Oct. 26, 27, 1861. † J. H., Diary.

† “McClellan's Own Story,” p. 171.

theory at least, the end of the Government of the United States. When, further, they saw that this theory was being translated into practice by acquiescence in South Carolina's revolt; by the failure to reinforce Sumter; by the President's quasi-diplomacy with the South Carolina commissioners as foreign agents; and finally by his practical abdication of executive functions, in the message of January 8,* "referring the whole subject to Congress," and throwing upon it all "the responsibility,"—they naturally concluded that the only remaining question for them was one of new relations with the divided States. From the election of Lincoln until three days preceding his inauguration, a period of nearly four months, embracing the whole drama of public secession and the organization of the Montgomery confederacy, not a word of information, explanation, or protest on these momentous proceedings was sent by the Buchanan cabinet to foreign powers. They were left to draw their inferences exclusively from newspapers, the debates of Congress, and the President's messages till the last day of February, 1861, when Secretary Black, in a diplomatic circular, instructed our ministers at foreign courts "that this Government has not relinquished its constitutional jurisdiction within the territory of those seceded States and does not desire to do so," and that a recognition of their independence must be opposed. France and England replied courteously that they would not act in haste, but quite emphatically that they could give no further binding promise.

Mr. Seward, on assuming the duties of Secretary of State, immediately transmitted a circular, repeating the injunction of his predecessor and stating the confidence of the President in the speedy restoration of the harmony and unity of the Government. Considerable delay occurred in settling upon the various foreign appointments. The new minister to France, Mr. Dayton, and the new minister to Great Britain, Mr. Adams, did not sail for Europe till about the 1st of May. Before either of them arrived at his post, both governments had violated in spirit their promise to act in no haste. On the day Mr. Adams sailed from Boston, his predecessor, Mr. Dallas, yet in London, was sent for by Lord John Russell, her Britannic Majesty's Minister of Foreign Affairs. "He told me," wrote Mr. Dallas, "that the three representatives of the Southern Confederacy were here; that he had not seen them, but was not unwilling to do so, *unofficially*; that there existed an understanding between this Government and that of France which would

lead both to take the same course as to recognition, whatever that course might be." The step here foreshadowed was soon taken. Three days later Lord Russell did receive the three representatives of the Southern Confederacy; and while he told them he could not communicate with them "officially," his language indicated that when the South could maintain its position England would not be unwilling to hear what terms they had to propose. When Mr. Adams landed in England he found, evidently to forestall his arrival, that the Ministry had published the Queen's proclamation of neutrality, raising the Confederate States at once to the position and privilege of a belligerent power; and France soon followed the example.

In taking this precipitate action, both powers probably thought it merely a preliminary step: the British ministers believed disunion to be complete and irrevocable, and were eager to take advantage of it to secure free trade and cheap cotton; while Napoleon III., Emperor of the French, already harboring far-reaching colonial designs, expected not only to recognize the South, but to assist her at no distant day by an armed intervention. For the present, of course, all such meditations were veiled under the bland phraseology of diplomatic regret at our misfortune. The object of these pages is, however, not so much to discuss international relations as to show what part President Lincoln personally took in framing the dispatch which announced the answering policy of the United States.

When the communication which Lord Russell made to Mr. Dallas was received at the State Department, the unfriendly act of the English Government, and more especially the half-insulting manner of its promulgation, filled Mr. Seward with indignation. In this mood he wrote a dispatch to Mr. Adams, which, if transmitted and delivered in its original form, could hardly have failed to endanger the peaceful relations of the two countries. The general tone and spirit of the paper were admirable; but portions of it were phrased with an exasperating bluntness, and certain directions were lacking in diplomatic prudence. This can be accounted for only by the irritation under which he wrote. It was Mr. Seward's ordinary habit personally to read his dispatches to the President before sending them. Mr. Lincoln, detecting the defects of the paper, retained it, and after careful scrutiny made such material corrections and alterations with his own hand as took from it all offensive crudeness without in the least lowering its tone, but, on the contrary, greatly increasing its dignity.

* "Globe," Jan. 9, 1861, p. 294.

SEWARD'S ORIGINAL DISPATCH, SHOWING MR. LINCOLN'S CORRECTIONS.

[All words by Lincoln in margin or in text are in italics. All matter between brackets was marked out.]

No. 10.

DEPARTMENT OF STATE,
WASHINGTON, May 21st, 1861.

SIR:

Mr. Dallas in a brief dispatch of May 2d (No. 333) tells us that Lord John Russell recently requested an interview with him on account of the solicitude which His Lordship felt concerning the effect of certain measures represented as likely to be adopted by the President. In that conversation the British Secretary told Mr. Dallas that the three Representatives of the Southern Confederacy were then in London, that Lord John Russell had not yet seen them, but that he was not unwilling to see them unofficially. He farther informed Mr. Dallas that an understanding exists between the British and French Governments which would lead both to take one and the same course as to recognition. His Lordship then referred to the rumor of a meditated blockade by us of Southern ports, and a discontinuance of them as ports of entry. Mr. Dallas answered that he knew nothing on those topics and therefore could say nothing. He added that you were expected to arrive in two weeks. Upon this statement Lord John Russell acquiesced in the expediency of waiting for the full knowledge you were expected to bring.

Mr. Dallas transmitted to us some newspaper reports of Ministerial explanations made in Parliament.

Leave out. You will base no proceedings on parliamentary debates farther than to seek explanations when necessary and communicate them to this Department. [We intend to have a clear and simple record of whatever issue may arise between us and Great Britain.]

Leave out, because it does not appear that such explanations were demanded. The President [is surprised and grieved] *regrets* that Mr. Dallas did not protest against the proposed unofficial intercourse between the British Government and the missionaries of the insurgents, [as well as against the demand for explanations made by the British Government]. It is due however to Mr. Dallas to say that our instructions had been given only to you and not to him, and that his loyalty and fidelity, too rare in these times [among our late representatives abroad are confessed and] *are* appreciated.

Leave out.

Intercourse of any kind with the so-called Commissioners is liable to be construed as a recognition of the authority which appointed them. Such intercourse would be none the less [wrongful] *hurtful* to us, for being called unofficial, and it might be even more injurious, because we should have no means of knowing what points might be resolved by it. Moreover, unofficial intercourse is useless and meaningless, if it is not expected to ripen into official intercourse and direct recognition. It is left doubtful here whether the proposed unofficial intercourse has yet actually begun. Your own [present] antecedent instructions are deemed explicit enough, and it is hoped that you have not misunderstood them. You will in any event desist from all intercourse whatever, unofficial as well as official with the British Government, so long as it shall continue intercourse of either kind with the domestic enemies of this country, [confining yourself simply to a delivery of a copy of this paper to the Secretary of State. After doing this]* you will communicate with this Department and receive farther directions.

Leave out.

** When intercourse shall have been arrested for this cause,*

Lord John Russell has informed us of an understanding between the British and French Governments that they will act together in regard to our affairs. This communication however loses something of its value from the circumstance that the communication was withheld until after knowledge of the fact had been acquired by us from other sources. We know also another fact that has not yet been officially communicated to us, namely that other European States are apprized by France and England of their agreement and are expected to concur with or follow them in whatever measures they adopt on the subject of recognition. The United States have been impartial and just in all their conduct towards the several

nations of Europe. They will not complain however of the combination now announced by the two leading powers, although they think they had a right to expect a more independent if not a more friendly course from each of them. You will take no notice of that or any other alliance. Whenever the European governments shall see fit to communicate directly with us we shall be as heretofore frank and explicit in our reply.

As to the blockade, you will say that by [the] *our own* laws [of nature] and *the laws* of nature and the laws of nations this government has a clear right to suppress insurrection. An exclusion of commerce from national ports which have been seized by the insurgents, in the equitable form of blockade, is a proper means to that end. You will [admit] not insist that our blockade is [not] to be respected if it be not maintained by a competent force—but passing by that question as not now a practical or at least an urgent one you will add that [it] the blockade is now and it will continue to be so maintained, and therefore we expect it to be respected by Great Britain. You will add that we have already revoked the exequatur of a Russian Consul who had enlisted in the Military service of the insurgents, and we shall dismiss or demand the recall of every foreign agent, Consular or Diplomatic, who shall either disobey the Federal laws or disown the Federal authority.

As to the recognition of the so-called Southern Confederacy it is not to be made a subject of technical definition. It is of course [*quasi*] direct recognition to publish an acknowledgment of the sovereignty and independence of a new power. It is [*quasi*] direct recognition to receive its ambassadors, Ministers, agents, or commissioners officially. A concession of belligerent rights is liable to be construed as a recognition of them. No one of these proceedings will [be borne] *pass* [*unnoticed*] unquestioned by the United States in this case.

Hitherto recognition has been moved only on the assumption that the so-called Confederate States are de facto a self-sustaining power. Now after long forbearance, designed to soothe discontent and avert the need of civil war, the land and naval forces of the United States have been put in motion to repress the insurrection. The true character of the pretended new State is at once revealed. It is seen to be a Power existing in pronunciamiento only. It has never won a field. It has obtained no forts that were not virtually betrayed into its hands or seized in breach of trust. It commands not a single port on the coast nor any highway out from its pretended Capital by land. Under these circumstances Great Britain is called upon to intervene and give it body and independence by resisting our measures of suppression. British recognition would be British intervention to create within our own territory a hostile state by overthrowing this Republic itself. [When this act of intervention is distinctly performed, we from that hour shall cease to be friends and become once more, as we have twice before been forced to be enemies of Great Britain.]

[Leave out.]

As to the treatment of privateers in the insurgent service, you will say that this is a question exclusively our own. We treat them as pirates. They are our own citizens, or persons employed by our citizens, preying on the commerce of our country. If Great Britain shall choose to recognize them as lawful belligerents, and give them shelter from our pursuit and punishment, the laws of nations afford an adequate and proper remedy, [and we shall avail ourselves of it. *And while you need not to say this in advance, be sure that you say nothing inconsistent with it.*]

Happily, however, Her Britannic Majesty's Government can avoid all these difficulties. It invited us in 1856 to accede to the declaration of the Congress of Paris, of which body Great Britain was herself a member, abolishing privateering everywhere in all cases and for ever. You *already* have our authority to propose to her our accession to that declaration. If she refuse to receive it, it can only be because she is willing to become the patron of privateering when aimed at our devastation.

These positions are not elaborately defended now, because to vindicate them would imply a possibility of our waiving them.

[Drop all from this line to the end, and in lieu of it write

" This paper is for your own guidance only, and not [sic] to be read or shown to anyone.]

We are not insensible of the grave importance of this occasion. We see how, upon the result of the debate in which we are engaged, a war may ensue between the United States, and one, two, or even more European nations. War in any case is as exceptionable from the habits as it is revolting from the sentiments of the American people. But if it come it will be fully seen that it results from the action of Great Britain, not our own, that Great Britain will have decided to fraternize with our domestic enemy, either without waiting to hear from you our remonstrances, and our warnings, or after having heard them. War in defense of national life is not immoral, and war in defense of independence is an inevitable part of the discipline of nations.

The dispute will be between the European and the American branches of the British race. All who belong to that race will especially deprecate it, as they ought. It may well be believed that men of every race and kindred will deplore it. A war not unlike it between the same parties occurred at the close of the last century. Europe atoned by forty years of suffering for the error that Great Britain committed in provoking that contest. If that nation shall now repeat the same great error the social convulsions which will follow may not be so long but they will be more general. When they shall have ceased, it will, we think, be seen, whatever may have been the fortunes of other nations, that it is not the United States that will have come out of them with its precious Constitution altered or its honestly obtained dominion in any degree abridged. Great Britain has but to wait a few months and all her present inconveniences will cease with all our own troubles. If she take a different course she will calculate for herself the ultimate as well as the immediate consequences, and will consider what position she will hold when she shall have forever lost the sympathies and the affections of the only nation on whose sympathies and affections she has a natural claim. In making that calculation she will do well to remember that in the controversy she proposes to open we shall be actuated by neither pride, nor passion, nor cupidity, nor ambition; but we shall stand simply on the principle of self-preservation, and that our cause will involve the independence of nations, and the rights of human nature.

I am Sir, respectfully, your obedient servant,

CHARLES FRANCIS ADAMS, ESQ., etc., etc., etc.

W. H. S.

[It is quite impossible to reproduce in type the exact form of the manuscript of the dispatch with all its interlineations and corrections; but the foregoing shows those made by Mr. Lincoln with sufficient accuracy. Such additional verbal alterations of Mr. Seward's as merely corrected ordinary slips of the pen or errors of the copyist are not noted. When the President returned the manuscript to his hands, Mr. Seward somewhat changed the form of the dispatch by prefixing to it two short introductory paragraphs in which he embodied, in his own phraseology, the President's direction that the paper was to be merely a confidential instruction not to be read or shown to any one, and that he should not in advance say anything inconsistent with its spirit. This also rendered unnecessary the President's direction to omit the last two paragraphs, and accordingly they remained in the dispatch as finally sent.]

THE mere perusal of this document shows how ill-advised was Mr. Seward's original di-

rection to deliver a copy of it to the British foreign office without further explanation, or without requesting a reply in a limited time. Such a course would have left the American minister in a position of uncertainty whether he was still in diplomatic relations or not, and whether the point had been reached which would justify him in breaking off intercourse; nor would he have had any further pretext upon which to ascertain the disposition or intention of the British Government. It would have been wiser to close the legation at once and return to America. Happily, Mr. Lincoln saw the weak point of the instruction, and by his changes not only kept it within the range of personal and diplomatic courtesy, but left Mr. Adams free to choose for himself the best way of managing the delicate situation.

The main point in question, namely, that the United States would not suffer Great Britain to carry on a double diplomacy with Washington and with Montgomery at the same time — that if she became the active friend of the re-

bellion she must become the enemy of the United States, was partly disposed of before the arrival of the amended dispatch at London. Several days before it was written Mr. Adams had his first official interview (May 18) with Lord John Russell, and in the usual formal phraseology, but with emphatic distinctness, told him that if there existed on the part of Great Britain "an intention more or less marked to extend the struggle" by encouragement in any form to the rebels, "I was bound to acknowledge in all frankness that in that contingency I had nothing further left to do in Great Britain." The British minister denied any intention to aid the rebellion, and explained that the Queen's proclamation was issued merely to define their own attitude of strict neutrality, so that British naval officers and other officials might understand how to regulate their conduct.*

When the dispatch finally reached Mr. Adams, he obtained another interview with Lord John Russell, to ascertain definitely the status of the rebel commissioners in London. He told him that a continuance of their apparent relation with the British Government "could scarcely fail to be viewed by us as hostile in spirit, and to require some corresponding action accordingly." Lord John Russell replied that he had only seen the rebel commissioners twice, and "had no expectation of seeing them any more."†

So early as the year 1854, when the shadow of the Crimean war was darkening over Europe, the Government of the United States submitted to the principal maritime nations the propositions, first, that free ships should make free goods, and second, that neutral property on board an enemy's vessel should not be subject to confiscation unless contraband of war. These propositions were not immediately accepted, but when the powers assembled in congress at Paris in 1856, for the purpose of making peace, Great Britain and the other nations which took part in the congress gave them their assent, adding to them, as principles of international law, the abolition of privateering and the obligation that blockades, to be respected, must be effective. The adhesion of the United States having been invited to these four propositions, the Government of that day answered that they would accede to them if the other powers would accept a fifth principle — that the goods of private persons, non-combatants, should be exempt from confiscation in maritime war. This proposition was rejected by the British Government, and the negotiations were then suspended until after Mr. Lincoln became President. A few weeks after his inauguration

the suspended negotiations were taken up by Mr. Seward, who directed Mr. Adams to signify to the British Government that the United States were now ready to accept without reserve the four propositions adopted at the Congress of Paris.‡ After some delay, Lord John Russell remarked to Mr. Adams that in case of the adhesion of the United States to the Declaration of Paris, the engagement on the part of Great Britain would be prospective and would not invalidate anything done. This singular reserve Mr. Adams reported to his Government, and was directed by Mr. Seward to ask some further elucidation of its meaning. But before this dispatch was received, the strange attitude of the British Government was explained by Lord Russell's§ submitting to Mr. Adams a draft of a supplementary declaration on the part of England that her Majesty did not intend, by the projected convention for the accession of the United States to the articles of the Congress of Paris, "to undertake any engagement which shall have any bearing, direct or indirect, on the internal differences now prevailing in the United States." The President, having been informed of this proposed declaration, at once instructed Mr. Adams|| that it was inadmissible, as the Government of the United States could not accede to this great international act except upon the same equal footing upon which all the other parties stood. It afterward transpired that the British Government had, at the same time that these important negotiations were going on with the Government of the United States, approached the new Confederate Government upon the same subject, sending communications in a clandestine manner through the British Legation in Washington to Mr. Bunch, the English consul at Charleston, through whom they were in the same furtive and unofficial manner laid before the authorities at Richmond. The French Government joined in this proceeding, at the invitation of England. Mr. Davis at once recognized the great importance of such quasi-recognition of his Government, and he himself drafted resolutions declaring the purpose of the Confederates to observe the principles towards neutrals embodied in the second and third rules of the Declaration of Paris — that blockades to be binding must be effectual, but

§ Lord John Russell was raised to the peerage, under the title of Earl Russell, July 30, 1861.

|| Seward to Adams, Sept. 7, 1861.

that they "maintained the right of privateering."* These resolutions were passed in the Confederate Congress, and Mr. Bunch, conveying the news of this result to Lord Lyons, said:

The wishes of her Majesty's Government would seem to have been fully complied with, for as no proposal was made that the Confederate Government should abolish privateering, it could not be expected that they should do so of their own accord, particularly as it is the arm upon which they most rely for the injury of the extended commerce of their enemy.

The American Government held itself justly aggrieved, therefore, that its accession to the Declaration of Paris was impeded by conditions which it could not, consistently with its dignity, accept; that the British Government was secretly negotiating at the same time with the insurgents upon the same subject; that while the United States were invited to accede to all four of the articles of Paris the Confederate Government was given its choice by the British Cabinet to accept only three. The Government of the United States said afterward in its case at Geneva that

The practical effect of this diplomacy, had it been successful, would have been the destruction of the commerce of the United States or its transfer to the British flag, and the loss of the principal resource of the United States upon the ocean should a continuation of this course of insincere neutrality unhappily force the United States into a war. Great Britain was thus to gain the benefit to its neutral commerce of the recognition of the second and third articles, the rebel privateers and cruisers were to be protected and their devastation legalized, while the United States were to be deprived of a dangerous weapon of assault upon Great Britain.

The action of Mr. Bunch in this matter was properly regarded by the President as a violation of the laws of the United States to which he was accredited, and his exequatur was revoked. A long discussion followed, in which neither side succeeded in convincing the other of its wrong; and the next year, pending an attack upon Charleston, a British man-of-war entered that port and took Mr. Bunch away.

THE "TRENT" AFFAIR.

THE public mind would probably have dwelt with more impatience and dissatisfaction upon the present and prospective inaction of the armies but for an event which turned all thoughts with deep solicitude into an entirely different channel. This was what is known as the *Trent* affair, which seriously threatened to embroil the nation in a war with Great Britain. The Confederate Gov-

ernment had appointed two new envoys to proceed to Europe and renew its application for recognition, which its former diplomatic agents had so far failed to obtain. For this duty ex-Senator Mason of Virginia and ex-Senator Slidell of Louisiana were selected, on account of their political prominence, as well as their recognized abilities. On the blockade runner *Theodora*, they, with their secretaries and families, succeeded in eluding the Union cruisers around Charleston, and in reaching Havana, Cuba. Deeming themselves beyond danger of capture, they made no concealment of their presence or mission, but endeavored rather to "magnify their office." The British consul showed them marked attention, and they sought to be presented officially to the Captain-General of Cuba; but that wary functionary explained that he received them only as "distinguished gentlemen." They took passage on board the British mail steamer *Trent* for St. Thomas, intending there to take the regular packet to England.

Captain Wilkes, commanding the United States war steamer *San Jacinto*, just returned from an African cruise, heard of the circumstance, and, going to Havana, fully informed himself of the details of their intended route. The *Trent*, he learned, was to leave Havana on November 7. That day found him stationed in the old Bahama channel, near the northern coast of Cuba, where he had reason to believe she would pass. At about noon of the 8th the lookout announced the approach of the *Trent*, and when she was sufficiently near, the *San Jacinto* fired a round-shot across her course, and displayed the American colors. The British steamer did not seem disposed to accept the warning and failed to slacken her speed, whereupon Captain Wilkes ordered a shell to be fired across her bows, which at once brought her to. Lieutenant Fairfax, with two officers and a guard of marines, left the *San Jacinto* and rowed to the mail steamer; the lieutenant mounted to the deck alone, leaving his officers and men in the boat. He was shown to the quarter-deck, where he met Captain Moir of the *Trent*, and, informing him who he was, asked to see his passenger-list. Captain Moir declined to show it. Lieutenant Fairfax then told him of his information that the rebel commissioners were on board and that he must satisfy himself on that point before allowing the steamer to proceed. The envoys and their secretaries came up, and, hearing their names mentioned, asked if they were wanted. Lieutenant Fairfax now made known in full the purport of his orders and the object of his visit.

The altercation and commotion called a

* Papers relating to the Treaty of Washington, Vol. I., p. 36.

CHARLES FRANCIS ADAMS. (FROM A PHOTOGRAPH BY MAVALL, LENT BY THEODORE F. DWIGHT, ESQ.)

considerable number of passengers around the group. All of them manifested open secession sympathy, and some indulged in abusive language so loud and demonstrative that the lieutenant's two officers, and six or eight armed men from the boat, without being called, mounted to the lieutenant's assistance. In these unfriendly demonstrations the mail agent of the *Trent*, one Captain Williams, a retired British naval officer, made himself especially conspicuous with the declaration that he was the "Queen's representative," and with various threats of the consequences of the affair. The captain of the *Trent* firmly but quietly opposed all compliance or search, and the envoys and their secretaries protested

against arrest, whereupon Lieutenant Fairfax sent one of his officers back to the *San Jacinto* for additional force. In perhaps half an hour the second boat returned from the *San Jacinto* with some twenty-four additional men. Lieutenant Fairfax now proceeded to execute his orders without actual violence, and with all the politeness possible under the circumstances. Mason and Slidell, and their secretaries, foreseeing the inevitable, had retired to their state-rooms to pack their luggage; thither it was necessary to follow them, and there the presence of the families of Slidell and Eustis created some slight confusion, and a few armed marines entered the cabin, but were sent back. The final act of capture and

removal was then carried out with formal stage solemnity.*

Captain Wilkes's first instruction to Lieutenant Fairfax was to seize the *Trent* as a prize, but, as he afterward explained:

I forbore to seize her, however, in consequence of my being so reduced in officers and crew, and the derangement it would cause innocent persons, there being a large number of passengers, who would have been put to great loss and inconvenience as well as disappointment from the interruption it would have caused them in not being able to join the steamer from St. Thomas for Europe.†

The *Trent* was allowed to proceed on her voyage, while the *San Jacinto* steamed away for Boston, where she arrived on the 24th of

REAR-ADMIRAL CHARLES WILKES, U. S. N.
(FROM A PHOTOGRAPH BY ANTHONY.)

November, and transferred her prisoners to Fort Warren.

The whole country rang with exultation

* "When the marines and some armed men had been formed," reports Lieutenant Fairfax, "just outside of the main deck cabin, where these four gentlemen had gone to pack up their baggage, I renewed my efforts to induce them to accompany me on board, they still refusing to accompany me unless force was applied. I called in to my assistance four or five officers, and first taking hold of Mr. Mason's shoulder, with another officer on the opposite side, I went as far as the gang-way of the steamer, and delivered him over to Lieutenant Greer, to be placed in the boat. I then returned for Mr. Slidell, who insisted that I must apply considerable force to get him to go with me. Calling in at last three officers, he also was taken in charge and handed over to Mr. Greer. Mr. McFarland and Mr. Eustis, after protesting, went quietly into the boat." "There was a great deal of excitement on board at this time," says another report, "and the officers and passengers

over the exploit. The feeling was greatly heightened by the general public indignation at the unfriendliness England had so far manifested to the Union cause; but perhaps more especially because the two persons seized had been among the most bitter and active of the secession conspirators. The public press lauded Captain Wilkes, Boston gave him a banquet, and the Secretary of the Navy wrote him a letter of emphatic approval. He congratulated him "on the great public service" he had rendered in the capture, and expressed only the reservation that his conduct in omitting to capture the vessel must not be allowed to constitute a precedent.‡ When Congress met on the 2d of December following, the House of Representatives immediately passed a resolution, without a dissenting voice, thanking Captain Wilkes for his "brave, adroit, and patriotic conduct"; while by other resolutions the President was requested to order the prisoners into close confinement, in retaliation for similar treatment by the rebels of certain prisoners of war. The whole strong current of public feeling approved the act without qualification, and manifested an instant and united readiness to defend it.

President Lincoln's usual cool judgment at once recognized the dangers and complications that might grow out of the occurrence. A well-known writer has recorded what he said in a confidential interview on the day the news was received:

I fear the traitors will prove to be white elephants. We must stick to American principles concerning the rights of neutrals. We fought Great Britain for insisting, by theory and practice, on the right to do precisely what Captain Wilkes has done. If Great Britain shall now protest against the act, and demand their release, we must give them up, apologize for the act as a violation of our doctrines, and thus forever bind her over to keep the peace in relation to neutrals, and so acknowledge that she has been wrong for sixty years.§ ||

The Cabinet generally coincided in expressing gratification and approval. The international questions involved came upon them so suddenly that they were not ready with de-

of the steamer were addressing us by numerous opprobrious epithets, such as calling us pirates, villains, traitors, etc." (Report Secretary of the Navy, Dec. 2, 1861.) The families of Slidell and Eustis had meanwhile been tendered the use of the cabin of the *San Jacinto*, if they preferred to accompany the prisoners; but they declined, and proceeded in the *Trent*.

† Report Secretary of the Navy, Dec. 2, 1861.

‡ Welles, in "The Galaxy," May, 1873, pp. 647-649.

§ Lossing, "Civil War in the United States," Vol. II., p. 156.

|| Secretary of the Navy Welles corroborated the statement in "The Galaxy" for May, 1873, p. 647: "The President, with whom I had an interview immediately on receiving information that the emissaries were captured and on board the *San Jacinto*, before consultation with any other member of the Cabinet discussed with me some of the difficult points presented. His chief

cided opinions concerning the law and policy of the case; besides, the true course obviously was to await the action of Great Britain.

The passengers on board the *Trent*, as well as the reports of her officers, carried the news of the capture directly to England, where the incident raised a storm of public opinion even more violent than that in the United States, and very naturally on the opposite side. The Government of England relied for its information mainly upon the official report of the mail agent, Captain Williams, who had made himself so officious as the "Queen's representative," and who, true to the secession sympathies manifested by him on shipboard, gave his report a strong coloring of the same character. English public feeling, popular and official, smarted under the idea that the United States had perpetrated a gross outrage, and the clamor for instant redress left no room for any calm consideration of the far-reaching questions of international law involved. There seemed little possibility that a war could be avoided, and England began immediate preparations for such an emergency. Some eight thousand troops were dispatched to Canada, ships were ordered to join the English squadrons in American waters, and the usual proclamation issued prohibiting the export of arms and certain war supplies.

Two days after the receipt of the news Lord Palmerston, in a note to the Queen, formulated the substance of a demand to be sent to the United States. He wrote:

The general outline and tenor which appeared to meet the opinions of the Cabinet would be, that the Washington Government should be told that what has been done is a violation of international law and of the rights of Great Britain, and that your Majesty's Government trusts that the act will be disavowed, and the prisoners set free and restored to British protection; and that Lord Lyons should be instructed that, if this demand is refused, he should retire from the United States.*

On the following day the formal draft of the proposed dispatch to Lord Lyons was laid before the Queen, who, together with Prince Albert, examined it with unusual care. The critical character of the communication, and the imminent danger—the almost certainty

JOHN SLIDELL.

—of a rupture and war with America which it revealed, made a profound impression upon both. Prince Albert was already suffering from the illness which terminated his life two weeks afterward. This new and grave political question gave him a sleepless night. "He could eat no breakfast," is the entry in her Majesty's diary, "and looked very wretched. But still he was well enough on getting up to make a draft for me to write to Lord Russell, in correction of his draft to Lord Lyons, sent me yesterday, which Albert did not approve."

The Queen returns these important drafts, which upon the whole she approves; but she cannot help feeling that the main draft—that for communication to the American Government—is somewhat meager. She should have liked to have seen the expression of a hope that the American captain did not act under instructions, or, if he did, that he misapprehended them—that the United States Government must be fully aware that the British Government could not allow its flag to be insulted, and the security of her mail communications to be placed in jeopardy; and her Majesty's Government are unwilling to believe that the United States Government intended wantonly to put an insult upon this country, and to add to their many distressing

anxiety—for his attention had never been turned to admiralty law and naval captures—was as to the disposition of the prisoners, who, to use his own expression, would be elephants on our hands, that we could not easily dispose of. Public indignation was so over-

whelming against the chief conspirators that he feared it would be difficult to prevent severe and exemplary punishment, which he always deprecated."

* Martin, "Life of the Prince Consort," Vol. V., p. 420.

J. M. MASON.

complications by forcing a question of dispute upon us; and that we are therefore glad to believe that upon a full consideration of the circumstances of the undoubted breach of international law committed, they would spontaneously offer such redress as alone could satisfy this country, viz., the restoration of the unfortunate passengers and a suitable apology.*

It proved to be the last political memorandum he ever wrote. The exact language of his correction, had it been sent, would not have been well calculated to soothe the irritated susceptibilities of Americans. To the charge of "violating international law," to which Palmerston's cold note confined itself, he added the accusation of "wanton insult," though disclaiming a belief that it was intended. But a kind and pacific spirit shines through his memorandum as a whole, and it is evident that both the Queen and himself, gratefully remembering the welcome America had lately accorded the Prince of Wales, shrank from the prospect of an angry war. In this the Queen unconsciously responded to the impulse of amity and goodwill which had induced the President to modify so materially his foreign secretary's dispatch of the 21st of May, the unpremeditated thought of the ruler, in each case, being at once wiser and more humane than the first intention of the diplomatists. It was from the intention rather than the words of the Prince that the

Queen's ministers took their cue and modified the phraseology into more temperate shape. Earl Russell wrote:

Her Majesty's Government, hearing in mind the friendly relations which have long subsisted between Great Britain and the United States, are willing to believe that the United States' naval officer who committed this aggression was not acting in compliance with any authority from his Government, or that if he conceived himself to be so authorized, he greatly misunderstood the instructions he had received. For the Government of the United States must be fully aware that the British Government could not allow such an affront to the national honor to pass without full reparation, and her Majesty's Government are unwilling to believe that it could be the deliberate intention of the Government of the United States unnecessarily to force into discussion between the two Governments a question of so grave a character, and with regard to which the whole British nation would be sure to entertain such unanimity of feeling. Her Majesty's Government, therefore, trust that when this matter shall have been brought under the consideration of the Government of the United States, that Government will of its own accord offer to the British Government such redress as alone would satisfy the British nation, namely, the liberation of the four gentlemen and their delivery to your Lordship, in order that they may again be placed under British protection, and a suitable apology for the aggression which has been committed. Should these terms not be offered by Mr. Seward, you will propose them to him.†

In the private note accompanying this formal dispatch further instruction was given, that if the demand were not substantially complied with in seven days, Lord Lyons should break off diplomatic relations and return with his whole legation to London. Yet at the last moment Lord Russell himself seems to have become impressed with the brow-beating precipitancy of the whole proceeding, for he added another private note, better calculated than even the Queen's modification to soften the disagreeable announcement to the American Government. He wrote to Lord Lyons:

My wish would be, that at your first interview with Mr. Seward you should not take my dispatch with you, but should prepare him for it and ask him to settle it with the President and the Cabinet what course they will propose. The next time you should bring my dispatch and read it to him fully. If he asks what will be the consequence of his refusing compliance, I think you should say that you wish to leave him and the President quite free to take their own course, and that you desire to abstain from anything like menace.‡

* Martin, "Life of the Prince Consort," Vol. V., p. 422.

† Earl Russell to Lord Lyons, Nov. 30, 1861. British "Blue Book."

‡ Inclosure in No. 49. British "Blue Book."

This last diplomatic touch reveals that the Ministry, like the Queen, shrank from war, but that it desired to reap all the advantages of a public menace, even while privately disclaiming one.

The British demand reached Washington on the 19th of December. It happened, fortunately, that Lord Lyons and Mr. Seward were on excellent terms of personal friendship, and the British envoy was therefore able to present the affair with all the delicacy which had been suggested by Lord Russell. The Government at Washington had carefully abstained from any action other than that already mentioned. Lord Lyons wrote:

Mr. Seward received my communication seriously and with dignity, but without any manifestation of dissatisfaction. Some further conversation ensued in consequence of questions put by him with a view to ascertain the exact character of the dispatch. At the conclusion he asked me to give him to-morrow to consider the question, and to communicate with the President.*

Another dispatch from Lord Lyons shows that Mr. Seward asked a further delay, and that Lord Russell's communication was not formally read to him till Monday, the 23d of December.†

If we may credit the statement of Secretary Welles, Mr. Seward had not expected so serious a view of the affair by the British Government; and his own language implies as much when, in a private letter some months afterward, he mentions Lord Lyons's communication as "our first knowledge that the British Government proposed to make it a question of offense or insult, and so of war," adding: "If I had been as tame as you think would have been wise in my treatment of affairs with that country, I should have no standing in my own."‡ But while Mr. Seward, like most other Americans, was doubtless elated by the first news that the rebel envoys were captured, he readily discerned that the incident was one of great diplomatic gravity and likely to be fruitful of prolonged diplomatic contention. Evidently in this spirit, and for the purpose of reserving to the United States every advantage in the serious discussion which was unavoidable, he prudently wrote in a confidential dispatch to Mr. Adams, on November 27:

I forbear from speaking of the capture of Messrs. Mason and Slidell. The act was done by Commodore Wilkes without instructions, and even without the knowledge of the Government. Lord Lyons has judiciously refrained from all communication with me on

the subject, and I thought it equally wise to reserve ourselves until we hear what the British Government may have to say on the subject.

Of the confidential first interviews between the Secretary of State and the President on this important topic there is no record. From what remains we may easily infer that the President clearly saw the inevitable necessities surrounding the question, and was anxiously searching some method of preserving to the United States whatever of indirect advantage might accrue from compliance with the British demand, and of making that compliance as palatable as might be to American public opinion. In this spirit we may presume he wrote the following experimental draft of a dispatch, preserved in his autograph manuscript. Its chief proposal is to arbitrate the difficulty, or in the alternative seriously to examine the question in all its aspects, and out of them to formulate a binding rule for both nations to govern similar cases. It was an honest and practical suggestion to turn an accidental quarrel into a great and durable transaction for the betterment of international law.

The dispatch of her Majesty's Secretary for Foreign Affairs, dated the 30th of November, 1861, and of which your Lordship kindly furnished me a copy, has been carefully considered by the President; and he directs me to say that if there existed no fact or facts pertinent to the case, beyond those stated in said dispatch, the reparation sought by Great Britain from the United States would be justly due, and should be promptly made. The President is unwilling to believe that her Majesty's Government will press for a categorical answer upon what appears to him to be only a partial record, in the making up of which he has been allowed no part. He is reluctant to volunteer his view of the case, with no assurance that her Majesty's Government will consent to hear him; yet this much he directs me to say, that this Government has intended no affront to the British flag, or to the British nation; nor has it intended to force into discussion an embarrassing question, all which is evident by the fact hereby asserted, that the act complained of was done by the officer without orders from, or expectation of, the Government. But being done, it was no longer left to us to consider whether we might not, to avoid a controversy, waive an unimportant though a strict right; because we too, as well as Great Britain, have a people justly jealous of their rights, and in whose presence our Government could undo the act complained of only upon a fair showing that it was wrong, or at least very questionable. The United States Government and people are still willing to make reparation upon such showing.

Accordingly I am instructed by the President to inquire whether her Majesty's Government will hear the United States upon the matter in question. The President desires, among other things, to bring into view, and have considered, the existing rebellion in the United States; the position Great Britain has assumed, including her Majesty's proclamation in relation thereto; the relation the persons whose seizure is the subject of complaint bore to the United States, and the object of their voyage at the time they were seized; the knowledge which the master of the *Trent* had of their relation to the United States, and of the object of their voyage, at the time he received them on board for the

* Lyons to Russell, Dec. 19, 1861.

† Lyons to Russell, Dec. 23, 1861. British "Blue Book."

‡ Seward to Weed, March 2, 1862. "The Galaxy," August, 1870.

voyage; the place of the seizure; and the precedents and respective positions assumed, in analogous cases, between Great Britain and the United States.

Upon a submission, containing the foregoing facts, with those set forth in the before-mentioned dispatch to your Lordship, together with all other facts which either party may deem material, I am instructed to say, the Government of the United States will, if agreed to by her Majesty's Government, go to such friendly arbitration as is usual among nations, and will abide the award.

Or, in the alternative, her Majesty's Government may, upon the same record, determine whether any, and if any, what, reparation is due from the United States; provided no such reparation shall be different in character from, nor transcend, that proposed by your Lordship, as instructed in and by the dispatch aforesaid; and provided further, that the determination thus made shall be the law for all future analogous cases between Great Britain and the United States.*

We may suppose that upon consultation with Mr. Seward, Mr. Lincoln decided that, desirable as this proceeding might be, it was precluded by the impatient, inflexible terms of the British demand. Only three days of the seven-days' grace remained; if they should not by the coming Thursday agree to deliver Mason and Slidell, the British legation would close its doors, and the consternation of a double war would fill the air. It is probable, therefore, that even while writing this draft, Lincoln had intimated to his Secretary of State the need of finding good diplomatic reasons for surrendering the prisoners.

A note of Mr. Seward shows us that the Cabinet meeting to consider finally the *Trent* question was appointed for Tuesday morning, December 24; but the Secretary says that, availing himself of the President's permission, he had postponed it to Wednesday morning at 10 A. M., adding, "I shall then be ready." It is probably true, as he afterward wrote,† that the whole framing of his dispatch was left to his own ingenuity and judgment, and that neither the President nor any member of the Cabinet had arrived at any final determination. The private diary of Attorney-General Bates supplies us some additional details:

Cabinet council at 10 A. M., December 25, to consider the relations with England on Lord Lyons's demand of the surrender of Mason and Slidell; a long and interesting session, lasting till 2 P. M. The instructions of the British Minister to Lord Lyons were read. . . . There was read a draft of answer by the Secretary of State.

The President's experimental draft quoted above was not read; there is no mention of

either the reading or the points it raised. The whole discussion appears to have been confined to Seward's paper. There was some desultory talk, a general comparing of rumors and outside information, a reading of the few letters which had been received from Europe. Mr. Sumner, chairman of the Senate Committee on Foreign Relations, was invited in, and read letters he had received from John Bright and Richard Cobden, liberal members of the British Parliament and devoted friends of the Union. During the session also there was handed in and read the dispatch just received from his Government by M. Mercier, the French minister, and which, in substance, took the English view of the matter. The diary continues:

Mr. Seward's draft of letter to Lord Lyons was submitted by him, and examined and criticised by us with apparently perfect candor and frankness. All of us were impressed with the magnitude of the subject, and believed that upon our decision depended the dearest interest, probably the existence, of the nation. I, waiving the question of legal right,—upon which all Europe is against us, and also many of our own best jurists,—urged the necessity of the case; that to go to war with England now is to abandon all hope of suppressing the rebellion, as we have not the possession of the land, nor any support of the people of the South. The maritime superiority of Britain would sweep us from all the Southern waters. Our trade would be utterly ruined, and our treasury bankrupt; in short, that we must not have war with England.

There was great reluctance on the part of some of the members of the Cabinet—and even the President himself—to acknowledge these obvious truths; but all yielded to, and unanimously concurred in, Mr. Seward's letter to Lord Lyons, after some verbal and formal amendments. The main fear, I believe, was the displeasure of our own people—lest they should accuse us of timidly truckling to the power of England.‡

The published extracts from the diary of Secretary Chase give somewhat fully his opinion on the occasion:

Mr. Chase thought it certainly was not too much to expect of a friendly nation, and especially of a nation of the same blood, religion, and characteristic civilization as our own, that in consideration of the great rights she would overlook the little wrong; nor could he then persuade himself that, were all the circumstances known to the English Government as to ours, the surrender of the rebel commissioners would be insisted upon. The Secretary asserted that the technical right was undoubtedly with England. . . . Were the circumstances reversed, our Government would, Mr. Chase thought, accept the explanation, and let England keep her rebels; and he could not divest himself of the belief that, were the case fairly understood, the British Government would do likewise. "But," continued Secretary Chase, "we cannot afford delays. While

* Lincoln, unpublished MS.

† The consideration of the *Trent* case was crowded out by pressing domestic affairs until Christmas Day. It was considered on my presentation of it on the 25th and 26th of December. The Government, when it took the subject up, had no idea of the grounds upon which it would explain its action, nor did it believe it would

concede the case. Yet it was heartily unanimous in the actual result after two days' examination, and in favor of the release. Remember that in a council like ours there are some strong wills to be reconciled. [Seward to Weed, Jan. 22, 1862. Weed, "Autobiography," Vol. II., p. 409.]

‡ Bates, Diary. Unpublished MS.

the matter hangs in uncertainty the public mind will remain disquieted, our commerce will suffer serious harm, our action against the rebels must be greatly hindered, and the restoration of our prosperity—largely identified with that of all nations—must be delayed. Better, then, to make now the sacrifice of feeling involved in the surrender of these rebels, than even avoid it by the delays which explanations must occasion. I give my adhesion, therefore, to the conclusion at which the Secretary of State has arrived. It is gall and wormwood to me. Rather than consent to the liberation of these men, I would sacrifice everything I possess. But I am consoled by the reflection that while nothing but severest retribution is due to them, the surrender under existing circumstances is but simply doing right—simply proving faithful to our own ideas and traditions under strong temptations to violate them; simply giving to England and the world the most signal proof that the American nation will not under any circumstances, for the sake of inflicting just punishment on rebels, commit even a technical wrong against neutrals.”*

In these two recorded opinions are reflected the substantial tone and temper of the Cabinet discussion, which ended, as both Mr. Bates and Mr. Seward have stated, in a unanimous concurrence in the letter of reply as drawn up by the Secretary of State. That long and remarkably able document must be read in full, both to understand the wide range of the subject which he treated and the clearness and force of his language and argument. It constitutes one of his chief literary triumphs. There is room here only to indicate the conclusions arrived at in his examination. First, he held that the four persons seized and their dispatches were contraband of war; secondly, that Captain Wilkes had a right by the law of nations to detain and search the *Trent*; thirdly, that he exercised the right in a lawful and proper manner; fourthly, that he had a right to capture the contraband found. The real issue of the case centered in the fifth question: “Did Captain Wilkes exercise the right of capturing the contraband in conformity with the law of nations?” Reciting the deficiency of recognized rules on this point, Mr. Seward held that only by taking the vessel before a prize court could the existence of contraband be lawfully established; and that Captain Wilkes having released the vessel from capture, the necessary judicial examination was prevented, and the capture left unfinished or abandoned.

Mr. Seward’s dispatch continued:

I trust that I have shown to the satisfaction of the British Government, by a very simple and natural statement of the facts and analysis of the law applicable to them, that this Government has neither meditated, nor practiced, nor approved any deliberate wrong

in the transaction to which they have called its attention, and, on the contrary, that what has happened has been simply an inadvertency, consisting in a departure by the naval officer, free from any wrongful motive, from a rule uncertainly established, and probably by the several parties concerned either imperfectly understood or entirely unknown. For this error the British Government has a right to expect the same reparation that we, as an independent State, should expect from Great Britain or from any other friendly nation in a similar case. . . . If I decide this case in favor of my own Government, I must disavow its most cherished principles, and reverse and forever abandon its essential policy. The country cannot afford the sacrifice. If I maintain those principles and adhere to that policy, I must surrender the case itself. . . . The four persons in question are now held in military custody at Fort Warren, in the State of Massachusetts. They will be cheerfully liberated.†

With the formal delivery of Mason and Slidell and their secretaries to the custody of the British minister, the diplomatic incident was completed on the part of the United States. Lord Russell, on his part, while announcing that her Majesty’s Government differed from Mr. Seward in some of the conclusions‡ at which he had arrived, nevertheless acknowledged that the action of the American Government constituted “the reparation which her Majesty and the British nation had a right to expect.”§ It is not too much to say that not merely the rulers and Cabinets of both nations, but also those of all the great European powers, were relieved from an oppressive apprehension by this termination of the affair.

If from one point of view the United States suffered a certain diplomatic defeat and humiliation, it became, in another light, a real international victory. The turn of affairs placed not only England, but France and other nations as well, distinctly on their good behavior. In the face of this American example of moderation they could no longer so openly brave the liberal sentiment of their own people by the countenance they had hitherto given the rebellion. So far from improving or enhancing the hostile mission of Mason and Slidell, the adventure they had undergone served to diminish their importance and circumscribe their influence. The very act of their liberation compelled the British authorities sharply to define the hollow pretense under which they were sent. In his instructions to the British Government vessel which received them at Provincetown and conveyed them to England, Lord Lyons wrote:

It is hardly necessary that I should remind you that these gentlemen have no official character. It will be

* Warden, “Life of Chase,” pp. 393, 394.

† Seward to Lyons, Dec. 26, 1861.

‡ In a dispatch to Lord Lyons of Jan. 23, 1862, in which he discusses the questions at some length, Lord Russell held: first, that Mason and Slidell and their supposed dispatches, under the circumstances of their

seizure, were not contraband; secondly, that the bringing of the *Trent* before a prize court, though it would alter the character would not diminish the offense against the law of nations.

§ Russell to Lyons, Jan. 10, 1862.

right for you to receive them with all courtesy and respect as private gentlemen of distinction; but it would be very improper to pay to them any of those honors which are paid to official persons.*

The same result in a larger degree awaited their advent in Europe. Under the intense publicity of which they had been the subject, officials of all degrees were in a measure com-

pelled to avoid them as political "suspects." Mason was received in England with cold and studied neglect; while Slidell in France, though privately encouraged by the Emperor Napoleon III., finally found himself a victim instead of a beneficiary of his selfishness.

BIRD MUSIC: SPARROWS.

THE SONG SPARROW.

THE sparrow family is a large one. There may be twenty species, half of which, at least, spend their summer in New England. The song sparrows are the most numerous, sing the most, and exhibit the greatest variety of melody. Standing near a small pond recently, I heard a song sparrow sing four distinct songs within twenty minutes, repeating each several times.

I have more than twenty songs of this sparrow, and have heard him in many other forms. He generally gives a fine trill at the beginning or end of his song. Sometimes, however, it is introduced in the middle, and occasionally is omitted, especially in the latter part of the season. There is a marked difference in the quality and volume of the voices of different individuals. During the season of 1885 I listened almost daily to the strongest and best sparrow voice that I have ever heard. There was a fullness and richness, particularly in the trills, that reminded one of the bewitching tones of the wood-thrush. These are some of his songs:

That the singers of any species sing exactly alike, with the same voice and style, and in the same key always, is a great mistake.

There is a wide difference between the singing of old and young birds. This is especially true of the oriole, the tanager, and the bobolink. The voice of a bird four years old is very much fuller and better than that of a yearling; just as his plumage is deeper and richer in color.

The song sparrow comes soon after the bluebird and the robin, and sings from the time of his coming till the close of summer. Unlike his cousin, the field sparrow, he seems to seek the companionship of man. Sitting near an open window one day last summer, as was my habit, my attention was attracted by the singing of a song sparrow perched upon a twig not far away. Fancying that he addressed himself to me individually, I responded with an occasional whistle.

He listened with evident interest, his head on one side and his eye rolled up. For many days in succession he came at about the same hour in the afternoon, and perching in the same place sung his cheery and varied songs, listening in turn to my whistles.

THE FIELD SPARROW.

THIS sparrow, less common than the song or the chipping sparrow, resembles these in appearance and habits. He is not so social, preferring the fields and pastures and bushy lots. When Wilson wrote, "None of our birds have been more imperfectly described than the family of the finch tribe usually called sparrows," he wrote well; but when he wrote of this one, "It has no song," he brought himself under his own criticism. And when Dr. Coues, on the contrary, describes him as "very melodious, with an extensive and varied

score to sing from," and further, as possessing "unusual compass of vocal powers," he much better describes the song sparrow. The field sparrow is surely a fine singer, and he may have several songs. I have heard him in one only; but that one, though short, it would be hard to equal. As a scientific composition it stands nearly if not quite alone. Dr. Coues quotes Mr. Minot on the singing of this bird. "They open with a few exquisitely modulated whistles, each higher and a little louder than the preceding, and close with a sweet trill." The song does begin with two or three well-separated tones—or "whistles," if you please; but I discover no modulation, nor is each higher than the preceding, the opening tones being on the same pitch. However, the song, both in power and rapidity, increases from beginning to end. It by no means requires "unusual compass"; simply the interval of a minor third.

When we consider the genius displayed in combining so beautifully the essence of the three grand principles of sound, length, pitch, and power, its brevity and limited compass make it all the more wonderful. Scarcely anything in rhythmic and dynamics is more difficult than to give a perfect *accelerando* and *crescendo*; and the use of the chromatic scale by which the field sparrow rises in his lyric flight involves the very pith of melodic ability. This little musician has explored the whole realm of sound, and condensed its beauties in perfection into one short song.

MATTHEW ARNOLD.

"Such, poets, is your bride, the Muse! . . .
 a hidden ground
 Of thought and of austerity within."

MATTHEW ARNOLD, *Austerity of Poetry*.

AUSTERE, sedate, the chisel in his hand,
 He carved his statue from a flawless stone,
 That faultless verse, whose earnest undertone
 Echoes the music of his Grecian land.
 Like Sophocles on that Ægean strand
 He walked by night, and watched life's sea alone,
 Amid a temperate, not the tropic zone,
 Girt round by cool waves and a crystal sand.
 And yet the world's heart in his pulses stirred;
 He looked abroad across life's wind-swept plain,
 And many a wandering mariner has heard
 His warning hail, and as the blasts increase,
 Has listened, till he passed the reefs again,
 And floated safely in his port of Peace.

William P. Andrews.

WAITING FOR THE BUGLE.

WE wait for the bugle ; the night-dews are cold,
The limbs of the soldiers feel jaded and old,
The field of our bivouac is windy and bare,
There is lead in our joints, there is frost in our hair,
The future is veiled and its fortunes unknown
As we lie with hushed breath till the bugle is blown.

At the sound of that bugle each comrade shall spring
Like an arrow released from the strain of the string:
The courage, the impulse of youth shall come back
To banish the chill of the drear bivouac,
And sorrows and losses and cares fade away
When that life-giving signal proclaims the new day.

Though the bivouac of age may put ice in our veins,
And no fiber of steel in our sinew remains ;
Though the comrades of yesterday's march are not here,
And the sunlight seems pale and the branches are sear,—
Though the sound of our cheering dies down to a moan,
We shall find our lost youth when the bugle is blown.

Thomas Wentworth Higginson.

THE HIGH TIDE AT GETTYSBURG.

BY AN EX-CONFEDERATE SOLDIER.

A CLOUD possessed the hollow field,
The gathering battle's smoky shield.
Athwart the gloom the lightning flashed,
And through the cloud some horsemen dashed,
And from the heights the thunder pealed.

Then at the brief command of Lee
Moved out that matchless infantry,
With Pickett leading grandly down,
To rush against the roaring crown
Of those dread heights of destiny.

Far heard above the angry guns
A cry across the tumult runs,—
The voice that rang through Shiloh's woods
And Chickamauga's solitudes,
The fierce South cheering on her sons !

Ah, how the withering tempest blew
Against the front of Pettigrew !
A Kamsin wind that scorched and singed
Like that infernal flame that fringed
The British squares at Waterloo !

A thousand fell where Kemper led ;
A thousand died where Garnett bled :
In blinding flame and strangling smoke
The remnant through the batteries broke
And crossed the works with Armistead.

"Once more in Glory's van with me!"
Virginia cried to Tennessee:
"We two together, come what may,
Shall stand upon these works to-day!"
(The reddest day in history.)

Brave Tennessee! In reckless way
Virginia heard her comrade say:
"Close round this rent and riddled rag!"
What time she set her battle-flag
Amid the guns of Doubleday.

But who shall break the guards that wait
Before the awful face of Fate?
The tattered standards of the South
Were shriveled at the cannon's mouth,
And all her hopes were desolate.

In vain the Tennesseean set
His breast against the bayonet!
In vain Virginia charged and raged,
A tigress in her wrath uncaged,
Till all the hill was red and wet!

Above the bayonets, mixed and crossed,
Men saw a gray, gigantic ghost
Receding through the battle-cloud,
And heard across the tempest loud
The death-cry of a nation lost!

The brave went down! Without disgrace
They leaped to Ruin's red embrace.
They only heard Fame's thunders wake,
And saw the dazzling sun-burst break
In smiles on Glory's bloody face!

They fell, who lifted up a hand
And bade the sun in heaven to stand!
They smote and fell, who set the bars
Against the progress of the stars,
And stayed the march of Motherland!

They stood, who saw the future come
On through the fight's delirium!
They smote and stood, who held the hope
Of nations on that slippery slope
Amid the cheers of Christendom!

God lives! He forged the iron will
That clutched and held that trembling hill.
God lives and reigns! He built and lent
The heights for Freedom's battlement
Where floats her flag in triumph still!

Fold up the banners! Smelt the guns!
Love rules. Her gentler purpose runs.
A mighty mother turns in tears
The pages of her battle years,
Lamenting all her fallen sons!

THE CAREER OF THE CONFEDERATE RAM "ALBEMARLE."

1. HER CONSTRUCTION AND SERVICE.

BY HER BUILDER.

PART OF THE SMOKE-STACK
OF THE "ALBEMARLE."

DURING the spring of 1863, having been previously engaged in unsuccessful efforts to construct war vessels, of one sort or another, for the Confederate Government, at different points in eastern North Carolina and Virginia, I undertook a contract with the Navy Department to build an iron-clad gun-boat, intended, if ever completed, to operate on the waters of Albemarle and Pamlico Sounds. A point on the Roanoke River, in Halifax County, North Carolina, about thirty miles below the town of

Weldon, was fixed upon as the most suitable for the purpose. The river rises and falls, as is well known, and it was necessary to locate the yard on ground sufficiently free from overflow to admit of uninterrupted work for at least twelve months. No vessel was ever constructed under more adverse circumstances. The shipyard was established in a corn-field, where the ground had already been marked out and planted for the coming crop, but the owner of the land was in hearty sympathy with the enterprise, and aided me then and afterwards, in a thousand ways, to accomplish the end I had in view. It was next to impossible to obtain machinery suitable for the work in

hand. Here and there, scattered about the surrounding country, a portable saw-mill, blacksmith's forge, or other apparatus was found, however, and the citizens of the neighborhoods on both sides of the river were not slow to render me assistance, but coöperated, cordially, in the completion of the iron-clad, and at the end of about one year from the laying of the keel, during which innumerable difficulties were overcome by constant application, determined effort, and incessant labor, day and night, success crowned the efforts of those engaged in the undertaking.

Seizing an opportunity offered by comparatively high water, the boat was launched, though not without misgivings as to the result, for the yard being on a bluff she had to take a jump, and as a matter of fact was "hogged" in the attempt, but to our great gratification did not thereby spring a leak.

The plans and specifications were prepared by John L. Porter, Chief Constructor of the Confederate Navy, who availed himself of the advantage gained by his experience in converting the frigate *Merrimac* into the iron-clad *Virginia* at the Gosport Navy Yard.

The *Albemarle* was 152 feet long between perpendiculars; her extreme width was 45 feet; her depth from the gun-deck to the keel was 9 feet, and when launched she drew 6½ feet of water, but after being ironed and completed her draught was about 8 feet. The

PLAN OF THE "ALBEMARLE."

keel was laid, and construction was commenced by bolting down, across the center, a piece of frame timber, which was of yellow pine, eight by ten inches. Another frame of the same size was then dovetailed into this, extending outwardly at an angle of 45 degrees, forming the side, and at the outer end of this the frame for the shield was also dovetailed, the angle

Oak knees were bolted in, to act as braces and supports for the shield.

The armament consisted of two rifled "Brooke" guns mounted on pivot-carriages, each gun working through three port-holes, as occasion required, there being one port-hole at each end of the shield and two on each side. These were protected by iron

THE "ALBEMARLE" GOING DOWN THE ROANOKE.

being 35 degrees, and then the top deck was added, and so on around to the other end of the bottom beam. Other beams were then bolted down to the keel, and to the one first fastened, and so on, working fore and aft, the main-deck beams being interposed from stem to stern. The shield was 60 feet in length and octagonal in form. When this part of the work was completed she was a solid boat, built of pine frames, and if calked would have floated in that condition, but she was afterwards covered with 4-inch planking, laid on longitudinally, as ships are usually planked, and this was properly calked and pitched, cotton being used for calking instead of oakum, the latter being very scarce and the former almost the only article to be had in abundance. Much of the timber was hauled long distances. Three portable saw-mills were obtained, one of which was located at the yard, the others being moved about from time to time to such growing timber as could be procured.

The iron plating consisted of two courses, 7 inches wide and 2 inches thick, mostly rolled at the Tredegar Iron Works, Richmond. The first course was laid lengthwise, over a wooden backing, 16 inches in thickness, a 2-inch space, filled in with wood, being left between each two layers to afford space for bolting the outer course through the whole shield, and the outer course was laid flush, forming a smooth surface, similar to that of the *Virginia*. The inner part of the shield was covered with a thin course of planking, nicely dressed, mainly with a view to protection from splinters.

covers lowered and raised by a contrivance worked on the gun-deck. She had two propellers driven by two engines of 200-horse power each, with 20-inch cylinders, steam being supplied by two flue boilers, and the shafting was geared together.

The sides were covered from the knuckle, four feet below the deck, with iron plates two inches thick.

The prow was built of oak, running 18 feet back, on center keelson, and solidly bolted, and it was covered on the outside with iron plating, 2 inches thick and, tapering off to a 4-inch edge, formed the ram.

The work of putting on the armor was prosecuted for some time under the most disheartening circumstances, on account of the difficulty of drilling holes in the iron intended for her armor. But one small engine and drill could be had, and it required, at the best, twenty minutes to drill an inch and a quarter hole through the plates, and it looked as if we would never accomplish the task. But "necessity is the mother of invention," and one of my associates in the enterprise, Peter E. Smith, of Scotland Neck, North Carolina, invented and made a twist-drill with which the work of drilling a hole could be done in four minutes, the drill cutting out the iron in shavings instead of fine powder.

For many reasons it was thought judicious to remove the boat to the town of Halifax, about twenty miles up the river, and the work of completion, putting in her machinery, armament, etc., was done at that point, although

CAPTAIN J. W. COOKE, C. S. N.

the actual finishing touches were not given until a few days before going into action at Plymouth.

Forges were erected on her decks, and blacksmiths and carpenters were kept hard at work as she floated down the river to her destination.

Captain James W. Cooke, of the Confederate Navy, was detailed by the department to watch the construction of the vessel and to take command when she went into commission. He made every effort to hasten the completion of the boat. He was a bold and gallant officer, and in the battles in which he subsequently engaged he proved himself a hero. Of him it was said that "he would fight a powder magazine with a coal of fire," and if such a necessity could by any possibility have existed he would, doubtless, have been equal to the occasion.

In the spring of 1864 it had been decided at headquarters that an attempt should be made to recapture the town of Plymouth. General Hoke was placed in command of the land forces, and Captain Cooke received orders to coöperate. Accordingly Hoke's division proceeded to the vicinity of Plymouth and surrounded the town from the river above to the river below, and preparation was made to storm the forts and breastworks as soon as the *Albemarle* could clear the river front of the Federal war vessels protecting the place with their guns.

On the morning of April 18, 1864, the *Albemarle* left the town of Hamilton and proceeded down the river towards Plymouth, going stern foremost, with chains dragging from the bow, the rapidity of the current making it impracticable to steer with her head

down-stream. She came to anchor about three miles above Plymouth, and a mile or so above the battery on the bluff at Warren's Neck, near Thoroughfare Gap, where torpedoes, sunken vessels, piles, and other obstructions had been placed. An exploring expedition was sent out, under command of one of the lieutenants, which returned in about two hours, with the report that it was considered impossible to pass the obstructions. Thereupon the fires were banked, and the officers and crew not on duty retired to rest.

Having accompanied Captain Cooke as a volunteer aide, and feeling intensely dissatisfied with the apparent intention of lying at anchor all that night, and believing that it was "then or never" with the ram if she was to accomplish anything, and that it would be foolhardy to attempt the passage of the obstructions and batteries in the day-time, I requested permission to make a personal investigation. Captain Cooke cordially assenting, and Pilot John Luck and two of the few experienced seamen on board volunteering their services, we set forth in a small lifeboat, taking with us a long pole, and arriving at the obstructions proceeded to take soundings. To our great joy it was ascertained that there was ten feet of water over and above the obstructions. This was due to the remarkable freshet then prevailing; the proverbial "oldest inhabitant" said, afterwards, that such high water had never before been seen in Roanoke River. Pushing on down the stream to Plymouth, and taking

COMMANDER C. W. FLUSSER, U. S. N.

THE SINKING OF THE "SOUTHFIELD."

advantage of the shadow of the trees on the north side of the river, opposite the town, we watched the Federal transports taking on board the women and children who were being sent away for safety, on account of the approaching bombardment. With muffled oars, and almost afraid to breathe, we made our way back up the river, hugging close to the northern bank, and reached the ram about 1 o'clock, reporting to Captain Cooke that it was practicable to pass the obstructions provided the boat was kept in the middle of the stream. The indomitable commander instantly aroused his men, gave the order to get up steam, slipped the cables in his impatience to be off, and started down the river. The obstructions were soon reached and safely passed, under a fire from the fort at Warren's Neck which was not returned. Protected by the iron-clad shield, to those on board the noise made by the shot and shell as they struck the boat sounded no louder than pebbles thrown against an empty barrel. At Boyle's Mill, lower down, there was another fort upon which was mounted a very heavy gun. This was also safely passed, and we then discovered two steamers coming up the river. They proved to be the *Miami* and the *Southfield*.*

The two ships were lashed together with long spars, and with chains festooned between them. The plan of Captain Flusser, who commanded, was to run his vessels so as to get the *Albemarle* between the two, which would have placed the ram at a great disadvantage, if not altogether at his mercy; but Pilot John Luck, acting under orders from Captain Cooke, ran the ram close to the southern shore; and then suddenly turning toward the middle of the stream, and going with the current, the throttles, in obedience to his bell, being wide open, he dashed the prow of the *Albemarle* into the side of the *Southfield*, making an opening large enough to carry her to the bottom in much less time than it takes to tell the story. Part of her crew went down with her.†

The chain-plates on the forward deck of the *Albemarle* became entangled in the frame of the sinking vessel, and her bow was carried down to such a depth that water poured into her port-holes in great volume, and she would soon have shared the fate of the *Southfield*, had not the latter vessel reached the bottom, and then, turning over on her side, released the ram, thus allowing her to come up on an even keel. The *Miami*, right alongside, had opened fire with her heavy guns, and so close were the vessels together that a shell with a ten-second

* The *Miami* carried 6 9-inch guns, 1 100-pounder Parrott rifle, and 1 24-pounder S. B. howitzer, and the ferry-boat *Southfield* 5 9-inch, 1 100-pounder Parrott, and 1 12-pounder howitzer.—EDITOR.

† Of the officers and men of the *Southfield*, seven of

the former, including Acting Volunteer Lieutenant C. A. French, her commander, and forty-two of her men were rescued by the *Miami* and the other Union vessels; the remainder were either drowned or captured.—EDITOR.

THE "SASSACUS" RAMMING THE "ALDEMARLE."

fuse, fired by Captain Flusser, after striking the *Albemarle* rebounded and exploded, killing the gallant man who pulled the lanyard, tearing him almost to pieces. Notwithstanding the death of Flusser, an attempt was made to board the ram, which was heroically resisted by as many of the crew as could be crowded on the top deck, who were supplied with loaded muskets passed up by their comrades below. The *Miami*, a powerful and very fast side-wheeler, succeeded in eluding the *Albemarle* without receiving a blow from her ram, and retired below Plymouth, into Albemarle Sound.*

Captain Cooke having successfully carried out his part of the programme, General Hoke attacked the fortifications the next morning and carried them; not, however, without heavy loss, Ransom's brigade alone leaving 500 dead and wounded on the field, in their most heroic charge upon the breastworks protecting the eastern front of the town. General Wessells, commanding the Federal forces, made a gallant resistance, and surrendered only when further effort would have been worse than useless. During the attack the *Albemarle* held the river front, according to contract, and all day long poured shot and shell into the resisting forts with her two guns.

On May 5, 1864, Captain Cooke left the Roanoke River with the *Albemarle* and two

tenders, the *Bombshell* and *Cotton Plant*, and entered the Sound with the intention of recovering, if possible, the control of the two Sounds, and ultimately of Hatteras Inlet. He proceeded about sixteen miles on an east-north-easterly course, when the Federal squadron, consisting of seven well-armed gun-boats, the *Mattabesett*, *Sassacus*, *Wyalusing*, *Whitehead*, *Miami*, *Commodore Hull*, and *Ceres*, all under the command of Captain Melancton Smith, hove in sight, and at 2 o'clock that afternoon approached in double line of battle, the *Mattabesett* being in advance. They proceeded to surround the *Albemarle*, and hurled at her their heaviest shot,† at distances averaging less than one hundred yards. The *Albemarle* responded effectively, but her boats were soon shot away, her smoke-stack was riddled, many iron plates in her shield were injured and broken, and the after-gun was broken off eighteen inches from the muzzle, and rendered useless. This terrible fire continued, without intermission, until about 5 p. m., when the commander of the double-ender *Sassacus* selected his opportunity, and with all steam on struck the *Albemarle* squarely just abaft her starboard beam, causing every timber in the vicinity of the blow to groan, though none gave way. The pressure from the revolving wheel of the *Sassacus* was so great that it forced the after deck of the ram several feet below the

* The following admirably clear and succinct account of the fight is given by Acting Master William N. Wells, of the *Miami*, in his report of April 23 to Admiral Lee:

"The siege commenced Sabbath afternoon, April 17, by an artillery fire upon Fort Gray. Early in the morning of April 18, between the hours of 3 and 5, the enemy tried to carry by storm Fort Gray, but were repulsed. In the afternoon of the 18th heavy artillery opened fire upon the town and breastworks. Then the fight became general. Up to this time the gun-boats *Southfield* and *Miami* were chained together in preparation to encounter the ram. They were then separated. The *Southfield*, moving up the river, opened fire over the town. The *Miami*, moving down the river, opened a cross-fire upon the enemy, who were charging upon Fort Williams. The firing, being very exact, caused the enemy to fall back. After three attempts to storm the fort, at 9 o'clock the firing ceased from the enemy, they having withdrawn from range. Commander Flusser dispatched a messenger to General Wessells to learn the result of the day's fight. The messenger returned at 10 p. m., having delivered the message, and bearing one from General Wessells to Commander Flusser, stating that the fire from the naval vessels was very satisfactory and effective — so much so that the advancing columns of the enemy broke and retreated; also desired that the *Miami* might be kept below the town to prevent a flank movement by the enemy. At 10:30 p. m., steamer *Southfield* came down and anchored near. At 12:20 a. m., April 19, the *Southfield* came alongside to rechain the two steamers as speedily as possible; the ram having been seen by Captain Barrett, of the *Whitehead*, and reported by him as coming down the river. At 3:45 a. m. the gun-boat *Ceres* came down, passing near, giving

the alarm that the ram was close upon her. I immediately hastened to acquaint Commander Flusser of the information. He immediately came on deck, and ordered both vessels to steam ahead as far as possible and run the ram down. No sooner than given was the order obeyed. Our starboard chain was slipped and bells rung to go ahead fast. In obedience to the order, the steamers were in one minute moving up the river, the ram making for us. In less than two minutes from the time she was reported, she struck us upon our port bow near the water-line, gonging two planks nearly through for ten feet; at the same time striking the *Southfield* with her prow upon the starboard bow, causing the *Southfield* to sink rapidly. As soon as the battery could be brought to bear upon the ram, both steamers, the *Southfield* and *Miami*, commenced firing solid shot from the 100-pound Parrott rifles and 11-inch Dahlgren guns; they making no perceptible indentations in her armor. Commander Flusser fired the first three shots personally from the *Miami*, the third being a ten-second Dahlgren shell, 11-inch. It was directly after that fire that he was killed by pieces of shell; several of the gun's crew were wounded at the same time. Our bow hawser being stranded, the *Miami* swung round to starboard, giving the ram a chance to pierce us. Necessity required the engine to be reversed in motion to straighten the vessel in the river, to prevent going upon the bank of the river, and to bring the rifle gun to bear upon the ram. During the time of straightening the steamer the ram had also straightened, and was making for us. From the fatal effects of her prow upon the *Southfield* and of our sustaining injury, I deemed it useless to sacrifice the *Miami* in the same way."

† The Union fleet had 32 guns and 23 howitzers, a total of 55.—EDITOR.

surface of the water, and created an impression on board that she was about to sink. Some of the crew became demoralized, but the calm voice of the undismayed captain checked the incipient disorder, with the command, "Stand to your guns, and if we must sink let us go down like brave men."

The *Albemarle* soon recovered, and sent a shot at her assailant which passed through one of the latter's boilers, the hissing steam disabling a number of the crew. Yet the discipline on the *Sassacus* was such that, notwithstanding the natural consternation under these appalling circumstances, two of her guns continued to fire on the *Albemarle* until she drifted out of the arena of battle. Two of the fleet attempted to foul the propellers of the ram with a large fishing-seine which they had previously procured for the purpose, but the line parted in paying it out. Then they tried to blow her up with a torpedo, but failed. No

equal conflict continued until night. Some of the Federal vessels were more or less disabled, and both sides were doubtless well content to draw off. Captain Cooke had on board a supply of bacon and lard, and this sort of fuel being available to burn without draught from a smoke-stack, he was able to make sufficient steam to get the boat back to Plymouth, where she tied up to her wharf covered with wounds and with glory.

The *Albemarle* in her different engagements was struck a great many times by shot and shell,* and yet but one man lost his life, and that was caused by a pistol-shot from the *Miami*, the imprudent sailor having put his head out of one of the port-holes to see what was going on outside.

Captain Cooke was at once promoted and placed in command of all the Confederate naval forces in eastern North Carolina. The *Albemarle* remained tied to her wharf at Plym-

INSIDE THE "ALBEMARLE" CASEMATE.

better success attended an effort to throw a keg of gunpowder down her smoke-stack, or what was left of it, for it was riddled with holes from shot and shell. This smoke-stack had lost its capacity for drawing, and the boat lay a helpless mass on the water. While in this condition every effort was made by her numerous enemies to destroy her. The un-

outh until the night of October 27, 1864, when Lieutenant William B. Cushing, of the United States Navy, performed the daring feat of destroying her with a torpedo. Having procured a torpedo-boat so constructed as to be very fast, for a short distance, and with the

* The upper section alone of the smoke-stack has 114 holes made by shot and shell.—G. E.

exhaust steam so arranged as to be noiseless, he proceeded, with a crew of fourteen men, up the Roanoke River. Guards had been stationed by the Confederate military commander on the wreck of the *Southfield*, whose top deck was then above water, but they failed to see the boat. A boom of logs had been arranged around the *Albemarle*, distant about thirty feet from her side. Captain Cooke had planned and superintended the construction of this arrangement before giving up the command of the vessel to Captain A. F. Warley. Cushing ran his boat up to these logs, and there, under a hot fire, lowered and exploded the torpedo under the *Albemarle's* bottom, causing her to settle down and finally to sink at the wharf. The torpedo-boat and crew were captured; but Cushing refusing to surrender, though twice called upon so to do, sprang into the river, dived to the bottom, and swam across to a swamp opposite the town, thus making his escape; and on the next night, after having experienced great suffering, wandering through the swamp, he succeeded in obtaining a small canoe, and made his way back to the fleet.

The river front being no longer protected, and no appliances for raising the sunken vessel

CAPTAIN ALEXANDER F. WARLEY, C. S. N.

being available, on October 31 the Federal forces attacked and captured the town of Plymouth.*

Gilbert Elliott.

II. THE "ALBEMARLE" AND THE "SASSACUS."

AN ATTEMPT TO RUN DOWN AN IRON-CLAD WITH A WOODEN SHIP.

THE United States steamer *Sassacus* was one of several wooden side-wheel ships, known as "double-enders," built for speed, light draught, and ease of manœuvre in battle, as they could go ahead or back with equal facility. She carried four 9-inch Dahlgren guns and two 100-pounder Parrott rifles. On the 5th of May, 1864, this ship, while engaged, together with the *Mattabesett*, *Wyalusing*, and several smaller vessels, with the Confederate iron-clad *Albemarle* in Albemarle Sound, was, under the command of Lieutenant-Commander F. A. Roe, and with all the speed attainable, driven down upon the ram, striking full and square at the junction of its armored roof and deck. It was the first attempt of the kind and deserves a place in history. This sketch is an endeavor to recall only the part taken in the engagement by the *Sassacus* in her attempt to run down the ram.

One can obtain a fair idea of the magnitude of such an undertaking by remembering that on a ship in battle you are on a floating target, through which the enemy's shell may bring not only the carnage of explosion but

an equally unpleasant visitor — the sea. To hurl this egg-shell target against a rock would be dangerous, but to hurl it against an iron-clad bristling with guns, or to plant it upon the muzzles of 100-pounder Brooke or Parrott rifles, with all the chances of a sheering off of the iron-clad, and a subsequent ramming process about which no two opinions ever existed, is more than dangerous.

On the 17th of April, 1864, Plymouth, N. C., was attacked by the Confederates by land and river. On the 20th it was captured, the ram *Albemarle* having sunk the *Southfield* and driven off the other Union vessels.

On the 5th of May the *Albemarle*, with the captured steamer *Bombshell*, and the steamer *Cotton Plant*, laden with troops, came down the river. The double-enders *Mattabesett*, *Sassacus*, *Wyalusing*, and *Miami*, together with the smaller vessels, *Whitehead*, *Ceres*, and *Commodore Hull*, steamed up to give battle.

The Union plan of attack was for the large vessels to pass as close as possible to the ram without endangering their wheels, deliver their fire, and then round to for a second discharge.

* The *Albemarle* was subsequently raised and towed to the Norfolk Navy Yard, and after being stripped

of her armament, machinery, etc., she was sold, Oct. 15, 1867, to J. N. Leonard & Co., for \$3200.—EDITOR.

The smaller vessels were to take care of thirty armed launches, which were expected to accompany the iron-clad. The *Miami* carried a torpedo to be exploded under the enemy, and a strong net or seine to foul her propeller.

All eyes were fixed on this second *Merrimac* as, like a floating fortress, she came down the bay. A puff of smoke from her bow port opened the ball, followed quickly by another, the shells aimed skillfully at the pivot-rifle of the leading ship, *Mattabesett*, cutting away

REAR-ADMIRAL F. A. ROE, U. S. N.

rail and spars, and wounding six men at the gun. The enemy then headed straight for her, in imitation of the *Merrimac*, but by a skillful management of the helm the *Mattabesett* rounded her bow,* closely followed by our own ship, the *Sassacus*, which at close quarters gave her a broadside of solid 9-inch shot. The guns might as well have fired blank cartridges, for the shot skimmed off into the air, and even the 100-pound solid shot from the pivot-rifle glanced from the sloping roof into space with no apparent effect. The feeling of helplessness that comes from the failure of heavy guns to make any mark on an advancing foe can never be described. One is like a man with a bodkin before a Gorgon or a Dragon, a man with straws before the wheels of Juggernaut.

To add to the feeling in this instance, the

rapid firing from the different ships, the clouds of smoke, the changes of position to avoid being run down, the watchfulness to get a shot into the ports of the ram, as they quickly opened to deliver their well-directed fire, kept alive the constant danger of our ships firing into or entangling each other. The crash of bulwarks and rending of exploding shells which were fired by the ram, but which it was utterly useless to fire from our own guns, gave confused sensations of a general and promiscuous mêlée, rather than a well-ordered attack; nevertheless the plan designed was being carried out, hopeless as it seemed. As our own ship delivered her broadside, and fired the pivot-rifle with great rapidity at roof, and port, and hull, and smoke-stack, trying to find a weak spot, the ram headed for us and narrowly passed our stern. She was foiled in this attempt, as we were under full headway, and swiftly rounding her with a hard-port helm, we delivered a broadside at her consort, the *Bombshell*, each shot hulling her. We now headed for the latter ship, going within hail.

Thus far in the action our pivot-rifle astern had had but small chance to fire, and the captain of the gun, a broad-shouldered, brawny fellow, was now wrought up to a pitch of desperation at holding his giant gun in leash, and as we came up to the *Bombshell* he mounted the rail, and, naked to the waist, he brandished a huge boarding-pistol and shouted, "Haul down your flag and surrender, or we'll blow you out of the water!" The flag came down, and the *Bombshell* was ordered to drop out of action and anchor, which she did. Of this surrender I shall have more to say farther on.

Now came the decisive moment, for by this action, which was in reality a manoeuvre of our commander, we had acquired a distance from the ram of about four hundred yards, and the latter, to evade the *Mattabesett*, had sheered off a little and lay broadside to us. The Union ships were now on both sides of the ram with engines stopped. Commander Roe saw the opportunity, which an instant's delay would forfeit, and boldly met the crisis of the engagement. To the engineer he cried, "Crowd waste and oil in the fires and back slowly! Give her all the steam she can carry!" To Acting-Master Boutelle he said, "Lay her course for the junction of the casemate and the hull!" Then came four bells, and with full steam and open throttle the ship sprang forward like a living thing. It was a moment

* If the *Mattabesett* rounded the bow of the *Albemarle*, the latter must have been heading up the sound at the time; in other words, she must have turned previous to the advance of the Union fleet. Upon this point the reports of the captains of the double-enders give conflicting testimony. Commander Febiger rep-

resents the ram as retreating towards the Roanoke, while Lieutenant-Commander Roe describes her as in such a position that she would necessarily have been heading towards the advancing squadron. The conflict of opinion was doubtless due to the similarity in the two ends of the ram.—EDITOR.

of intense strain and anxiety. The guns ceased firing, the smoke lifted from the ram, and we saw that every effort was being made to evade the shock. Straight as an arrow we shot for-

ward to the designated spot. Then came the order, "All hands lie down!" and with a crash that shook the ship like an earthquake, we struck full and square on the iron hull, careen-

UNION FORCE IN THE ACTION IN ALBEMARLE SOUND, MAY 5, 1864.

CAPTAIN MELANCTON SMITH, COMMANDING.

ing it over and tearing away our own bows, ripping and straining our timbers at the water-line. The enemy's lights were put out, and his men hurled from their feet, and, as we learned afterward, it was thought for a moment that it was all over with them. Our ship quivered for an instant, but held fast, and the swift splash of the paddles showed that the engines were uninjured. My own station was in the bow, on the main-deck, on a line with the

ACTING MASTER CHARLES A. BOUTELLE, U. S. N.

enemy's guns. Through the starboard shutter, which had been partly jarred off by the concussion, I saw the port of the ram not ten feet away. It opened; and like a flash of lightning I saw the grim muzzle of a cannon, the straining gun's-crew naked to the waist and blackened with powder; then a blaze, a roar and rush of the shell as it crashed through, whirling me round and dashing me to the deck.

Both ships were under headway, and as the ram advanced, our shattered bows clinging to the iron casemate were twisted round, and a second shot from a Brooke gun almost touching our side crashed through, followed immediately by a cloud of steam and boiling water that filled the forward decks as our overcharged boilers, pierced by the shot, emptied their contents with a shrill scream that drowned for an instant the roar of the guns. The shouts of command and the cries of scalded, wounded, and blinded men mingled with the rattle of small-arms that told of a hand-to-hand conflict above. The ship surged heavily to port as the great weight of water in the boilers was expended, and over the cry, "The ship is sinking!" came the shout, "All hands repel boarders on starboard bow!"

The men below, wild with the boiling steam, sprang to the ladder with pistol and cutlass, and gained the bulwarks; but men in the rigging with muskets and hand grenades, and the well-directed fire from the crews of the guns, soon baffled the attempt of the Confederates to gain our decks. To send our crew on the grated top of the iron-clad would have been madness.

The horrid tumult, always characteristic of battle, was intensified by the cries of agony from the scalded and frantic men. Wounds may rend, and blood flow, and grim heroism keep the teeth set firm in silence; but to be boiled alive—to have the flesh drop from the face and hands, to strip off in sodden mass from the body as the clothing is torn away in savage eagerness for relief, will bring screams from the stoutest lips. In the midst of all this, when every man had left the engine room, our chief engineer, Mr. Hobby, although badly scalded, stood with heroism at his post; nor did he leave it till after the action, when he was brought up, blinded and helpless, to the deck. I had often before been in battle; had stepped over the decks of a steamer in the *Merrimac* fight when a shell had exploded, covering the deck with fragments of human bodies, literally tearing to pieces the men on the small vessel as she lay alongside the *Minnesota*, but never before had I experienced such a sickening sensation of horror as on this occasion, when the bow of the *Sassacus* lay for thirteen minutes on the roof of the *Albemarle*. An officer of the *Wyalusing* says that when the dense smoke and steam enveloped us they thought we had sunk, till the flash of our guns burst through the clouds, followed by flash after flash in quick succession as our men recovered from the shock of the explosion.

In Commander Febiger's report the time of our contact was said to be "some few minutes." To us, at least, there seemed time enough for the other ships to close in on the ram and sink her, or sink beside her, and it was thirteen minutes as timed by an officer, who told me; but the other ships were silent, and with stopped engines looked on as the clouds closed over us in the grim and final struggle.

Captain French of the *Miami*, who had bravely fought his ship at close quarters, and often at the ship's length, vainly tried to get bows on, to come to our assistance and use his torpedo; but his ship steered badly, and he was unable to reach us before we dropped away. In the mean time the *Wyalusing* signaled that she was sinking—a mistake, but one that affected materially the outcome of the battle. We struck exactly at the spot for which we had aimed; and, contrary to the diagram given in the naval report for that year, the headway of

"ALL HANDS LIE DOWN!"

both ships twisted our bows, and brought us broadside to broadside—our bows at the enemy's stern and our starboard paddle-wheel on the forward starboard angle of his casemate. Against the report mentioned, I not only place my own observation, but I have in my possession the written statement of the navigator, Boutelle, now a member of Congress from Maine.

At length we drifted off the ram, and our pivot-gun, which had been fired incessantly by Ensign Mayer, almost muzzle to muzzle with the enemy's guns, was kept at work till we were out of range.

The official report says that the other ships were then got in line and fired at the enemy, also attempting to lay the seine to foul his propeller—a task that proved, alas, as impracticable as that of injuring him by the fire of the guns. While we were alongside, and had drifted broadside to broadside, our 9-inch Dahlgren guns had been depressed till the shot would strike at right angles, and the solid iron would bound from the roof into the air like marbles, and with as little impression. Fragments even of our 100-pound rifle-shots, at close range, came back on our own decks.

At dusk the ram steamed into the Roanoke River. Had assistance been rendered during the long thirteen minutes that the *Sassacus* lay over the ports of the *Albemarle*, the heroism of Commander Roe would have electrified the public and made his name, as it should be, imperishable in the annals of naval warfare. There was no lack of courage on the

other ships, and the previous loss of the *Southfield*, the signal from the *Wyalusing* that she was sinking, the apparent loss of our ship, and the loss of the sounds of North Carolina if more were disabled, dictated the prudent course they adopted.

Of the official reports, which gave no prominence to the achievement of Commander Roe and have placed an erroneous record on the page of history, I speak only with regret. He was asked to correct his report as to the speed of our ship. He had said we were going at a speed of ten knots, and the naval report says, "He was not disposed to make the original correction." I should think not!—when the speed could only be estimated by his own officers, and the navigator says clearly in his report *eleven* knots. We had perhaps the swiftest ship in the navy. We had backed slowly to increase the distance; with furious fires and a gagged engine working at the full stroke of the pistons,—a run of over four hundred yards, with eager and excited men counting the revolutions of our paddles; who should give the more correct statement?

The ship first in the line claimed the capture of the *Bombshell*. The captain of that vessel, afterward a prisoner on our ship, said he surrendered to the *second* ship in the line, viz., the *Sassacus*; that the flag was not hauled down till he was ordered to do so by Commander Roe; and that no surrender had been intended till the order came from the second vessel in the line.

Another part of the official report states that

THE "SASSACUS" DISABLED AFTER RAMMING.

the bows of the double-enders were all frail, and had they been armed would have been insufficient to have sunk the ram. If this were so, then was the heroism of the trial the greater. Our bow, however, was shod with a *bronze beak*, weighing fully three tons, well secured to prow and keel; and this was twisted and almost entirely torn away in the collision.

But what avails it to a soldier to dash over the parapet and seize the colors of the enemy if his regiment halts outside the *chevaux-de-*

frise? We have always felt that a similar blow on the other side, or a close environment of the heavy guns of the other ships, would have captured or sunk the ram. As it was, she retired, never again to emerge for battle from the Roanoke River, and the object of her coming on the day of our engagement, viz., to aid the Confederates in an attack on New Berne, was defeated; but her ultimate destruction was reserved for the gallant Lieutenant Cushing, of glorious memory.

Edgar Holden, M. D., late U. S. N.

NOTE. The Navy Department was not satisfied with the first official reports, and new and special reports were called for. As a result of investigation, promotions of many of the officers were made.—EDITOR.

THE DESTRUCTION OF THE "ALBEMARLE."

UNPUBLISHED MANUSCRIPT BY THE LATE W. B. CUSHING, COMMANDER, U. S. N.

IN September, 1864, the Government was laboring under much anxiety in regard to the condition of affairs in the sounds of North Carolina. Some months previous (April 19th) a rebel iron-clad had made her appearance, attacking Plymouth, beating our fleet, sinking the *Southfield*, and killing the gallant Captain Flusser, who commanded the flotilla. General Wessells's brigade had been forced to surrender, and all that section of country and the line of Roanoke River had fallen again into rebel hands. Little Washington and the Tar River were thus outflanked and lost to us. Some time after (May 5th), this iron-clad, the *Albemarle*, had steamed out into the open sound and engaged seven of our steamers, doing much dam-

age and suffering little. The *Sassacus* had attempted to run her down, but had failed, and had had her boiler exploded by one of the 100-pound shells fired from the Confederate.

The Government had no iron-clad that could cross Hatteras bar and enter the sounds,* and it seemed likely that our wooden ships would be defeated, leaving New Berne, Roanoke Island, and other points endangered. At all events, it was impossible for any number of our vessels to injure her at Plymouth, and the expense of our squadron kept to watch her was very great.

At this stage of affairs Admiral S. P. Lee

* Several light-draught monitors were in course of construction at this time, but were not yet completed.—ED.

spoke to me of the case, when I proposed a plan for her capture or destruction. I submitted in writing two plans, either of which I was willing to undertake.

The first was based upon the fact that through a thick swamp the iron-clad might be approached to within a few hundred yards, whence India-rubber boats, to be inflated, and carried upon men's backs, might transport a boarding-party of a hundred men; in the second plan the offensive force was to be conveyed in two low-pressure and very small steamers, each armed with a torpedo and howitzer.

In this last named plan (which had my preference), I intended that one boat should dash in, while the other stood by to throw canister and renew the attempt if the first should fail. It would also be useful to pick up our men if the attacking boat were disabled. Admiral Lee believed that the plan was a good one, and ordered me to Washington to submit it to the Secretary of the Navy. Mr. Fox, Assistant Secretary of the Navy, doubted the merit of the project, but concluded to order me to New York to "purchase suitable vessels."

Finding some boats building for picket duty, I selected two, and proceeded to fit them out. They were open launches, about thirty feet in length, with small engines, and propelled by a screw. A 12-pounder howitzer was fitted to the bow of each, and a boom was rigged out, some fourteen feet in length, swinging by a goose-neck hinge to the bluff of the bow. A topping lift, carried to a stanchion inboard, raised or lowered it, and the torpedo was fitted into an iron slide at the end. This was intended to be detached from the boom by means of a heel-jigger leading inboard, and to be exploded by another line, connecting with a pin, which held a grape-shot over a nipple and cap. The torpedo was the invention of Engineer Lay of the navy, and was introduced by Chief-Engineer Wood.

Everything being completed, we started to the southward, taking the boats through the canals to Chesapeake Bay, and losing one in going down to Norfolk. This was a great misfortune, and I have never understood how it occurred. I forget the name of the volunteer ensign to whose care it was intrusted; he was taken prisoner with his crew.

My best boat being thus lost, I proceeded with one alone to make my way through the Chesapeake and Albemarle canals into the sounds.

Half-way through, the canal was filled up, but finding a small creek that emptied into it below the obstruction, I endeavored to feel

my way through. Encountering a mill-dam, we waited for high water, and ran the launch over it; below she grounded, but I got a flat-boat, and, taking out gun and coal, succeeded in two days in getting her through. Passing with but seven men through the canal, where for thirty miles there was no guard or Union inhabitant, I reached the sound, and ran before a gale of wind to Roanoke Island. Here I pretended that we were going to Beaufort, and engaged to take two passengers along. This deception became necessary, in consequence of the close proximity of the rebel forces. If any person had known our destination, the news would have reached Plymouth long before we arrived to confirm it.

So, in the middle of the night, I steamed off into the darkness, and in the morning was out of sight. Fifty miles up the sound, I found the fleet anchored off the mouth of the river, and awaiting the ram's appearance. Here, for the first time, I disclosed to my officers and

COMMANDER W. B. CUSHING, U. S. N.

men our object, and told them that they were at liberty to go or not, as they pleased. These, seven in number, all volunteered. One of them, Mr. Howarth of the *Monticello*, had been with me repeatedly in expeditions of peril. Eight were added to my original force, among whom was Assistant Paymaster Francis H. Swan, who came to me as we were about to start and urged that he might go, as he had never been in a fight. Disregarding my remark that "it was a bad time for initiation," he still made the request, and joined us. He found an event-

ful night of it, being wounded, and spending his next four months in Libby Prison.

The Roanoke River is a stream averaging 150 yards in width, and quite deep. Eight miles from the mouth was the town of Plymouth, where the ram was moored. Several thousand soldiers occupied town and forts, and held both banks of the stream. A mile below the ram was the wreck of the *Southfield*, with hurricane deck above water, and on this a guard was stationed, to give notice

FIG. 1. CUSHING'S LAUNCH AND TORPEDO—SHOWING METHOD OF WORKING.

A long spar A (Fig. 1) was pivoted by means of a universal joint on its inboard end into the bracket B, the bracket being securely fastened to the outside of the boat. The spar was raised or lowered by means of a haliard *e*, which passed through a block at the head of the stanchion C, and thence down to the drum of a small windlass D, situated in the bottom of the boat, directly abaft the stanchion. On the outboard end of the spar was a socket, or head, which carried the shell. The shell was held in place only by a small pin *g*, which passed through a lug *h*, protruding from the lower side of the shell, and thence through an inclined plane *i*, which was attached to the socket. The lug and pin are clearly shown in Fig. 2. To detach the shell the pin *g* was pulled, which forced the shell gently out of the socket. This was accomplished by a laniard *j*, which led from the boat to the head of the socket, passing back of the head of the shell through the lugs *aa*, so that when the laniard was tightened it would force the shell out. A smaller laniard *k*, leading to the pin *g*, was spliced to the laniard *j* in such a manner that when the laniard *j* was pulled, first the pin and then the shell would come out.

her alive," having in the two boats twenty men well armed with revolvers, cutlasses, and hand-grenades. To be sure, there were ten times our number on the ship and thousands near by; but a surprise is everything, and I thought if her fasts were cut at the instant of boarding, we might overcome those on board, take her

FIG. 2. CUSHING'S TORPEDO—SECTIONAL VIEW.

The shell (Fig. 2) contained an air chamber X and a powder chamber Z. The result of this arrangement was that when the shell was detached it assumed a vertical position, with the air chamber uppermost, and, being lighter than its volume of water, it floated gradually towards the surface. At the top of its central shaft or tube was a grape-shot, held in place by a pin *g*, to which was attached the laniard *s*. The pin was a trigger, and the laniard was known as the trigger-line. Upon pulling the laniard the pin came out, the shot fell by its own weight upon the nipple *u*, which was covered by a percussion cap and connected directly with the powder chamber, and the torpedo exploded.

When the spar was not in use it was swung around by means of a stern line, bringing the head of the spar to the stern of the boat. To use the apparatus, the shell was put in place and the spar was swung around head forward; it was then lowered by means of the haliard *e* to the required depth; the laniard *j* was pulled, withdrawing the pin *g*, and forcing out the shell; finally, when the floating shell had risen to its place, the trigger-line *s* was pulled and the torpedo fired.

of anything suspicious, and to send up fire-rockets in case of an attack. Thus it seemed impossible to surprise them, or to attack, with hope of success.

Impossibilities are for the timid: we determined to overcome all obstacles. On the night of the 27th of October* we entered the river, taking in tow a small cutter with a few men, the duty of whom was to dash aboard the [wreck of the] *Southfield* at the first hail, and prevent any rocket from being ignited.

Fortune was with our little boat, and we actually passed within thirty feet of the pickets without discovery and neared the wharf, where the rebels lay all unconscious. I now thought that it might be better to board her, and "take

into the stream, and use her iron sides to protect us afterward from the forts. Knowing the town, I concluded to land at the lower wharf, creep around and suddenly dash aboard from the bank; but just as I was sheering in close to the wharf, a hail came, sharp and quick, from the iron-clad, and in an instant was repeated. I at once directed the cutter to cast off, and go down to capture the guard left in our rear, and ordering all steam went at the dark mountain of iron in front of us. A heavy fire was at once opened upon us, not only from the ship, but from men stationed on the shore. This did not disable us, and we neared them rapidly. A large fire now blazed upon the bank, and by its light I discovered the unfortunate fact that there was a circle of logs around the *Albemarle*, boomed well out from her side, with the very intention of preventing the action of torpedoes. To examine them more closely,

* The first attempt was made on the previous night, but after proceeding a short distance the launch grounded, and the time lost in getting her off made it too late to carry out the purpose of the expedition.—EDITOR.

I ran alongside until amidships, received the enemy's fire, and sheered off for the purpose of turning, a hundred yards away, and going at

against the iron ribs and into the mass of men standing by the fire upon the shore. In another instant we had struck the logs and were

THE BLOWING-UP OF THE "ALBEMARLE."

the booms squarely, at right angles, trusting to their having been long enough in the water to have become slimy—in which case my boat, under full headway, would bump up against them and slip over into the pen with the ram. This was my only chance of success, and once over the obstruction my boat would never get out again; but I was there to accomplish an important object, and to die, if needs be, was but a duty. As I turned, the whole back of my coat was torn out by buck-shot, and the sole of my shoe was carried away. The fire was very severe.

In a lull of the firing, the captain hailed us, again demanding what boat it was. All my men gave some comical answers, and mine was a dose of canister, which I sent among them from the howitzer, buzzing and singing

over, with headway nearly gone, slowly forging up under the enemy's quarter-port. Ten feet from us the muzzle of a rifle gun looked into our faces, and every word of command on board was distinctly heard.

My clothing was perforated with bullets as I stood in the bow, the heel-jigger in my right hand and the exploding-line in the left. We were near enough then, and I ordered the boom lowered until the forward motion of the launch carried the torpedo under the ram's overhang. A strong pull of the detaching-line, a moment's waiting for the torpedo to rise under the hull, and I hauled in the left hand, just cut by a bullet.*

The explosion took place at the same instant that 100 pounds of grape, at 10 feet range, crashed in our midst, and the dense

* In considering the merits of Cushing's success with this exceedingly complicated instrument, it must be remembered that nothing short of the utmost care in

preparation could keep its mechanism in working-order; that in making ready to use it, it was necessary to keep the end of the spar elevated until the boat had

mass of water thrown out by the torpedo came down with choking weight upon us.

Twice refusing to surrender, I commanded the men to save themselves; and throwing off sword, revolver, shoes, and coat, struck out from my disabled and sinking boat into the river. It was cold, long after the frosts, and the water chilled the blood, while the whole surface of the stream was plowed up by grape and musketry, and my nearest friends, the fleet, were twelve miles away, but anything was better than to fall into rebel hands. Death was better than surrender. I swam for the opposite shore, but as I neared it a man,* one of my crew, gave a great gurgling yell and went down.

The rebels were out in boats, picking up my men; and one of these, attracted by the sound, pulled in my direction. I heard my own name mentioned, but was not seen. I now "struck out" down the stream, and was soon far enough away to again attempt landing. This time, as I struggled to reach the bank, I heard a groan in the river behind me, and, although very much exhausted, concluded to turn and give all the aid in my power to the officer or seaman who had bravely shared the danger with me and in whose peril I might in turn partake.

Swimming in the night, with eye at the level of the water, one can have no idea of distance, and labors, as I did, under the discouraging thought that no headway is made. But if I were to drown that night, I had at least an opportunity of dying while struggling to aid another. Nearing the swimmer, it proved to be Acting Master's Mate Woodman, who said that he could swim no longer. Knocking his cap from his head, I used my right arm to sustain him, and ordered him to strike out. For ten minutes at least, I think, he managed to keep afloat, when, his presence of mind and physical force being completely gone, he gave a yell and sunk like a stone, fortunately not seizing upon me as he went down.

Again alone upon the water, I directed my

surmounted the boom of logs, and to judge accurately the distance in order to stop the boat's headway at the right point; that the spar must then be lowered with the same precision of judgment; that the detaching lanyard must then be pulled firmly, but without a jerk; that, finally, the position of the torpedo under the knuckle of the ram must be calculated to a nicety, and that by a very gentle strain on a line some twenty-five or thirty feet long the trigger-pin must be withdrawn. When it is reflected that Cushing had attached to his person four separate lines, viz., the detaching lanyard, the trigger-line, and two lines to direct the movements of the boat, one of which was fastened to the wrist and the other to the ankle of the engineer; that he was also directing the adjustment of the spar

course towards the town side of the river, not making much headway, as my strokes were now very feeble, my clothes being soaked and heavy, and little chop-seas splashing with a choking persistence into my mouth every time that I gasped for breath. Still, there was a determination not to sink, a will not to give up; and I kept up a sort of mechanical motion long after my bodily force was in fact expended.

At last, and not a moment too soon, I touched the soft mud, and in the excitement of the first shock I half raised my body and made one step forward; then fell, and remained half in the mud and half in the water until daylight, unable even to crawl on hands and knees, nearly frozen, with brain in a whirl, but with one thing strong in me—the fixed determination to escape. The prospect of drowning, starvation, death in the swamps—all seemed lesser evils than that of surrender.

As day dawned, I found myself in a point of swamp that enters the suburbs of Plymouth, and not forty yards from one of the forts. The sun came out bright and warm, proving a

THE WRECK OF THE "ALBEMARLE."

most cheering visitant, and giving me back a good portion of the strength of which I had been deprived before. Its light showed me the town swarming with soldiers and sailors, who moved about excitedly, as if angry at some sudden shock. It was a source of satisfaction to me to know that I had pulled the

by the halliard; that the management of all these lines, requiring as much exactness and delicacy of touch as a surgical operation, where a single error in their employment, even a pull too much or too little, would render the whole expedition abortive, was carried out under a fire of musketry so hot that several bullets passed through his clothing and directly in front of the muzzle of a 100-pounder rifle, and carried out with perfect success, it is safe to say that the naval history of the world affords no other example of such marvelous coolness and professional skill as that shown by Cushing in the destruction of the *Albemarle*.—J. R. SOLEY.

* Samuel Higgins, fireman.

wire that set all these figures moving (in a manner quite as interesting as the best of theatricals), but as I had no desire of being discovered by any of the rebs who were so plentiful around me, I did not long remain a spectator. My first object was to get into a dry fringe of rushes that edged the swamp; but to do this required me to pass over thirty or forty feet of open ground, right under the eye of the sentinel who walked the parapet.

Watching until he turned for a moment, I made a dash to cross the space, but was only half-way over when he turned, and forced me to drop down right between two paths, and almost entirely unshielded. Perhaps I was unobserved because of the mud that covered me, and made me blend in with the earth; at all events the soldier continued his tramp for some time, while I, flat on my back, awaited another chance for action. Soon a party of four men came down the path at my right, two of them being officers, and passed so close to me as almost to tread upon my arm. They were conversing upon the events of the previous night, and were wondering "how it was done," entirely unconscious of the presence of one who could give them the information. This proved to me the necessity of regaining the swamp, which I did by sinking my heels and elbows into the earth and forcing my body, inch by inch, towards it. For five hours then, with bare feet, head, and hands, I made my way where I venture to say none ever did before, until I came at last to a clear place, where I might rest upon solid ground. The cypress swamp was a network of thorns and briars, that cut into the flesh at every step like knives, and frequently, when the soft mire would not bear my weight, I was forced to throw my body upon it at length, and haul it along by the arms. Hands and feet were raw when I reached the clearing, and yet my difficulties were but commenced. A working-party of soldiers was in the opening, engaged in sinking some schooners in the river to obstruct the channel. I passed twenty yards in their rear through a corn furrow, and gained some woods below. Here I encountered a negro, and after serving out to him twenty dollars in greenbacks and some texts of Scripture (two powerful arguments with an old darky), I had confidence enough in his fidelity to send him into town for news of the ram.

When he returned, and there was no longer doubt that she had gone down, I went on again, and plunged into a swamp so thick that I had only the sun for a guide and could not see ten feet in advance. About 2 o'clock in the afternoon I came out from the dense mass of reeds upon the bank of one of the deep,

narrow streams that abound there, and right opposite to the only road in the vicinity. It seemed providential that I should come just there, for, thirty yards above or below, I never should have seen the road, and might have struggled on until worn out and starved—found a never-to-be-discovered grave. As it was, my fortune had led me to where a picket party of seven soldiers were posted, having a little flat-bottomed, square-ended skiff toggled to the root of a cypress-tree that squirmed like a snake into the inky water. Watching them until they went back a few yards to eat, I crept into the stream and swam over, keeping the big tree between myself and them, and making for the skiff.

Gaining the bank, I quietly cast loose the boat and floated behind it some thirty yards around the first bend, where I got in and paddled away as only a man could where liberty was at stake.

Hour after hour I paddled, never ceasing for a moment, first on one side, then on the other, while sunshine passed into twilight and that was swallowed up in thick darkness, only relieved by the few faint star rays that penetrated the heavy swamp curtain on either side. At last I reached the mouth of the Roanoke, and found the open sound before me.

My frail boat could not have lived a moment in the ordinary sea there, but it chanced to be very calm, leaving only a slight swell, which was, however, sufficient to influence my boat, so that I was forced to paddle all upon one side to keep her on the intended course.

After steering by a star for perhaps two hours for where I thought the fleet might be, I at length discovered one of the vessels, and after a long time got within hail. My "Ship ahoy!" was given with the last of my strength, and I fell powerless, with a splash, into the water in the bottom of my boat, and awaited results. I had paddled every minute for ten successive hours, and for four my body had been "asleep," with the exception of my two arms and brain. The picket vessel, *Valley City*,—for it was she,—upon hearing the hail at once slipped her cable and got under way, at the same time lowering boats and taking precaution against torpedoes.

It was some time before they would pick me up, being convinced that I was the rebel conductor of an infernal machine, and that Lieutenant Cushing had died the night before.

At last I was on board, had imbibed a little brandy and water, and was on my way to the flag-ship, commanded by Commander Macomb.

As soon as it became known that I had returned, rockets were thrown up and all hands

called to cheer ship; and when I announced success, all the commanding officers were summoned on board to deliberate upon a plan of attack.

In the morning I was again well in every way, with the exception of hands and feet, and had the pleasure of exchanging shots with the batteries that I had inspected on the day previous.

I was sent in the *Valley City* to report to Admiral Porter at Hampton Roads, and soon after Plymouth and the whole district of the Albemarle, deprived of the iron-clad's protection, fell an easy prey to Commander Macomb and our fleet.*

I again received the congratulations of the Navy Department, and the thanks of Congress, and was also promoted to the grade of Lieutenant-Commander.

Engineer-in-Chief William W. Wood, of the United States Navy, in describing the construction and fitting out of the launch with which Captain Cushing blew up the *Albemarle*, says:

When I was on duty in New York in connection with the construction of the iron-clad fleet and other vessels, I was also engaged in devising means to destroy the Confederate iron-clads, and to remove the harbor obstructions improvised by the Southerners to prevent

* Lieutenant Cushing reached the *Valley City* about midnight on the night of October 28-29, and announced the destruction of the *Albemarle*. On the next day, the 29th, at 11.15 A. M., Commander Macomb got under way, and his fleet proceeded up the Roanoke River in the following order: *Commodore Hull*, *Shamrock* (flag-ship), *Chicopee*, *Otsego*, *Wyalusing*, and *Tacony*; the *Valley City* being sent at the same time up Middle River, which joined the Roanoke above Plymouth, to intercept any vessels coming out with stores. Upon the arrival of the fleet at the wreck of the *Southfield*, after exchanging shots with the lower batteries, it was found that the enemy had effectually obstructed the channel by sinking schooners alongside of the wreck, and the expedition was therefore compelled to return. The *Valley City*, hearing the firing cease, concluded that Plymouth had been captured, and continuing her course up Middle River reached the Roanoke; but on approaching the enemy's works, and learning her mistake, she withdrew as she had come. It was upon her course up Middle River, shortly after noon, that the *Valley City* picked up Houghton, the only member of the crew of the picket-boat, beside Cushing, who escaped death or capture. He had swum across the river, and had remained hidden for thirty-six hours in the swamp that separates the two streams.

On the next day, Commander Macomb, having ascertained from the experience of the *Valley City* that Middle River offered a clear passage, determined to approach Plymouth by that route. The fleet was preceded by the tug *Bazley*, with Pilot Alfred Everett, of the *Wyalusing*, on board. Following the *Bazley* were the *Shamrock*, *Otsego*, *Wyalusing*, *Tacony*, and *Commodore Hull*. The *Valley City* had been detailed to take Lieutenant Cushing to Hampton Roads, and the *Chicopee* had gone to New Berne for repairs. The expedition threaded successfully the channel, shelling Plymouth across the woods on the intervening neck of

access of our vessels to the harbors and approaches in Southern waters.

About this time experiment had developed the feasibility of using torpedoes from the bows of ordinary steam-launches, and there had been already two such launches constructed, which were then lying at the Brooklyn Navy Yard, N. Y., having torpedoes fitted to them.

While sitting at my desk at the iron-clad office in Canal street, New York (the office of Rear-Admiral F. H. Gregory, the general superintendent), a young man (a mere youth) came in and made himself known as Lieutenant W. B. Cushing, United States Navy.

He stated to me, in strict confidence, that he was North on a secret mission, under the sanction of the Honorable Secretary of the Navy, the object being to cut out or destroy the rebel iron-clad ram *Albemarle*, then lying at Plymouth, N. C., and he had been looking for small and swift low-pressure tug-boats for the purpose of throwing a force on board, capturing, and cutting her out, and that, should he fail in this object, to destroy her; that so far he had been unable to find just such vessels as he required; and, further, he had been at the Navy Yard and there saw a steam-launch being fitted with a torpedo, and had called on me to make inquiry as to what was designed to be accomplished by its use, etc.

I gave him all the particulars and urged him to avail himself of the opportunity presented, which he without hesitation did. He sat down at my desk and wrote to the Secretary, stating that he had found what he desired for his purpose, and requested an order from the Department to be furnished with two of the torpedo boats or launches; and in going out said: "I will visit my mother at Fredonia, N. Y., and when they are ready inform me, and I will come down and learn how to use this thing."

land on its way up, until it reached the head of Middle River and passed into the Roanoke, where it lay all night.

At 9.30 on the morning of the 31st of October the line was formed, the *Commodore Hull* being placed in advance, as her ferry-boat construction enabled her to fire ahead. The *Whitehead*, which had arrived with stores just before the attack, was lashed to the *Tacony*, and the tugs *Bazley* and *Belle* to the *Shamrock* and *Otsego*, to afford motive power in case of accident to the machinery. Signal was made to "Go ahead fast," and soon after 11 the fleet was hotly engaged with the batteries on shore, which were supported by musketry from rifle-pits and houses. After a spirited action of an hour at short range, receiving and returning a sharp fire of shell, grape, and canister, the *Shamrock* planted a shell in the enemy's magazine, which blew up, and the Confederates hastily abandoned their works. A landing-party was at once sent ashore and occupied the batteries, capturing the last of the retreating garrison. In a short time Plymouth was entirely in possession of the Union forces. Twenty-two cannon were captured, with a large quantity of small-arms, stores, and ammunition. The casualties on the Union side were six killed and nine wounded.

The vessels engaged were as follows: DOUBLE-ENDERS: *Shamrock*, Commander W. H. Maconib, commanding division, Lieutenant Rufus K. Duer, executive officer; *Otsego*, Lieutenant-Commander H. N. T. Arnold; *Wyalusing*, Lieutenant-Commander Earl English; *Tacony*, Lieutenant-Commander W. T. Truxtun. FERRY-BOAT: *Commodore Hull*, Acting-Master Francis Josselyn. GUN-BOAT: *Whitehead*, Acting-Master G. W. Barrett. TUGS: *Belle*, Acting-Master James G. Green; *Bazley*, Acting-Master Mark D. Ames. The *Chicopee*, Commander A. D. Harrell, and *Valley City*, Acting-Master J. A. J. Brooks, as already stated, were not present at the second and final demonstration.—J. R. SOLEY.

I did so. Lieutenant Cushing came to New York, the launch was taken out into the North River, and one or more torpedo shells exploded by Lieutenant Cushing himself.

We stopped at the same hotel (the old United States, corner of Pearl and Fulton streets) until his departure, where I became well acquainted with this gallant and brave officer, and discussed frequently the resources of the torpedo steam-launches.

I was not disappointed when, a short time afterwards, Barry, the clerk of the hotel, told me one morning on my making my appearance that "Cushing had done the work," and handed me the morning paper containing Cushing's report to the Honorable Secretary of the Navy. The dimensions of these two launches were as follows: 45 to 47 feet long; 9 feet 6 inches beam, and carried a howitzer forward. Draught of water, about 40 to 42 inches."

Cushing's visit to his mother, referred to by Engineer-in-Chief Wood, is thus described by Mrs. Cushing:

Well do I remember that dreary day in the fall of 1864 when Will, home on a brief visit, invited me to ride with him over the Arkwright hills; the only time I was there, but in memory forever associated with the destruction of the *Albemarle*. It was a dark, cloudy day, and looked lonely; but where no one could hear or see us Will said to me, "Mother, I have undertaken a great project, and no soul must know until it is accomplished. I must tell you, for I need your prayers." He then informed me that the Navy Department had commissioned him to destroy the rebel ram *Albemarle*. How, when, and where, he told me all particulars, while I tried to still the beatings of my heart and listen in silence. At last I said, "My son, I believe you will accomplish it, but you cannot come out alive. Why did they call upon you to do this?" I felt that it was asking too much. "Mother, it shall be done or you will have no son Will. If I die, it will be in a good cause." After that I spoke only words of encouragement, but, oh! those days of suspense, shared by no one, every hour an age of agony, until from my son Howard came the glad telegram, "William is safe and successful."

NOTE ON THE DESTRUCTION OF THE "ALBEMARLE."

BY HER CAPTAIN, A. F. WARLEY, C. S. N.

WHEN I took command of the Confederate States iron-clad *Albemarle*, I found her made fast to the river bank nearly abreast of the town of Plymouth. She was surrounded by a cordon of single cypress logs chained together, about ten feet from her side.

I soon found why the very able officer whom I succeeded (Captain J. N. Maffitt) was willing to give up the command. There was no reason why the place might not be recaptured any day: the guns commanding the river were in no condition for use, and the troops in charge of them were worn down by ague, and were undrilled and worthless.

On the other side of the river, at pistol range, was a low island heavily timbered, and said to be almost impenetrable. As it fully commanded our position, I sent an active officer with a few hardy men to "explore it."

"The two "picket-boats," as they were officially designated, were delivered completely fitted to Lieutenant Cushing, in New York, on the 20th of September, by Admiral F. H. Gregory, Superintendent of Construction, with orders to send them directly to Hampton Roads by way of the canals. Cushing, not having any desire to make a canal voyage in an open launch, had obtained permission to proceed by land. Picket-boat No. 1 was under the command of Acting Ensign William L. Howarth, and No. 2 under Acting Ensign Andrew Stockholm. The two boats left New York on the 22d. Both of them struck on the rocks near Bergen Point, N. J., and remained there sunk for some hours. They arrived on the 25th, badly damaged, at New Brunswick, where they were repaired. No. 2 sank again in the canal, and was again repaired in Philadelphia, where the boats arrived on the 28th. Leaving Philadelphia, they reached Baltimore in safety; and after having been inspected by Cushing, they resumed their voyage on the 4th of October down Chesapeake Bay.

Soon after leaving Baltimore, No. 1's engine broke down, and she was towed into Annapolis by No. 2 on the 5th. Leaving Annapolis the next day in a heavy sea, the boats worked over first to one shore and then to the other. Presently the machinery of No. 2 was disabled, and she put into Great Wicomico Bay for repairs. Howarth's anxiety to reach Fort Monroe led him to press on, leaving his consort to follow as soon as possible. On the 8th, however, when the repairs had been completed, and just as Stockholm was

His report on his return showed that we were under constant espionage. Acting on this information the same officer (Mr. Long), with ten men, ambuscaded and captured a Federal man-of-war boat, and for the time being put a stop to the spy system.

When I had been about a month at Plymouth the troops were relieved by a new set. On the day of their arrival I heard of a steam-launch having been seen in the river, and I informed the officer in command of the fact, and at the same time told him that the safety of the place depended on the *Albemarle*, and the safety of the *Albemarle* depended on the watchfulness of his pickets.

The crew of the *Albemarle* numbered but sixty, too small a force to allow me to keep an armed watch on deck at night and to do outside picketing besides. Moreover, to break the monotony of the life and keep

about to get away, he was attacked by guerrillas. In trying to get out into the open water the boat unfortunately grounded; and Stockholm, after using up his ammunition, set her on fire and surrendered. The prisoners were sent to Richmond, but were soon after paroled, and Stockholm on his return was dismissed. No. 1 arrived safely at her destination, and was used by Cushing in the expedition against the *Albemarle*. The list of officers and men on board Picket-boat No. 1, on the expedition of October 27, 1864, with the vessels to which they were officially attached, was as follows: Lieutenant William B. Cushing, commanding, *Monticello*; Acting Assistant Paymaster Francis H. Swan, *Olsego*; Acting Ensign William L. Howarth, *Monticello*; Acting Master's Mate John Woodman, *Commodore Hull*; Acting Master's Mate Thomas S. Gay, *Olsego*; Acting Third Assistant Engineer William Stotesbury, Picket-boat; Acting Third Assistant Engineer Charles L. Steever, *Olsego*; Samuel Higgins, first-class fireman, Picket-boat; Richard Hamilton, coal-heaver, *Shamrock*; William Smith, ordinary seaman, *Chicopee*; Bernard Harley, ordinary seaman, *Chicopee*; Edward J. Houghton, ordinary seaman, *Chicopee*; Lorenzo Deming, landsman, Picket-boat; Henry Wilkes, landsman, Picket-boat; Robert H. King, landsman, Picket-boat. Cushing and Howarth, together with those designated as attached to the "Picket-boat," were the original seven who brought the boat down from New York. Cushing and Houghton escaped, Woodman and Higgins were drowned, and the remaining eleven were captured.

down ague, I had always out an expedition of ten men, who were uniformly successful in doing a fair amount of damage to the enemy. All were anxious to be on these expeditions and to keep out of the hospital.

The officer in command of the troops was inclined to give me all assistance, and sent a picket of twenty-five men under a lieutenant; they were furnished with rockets and had a field-piece. This picket was stationed on board of a schooner about gun-shot below the *Albemarle*, where an attempt was being made to raise a vessel (the *Southfield*) sunk at the time of Commander Cooke's dash down the river. Yet on the night of the 27th of October Cushing's steam-launch ran quietly alongside of the schooner unobserved by the picket, without a sound or signal, and then steamed up to the *Albemarle*.

It was about 3 A. M. The night was dark and slightly rainy, and the launch was close to us when we hailed and the alarm was given — so close that the gun could not be depressed enough to reach her; so the crew were sent in the shield with muskets, and kept up a heavy fire on the launch as she slowly forced her way over the chain of logs and ranged by us within a few feet. As she reached the bow of the *Albemarle* I heard a report as of an unshot gun, and a piece of wood fell at my feet. Calling the carpenter, I told him a torpedo had been exploded, and ordered him to examine and report to me, saying nothing to any one else. He soon reported "a hole in her bottom big enough to drive a wagon in."

By this time I heard voices from the launch — "We surrender," etc., etc. I stopped our fire and sent out Mr. Long, who brought back all those who had been in the launch except the gallant cap-

tain and three of her crew, all of whom took to the water.

Having seen to their safety, I turned my attention to the *Albemarle* and found her resting on the bottom in eight feet of water, her upper works above water. The very men who had destroyed her had no idea of their success, for I heard one say to another, "We did our best, but there the old thing is yet."

That is the way the *Albemarle* was destroyed, and a more gallant thing was not done during the war. After her destruction, failing to convince the officer in command of the troops that he could not hold the place, I did my best to help defend it. Half of my crew went down and obstructed the river by sinking the schooner at the wreck, and with the other half I had two 8-inch guns commanding the upper river put in serviceable order, relaid platforms, fished out tackles from the *Albemarle*, got a few shells, etc., and waited. I did not have to wait long. The fleet steamed up to the obstructions, fired a few shells over the town, steamed down again, and early next morning rounding the island were in the river and opened fire.

The two 8-inch guns worked by Mr. Long and Mr. Shelley did their duty, and I think did all that was done in the defense of Plymouth. The fire of the fleet was concentrated on us, and one at least of the steamers was so near that I could hear the orders given to elevate or depress the guns. When I felt that by hanging on I could only sacrifice my men and achieve nothing, I ordered our guns spiked and the men sent round to the road by a ravine.

The crew left me by Captain Maffitt were good and true men, and stuck by me to the last. If any failed in his duty, I never heard of it; and if any of them still live, I send them a hearty "God bless you!"

A NOTE OF PEACE.

REUNIONS OF "THE BLUE AND THE GRAY."

ALTHOUGH the horrors of war are the more conspicuous where the conflict is between brothers and the struggle is a long and desperate one, the evidences are numerous that, underneath the passion and bitterness of our civil war, there were counter currents of kindly feeling, a spirit of genuine friendliness pervading the opposing camps. This friendliness was something deeper than the expression of mere human instinct; the combatants felt that they were indeed brothers. Acts of kindness to wounded enemies began to be noted at Bull Run, while in every campaign useless picket firing was almost uniformly discountenanced, and the men shook hands at the outposts and talked confidently of their private affairs and their trials and hardships in the army. This feeling, confined, perhaps, to men on the very front line, culminated at Appomattox, where the victors shared rations with their late antagonists and

generously offered them help in repairing the wastes of battle. When the Union veteran returned to the North he did not disguise his faith in the good intentions of the Southern fighting man, and for a number of years after peace was made, the process of fraternization went quietly forward. The business relations of the sections and the interchange of settlers brought into close communication the rank and file of both armies, and the spirit of goodwill that had been manifested in a manner so unique at the front was found to be a hearty and general sentiment.

Out of this state of things was developed, naturally, a series of formal meetings of veterans of the Blue and the Gray. The earliest reunions of which I find record were held in 1881 (the year of the Yorktown Centennial and of Garfield's death). The first was a meeting of Captain Colwell Post, Grand Army of the Republic, of Carlisle, Pennsylvania, and the ex-Confederates of Luray Valley, Virginia. The Southern veterans appointed special committees to welcome the comrades of the Carlisle

post to the soil of Virginia, and received them accordingly on the 21st of July. In September following, the post, in turn, invited the Southerners to visit Carlisle, and greeted them with a public reception. The meeting was held on the Fair Ground, in the presence of a large assemblage, and Governor Henry M. Hoyt welcomed the Virginians; General James A. Beaver and Grand Army Posts 58 and 116, of Harrisburg, took part in the reunion.

In October of that year, the members of Aaron Wilkes Post, of Trenton, New Jersey, on their journey to the Yorktown Centennial celebration, visited Richmond, and were entertained in a fraternal manner by the Veteran Association of the Old 1st Virginia regiment and by other ex-Confederates. In each case, at Luray and at Richmond, the meeting was brought about by overtures on the part of the Northern veterans. Lee Camp, Confederate Veterans, at Richmond, was formed soon after this visit of Aaron Wilkes Post. The list of the more prominent formal reunions includes the following:

- 1881.—July 21, Luray, Virginia. Participants: Captain Colwell Post, G. A. R., of Carlisle, Pennsylvania, and ex-Confederates of the Valley of Virginia.
- 1881.—September 28, Carlisle, Pennsylvania. The same organizations participating.
- 1881.—October 17 and 18, Richmond. Aaron Wilkes Post, G. A. R., of Trenton, New Jersey, and the Veteran Association of the Old 1st Virginia Infantry, Otey Battery, and Richmond Howitzers, of Richmond.
- 1882.—April 12 and 13, Trenton. Return visit of the Richmond ex-Confederates.
- 1882.—October, Gettysburg. Officers and soldiers of the Army of the Potomac and of the Army of Northern Virginia. The exercises extended over three days, and among the participants were Generals Sickles, Crawford, and Stannard, of the Union side, and Generals Forney, Trimble, and others, of the Confederate Army.
- 1883.—October 15-18, Richmond. Lincoln Post, G. A. R., of Newark, New Jersey, Phil Kearny Post, G. A. R., of Richmond, and Lee Camp, Confederate Veterans.
- 1884.—May 30, Fredericksburg, Virginia. Union Veteran Corps, Washington Continentals, and George G. Meade Post, G. A. R., of Washington, D. C., and Lee Camp, C. V., of Richmond, and Maury Camp, C. V., of Fredericksburg. Among the participants were Generals Rosecrans, Slocum, Newton, Doubleday, and Roy Stone, and Colonel H. W. Jackson of the Union side, and General Longstreet, Colonels W. C. Oates, and Hilary A. Herbert, and Captain Robert E. Lee of the Confederates.
- 1884.—June 17, Newark, New Jersey. Return visit of Phil Kearny Post and Lee Camp, of Richmond, to Lincoln Post, of Newark.
- 1885.—May 7 and 8, Baltimore. Society of the Army of the Potomac, and Lee Camp, of Richmond.
- 1885.—May 20, Richmond. Aaron Wilkes Post, of Trenton, and Lee Camp. Dedication of the Richmond Home for ex-Confederates, and Memorial Exercises at Hollywood Cemetery.
- 1885.—May 30, Annapolis, Maryland. Meade Post, G. A. R., and other Union veterans, and the ex-Confederates of Annapolis. Memorial Day reunion.
- 1885.—July 4, Auburn, New York. Seward Post, G. A. R., of Auburn, and Lee Camp.
- 1885.—October 19, Richmond. The same.
- 1885.—October 22, 23, and 24, Owensboro, Kentucky. "Ex-Federal and Ex-Confederate" Soldiers' Association, of Davis County, Kentucky, and Union veterans and ex-Confederates of the West.
- 1886.—July 3, Gettysburg. Cavalry Reunion on the field of the battle of July 3, 1863, between Stuart and Gregg. Generals D. McM. Gregg, Wade Hampton, J. B. McIntosh were present, also Major H. B. McClellan, of Stuart's staff.
- 1886.—October 12, 13, and 14, Richmond. Lee Camp, and John A. Andrew Post, G. A. R., of Boston.
- 1887.—June 9, Staunton, Virginia. Confederate Memorial Exercises conducted jointly by the Blue and the Gray; Generals W. W. Averell, Fitzhugh Lee, and John D. Imboden took part in the ceremonies.
- 1887.—June 16, 17, 18, and 19, Boston, Massachusetts. John A. Andrew Post, of Boston, and Lee Camp. The Southern veterans took part in the ceremonies at the Bunker Hill anniversary on the 17th, and in the evening attended a banquet at Faneuil Hall, where the State shield of Virginia was displayed beside that of Massachusetts. Among those present were Governor Oliver Ames, Senator George F. Hoar, Henry Cabot Lodge, and Colonel Henry O. Kent, of Massachusetts, and John Goode, George D. Wise, and Major N. B. Randolph, of Virginia.
- 1887.—June 18, Lynn, Massachusetts. General Lander Post, G. A. R., of Lynn, John A. Andrew Post, and Lee Camp.
- 1887.—July 3, Gettysburg. Pickett's Division Association and the Philadelphia Brigade. A large number of veterans of both armies accompanied these organizations and took part in the memorial meeting.
- 1887.—September 14, Mexico, Missouri. Reunion of ex-Confederates of Missouri, participated in by Union veterans and local posts of the Grand Army.
- 1887.—September 15, 16, and 17, Antietam Battlefield, Maryland. Antietam Post, G. A. R., of Sharpsburg, Maryland, U. S. Grant Post, of Harper's Ferry, the Veteran Association of the 50th New York Volunteers, and Confederate veterans of Maryland and Virginia.
- 1887.—September 27, Evansville, Indiana. Veterans of both armies under a general invitation from a national committee, headed by General James M. Shackleford. Letters of indorsement breathing the spirit of fraternity were sent by Generals John B. Gordon, James Longstreet, and Basil W. Duke.
- 1887.—October 11, Kenesaw Mountain Battlefield, Georgia. Excursion and reunion of Confederate and Union veterans.

The meetings here enumerated, with two or three exceptions, were devoted mainly to the interchange of social courtesies. On other noteworthy occasions the Southerners have extended less formal attentions to Northern

veterans while visiting the old battle-fields, particularly at Pea Ridge, Chickamauga, Chattanooga, Petersburg, Antietam, Ball's Bluff, and the region around Richmond. One of the practical results of the personal acquaintance that sprung up at these reunions was the coöperation of the Grand Army of the Republic with the Confederate Veterans in raising funds to erect a home for disabled Southern soldiers at Richmond. The movement to establish the home originated with Lee Camp, and was promptly indorsed by the Grand Army posts of Virginia.

In March, 1884, J. F. Berry, of Phil Kearny Post, and A. A. Spitzer, of Lee Camp, Richmond, visited New York to confer with members of the Grand Army, and a meeting was held on the 19th at the St. James Hotel, resulting in the creation of a joint committee with General John B. Gordon, of Georgia, as chairman, and General James R. O'Beirne, of Farragut Post, G. A. R., of New York, as vice-chairman. Acting on the suggestion of the ex-Confederate members, the committee published a call for a mass meeting to be held at Cooper Institute, April 9, the anniversary of Lee's surrender, and General Grant was called upon to preside. His response to the invitation was as follows:

WASHINGTON, April 3, 1884.

GENERAL J. B. GORDON, *Chairman Central Committee, New York:*

Your letter of March 31, informing me that I had been chosen to preside at a meeting of the different posts of the G. A. R. and ex-Confederates in the city of New York, is received.

The object of the meeting is to inaugurate, under the auspices of soldiers of both armies, a movement in behalf of a fund to build a home for disabled ex-Confederate soldiers.

I am in hearty sympathy with the movement, and would be glad to accept the position of presiding officer, if I were able to do so. You may rely on me, however, for rendering all aid I can in carrying out the designs of the meeting.

I am here under treatment for the injury I received on Christmas Eve last, and will not be able to leave here until later than the 9th, and cannot tell now how soon or when I shall be able to go.

I have received this morning your dispatch of last evening urging that I must be there to preside, but I have to respond to that, that it will be impossible for me to be there on the 9th, and I cannot now fix a day when I could certainly be present.

Hoping that your meeting will insure success, and promising my support financially and otherwise to the movement,

I am, very truly yours,

U. S. GRANT.

Following this mass meeting a fund of several thousand dollars was raised by local committees of the G. A. R. posts of New York,

*What will doubtless prove to be the greatest demonstration (up to this date) of the fraternal feelings existing among veterans, is the meeting of the survivors of the Army of the Potomac with the survivors of the Army of Northern Virginia, at Gettysburg, July

Brooklyn, Boston, and elsewhere. Literary and dramatic entertainments were given in aid of the fund. The first of these took place on the 30th of April, at the Metropolitan Opera House, New York. At that date General Grant had returned to his home in Sixty-sixth street, though he was still suffering from the injuries referred to in his letter to General Gordon. He wrote to the committee of Grand Army veterans that he was physically unable to attend the entertainment, inclosed a check for \$50, and indorsed their action.

The record here presented is not the whole story of the work that has been done since the war closed. The spirit that moved Lincoln to say in his last inaugural, "With malice toward none," has continued its holy influence. That which must appear to the world at large a startling anomaly, is in truth the simple principle of good-will unfolding itself under favorable conditions. The war, that is, the actual encounter on the field, taught the participants the dignity of American character. On the occasion of the reception of Lee Camp by the Society of the Army of the Potomac at Baltimore, in 1885, General H. W. Slocum said to the assembled veterans: "This incident that occurred here to-day proves the truth of the old saying that there is nothing so makes men respect one another as standing up in the ranks and firing at one another." In closing his remarks the same speaker gave the key-note to this whole matter of the fraternization of former foes, from the point of view of a Unionist. The words were these: "The men of those armies [Union and Confederate] respected one another, and when General Grant said to General Lee, 'when your men go home they can take their horses to work their little farms,' he spoke the sentiments of every man in the army." The propriety of such declarations can hardly be questioned, and the Northern promoters of reunions of "The Blue and the Gray" are pursuing the course marked out by Grant, and they may, in sincerity, point to him as their leader and exemplar.* On the other hand, the sympathy of the ex-Confederates with the sufferings of General Grant, at the close of his life, and their notable action at the time of his death, may be cited as evidence for the Southerners of the lasting sentiments of good-will they hold toward their former opponents.

George L. Kilmer,

ABRAHAM LINCOLN POST, G. A. R.,
NEW YORK, 1888.

2d, 3d and 4th. This gathering originated in a proposal made by the Third Corps Society, at their reunion in May, 1887, and the matter was taken in charge by the Society of the Army of the Potomac at their reunion in the June following.—G. L. K.

DREAMS, NIGHTMARE, AND SOMNAMBULISM.

SEVERAL men and women, most of whom were intellectual and cultivated, were conversing upon some of the more unusual phases of human nature. Various incidents, some of thrilling interest, had been narrated, when a dream was related of such remarkable detail—with which, as it was alleged, subsequent events corresponded—that it seemed as though “it were not all a dream”; and during the remainder of a long evening similar tales were told, until it appeared that all except two or three dreamed frequently. Finally it was proposed to ascertain the opinions of every one present on the subject.

One plainly said that he did not believe in them at all. When he was suffering from indigestion, or was overtired, or had a great deal on his mind, he dreamed; and when he was well and not overworked, he did not, and “that is all there is in it.” But he added that there was one which he could never quite understand, and gave an account of a dream which his brother had had about the wrecking of a steamer. This caused him not to take passage on it, and the vessel was lost, and every person in the cabin was either seriously injured or drowned. At this a lady said that she had been in the habit of dreaming all her life, and nearly everything good or bad that had happened to her had been foreshadowed in dreams.

It was soon apparent that three out of four did not believe dreams to be supernatural, or preternatural, or that they have any connection with the events by which they are followed; but nearly every one had had a dream or had been the subject of one; or his mother, or grandmother, or some other relative or near friend, had in dreams seen things which seemed to have been shadows of coming events.

One person affirmed that he had never dreamed: he was either awake or asleep when he was in bed; and if he were asleep, he knew nothing from the time he closed his eyes until he awoke.

Some expressed the belief that minds influence each other in dreams, and thus knowledge is communicated which could never have been obtained by natural means. One gentleman thought that in this way the spirits of the dead frequently communicate with the living;

and another, a very devout Christian, suggested that in ancient times God spoke to his people in dreams, and warned them; and for his part he could see no good reason why a method which the Deity employed then should not be used now. At all events, he had no sympathy with those who were disposed to speak slightly of dreams, and say that there is nothing in them; he considered it but a symptom of the skeptical spirit that is destroying religion. Whereupon a lady said that this was her opinion too, and, turning to one of those who had stoutly ridiculed dreams, said, “There are more things in heaven and earth, Horatio, than are dreamt of in your philosophy.”

THE HISTORY AND PHENOMENA OF DREAMS.

In this paper, by *dreams* is meant the visions which occur in natural sleep; by *nightmare*, a dream unusually intense, involving a terrifying sense of danger and a physical condition to be more fully described; and by *somnambulism*, talking, walking, or performing other actions under the influence of a dream attending natural sleep.

Dreams are frequently spoken of, and in almost every possible aspect, by the oldest books of the world. In the Bible, God speaks in a dream to Jacob about the increase of the cattle, and warns Laban not to obstruct Jacob's departure. The dreams of Joseph, unsurpassed even from a literary point of view, and of Pharaoh, with a history of their fulfillment, occupy a large part of the first book. The dream of Solomon and the dreams of Nebuchadnezzar, the warning of Joseph to take the young Child into Egypt, are parts of the history of the Christian religion. These being attributed to supernatural influence can reflect no light upon ordinary phenomena.

But the Bible itself distinguishes between natural dreams and such as these. It states very clearly the characteristics of dreams. The hypocrite “shall fly away as a dream, and shall not be found: yea, he shall be chased away as a vision of the night.” David says, “As a dream when one awaketh,” the Lord shall despise the image of the proud. Solomon speaks of the character of dreams thus: “For in the multitude of dreams and many words there are also divers vanities”; of their general causes he says, “For a dream cometh through the multitude of business.”

Cicero says that men of greatest wisdom among the Romans did not think it beneath them to heed the warnings of important dreams, and affirms that in his time the senate ordered Lucius Junius to erect a temple to Juno Sospita, in compliance with a dream seen by Cecilia. Scipio's dream, philosophical, imaginative, grand, published in the works of Cicero, called the most beautiful thing of the kind ever written, has from its origin until now been the subject of discussion as to whether it was composed by Cicero for a purpose or is the veritable account of a dream.

Almost all the great characters described by Herodotus believed that dreams were of supernatural origin. Kings resigned their scepters; Cambyses assassinated his brother; priests attained great power as commanders; cities which had been destroyed were restored by men who changed their plans and performed these acts because warned, as they supposed, in dreams; and with the invasion of Greece by Xerxes such night visions had much to do. Plato and Socrates believed in dreams, and even Aristotle admitted that they might have a supernatural origin.

There are persons who affirm that they have never dreamed. It is obvious that all to which they can testify is that they have never remembered a dream. Their evidence is therefore untrustworthy as to the fact of dreaming; for it is known that the recollections of dreams, as a general rule, are very imperfect. Countless details have fled away; the scenes have been inextricably interwoven with each other. A dreamer may be confident that he has dreamed hundreds of dreams, during any given night, and yet not be able to recall with distinctness more than one or two. Besides, observation of some persons who declare that they never dream has demonstrated the contrary; for not only have they moved in ways which indicated that they were dreaming, but talked, and even responded to questions.

Upon only one phase of the subject is there substantial agreement among investigators, and that is upon the general characteristics of dreams. Time and space are annihilated, and all true estimates confounded. As a rule, to which there are occasional exceptions, nothing appears strange, and the impressions which

would be made by similar events in the waking state are not made; or, if at all, so slightly as not to produce their customary effects. Identity being often lost, no surprise is produced by a change of sex, age, name, country, or occupation. A young lady dreamed of seeing herself in her coffin, of listening to the observations of the mourners, and was not astonished to find herself dead, nor, that being dead, she could hear. She was not even surprised when the funeral services closed without the coffin lid being shut down; nor when, in a very short time, she dreamed of being alive and engaged in her usual pursuits.

But the moment we pass beyond general statements of this character, opinions the most incongruous and even contradictory are held, and strenuously advocated by representative writers in every profession.*

Nightmare is something so terrible that its very name attributes its origin to the devil. The meaning of "mare" is an incubus, as of a spirit which torments persons in sleep. In nightmare the mind is conscious of an impossibility of motion, speech, or respiration, with a dreadful sense of pressure across the chest, and an awful vision of impending danger. The victim sometimes realizes his peril, gathers all his forces, struggles vainly, and endeavors to shout for help. At last, by a desperate effort, he succeeds in screaming. If then some friendly touch or voice awaken him, the vision flees, and he is left stertorously breathing, perspiring, and more tired than if he had broken stone or worked in a tread-mill for as many hours as the nightmare lasted minutes. If he be not aroused, he may be awakened by his own screams; otherwise the incubus may not depart for a considerable period, which, though short in actual time, seems like ages to him.

A young man under the writer's care was subject to attacks so harrowing that it was excruciating to be in the room with him during the paroxysm. Sometimes after he was awakened the terrifying vision would not wholly fade away for three-quarters of an hour or more, during which his shrieks and groans and appeals to God and the unutterable expression of agony upon his face were terrible. In the city of Philadelphia, but a few months since, a lad, having been exceptionally healthy

* Those who desire to see the opinions of leading writers, ancient and modern, down to the year 1865, and have not time to consult them in their own works, may find in Seafeld's "Literature and Curiosities of Dreams" a very extensive collection. This work has been criticised within a year or so as containing a large amount of valuable but *undigested* information. The criticism is not just, for it does not profess to have digested, but to present all for the digestion of others. The author expressly declares that he has "foregone such chances of greater credit and importance, as would have been

open to him if he had seemed to claim the whole as original, by incorporating the several theories and anecdotes with textual commentary of his own."

More recent investigations of great presumptive importance have introduced an immense amount of new matter into the literature and considerable into the "curiosities" of dreams, or at least of dream investigations. I have found that some of the passages quoted by Seafeld, read in their original setting, or compared with all the authors have said, require important modifications, if taken as expressions of mature opinion.

from birth, was attacked with nightmare when fourteen years old. After a few attacks his father slept with him for the purpose of awakening him if there should be occasion. One night the father was startled by the voice of his boy calling in terrified tones, "Pop! Pop! I am afraid!" He felt the hand of his son nervously clutching his wrist. Then the boy fainted, and died instantly. The post-mortem examination showed a large clot of blood about the heart, caused by paralysis due to fear. There is reason to believe that such instances are numerous enough to make nightmare worthy of serious medical investigation.

In nightmare, as A. Brierre de Boismont shows, the incubus takes different forms. Sometimes the subject fancies he flies in the air. He gives the case of a distinguished writer, whom he had seen in that state, uttering inarticulate sounds — his hair bristling, his countenance full of terror. At such times he would exclaim, "How surprising! I fly like the wind! I pass over mountains and precipices!" For several seconds after awaking he still imagined himself floating in the air. Others skim over the ground, pursued or threatened by dangers.

In childhood and youth, according to the same author, the individual is upon the edge of precipices, about to fall. In later years, robbers are breaking into the house, or the victim supposes himself condemned to death. Occasionally cats, or some other animals or monsters, place themselves upon the stomach. "The weight of this imaginary being stifles, while it freezes the blood with horror." While not every case of nightmare is attended with motion or sound, the reader will observe that nightmare passes into somnambulism when the victim shrieks or leaps from his bed, or makes any motion.

Somnambulism, in its simplest form, is seen when persons talk in their sleep. They are plainly asleep and dreaming; yet the connection, ordinarily broken, between the physical organs and the images passing through the mind is retained or resumed, in whole or in part. It is very common for children to talk more or less in their sleep; also many persons who do not usually do so are liable to mutter if they have overeaten, or are feverish or otherwise ill. Slight movements are very frequent. Many who do not fancy that they have ever exhibited the germs of somnambulism groan, cry out, whisper, move the hand, or foot, or head, plainly in connection with ideas passing through the mind. From these incipient manifestations of no importance somnambulism reaches frightful intensity and almost inconceivable complications.

Somnambulists in this country have recently perpetrated murders, have even killed their

own children; they have carried furniture out of houses, wound up clocks, ignited conflagrations. A carpenter not long since arose in the night, went into his shop, and began to file a saw; but the noise of the operation awoke him. The extraordinary feats of somnambulists in ascending to the roofs of houses, threading dangerous places, and doing many other things which they could not have done while awake have often been described, and in many cases made the subject of close investigation. Formerly it was believed by many that if they were not awakened they would in process of time return to their beds, and that there would not be any danger of serious accident happening to them. This has long been proved false. Many have fallen out of windows and been killed; and though some have skirted the brink of danger safely, the number of accidents to sleeping persons is great.

Essays have been written by somnambulists. A young lady, troubled and anxious about a prize for which she was to compete, involving the writing of an essay, arose from her bed in sleep and wrote a paper upon a subject upon which she had not intended to write when awake; and this essay secured for her the prize. The same person, later in life, while asleep selected an obnoxious paper from among several documents, put it in a cup, and set fire to it. She was entirely unaware of the transaction in the morning.

Intellectual work has sometimes been done in ordinary dreams not attended by somnambulism. The composition of the "Kubla Khan" by Coleridge while asleep and of the "Devil's Sonata," by Tartini, are paralleled in a small way frequently. Public speakers often dream out discourses; and there is a clergyman now residing in the western part of New York State who, many years ago, dreamed that he preached a powerful sermon upon a certain topic, and delivered that identical discourse the following Sunday with great effect. But such compositions are not somnambulistic unless accompanied by some outward action at the time.

SEARCHING FOR ANALOGIES.

THREE different views of dreams are possible, and all have been held and strenuously advocated. The first is that the soul is never entirely inactive, and that dream images proceed all the time through the mind when in sleep. Richard Baxter held this view and attempted to prove it by saying, "I never awaked, since I had the use of memory, but I found myself coming out of a dream. And I suppose they that think they dream not, think so because they forget their dreams." Bishop

Newton says that the deepest sleep which possesses the body cannot affect the soul, and attempts to prove it by showing that the impressions are often stronger and the images more lively when we are asleep than when awake. Dr. Watts held the same view, and devoted a great deal of attention to it in his philosophical essays. Sir William Hamilton was inclined to the same belief, because, having had himself waked up on many occasions, he always found that he was engaged in dreaming.

Baxter's theory is an assumption of which no adequate proof can be offered; and Sir William Hamilton's test is inadequate, because an instant of time, even the minute fraction that elapses between the time that a man's name is called or his body touched for the purpose of awaking him and the resumption of consciousness, may be long enough for a dream of the most elaborate character. Sir Henry Holland fell asleep while a friend was reading to him. He heard the first part of a sentence, was awake in the beginning of the next sentence, and during that time had had a dream which would take him a quarter of an hour to write down.

Lord Brougham and others have maintained that we never dream except in a state of transition from sleeping to waking. Sir Benjamin Brodie, in speaking of this, says:

There is no sufficient proof of this being so; and we have a proof to the contrary in the fact that nothing is more common than for persons to moan, and even talk, in their sleep without awaking from it.

The third theory is that in perfect sleep there is little or no dreaming. This is supported by various considerations. The natural presumption is that the object of sleep is to give rest, and that perfect sleep would imply the cessation of brain action; and it is found that "the more continuous and uninterrupted is our dreaming, the less refreshing is our sleep." Recent experiments of great interest appear to confirm this view. The effect of stimuli, whether of sound, touch, smell, sight, or hearing, in modifying the dreams without awaking the sleeper—or in awaking him—all point in the same direction; and though there is always some sense of time when awaking, which proves that the mind has to some extent been occupied, in the soundest sleep, it is so slight as to seem as if the person had just lain down, though many hours may have passed. Whereas, just in proportion as the dreams are remembered, or as the fact of dreaming can be shown by any method, is the sense of time the longer. I do not speak of the heavy, dull sleep which, without apparent dreams, results from plethora, or sometimes accompanies an overloaded stomach, or is the result of overexhaustion, or occasion-

ally supervenes after protracted vigils, but of the very sound sleep enjoyed by the working classes when in health, or by vigorous children.

The most interesting question is, Can a theory of dreams be constructed which will explain them upon natural principles, without either the assumption of materialism, or an idealism akin to superstition? It is to be understood that no phenomena can be explained at the last analysis; but a theory which will, without violence, show the facts to be in harmony with natural laws, or bring them within the range of things natural, so that they are seen to belong to a general class, and to be subject to the relation of antecedents and consequents, is an explanation. For example, electricity defies final analysis; but its modes of action are known, and even the greatest of mysteries, the form of induction which now surprises the world in the recently invented process of telegraphing from moving trains, is as susceptible of this kind of explanation as the action of steam in propelling a train or a steamship.

We begin with analogies, and find these in the effect of drugs, such as opium, alcohol, nitrous-oxide gas, hasheesh, etc. De Quincey describes all the experiences of dreams, both before and after he entered into a state of sleep, as resulting from the use of opium; and the peculiar sleep produced by that drug is attended by dreams marked by all the characteristics of those which occur in natural sleep. The effect of alcohol in setting up a dream state in the mind while the senses are not locked in sleep is, unfortunately, too well known. When a certain point is reached in intoxication the will is weakened, the automatic machinery takes control, the judgment is dethroned, and images—some grotesque and others terrible—having the power of exciting the corresponding emotions hurry through the mind until frenzy is reached, subsequent to which a heavy stupor ends the scene. When the drunken man becomes sober, his recollections of what he has done are as vague and uncertain as those of dreamers; and a similar inability to measure the flight of time, to perceive the incongruity of images, the moral character of actions, and the value and force of words, characterizes this state which attends dreaming. Ether, and chloroform, and nitrous-oxide gas, when the amount administered is not sufficient to produce unconsciousness, cause similar effects. The writer, being compelled to undergo a surgical operation at a time when he was greatly absorbed in the then impending civil war, by the advice of physicians took ether, the effect of which was to lead to a harangue upon abolitionism,

in which some profane language was used. As the effect deepened, though it was at no time sufficient to produce absolute unconsciousness, the scene changed, and devotional hymns were sung, and a solemn farewell taken of the physicians and surgeon, who were warned to prepare to die. Of all this the remembrance was analogous to that of dreams.

The influence of hasheesh has received much attention, and has been outlined in scientific works and literary compositions. The most striking account of its effects is that of M. Théophile Gautier, originally published in "La Presse" and quoted in many works. Under the influence of hasheesh his eyelashes seemed to lengthen indefinitely, twisting themselves like golden threads around little ivory wheels. Millions of butterflies, whose wings rustled like fans, flew about in the midst of a confused kind of light. More than five hundred clocks chimed the hour with their flute-like voices. Goat-suckers, storks, striped geese, unicorns, griffins, nightmares, all the menagerie of monstrous dreams, trotted, jumped, flew, or glided through the room. According to his calculation this state, of which the above quotations give but a feeble representation, must have lasted three hundred years; for the sensations succeeded each other so numerously and powerfully that the real appreciation of time was impossible. When the attack was over, he found that it had occupied about a quarter of an hour.

These drugs operate only upon the circulation, the nervous system, and the brain. They are physical agents, operating upon a physical basis, and yet they produce phenomena analogous to those of dreams, with the exception that they do not in every case divorce the motor and sensory nerves from the sensorium as perfectly as in ordinary dreaming sleep.

Delirium is analogous in most respects to the conditions produced by these drugs. Its stages are often very similar to those of intoxication; so that it requires a skilled physician to determine whether the patient is under the influence of delirium, insanity, or intoxication. Delirium results from a change in the circulation, or a defective condition of the blood; and in most instances there is no difficulty, when the disease is understood, of assigning the exact approximate cause of the delirium. The analogy between delirium and dreams and the partial recollection or complete forgetfulness of what was thought, felt, said, or done in the delirium and similar recollection or forgetfulness of dream images is well known by all who have experienced both, or closely observed them. And the analogy between delirium and intoxication loses nothing

in value from the fact that the drug is administered. Disease in the human system can engender intoxicating poisons as well as others.

Revery is a natural condition, so common to children that they are hardly able to distinguish between the reports from the external world and the images presented by their imagination. But revery is a common experience of the human race in all stages of development. It differs from abstraction in the fact that the latter is the intense pursuit of a train of reasoning or observation, which absorbs the mind to such an extent that there is no attention left for the reports of the senses. Hence the abstracted man neither looks nor listens, and a noise or an impulse, far greater than would suffice to awaken the same man if asleep, may be insufficient to divert him from the train of thought which he pursues. Revery is literally day-dreaming. It is not reasoning. The image-making faculty is set free and it runs on. The judgment is scarcely attentive, hardly conscious, and the tear may come into the eye, or the smile to the lip, so that in a crowded street-car, or even in an assembly, attention may be attracted to the person who is wholly unconscious of the same. A person may imagine himself other than he is, and derive great pleasure from the change, and pass an hour, a morning, or a day unconsciously. In revery persons frequently become practical somnambulists; that is, they speak words which others hear that they would not have uttered on any account, strike blows, move articles, gesticulate, and do many other things, sometimes with the effect of immediately recalling them to a knowledge of the situation, when they, as well as others, are amused, but often without being aware that they are noticed. In extreme cases the only distinctions between revery and dreaming sleep are regular breathing and the suspension of the senses which accompany the latter.

The passage from revery into dreaming sleep is to be scrutinized, as the line of demarcation is less than the diameter of a hair. When persons lie down to sleep, their thoughts take on the dream character before they can sleep. "Look," says Sir Henry Holland, "to the passage from waking to sleeping, and see with what rapidity and facility these states often alternate with each other." Abstract reason gives place to images that begin to move at random before the mind's eye; if they are identified and considered, wakefulness continues. But at last they become vague, the attention relaxes, and we sleep. It is possible to realize that one is sleeping, and to make an effort to awake and seize the mental train. But the would-be sleeper resumes the favorable position, the head drops, the senses lose

their sensibility, and he who spent the last hour of the evening in revery in a darkened room has undergone but a very slight change when he passes into sleep. The images still run on while the body reposes, until, according to his temperament and habits, the brain becomes calm, and the soporific influence penetrates, we cannot tell how far, into the higher regions of the sensorium.

If we consider the passing *from the dream state into the waking state*, several analogies are to be noted. Sometimes an amusing sense of the last dream occupies the attention deliciously for a few moments. Again, it is not uncommon to pass out of a dream into a perception of the hour of the night and of the situation, retract into the dream, and sleep and take up the thread where it was left at the moment of consciousness. But more frequently the dream, if resumed, will be modified by physical conditions. At other times a painful consciousness of a fearful dream remains.

From these analogies the conclusion is reasonable that dreaming is a phenomenon of the mind, dependent upon changes in the circulation of the blood, and in the condition of the brain and the nervous system, whereby the higher powers of the mind, including the judgment, the conscience, and the will, are prevented from exercising their usual jurisdiction, the senses from reporting the events of the external world, by which to a great extent time is measured and space relations determined, while the image-making faculty and the animal instincts are to a less degree affected; and that the images constructed in dreams are the working up of the capital stock, the raw material of sensations, experiences, and ideas stored in the mind.

MORE DIRECT EVIDENCE.

Of the truth of this view I will submit further evidence.

First. There is no proof that babes dream at all. The interpretation of the smile of the infant of a few months, which in former times led fond mothers to suppose that "an angel spoke to it," is now of "spirit" in the original sense of the word, which connects it with internal gaseous phenomena. Aristotle says, "Man sleeps the most of all animals. Infants and young children do not dream at all, but dreaming begins in most at four or five years old."

Pliny, however, does not agree with Aristotle in this, and gives two proofs that infants dream. First, they will instantly awake with every symptom of alarm; secondly, while asleep they will imitate the action of sucking. Neither of these is of any value as proof. As

to the first, an internal pain, to which infants appear to be much subject, will awaken them; and as they are incapable of being frightened by any external object until they are some months old, the symptom is not of alarm, but of pain. The imitation while asleep of the action of sucking is instinctive, and an infant will do so when awake, and when there is obviously not the slightest connection between the state of mind and the action. The condition of the babe in sleep is precisely such as might be expected from its destitution of recorded sensations.

Second. Animals dream. Aristotle's history of animals declares that horses, oxen, sheep, goats, dogs, and all viviparous quadrupeds dream. Dogs show this by barking in their sleep. He says further that he is not quite certain from his observations whether animals that lay eggs, instead of producing their young alive, dream; but it is certain that they sleep. Pliny, in his natural history, specifies the same animals. Buffon describes the dreams of animals. Macnish calls attention to the fact that horses neigh and rear in their sleep, and affirms that cows and sheep, especially at the period of rearing their young, dream. Scott, in the "Lay of the Last Minstrel," says:

The stag-hounds, weary with the chase,
Lay stretched upon the rushy floor,
And urged in dreams the forest race
From Teviot-stone to Eskdale Moor.

Tennyson also speaks of dogs that hunt in dreams. Darwin, in the "Descent of Man," Vol. I., p. 44, says that "dogs, cats, horses, and probably all the higher animals, even birds, as is stated on good authority (Dr. Jerdon, 'Birds of India'), have vivid dreams, and this is shown by their movements and voice." George John Romanes, in his "Mental Evolution in Animals," says that the fact that dogs dream is proverbial, and quotes Seneca and Lucretius, and furnishes proof from Dr. Lauder Lindsay, an eminent authority, that horses dream. Cuvier, Jerdon, Houzeau, Bechstein, Bennett, Thompson, Lindsay, and Darwin assert that birds dream; and, according to Thompson, among birds the stork, the canary, the eagle, and the parrot, and the elephant as well as the horse and the dog are "incited" in their dreams. Bechstein holds that the bullfinch dreams, and gives a case where the dream took on the character of nightmare and the bird fell from its perch; and four great authorities say that occasionally dreaming becomes so vivid as to lead to somnambulism. Guer gives a case of a somnambulist watch-dog which prowled in search of imaginary strangers or foes, and exhibited toward them a whole series of pantomimic actions, including barking. Dryden says:

The little birds in dreams the songs repeat,

and Dendy's "Philosophy of Mystery" quotes from the "Domestic Habits of Birds" in proof of this.

We have often observed this in a wild bird. On the night of the 6th of April, 1811, about 10 o'clock, a dun-nock (*Accentor modularis*) was heard in the garden to go through its usual song more than a dozen times very faintly, but distinctly enough for the species to be recognized. The night was cold and frosty, but might it not be that the little musician was dreaming of summer and sunshine? Aristotle, indeed, proposes the question—whether animals hatched from eggs ever dream? Macgrave, in reply, expressly says that his "parrot Laura often arose in the night and prattled while half asleep."

Third. The dreams of the *blind* are of great importance, and the fact that persons born blind never dream of seeing is established by the investigations of competent inquirers. So far as we know, there is no proof of a single instance of a person born blind ever in dreams fancying that he saw. Since this series of articles has begun, the subject has been treated by Joseph Jastrow in the "Presbyterian Review." He has examined nearly two hundred persons of both sexes in the institutions for the blind in Philadelphia and Baltimore. Thirty-two became blind before completing their fifth year, and not one of these thirty-two sees in dreams. Concerning Laura Bridgman, the blind and deaf mute, Professor G. Stanley Hall, quoted by Mr. Jastrow, says, "Sight and hearing are as absent from her dreams as they are from the dark and silent world which alone she knows."

Fourth. The testimony is the same with regard to those born *deaf*. The celebrated Harvey P. Peet, LL. D., in his researches, among the most philosophical ever made, places this fact beyond rational doubt; but other investigators furnish equally valuable evidence. In visiting institutions for the blind and the deaf I have made inquiry, and have never found an instance of a person born deaf, or of a child who lost his hearing before he was four years of age, dreaming of hearing. Among the results of recent inquiries I present the following from the principal of the State Institution for the Blind and Deaf at St. Augustine, Florida:

I have closely questioned the deaf children here as to whether they have ever *dreamed of hearing*, and the invariable answer is *No*. I have asked the same question of upwards of fifty deaf persons with the same result, except where the person interrogated had lost his hearing after learning to talk. These last mentioned are all persons of some education who understood the question fully and were very positive that they had never dreamed of hearing more than a rumbling sound.

Very sincerely,

PARK TERRELL.

I was one of the members of a committee of three to visit the State institution of Michi-

gan for the blind and deaf, at Flint, where there were hundreds of pupils. The method of awakening them in the morning and of calling them to recitations and to chapel services was by beating a base-drum, which, of course, the blind could hear. But it was curious to observe the deaf awaking from a sound sleep at 5 in the morning, or called to chapel and recitation at other hours of the day, by the beating of a base-drum in the central hall. Those who could not have heard the reverberation of all the artillery in the world felt the vibration of the building produced by the beating of the drum and obeyed the signal. Some of them dreamed of vibration; none born deaf of hearing.

In further elucidation of the subject I addressed a letter to Professor J. W. Chickering, Jr., of the National Deaf Mute College at Washington, D. C., and under date of February 3, 1888, received the following:

Deaf mutes of all grades dream frequently, though they are not given to imagination. As to the question whether they dream about anything involving sound, I have made diligent inquiry, and have been answered in the negative except in the case of the Rev. Job Turner. He says that he once dreamed of being counsel for a prisoner, and being greatly delighted to find himself making a very eloquent speech in his behalf.

The question of dreaming about sounds in the case of semi-mutes was discussed in the "American Annals" some years ago by Professor Greenberger of New York, and some statistics were given; but he dismisses your inquiry (*i. e.*, whether persons born deaf ever dream of hearing) very abruptly by saying, "This question was put to a number of congenital deaf mutes, and, as might have been expected, their answers were all in the negative."

I may state to you, as a matter of fact, that one of our deaf-mute teachers, who has no memory of hearing, has waked from sleep in a fright by the report of firearms; but that would be accounted for by the concussion and consequent action upon the nerves of general sensation.

Truly yours,

J. W. CHICKERING, JR.

Upon the above letter I may remark that the single case of the Rev. Job Turner, an educated man, accustomed to read and imagine spoken oratory, can be accounted for without assuming that he dreamed of hearing sounds, the speechmaking being a movement of his mind involving an act rather than a perception. The being awakened by the explosion of firearms is, as Professor Chickering justly says, explicable on the same principle as that which accounts for the awaking of the deaf and the communication of information by the rhythmical vibration of a building.

Leaving out of account the question of the dreamless state of infants and very young children, I deem the facts that animals dream, that the congenital blind and deaf never dream of seeing or hearing, conclusive proof that dreams are phenomena of the physical basis of mind, dependent upon changes in the cir-

culuation of the blood, and the condition of the brain and the nervous system; and that the images constructed in dreams are the automatic combinations of the sensations, experiences, ideas, and images stored in the mind.

Three further collateral evidences can be adduced. First, the modification of dreams by physical conditions. With this all are familiar. These are plainly, so to speak, efforts of the image-making faculty, active in dreams to account without the aid of the judgment for a physical sensation. Every one knows that the condition of the digestive organs, the position of the head or any other part of the body, will affect the dreams.

Another fact is that the dreams of the very aged, unless something unusually agitating is anticipated or occurs, generally recur to the scenes of former years, and therein greatly resemble their conversation. Even when the intellectual faculties are unimpaired, and the aged person is much interested in current events, and pursues a train of study and reflection by day under the control of the will, when at night the imagination is set free the scenes of early life or childhood furnish the materials of the images much more frequently than contemporaneous events. This is in harmony with the known laws of memory.

In regard to the dreams of the insane, the "Medical Critic and Psychological Journal" of April, 1862, says:

The dreams of the insane are generally characteristic of the nature of the aberration under which they labor; those of the typho-maniac are gloomy and frightful; of the general paralytic, gay and smiling; of the maniac, wild, disordered, pugnacious; in stupidity they are vague, obscure, and incoherent; in dementia, few and fleeting; in hypochondria and hysteria the sleep, especially during indigestion, is disturbed and painful.

This is in accordance with all the indications.

ACCOUNTING FOR THE CHARACTERISTICS OF DREAMS.

IN dreams, time and the limitations of space are apparently annihilated. This is to be explained by the fact that the reports of the senses and the movements of external bodies by which we measure time are shut out, and the mind is entirely absorbed in a series of images.

I entered the South Kensington Museum in London and saw a painting of an Alderney bull, cow, and calf in a field, which produced so extraordinary an illusion that I advanced several steps towards it in broad daylight, under the belief that I was looking out of a window into the park. The same phenomenon occurs under the spell of an orator of the highest grade; and it is the charm of a theater to make an

audience think and feel that a series of events which would ordinarily occupy many years is taking place before them. That which, under these circumstances, is accomplished to some extent by abstraction or external means in dreams is done entirely by cutting off all possibility of estimating time or space.

The mind is supposed to move more rapidly in dreams than in waking thoughts. Dreams certainly are more diversified and numerous than the waking thoughts of busy men and women absorbed in a particular routine of work, or in the necessary cares of the body, or in conversation circumscribed by conventional laws, the slow rate of speech, and the duty of listening. But it is an error to think that dream images are more numerous than those of revery. In a single hour of revery one may see more images than he could fully describe in a volume of a thousand pages. It is as true of the waking as of the dreaming state, that

Lulled in the countless chambers of the brain,
Our thoughts are linked in many a hidden chain;
Wake but one, and lo! what myriads rise:
Each stamps its image as the other flies.

The apparent loss of identity in dreams, and the finding one's self in impossible positions, is the result of the entire occupation of the perceptive faculties with one image at a time. A dream that a man is a clergyman may change into one that he is a general commanding on the field of battle, and he will see no incongruity. He may even imagine himself to be two persons at the same time, as in Dr. Johnson's case when he contended with a man, and was much chagrined to feel that his opponent had the better of him in wit. He was consoled, however, when on waking he reasoned that he had furnished the wit for both.

The vividness of dreams is to be explained in the same way. If a man sees that his own house is on fire, and his family in danger, he looks at the scene in such a way that he becomes for the time as unconscious of anything else as though there were nothing in his brain but the picture. So in the dream, as he sees nothing but the picture, it must be more vivid than any ordinary reality can possibly be; only from the most extraordinary scenes can an analogy be drawn.

In dreams circumstances often appear which had been known by the dreamer, but practically forgotten. Men have sworn that they never knew certain things, and maintained that they had been revealed to them in dreams, when subsequent investigation proved indubitably that they had known, but had forgotten them. The recurrence is precisely like ordinary waking experiences. Events which have not emerged into consciousness for a score of years,

or even a half-century, and phrases, parts of words, expressions of countenance, tones of voices, analogies stumbled upon in the most out-of-the-way places, may in a single moment bring an entire scene with several series of related events before the mind.

The testimony of the mind excited to a certain degree of activity by the fear of death by shipwreck or fire, or, as Whympers has shown in his "Scrambles among the Alps," the immediate expectation of a fatal fall, is that it seems to see at a glance the whole of the past life. This is sufficient to show what it can do in an entirely normal state, and nothing can ever occur in dreams more vivid than this, though it is to be considered that we have only the statements of these persons in regard to what they think was their mental condition; nor in any case could they know that they saw everything.

When one dreams that he is dreaming, which occasionally occurs, he is approaching the waking state; but since he cannot at that time sit in judgment on what he dreams fully without waking himself, it is equally clear that his state resembles that of a delirious person who may perceive that he is delirious and acknowledge it, but in a few seconds be absorbed again in what he sees.

Some of the most interesting achievements of the mind in dreams are the composition of poetry and the working out of mathematical problems. Dr. Abercrombie says that his friend Dr. Gregory told him that thoughts and even expressions which had occurred to him in dreams seemed to him so good when he awoke that he used them in his college lectures. Condorcet, having gone to bed before finishing certain profound calculations, said afterwards that sometimes the conclusions of the work had been revealed to him in dreams. Dr. Abercrombie says that Benjamin Franklin, than whose a more well-balanced and self-controlled mind never existed, assured Cabanis that the bearing and issue of political events which puzzled him when awake were not unfrequently unfolded to him in his dreams. Dr. Carpenter attempts to explain this by the theory well known as "unconscious cerebration." Like the terms of the phrenologists, this may describe but does not explain the process; and what it describes occurs frequently while we are awake. Not only in questions of memory, but in the profoundest thought, how often, when we have been compelled to turn from one class of work to another, and are, so far as our consciousness reports, entirely absorbed in it, in an instant a thought germane to the first problem which was occupying the mind appears with such clearness as to surpass in pertinency and value anything

which we had previously reached. We are compelled to take note of it, and in the case of defective recollection the best of all modes is to cease to think about the matter, and in a short time it will appear almost with the intelligence of a messenger bringing something for which he had been sent.

It would not be surprising, when one has wearied himself, and his perceptions have been somewhat obscured, even though nothing had occurred of the nature of unconscious cerebration, if after a refreshing sleep the first effort of his mind should classify and complete the undigested work of the day before. The dream imagery under which such things are done frequently invests the operation with a mysterious aspect, which, on analysis, appears most natural. I am informed by one of the participants that some time since two gentlemen in Pennsylvania were conversing concerning an intricate mathematical problem. One of them succeeded in its solution by algebraic methods. The other insisted that it could be done by arithmetic, but, after making many efforts, gave up the problem, and retired for the night. In the morning he informed his friend that in the night, while he was asleep, an old Scotch schoolmaster, who had been his instructor many years before, appeared to him and said, "I am ashamed of you that you could not do that sum. It can be worked out by arithmetic, and I will show you how now." And he added that he had immediately done so, and in the morning when he awoke he had put the figures on paper just as his schoolmaster had done in the dream; and there they were, a complete solution of the example.

It was a very impressive dream, but easily explained. It was a workable problem. The man, ashamed of himself that he could not do it and exhausted with his efforts, had sunk into a troubled sleep. His mind undoubtedly had recurred to his old teacher and the rule; and as he dreamed about the matter the working out of the problem had to come in some form. What more natural than that the image of the teacher who taught him the greater part of what he knew of the subject of arithmetic, especially in difficult problems, should have come in to give bodily shape to the shame which he felt, and that his fancy should attribute the information to him. So that, instead of such a dream being extraordinary, it is the most natural method in which it could occur.

The mind when awake is capable, by an effort of the imagination, of conceiving the most grotesque ideas. For example, a man sees before him a huge rock. He may conceive the idea that that rock is transformed into pure gold, and that upon it is a raised inscription made of diamonds promising the

rock as a reward for the guessing of a conundrum. Being awake, he perceives both clearly—the rock in its original character, and the image of the gold rock with the raised letters in diamonds. Perceiving both, he knows the rock to be real, and the other to be fantastic. If the faculties by which he identifies the granite rock were to be stupefied, leaving those by which he conceives the idea of the gold and diamonds in full exercise, it is clear that he would believe that the granite rock was gold. If awake, in this state, he would be insane; if asleep, he would be dreaming. So, if the dreamer be absorbed in images which seem to him real, if the faculties by which he would distinguish an ideal conception from an objective reality were restored, he would take cognizance of his surroundings, and though the image might remain it would not seem real. The statement of this self-evident fact is sufficient to show what all the evidence I have collated combines to prove, that *Mercutio*, in “*Romeo and Juliet*,” was scientifically correct when he said:

True, I talk of dreams,
Which are the children of an idle brain,
Begot of nothing but vain fantasy.

Nightmare, with all its horrors, is but a variety of dreams. The causes for its peculiarities are various—position; pressure upon the stomach, whereby the sympathetic nerves are affected, and through them the brain; extreme fatigue, etc. When a person is awake and has precisely the same unfavorable physical sensations which would produce nightmare, he refers them to their proper source, changes his position, measures the probable consequences, resorts to medical aid, or absorbs himself in work; but when asleep, the mind attempts to account for the sensation, and will perhaps construct an image of Bunker Hill Monument pressing upon his chest to account for a sensation which, if he were awake, he would have no difficulty in explaining.

The relation of sleeping on the back to nightmare is so simple as hardly to need an explanation. Many persons never have an attack unless they get into this position.

Somnambulism differs from dreams in the fact that one or more of the senses may be in an active condition, and that one or more of the organs may respond to the idea which absorbs the mind. A merchant of New York, traveling on the Mississippi River, occupied the same state-room with a stranger of highly respectable appearance. In the morning the stranger, taking up his stockings, said sadly, “I see I have been at my old tricks again.” “To what do you refer?” asked the merchant. “My stockings are wet, and I must have

arisen in the night and traveled all over the ship.”

As already remarked, talking in the sleep is the simplest form in which somnambulism appears. Usually dreamers do not move their limbs, and especially are incapable of rising or walking, because under ordinary circumstances the impulse to do these things is created by the will, and it requires a strong exertion thereof to overcome the inertia of the body and to begin the complex series of motions necessary to move from place to place. In sleep the image is not sufficiently vivid to take control of the muscles.

Cicero says that if it had been so ordered by nature that we should actually do in sleep all that we dream of doing, every man would have to be bound to the bed before going to sleep. The justice of this remark is illustrated in the case of somnambulism.

The peculiarity of somnambulism which identifies it with dreaming is complete absorption of all the powers and faculties in the image. A voice falling in with that may be heard; one speaking of other matters is unnoticed. Dreamers who have never been somnambulists could, by a process of training, be transformed into such; and, what is more important, the tendency can be destroyed if taken in time.

Sir Henry Holland says that it is an old trick to put the hand into cold water, or to produce some other sensation not so active as to awaken, but sufficient to draw the mind from a more profound to a lighter slumber; thus the sleeper may be made to answer questions.

Great light has been reflected upon natural by artificial somnambulism, known by the various names of mesmerism, animal magnetism, electro-biology, hypnotism, etc. It is a very astonishing fact that in these states a particular sense may be exalted so as to give results which in a normal condition would be impossible; and which to a superficial observer, and even to an investigator if he be inexperienced, appear to transcend the bounds of the human faculty.*

MYSTERIOUS DREAMS ANALYZED.

If the foregoing attempt at explanation covered all the actual phenomena of dreams, there is no reason to doubt that it would be satisfactory to readers of intelligence; but it is claimed by many that in dreams premoni-

* Abnormal states, involving changes radically different from dream somnambulism, happen spontaneously when awake, occur in delirium, and at rare intervals the somnambulist may pass into them. It is not the purpose of this paper to consider such.

tions of future events are given, especially of death; that events which have taken place, of interest to the person who receives the communication, are made known; and that the knowledge of current events is frequently imparted when the dreamer is at a great distance.

I will give an example of a dream of premonition which has occurred in the United States within three years. A young man, nineteen years of age, a student in a large seminary about sixty miles from New York, was strongly attached to a teacher. The teacher died, to the great grief of the student. Some time afterward the young man dreamed that the teacher appeared to him and notified him that he would die on a certain day and hour. He informed his mother and friends of the dream, and expressed a firm belief that when that time came he should die. The family considered it a delusion; and as no alarming change took place in his health, they were not worried. When the day arrived they noticed nothing unusual; but after dining and seeming to enjoy the meal and to be quite cheerful, he went to his room, lay down, and died without a struggle.

The following case is said to be authentic. The father of a certain lady died. About a year afterward she aroused her husband by sobbing and trembling violently, while tears ran down her cheeks. She explained that she had just had a vivid dream, in which she had seen her father assemble all his children in his room in the old house, and tell them that the family heirlooms were being disposed of to strangers. The same dream recurred the next night. A day or two afterward this lady, while walking in the town where she lived, saw her father's walking-stick, with a gold band bearing an inscription, a gift from all his children, in the hands of a stranger. The sight so affected her that she fainted. Later inquiries proved that the stick had changed hands on the day previous to her first dream.

The case of William Tennent is in point. Mr. Tennent, a remarkable preacher of Freehold, N. J., zealous in promoting revivals, had a particular friend, the Rev. David Rowland, who was exceedingly successful. A notorious man named Thomas Bell, guilty of theft, robbery, fraud, and every form of crime, greatly resembled Mr. Rowland. Passing himself off for him, he imposed upon citizens of Hunterdon County, N. J., robbed them and fled, everywhere representing himself as the Rev. Mr. Rowland. At the time he perpetrated this robbery in Hunterdon County, "Messrs. Tennent and Rowland, accompanied by two laymen, Joshua Anderson and Benjamin Stevens, went into Pennsylvania or Maryland to conduct religious services. When Mr. Row-

land returned, he was charged with the robbery committed by Bell. He gave bonds to appear at the court of Trenton, *and the affair made a great noise throughout the colony.* Tennent, Anderson, and Stevens appeared, and swore that they were with Mr. Rowland and heard him preach on that very day in Pennsylvania or Maryland. He was at once acquitted." But months afterward Tennent, Anderson, and Stevens were arraigned for perjury. Anderson was tried and found guilty. Tennent and Stevens were summoned to appear before the next court. Stevens took advantage of a flaw in the indictment and was discharged. Tennent refused to do that, or to give any assistance to his counsel, relying upon God to deliver him. The authorized "Life of Tennent" now gives the particulars:

Mr. Tennent had not walked far in the street (the bell had rung summoning them to court), before he met a man and his wife, who stopped him, and asked if his name was not Tennent. He answered in the affirmative, and begged to know if they had any business with him. The man replied, "You best know." He told his name, and said that he was from a certain place (which he mentioned) in Pennsylvania or Maryland; that Messrs. Rowland, Tennent, Anderson, and Stevens had lodged either at his house, or in a house wherein he and his wife had been servants (it is not now certain which), at a particular time which he named; that on the following day they heard Messrs. Tennent and Rowland preach; that some nights before they left home, he and his wife waked out of a sound sleep, and each told the other a dream which had just occurred, and which proved to be the same in substance; to wit, that he, Mr. Tennent, was at Trenton, in the greatest possible distress, and that it was in their power, and theirs only, to relieve him. Considering it as a remarkable dream only, they again went to sleep, and it was twice repeated, precisely in the same manner, to both of them. This made so deep an impression on their minds, that they set off, and here they were, and would know of him what they were to do.

On the trial the evidence of these persons, and of some others who knew Bell, and were acquainted with his resemblance to Mr. Rowland, was sufficient to secure Mr. Tennent's acquittal.

To explain such dreams as these some introduce a supernatural element, claiming that they are sent by God to warn his people; others adopt the hypothesis now known as telepathy; while still others content themselves with vague references to "clairvoyance."

A personal and close investigation of a great number of alleged premonitions of death, revelations of current and past facts, and predictions of the future has afforded me no ground for a scientific presumption either of supernatural interference, of telepathy, or of clairvoyance. That is, authentic cases can be more reasonably explained without than with any of these assumptions.

The English Society of Psychical Research

was founded in 1882, and has pursued its investigations since that time. The names of its president, vice-presidents, corresponding members, and council include men justly distinguished in various fields of scientific investigation, and some occupying high religious positions; and the list of members is also very imposing. It is proper to say, however, that the investigations, as is usual in such cases, have been committed to a few persons, enthusiasts in the matter, and many of the most learned and conservative members of the body appear, from the reports of all the proceedings which I have carefully read, to take no active part in the work. Indeed, Professor G. Stanley Hall, Professor of Psychology and Pedagogics in Johns Hopkins University, who is one of the corresponding members, regrets, in an elaborate review of the proceedings, the absence from the investigations of the most distinguished alienists. The Society, having to a great extent surrendered the investigations to certain persons, has practically committed itself to the hypothesis of telepathy, or the ability of one mind to impress or to be impressed by another mind otherwise than through the recognized channels of sense. Of course dreams have a bearing upon this subject, and to dreams the Society has paid a great deal of attention.

The subject of telepathy I shall not treat in this article, for the Society as represented in the two bulky volumes entitled "Phantasms of the Living," edited by Edmund Gurney, Frederic W. H. Myers, and Frank Podmore, does not claim that the cases which they have presented, drawn from dreams, would be sufficient to prove the truth of telepathy. They confess that they are on doubtful ground, and say:

For (1) the details of the reality, when known, will be very apt to be read back into the dream, through the general tendency to make vague things distinct; and (2) the great *multitude* of dreams may seem to afford almost limitless scope for *accidental* correspondences of a dream with an actual occurrence resembling the one dreamt of. Any answer to this last objection must depend on statistics, which, until lately, there has been no attempt to obtain; and though an answer of a sort can be given, it is not such a one as would justify us in basing a theory of telepathy on the facts of dreams alone.

They acknowledge that dreams, being often somewhat dim and shapeless things, "subsequent knowledge of events may easily have the effect of giving body and definiteness to the recollection of a dream." They concede that "millions of people dream every night, and in dreams, if anywhere, the range of possibilities seems infinite." But when they come to present the subsequent cases, their reasoning upon them is in many instances almost

puerile, and is unscientific in its destitution of rigor. For example, in cases of partial fulfillment where a person dreamed of death, and the dream did not occur until a number of hours after the death, they call that a deferment of percipience. They say that the impression when it first arrived "was unable to compete at the moment with the vivid sensory impressions and the crowd of ideas and images that had belonged to normal senses and waking life, and that it may thus remain latent until darkness and quiet give a chance for its development." The same sort of reasoning might be applied to account for the fact that such information is not universally communicated. It is flying about loose in the heavens and in the earth; but, not being able to compete with the crowd of images in any except few cases, does not generally materialize.

When they come to cases where the dreams contain the general feature of conversation between the dreamer and the agent they say, "This is, of course, a clear instance of something superadded by the dreamer's own activity"; and when the circumstances of the death do not concur with it they claim a fulfillment, and attribute a failure to agree to a death imagery superadded by the independent activity of the dreamer.

Where a woman dreams twice of death and it is fulfilled, and she also has the candor to state that on another occasion she dreamed of a death and nothing came of it, they say:

The absence of any ascertained coincidence on the third occasion might be represented as an argument for regarding the correspondence on the two previous occasions as accidental, but it would be a very weak one; since even if the dream had recurred a thousand times, the chances against the accidental occurrences of two such coincidences would still remain enormous.

Many of the cases they cite depend upon vague memory, and others do not supply adequate particulars.

Their general method of writing about these dreams and of the whole theory of telepathy is that of an affectionate mother lingering over her own child, and wherever coddling is necessary doing it *con amore*. There are two radical defects to be seen in the entire method: First, not a twentieth part of the care is taken in the investigation of the cases and their authentication which would be required for a case of ordinary importance in a court of justice; secondly, the use of the so-called doctrine of chances is so ludicrous as to be practically a burlesque of science. They sent to 5360 persons taken at random, asking them to state whether they had ever had a dream of the death of some person known to them, which dream was an exceptionally vivid one, and of which the distressing impression lasted an

hour after arising in the morning, at any time within the twelve years 1874 to 1885 inclusive. Of these 173 answered "Yes." It would be difficult to believe, if it were not published to the world on the authority of the Society, that any one should conclude that that number could furnish a basis upon which to ascertain an average to be applied to the whole population; yet they do so, and say that it is as satisfactory as the proof that a similar number of persons taken at random would afford on the average number of cases of short-sight or color-blindness.

Short-sight and color-blindness are physical conditions, depending upon physical causes; dreams are evanescent, irregular, depending upon phenomenal causes, and the dream images of a single family in a single week may amount to millions, of which any one under the operations of laws not subject to statistics may be vividly remembered.

But of the whole number of 173 who had vivid dreams of death, there were only 24 where the event fell within 12 hours of the dream. By an application of the law of chance they endeavor to maintain that there would not be more than *one* such coincidence in that time, and that, therefore, "twenty-four is twenty-four times larger than the doctrine of chance would have allowed us to expect." As well might the law of chance be applied to the determination of the number of thoughts on any given subject that would naturally arise in one or more minds in a given period.

As shown in an article on "Astrology, Divination, and Coincidences," published in *THE CENTURY* for February, 1888, the "law of chance" is not capable of application to such subjects. Events are continually occurring, whether attention is directed to them or not. Of all possible occurrences, the time, place, and manner of death are most uncertain. Human lives revolve about a few central points—home, business, health, friends, travel, religion, country. Dream images are about persons and things. That there can be millions of images portrayed in the gallery of dreams, and that the great majority deal with these pivotal points of human life and human thought, taken in connection with the fact that all the events of human history, past, current, and future, revolve about these same points, make it absolutely certain that the number of coincidences must be vast. It is, in fact, smaller rather than larger than might reasonably be expected.

It is natural that a large proportion of dreams of a terrifying nature should be about deaths, because in deaths center all grounds of anxiety about one's self or one's friends. As death is the king of terrors and the dream

state often a disturbed state, death would be also the king of dreams.

Out of the 173 who declare that they have had distressing dreams, there have been only 24 cases of fulfillment. An exact statement of the situation of the twenty-four persons dreamed about, or their physical condition and circumstances, would be as essential to a scientific estimate as the condition and circumstances of the dreamer.

The recollection of dreams depends much upon habit and upon the practice of relating them. I found by experience that this had a tendency to perpetuate a particular dream. For twenty-five years I was visited at irregular intervals by the dream of the death, by drowning, of my brother who is still living. It frequently recurred soon after I had told it with elaborateness of detail to another. The number of appalling dreams that come to nothing is very great, where the vividness of details sometimes fairly compels belief. In many instances a dream of one's death originates in a profound derangement of the nervous system, and the effect of such a dream upon that weakened condition may be fatal. The young student to whom reference has been made came of a family peculiarly liable to instant death from heart disease. Since that period his only brother died without warning, when quietly, as it was supposed, reposing upon his bed. The dream was so vivid that the young man believed it, and prepared himself for it in mind while his body was depressed by the natural physical effect. If he had been treated as another young man was who had a similar dream, and believed it as implicitly, he might have lived. In that case a sagacious physician, finding evidences that death was near, and believing the symptoms to be caused wholly by the impression that he was to die, administered a heavy dose of chloroform. When the young man became conscious and found the hour fixed upon for his death long passed, he speedily recovered.

The repetition of dreams on the same night or on other nights is explained by the impression which they make; and doubtless the number 3 has literary and religious associations which have an effect upon some dreamers. If they have a notion that 3 is the number for significant dreams, they, having dreamed the same thing thrice, are now fully aroused and sleep no more. This is not always the case. A member of Congress dreamed that his only daughter died; he awoke in great agitation, and on composing himself to sleep the dream returned. This continued for the fourth time, and even until the *ninth*, and after each recurrence he was awakened; and in the morning, though not a

believer in dreams, he hastened to his home in a western State, feeling assured that something terrible had happened or was about to happen. The first person whom he met was his daughter, in perfect health.

Coinciding dreams of two persons about a third are often not fulfilled. Abercrombie gives the case of a young man and his mother dreaming substantially the same dream the same night, in which he told her that he was going on a long journey, and she said, "Son, thou art dead." But nothing came of the dream. A young man not far from New York dreamed that his father was being burned to death in a hotel. The same night a lady, a friend of the family, dreamed the same. Nothing came of it.

In regard to the dream of William Tennent's witnesses, the following points may be noticed: First, "the affair made a great noise in the colony"; secondly, Tennent, Stevens, and Anderson all knew where they had been in Pennsylvania or Maryland, and it was easy for them to procure witnesses who could conclusively prove their innocence, and a supernatural interference was not necessary; thirdly, the delay between the trial of Rowland and that of Tennent at a period when information was principally distributed by word of mouth, taken in connection with the general interest in the subject of religion at that time and the excitement produced by the preceding trial, rendered it highly probable that every person in any community where Rowland had preached knew about these facts. The account cannot tell much about these witnesses, or even whether the preaching and the dream occurred in Pennsylvania or Maryland. The natural explanation of the whole proceeding is that they knew the facts and had talked, or heard others talk, about the trial; and so far as evidence goes they had themselves talked about it, and the double dream was a mere coincidence. Whether this be true or not, the facts that the accounts are so defective, contradictory, and improbable, and that Mr. Anderson was allowed to be convicted and punished when he was as innocent as Mr. Tennent, greatly strengthen the natural explanation of the entire proceedings, for it is certain that fortunate coincidences have as often helped sinners as saints.

The possibilities of coincidence in human affairs are incomputable. A gentleman residing near New York remarked to a friend on the 4th of February, 1888, "We shall have snow to-day." There was not a sign of it then, but before they separated the snow began to fall. "How did you know that it would snow?" asked the friend. The sad and singular answer was, "Forty-three years ago to-day I buried

my only son. It snowed that day and has snowed on the 4th day of February every year since, and I felt sure that it would snow to-day." Let those who fancy that the law of probabilities is of any value when applied to a particular day ascertain how many chances there were that it would snow for forty-three consecutive years in a certain part of the country on the 4th day of February.

Inquiry of the passengers on many ocean voyages has shown that not a ship crosses the sea upon which there is not some passenger who had a dream that the ship would be destroyed, which strongly tempted him to remain at home; or was warned by a friend, who, after such a dream, prophesied disaster; or which had not left behind some intending passenger deterred by a dream.

Many of the supposed cases of fulfillment of dreams, and where the coincidences are most startling, relate to events which neither man nor devil, disembodied spirit nor angel, could foreknow if true, since neither the events nor their causes were in existence in the universe; and the fulfillment depended upon actions involving juxtapositions which could not have been foreseen by any finite being, as they were themselves coincidences, and only conceivable as foreknown by God, because of the assumption of his infinity.

THE RATIONAL USE OF DREAMS.

By some it is maintained that dreams are of great value in the argument for the immortality of the soul; the short method being that they prove the soul immaterial and independent of the body, and if immaterial then immortal. If this has any value it would apply equally to animals.

Others have held that we are responsible for our dreams. An article in the "Journal of Psychological Medicine," for July, 1849, says that we are as responsible for our dreams as for our waking thoughts; just as much so as we are told we shall be at the great tribunal for every idle word. And another writer affirms that in dreams each man's character is disintegrated so that he may see the elements of which it is composed. But few dreams are more absurd than such conceptions of them as these. Gluttony, evil thoughts, intemperance, vigils, and anxiety may affect dreams, but the responsibility is for the gluttony and other vices and sins; these are simply the incidental results. Many of the most devout and religious persons who have been unduly excited in religious work have been terrified and driven almost to doubt their acceptance with God by the fearful dreams of an impure or immoral character which have made their

nights hideous. Religious biography abounds with such accounts. These persons have attributed them to the devil, of whom one of them naïvely said, "The evil spirit, having no hope of succeeding with me by day, attacks me in sleep." Intellectual persons of sedentary habits have also been troubled in this way. The explanation in such cases is simple. The "*Journal of Psychological Medicine*," for January, 1857, says:

When persons have been much engaged during the whole day on subjects which require the continued exercise of the intellectual and moral attributes, they may induce so much fatigue and exhaustion of those powers that when they are asleep, to their subsequent sorrow and surprise, they may have the most sensual and most vicious dreams.

The writer proceeds to explain the fact upon the natural principle that the exhausted intellectual faculties, not being active and vigorous in the dream, the intellect received imperfect impressions; while the animal propensities having been in a state of comparative inactivity, manifested greater activity.

In the case of great religious excitement, the principle embodied in the stern saying of a writer that "When one passion is on fire, the rest will do well to send for the buckets" is a sufficient explanation. The intellect and the will being subdued by sleep, the generally excited condition of the brain and the nervous system produces a riot in the imagination.

Some persons rely upon dreams for evidence of acceptance with God, and of God's love. Where they have other evidences and sound reason, they do not need the help of dreams. When destitute of other evidences, it has been observed that their conduct is frequently such as no Christian, and sometimes as no moral person, could safely imitate.

One of the best things said in favor of dreams is by David Hartley, M. D.

The wildness of our dreams seems of singular use to us, by interrupting and breaking the course of our associations. For if we were always awake, some accidental associations would be so much cemented by continuance, as that nothing could afterwards disjoin them, which would be madness.

Notwithstanding, I would prefer to take the risk of dreamless sleep.

Any marked increase in the number or change in the character of dreams should be seriously considered. They are sometimes the precursors of a general nervous and mental prostration. In such cases habits of diet and exercise, work and rest, should be examined. If dreams which depress the nervous energies and render sleep unrefreshing recur frequently, medical counsel should be taken. The habit of remembering and narrating dreams is pernicious; to act upon them is to surrender rational self-control.

A gentleman of Boston who travels much is in the habit of dreaming often of sickness and death in his family. He always telegraphs for information, but has had the misfortune never to dream of the critical events, and to be away from home when most needed. Still, like the devotee of a lottery, he continues to believe in dreams. Another, whose dreams are equally numerous and pertinent, never so much as gives them a thought, and has had the good fortune to be near his family when needed.

An extraordinary dream relating to probable or possible events may be analyzed, and anything which seems of importance in it from its own nature or the way things are stated, may be made a matter of reflection without superstition. But to take a step upon a dream which would not be taken without it allies the person who does it to every form of superstition that stultifies the god-like faculty of reason.

J. M. Buckley.

ON THE BATTLE-FIELD.

I.

ROBERT WHITE GOES IN SEARCH OF A STORY.

ONE afternoon late in September, as Mr. Robert White was about to leave the private office of the editor of the "*Gotham Gazette*," having settled on the subject of the editorial article he was to write for

the next morning's paper, the chief called him back.

"By the way, White," he asked, "have

you a story or a sketch you could give us for Sunday?"

"I don't know," answered White; "that is to say, I have n't one concealed about my person just now—but perhaps I can scare up something before you need it."

"I wish you would," the editor returned. "You know that we are making a feature of the short story in the Sunday paper, and we are running short of copy. We have several things promised us, but they are slow in coming. Rudolph Vernon, for example, was to have given me a tragic tale for this week; but here I have a letter from him, begging off on

the plea that his wife's grandmother has just died, and —"

"And so he's not attuned for tragedy, eh?" interrupted White, smiling. "Well, I'll try to turn out something; but a good idea for a short story is a shy bird, and does n't come for the calling. It is only now and then I can get within reach of one to put salt on its tail. The trouble is that all I could lime I have served up already in the dainty dish I called 'Nightmare's Nests.'"

"I don't know that we really need anything as peculiar or as striking as most of those stories were," said the editor, meditatively. "I doubt sometimes whether the sketch from real life is n't really more popular than the most daringly original fantasy of Poe's or Hawthorne's. The simple little story, with a touch of the pathetic about it, that's what the women like; and after all, you know, fiction is meant to please the women mostly."

"I do know it," said White, with a saddened smile. "Woman likes the cut-and-dried better than the unconventional and unexpected; it is only in the fashions that she wants the latest novelty."

"Then your task is the easier," suggested the editor.

"Not for me," White returned. "I can't do the Dying Infant at will, or the Deserted Wife, or the Cruel Parent and the Lovely Daughter. Some fellows find it easy enough to turn on the water-works and make the women weep; but I never could. The grew-some, now, or the gleeful, I can tackle when I'm in the mood, but the maudlin evades me."

"Well, I'll leave it to you," said the editor, turning back to his work. "Do the best you can for us. You know what we want."

"But I don't know where I'm going to get it," was White's final remark, as he left the chief's office and went to his own desk.

Sitting down, he took up his pen, thought for a minute or two, laughed gently to himself once or twice, made a few incomprehensible notes on a scrap of paper, and then wrote a column of brevier on the subject assigned to him—"Philadelphia as a Rest-Cure." After reading this over carefully and making a correction here and there, he sent it up to the composing-room. Then he took his hat and left the building, his day's work done.

When he reached Madison Square, in his walk up-town, it was about 6 o'clock. His family was still in the country—the lovely September weather was too tempting, and White had not the heart to recall his wife to town, although he heartily hated his condition of grass-widower. With a feeling of disgusted

loneliness he went to the College Club and had a solitary meal, which he ate with an ill grace. But a good dinner and a good cup of coffee after it, and a good cigar, combined to make another man of him. He lingered in the smoking-room for a while, lazily glancing over the evening paper. Then he threw aside the crackling sheet and tried to devise a plot for a possible story, or to recall a character about whom a tale might be told. But his invention was sluggish and he made no headway in his work. Feeling that his recumbent posture might be tending to increase his mental inertia, he arose; and, throwing away his cigar, he went out for a walk, in the hope that the exercise might stimulate his dormant faculties, or that, in his rambles, he might happen on a suggestion.

The evening was warm but not unpleasant; a refreshing breeze was blowing up from the bay and clearing the atmosphere of the foul odors of streets everywhere torn up by the excavations of a new company, until they looked as though French rioters had been building barricades or veterans of the Army of the Potomac had been throwing up temporary intrenchments. Just as this military suggestion occurred to Robert White, the illusion was strengthened by the martial notes of "Marching through Georgia," which rang across the Square as a militia regiment with its band tramped up Broadway. While he was thus attuned for war's alarms, he found himself before a huge iron rotunda, as devoid of all architectural beauty as might be a gigantic napkin-ring, capped by an inverted saucer. A coronet of electric lights circled the broad roof, and a necklace of these glaring gems was suspended over the sidewalk in front of the entrance, illuminating many bold advertisements to the effect that a cyclorama of the battle of Gettysburg was on exhibition within.

As it happened, Robert White had not yet seen this cyclorama, which had only been recently opened to the public. Obeying the impulse of the moment, he crossed the street and entered the building.

He passed down a long dim tunnel, and mounted a winding-stair, coming out at last upon an open platform—and the effect was as though he had been sitting upon King Solomon's carpet and by it had been instantly transported through time and space to the center of a battle-field and into the midst of the fight. To an imaginative spectator the impression of reality was overpowering, and White found himself waiting for the men to move, and wondering why the thunder of the cannon did not deafen him. He felt himself in the very thick of the tussle of war—an

on-looker at the great game of battle. He was alone at first, and there was a subdued hush which lent a mysterious solemnity to the noiseless combat. The Pennsylvania hills stretched away from him on all sides and the July sun beat down on the dashing cavalry, on the broken ranks ill sheltered by the low stone walls, on the splendid movement of Pickett's division, on the swiftly served batteries, on the wounded men borne quickly to the rear, and on the surgeons working rapidly, bare-armed and bloody. Here and there the smoke hung low over the grass, a lingering witness to the artillery duel which preceded the magnificent advance of the Southern infantry. On all sides were heroic devotion, noble bravery, dogged persistence, and awful carnage.

As White stood silent in the midst of this silent warfare, he felt as though he could count the cost of this combat in precious lives, for he knew how few were the families of this wide nation but had one of its best beloved clad in gray in the longlines of Lee, or massed in blue on Cemetery Ridge to stand the shock of the charging Virginians.

The platform slowly filled up with later arrivals, and Robert White was aroused from his reverie; he began to study the canvas before him more carefully. His own interest was rather in the navy than in the army, but he was familiar with the chief movements on this field. He recognized the generals and he noted the details of the picture. The art of the painter delighted him; the variety, the movement, the vivacity of the work appealed to his appreciation; with the relish of a Yankee he enjoyed the ingenious devices by which the eye of the spectator was deceived; he detected one or two of the tricks—a well, for instance, half painted and half real, and a stretcher carried by one soldier in the picture itself and by another out in the foreground with real grass springing up under his feet; and, although he discovered, he almost doubted—the illusion was well-nigh perfect.

By this time the throng on the platform had thickened. It was densest on the opposite side; and White slowly became conscious that a lecturer was there explaining to the gathering group the main lines of the battle and its chief episodes. Remembering that when he entered he had seen a figure in blue with an empty sleeve pinned across the breast sitting apart in the center of the platform, he recalled the custom of most cycloramas to have a veteran, a wounded survivor of the struggle, to tell the tale of the day and to fight his battles o'er every hour to changing companies of visitors.

"It was just there," said the lecturer, "that Colonel Delancey Jones and Lieutenant-Colonel Oliphant of our regiment were killed within less than five minutes; and not ten minutes later our Major Laurence Laughton was badly wounded. Few know how terrific was the loss of life on this bloody field. There were more men killed in this single battle than in the whole Crimean war, which lasted more than eighteen months."

As White listened he found himself involuntarily remarking something unusual in this fragment of the lecturer's little speech. It was not the manner, which was confident enough, nor the delivery, which was sufficiently intelligent, but rather the voice of the speaker. This did not sound like the voice of an old soldier; it was fresher, younger, and, indeed, almost boyish.

"That little building there is an exact reproduction of the farm-house of old John Burns of Gettysburg:

'Just where the tide of battle turns,
Erect and lonely stood old John Burns.
How do you think the man was dressed?
He wore an ancient long buff vest,
Yellow as saffron—but his best;
And, buttoned over his manly breast,
Was a bright blue coat, with a rolling collar,
And large, gilt buttons—size of a dollar;
He wore a broad-brimmed, bell-crowned hat,
White as the locks on which it sat.
But Burns, unmindful of jeer and scoff,
Stood there picking the rebels off—
With his long, brown rifle and bell-crowned hat,
And the swallow-tails they were laughing at.
In fighting the battle, the question 's whether
You 'll show a hat that 's white, or a feather!'

"That 's John Burns's house there, with the gable towards you, and those are his bees and his cows that the poet mentions. Farther away to the right is General Meade with his staff—"

Involuntarily White had drawn nearer to the speaker; and the lecturer, in his rotation around the platform, now advanced three or four paces towards the journalist. Then for the first time White got a good view of him; he saw a slight figure, undeveloped rather than shrunk, about which hung loosely a faded blue uniform with the empty sleeve of the left arm pinned across the breast. The lecturer's walk as he passed from one point to another was alert and youthful; his face was long and thin; his dark eyes were piercing and restless; his hair was so light that it might be white; his chin was apparently clean shaven, and he did not wear even a military mustache. Altogether he produced upon the journalist an inexplicable impression of extreme juvenility; he could not believe that this Boy in Blue was old enough to have been at the battle of Gettysburg, fought just a quarter of a century

ago. Even if the North, like the South, had robbed the cradle and the grave, a drummer-boy of fifteen at the battle would now be a man of forty, and it seemed impossible that the lecturer had attained half that age. The journalist could not but think that the soldier was only a youth, with a strangely aged look for one so young, it is true, and worn with pain, it may be, and without an arm—and yet, for all this, but little more than a boy.

While White had been coming to this conclusion the lecturer had been drawing nearer to him, and was now standing not five feet distant.

"That clump of trees there was the point Pickett had told his men to go for, and they did get to it too—but they could n't hold it. Those trees mark the spot farthest north ever reached by the Southern soldiers at any time during the battle. There was pretty hot fighting in among those bushes for a while, and then the Johnnies began to fall back. It was just then that we were sent in."

"Were you there, sir?" asked an awed young lady, as much overdressed as the red-haired young man with her.

"Yes, miss," was the prompt answer.

White was now close to the speaker, and he examined him again carefully. Despite the uniform and the empty sleeve and a certain appearance of having undergone hardships, it was simply impossible that the fellow should be telling the truth.

"Where did you stand?" asked the young lady.

"Just back of that clump of trees there, miss. When the rebs broke we were told to go in, and we went in at once; and, as I told you, Colonel Delancey Jones was killed first and Lieutenant-Colonel Oliphant next and Major Loughton was wounded, and it was Captain Bryce that took us through the fight after that."

"O Charley!" said the young lady to her red-haired companion. "Just think! He was there; is n't it perfectly awful?"

"I guess it was pretty lively for him," responded the young man; "but when there's a war a fellow feels he must go, you know."

"Did you lose your arm there?" asked the young lady.

"Yes, miss. It was taken off by a ball from Mason's battery. That's Mason's battery over there on the hill; in the woods, almost."

As White heard this answer, which seemed to him a repulsive falsehood, he looked the lecturer full in the face.

"O Charley!" said the young lady to her red-haired companion. "He did lose his arm there! Is n't it perfectly dreadful? And he is so young too!"

"I guess he's older than he looks," Charley jauntily replied.

The lecturer caught White's gaze fixed full upon him, and he returned the glance without the slightest suggestion of embarrassment.

"So you were wounded there, were you?" queried White.

"Yes, sir; just in front of those trees, as the boys went on."

"And how did you feel?" pursued White.

"I did n't know anything for a few minutes, and then I felt sorry that we had been beaten; they say a wounded man always thinks that his side has got the worst of it."

The speaker was now close to White, and the journalist no longer doubted that the Boy in Blue was a boy in fact, masquerading as a man and as a soldier. To White this seemed like trading on patriotism—a piece of despicable trickery. The fellow bore it off bravely enough, as though unconscious of the contemptible part he was playing. He stood the close scrutiny of the journalist with imperturbable calm. His face was coldly serious; and even his eyes did not betray any guilty knowledge of his false position; their glance was honest and open.

"The boy is a good actor," thought White, "but what is the object of this queer performance? Surely there are old soldiers enough in the city to explain a battle picture without the need of dressing up a slim youth in the cast-off clothes of a wounded veteran."

Taking a place by the railing of the platform just alongside White, the mysterious lecturer pointed to a group of horsemen and said:

"That's General Hancock there, with his staff."

White interrupted with the sudden question:

"Were *you* in the war?"

The youth looked at White in surprise and answered simply:

"Of course."

"In what regiment?" White continued.

"The 41st, Colonel Delancey Jones," the boy replied. "They used to call us the Fighting 41st."

"And you were at the battle of Gettysburg?" pursued White.

"Of course," was the reply, accompanied by a strange look of surprise. "Have n't I been telling you about it?"

"Were you also at the battle of Buena Vista?" asked White, sarcastically.

This question seemed to puzzle the young man. "Buena Vista?" he repeated slowly, with dazed expression. "I don't know."

"Perhaps you took part also in the battle of Bunker Hill?" White went on.

"Oh, no," replied the young fellow quickly, his face lighting at once. "No—you've been getting things mixed. Bunker Hill was in the Revolutionary War and Gettysburg was in the Rebellion. The Revolutionary War was over long before I was born."

"And how old were you when the battle of Gettysburg was fought?" was White's next question.

Again a puzzled look came into the face of the lecturer.

"How old was I? I don't know how old I was then. But I was there!" he added with sudden emphasis, as though he were defying the lurking smile which flitted across White's mouth.

"And it was at Gettysburg you lost your arm by a cannon-ball?" White asked.

"Yes—yes!" was the impatient reply. "Did n't I tell you so before?"

And with a suggestion of defiance the Boy in Blue passed behind White and resumed his description of the combatants.

White asked no more questions, and he listened in silence for a few minutes. He did not feel quite as sure that the young fellow was a humbug as he had at first. There was an air of good faith about him, as though he believed what he was saying. It did not seem possible that this was a mere piece of acting; and if it were, what might be its motive? That the boy had been at Gettysburg was simply impossible; and why he should dress as a soldier, and pretend to have taken part in the fight, was a puzzle to which White did not see the solution.

On entering the building the journalist had bought an illustrated description of the battle, proffered by a page at the door; and now, as he mechanically turned the leaves of this, his eyes fell on the name of the business manager of the Gettysburg Cyclorama—Mr. Harry Brackett. White knew Brackett well when the present manager had been a reporter of the "*Gotham Gazette*"; and when he saw Brackett's name he knew to whom he could apply for information. It was at all times a weakness of White's to spy out a mystery, and he deemed the present circumstances too curious not to demand investigation.

At the door of the manager's office, near the entrance, he found Harry Brackett, who greeted him with great cordiality.

"Glad to see you, White," he said. "Good show upstairs, is n't it? I wish you could give us a column of briefer in the '*Gazette*,' just to boom it, now that people are coming back to town again. A good rattling editorial on object-lessons in the teaching of American history would be very timely, would n't it?"

White laughed. "If you want a reading

notice on the fourth page, you had better apply to the publisher for his lowest column rates. I won't volunteer a good notice for you, because I don't approve of your *Infant Phenomenon*, the *Boy Warrior*."

"So you have tumbled to it, have you?" returned Brackett, smiling.

"Well," said White, "it does n't take extraordinary acumen to 'tumble,' as you call it. The battle of Gettysburg was fought in 1863, and it is now 1888; and if that boy upstairs was only a babe in arms then, he would be twenty-five now—and he is n't. That's as simple as the statement of the clever French woman who was asked her age, and who answered that she must be at least twenty-one, as her daughter was twenty."

"That boy does look odd, I'll allow," Brackett remarked. "Lots of people ask me about him."

"And what do you tell them?" was White's natural query.

"I stand 'em off somehow; I give 'em some kind of a ghost-story. They're not particular, most of 'em. Besides, it's only when going out that they ask questions—and they paid their money coming in."

"Then as I'm coming out, I suppose there is no use in my requesting information," suggested White.

"You're one of the boys," replied Harry Brackett. "You are a friend of mine; you are a newspaper man too, and you may give us a paragraph, so I don't care if I do tell you the story."

"Then there is a story to tell?"

"Rather!" Harry Brackett rejoined, emphatically.

"Ah!" said White. "Come over to the Apollo House and give me the latest particulars. A story is just what I have been looking for all day."

II.

THE STORY MR. ROBERT WHITE FOUND.

EARLY in the spring certain old-fashioned houses, low and wide-spreading, standing alone, each in a garden that came forward to the broad avenue, having long lingered as reminders of an earlier time when New York was not as huge as it is now, nor as heaped together, nor as hurried, were seized by rude hands and torn down ruthlessly. After the dust of their destruction had blown away, the large rectangle of land thus laid bare was roughly leveled and smoothed. Within this space, which was almost square, an enormous circle was drawn; and soon a ring of solid brick-work arose a foot or more above the surface of the lot. Upon this foundation swift

workmen soon erected the iron skeleton of a mighty rotunda, which stood out against the evening sky, well knit and rigid, like a gigantic rat-trap. In the perfect adaptation of the means to the end, in the vigor and symmetry of its outlines, in its simple strength and its delicate firmness, in the marvelous adjustment of its strain whereby there was not a superfluous pound of metal, this iron framework was a model of American skill in the noble art of the smith. But soon the beauty of this supple skeleton was hidden under a dull covering of wrinkled sheet-iron; and the building as it drew to completion became uglier and uglier day by day.

The erection of an edifice so unusual as this inflated round-tower aroused the greatest curiosity among the boys of the neighborhood. But no boy followed the labors of the workmen with keener interest than Dick Harmony, a lad of seventeen, who tended the newspaper-stand on the opposite side of the avenue. On a board supported by a folding trestle the journals of the day were displayed every morning and every afternoon under the charge of Dick Harmony. This stand was a branch of a more important establishment two blocks farther up the avenue. Newspapers are the most perishable of commodities; they spoil on the vender's hands in a very few hours; and Dick Harmony found that his trade was brisk only in the mornings and afternoons, and that in the middle of the day, from 11 to 3, there was a slack time. This intermission Dick had been wont to utilize in long walks; but he now spent it wholly on the other side of the avenue, in rapt contemplation of the progress of the strange building which had aroused his interest from the first.

In the very beginning, indeed, he had hated the intruding edifice, from loyal love for its predecessors. He had always liked the looks of the old houses, now swept aside by the advancing besom of improvement. He had taken pleasure, more or less unconsciously, in noting their differences from the taller, smarter, and newer houses by which they were surrounded. He had admired the dignity of their dingy yellow bricks. He had had a fondness for the few faded and dusty flowers that grew along the paths of the gardens in front, and around the basin of the dried-up fountains. He had liked to see the vines clambering over the shallow cast-iron balconies. Once he had even ventured to wish that he were rich enough to own one of those houses,—the one on the corner was the one he would choose,—and if he lived in it, he would open the gate of the garden, and let other boys in to enjoy the restful green. It was a daring dream, he knew; probably the man who dwelt in that little old house on

the corner was worth a hundred thousand dollars, or maybe a million. Dick Harmony made two dollars and a half a week.

It may be that the newsboy was as rich on his two dollars and a half a week as was the man who had been living in the house on the corner, now torn down and replaced by the circular iron building; for Dick was all alone in the world; he had nobody dependent on him; he was an orphan, without brother or sister, or any living relative, so far as he knew; he could spend his weekly wages as he chose. His wants were few and simple and easily satisfied. When he had a dime or a quarter to spare he might do what he pleased with the money; he could go to the theater or to the minstrels or to the circus. He wondered whether the new building was to be a circus.

He expressed to a casual acquaintance, a bootblack, his hope that it might prove to be a circus.

"What are ye givin' me?" cried this young gentleman. "Na—that ain't no circus."

"It's round, like a circus," returned Dick, "an' if it ain't a circus, what is it?"

"I'll give ye the steer. I shined a young feller this mornin' an' he said it was to be a cyclonhammer—a sort of pianneraimer, he said. Ye go in the door and up in the middle somehow, and there you are bang on the battle-field right in with the soldiers a-fightin' away!"

"What battle-field?" asked Dick.

"Battle o' Gettysburg, o' course," answered the bootblack. "Did n't I tell ye it was a pianneraimer o' Gettysburg? *Shine?*"

This final syllable was addressed, not to the guardian of the news-stand, but to a gentleman on the other side of the avenue; and, as this gentleman nodded, the bootblack cut short the conversation with his friend.

Dick Harmony had but scant teaching; but he had studied a brief history of the United States, and from this he derived his sole notions of the history of the world. Like not a few American boys who have had more chances to learn better, he was inclined to think that 1492 was the date of the creation of the universe, which, however, had not really got going until 1776. He recalled vaguely the battle of Gettysburg as having taken place on the Fourth of July, 1863.

The news that the circular building in process of erection before his eyes was to contain some sort of picture or reproduction of this famous fight quickened his desire to learn more about Gettysburg. As it happened, long before the building was roofed in a call was issued for a reunion of the veterans of both sides, and the newspapers were frequent in allusions to the battle. At last a boys' paper,

which Dick read regularly every week, gave an illustrated account of Gettysburg and reprinted Lincoln's speech. As the boy read the story of Pickett's charge and of its repulse, his blood tingled with martial ardor; he wished he had been a man then to have a share in the hard struggle for Little Round Top and to have a hand in the bloody cookery of the Devil's Kitchen. But the fighting is all over, the boy knew; this was years ago; the battles are ended, the country is at peace again, and everybody is glad. None the less did Dick regret that he had not lived in those times, that he might see so great a fight. Then he wondered what a panorama or a cyclorama might be, and he longed to see at least the picture since he had missed the real battle.

Thereafter Dick Harmony spent as much time as he could spare from his news-stand in watching the completion of the building. As soon as the morning demand for newspapers slackened the boy closed his trestle, stowed it away, and crossed the avenue. After a few days the workmen came to know him, and the foreman tolerated his presence where other boys were not allowed to enter. He was shy and silent generally; but now and again his curiosity got the better of him, and he asked questions about the battle—questions which the workmen were puzzled to answer, and which they merely laughed at. He bore their rude jesting without anger; a reproachful glance from his dark eyes was his only retort. He was persistent in his attendance, and always obliging. He was never unwilling to run on an errand for the foreman or for one of the men. At noon he went to the nearest saloon and came back with their cans of beer balanced along a stick. Everybody knew him at last, and so it came to pass that he was tacitly granted the freedom of the place.

He saw the roof put on with its broad ring of heavy glass in thick panes. He watched the fungus growth of the central platform, which at one time came to look like the skeleton of a wooden mushroom. He examined its twin set of spiral stairs, one within the other, like a double corkscrew. He looked on while the passage was built from the platform to the main door, a long wooden tunnel. He walked around the inner circumference of the edifice as the men laid the broad ties and single rail of a circular track. He wondered at the huge wooden tower on wheels—not unlike those used by the ancients in an assault on a walled city—which was built to run upon the primitive railroad. He was present when there was thrust into the building the canvas of the picture, a long limp roll like a Gargantuan sausage. He was there when the spool upon which this canvas had been reeled was raised

up perpendicularly and fastened to pivots at the top and bottom of the moving tower. He was permitted to see the picture unrolled and made fast to a great iron ring, just under the edge of the roof, as the tower was wheeled slowly around the rotunda. He saw the canvas tightened by another iron ring joined in sections to its lower edge. He looked on while the men stretched the canopy which was to spread over the heads of the spectators as they might stand on the platform, and which hung from the apex of the building for a week at least neglected and limp, like the umbrella of a gigantic Mrs. Gamp. He gazed with wonder as the artist touched up the painting here and there, as need was, heightening the brilliancy of a cannon in one place or toning down the glitter of a button in another.

This painter was not the chief painter of the cyclorama, which was the work of a distinguished Frenchman, a famous depicter of battle-scenes. The man Dick saw was a burly Alsatian, who had been one of the principal assistants of the French artist, and who on the return of the great painter to France had been deputed to set the cyclorama in New York. He spoke English like a Frenchman and French like a German. His huge bulk and his shock of iron-gray hair gave him a forbidding appearance; and his voice was so harsh that Dick Harmony was afraid of him and kept out of his way, while following his operations with unfailing interest.

Among the many ingenious devices for concealing from the spectator the exact junction of the real foreground with the painted cloth of the picture was a little pond of water in a corner of a stone wall, cunningly set off by aquatic plants, some of them genuine and some of them merely painted. One morning when Dick entered the building he started back as he heard the big Alsatian loudly swearing in German-French and French-English, because the workmen had carelessly crushed a little group of these plants.

"*Sacré dunder!*" he cried in stentorian tones. "The brute who spoild my cad-dails, vere is he? Vere is the idiod, dad I breag his head?"

Dick crept around behind the central platform and soon discovered the cause of this portentous outbreak. In constructing a few feet of real stone wall, a cluster of cat-tails just at the edge of the pond had been trampled and broken beyond repair.

"*Dunder of heafen!*" the Alsatian roared; "if I attrap the workman beasd who did me dad drick, I breag his neg! Vere vil I find more cad-dails now?"

For some time the human volcano continued thus; and its eruption of trilingual profanity

did not wholly intermit until the shrill whistles of the neighboring factories proclaimed the noontide recess. Even then the artist muttered spasmodically as he went out to his lunch. Dick did not dare to address him then. But nearly an hour later the Alsatian returned, having made a satisfactory midday meal, as his smiling face testified. Dick stood afar off until the painter, leaning back on a grassy mound, had lighted his cigarette, and then he ventured to approach.

"If you want some more of those cat-tails," he said timidly, "I think I know where you can get them."

Then he drew back a few paces, doubtfully.

"You dink you know vere to ged dem?" answered the artist, rising from the ground and towering over the lad; "den I shall go vid you all ad once."

"They may be gone now, but I don't think they are; for the man used to have 'em regularly, and I guess he's got 'em still," the boy returned, with rising courage.

"Ve sall go see," was the Frenchman's reply.

As it happened, Dick was thus able to be of service to the artist. In his wanderings during his noon leisure, before he spent the middle of the day in the cyclorama, he had marked a florist who kept cat-tails. To this man's shop he guided the painter, who was enabled to replace the broken plants. Dick carried the tall stems as he walked back to the cyclorama by the side of the artist, whose roughness had waned and who spoke gently to the boy. In a few minutes Dick was answering questions about himself—who he was, what he did for a living, how he came to be off duty in the very busiest part of the day, how he liked the cyclorama. When the boy declared that he thought the picture of the battle the most wonderful thing he had ever seen, the man smiled not unkindly as he said, "You haf not seen much of dings. But id is nod badd—nod so badd—I haf seen vorse, perhabs. Id is nod so badd."

And from that morning the American boy and the big Alsatian were on friendly terms. After his lunch the artist liked to smoke a cigarette before returning to work, and then he would talk to Dick, explaining the details of the great picture and dwelling on the difficulty they had had to get at the exact facts of the mighty combat. As he told of the successive movements of the two armies during the three-days' fighting, the boy's face would flush and his eyes would flash, and he would hold himself erect like a soldier.

Seeing these things, one day the artist asked, "You vould vish to haf been ad de baddle, eh?"

"There ain't anything I 'd like better," replied Dick. "To be a real soldier and to see a real fight in a real war—that's what I 'd like."

"Bud de war is nod veridably amusing," returned the artist. "For my pard, I lofed it nod."

"Were you a real soldier?" cried the boy eagerly.

The Alsatian nodded, as he rolled another cigarette.

"In a real war?" pursued Dick.

"Id vas a real var, I assure you," the painter responded.

"Did you ever kill anybody?" the lad inquired next, with growing excitement.

"I don't know"—

Dick was evidently disappointed at this.

"Bud dey haf me almost killed vonce. I haf a Prussian saber-cud on my shoulder here."

"Did you get wounded at Gettysburg?"

Dick asked.

"Bud no—bud no," answered the Frenchman. "Id vas at the siege of Paris—I vas a *Mobile*—and ve fought vid de Germans."

"They were Hessians, I suppose?" Dick suggested.

"Dey vere Hessians and Prussians and Bavarians and Saxons—bud de Prussians vere de vorse."

For a few seconds Dick was silent in thought.

"I knew the French helped us lick the Hessians over here in the Revolutionary War, but I did n't know that the Hessians had been fighting the French over in Europe too," he said at last. "I suppose it was to get even for their having been beat so bad over here."

This suggestion seemed humorous even to the Alsatian, who smiled, and rolled another cigarette meditatively.

"Should you lofe to be painted in de picture?" he asked suddenly.

"Would n't I!" cried Dick. "There ain't anything I 'd like better."

"Dere's a drummer-boy vounded dere in de veat-field and he is all dorn. I will paind him once more. You will pose for him."

"But I have n't any uniform," said the boy.

"Dere are uniforms dere in dat case. Dake a jacked and a cap."

Dick sprang to the large box which the artist had pointed out. There were all sorts of uniforms in it—infantry, cavalry, and artillery, volunteers' and regulars', bright zouave red and butternut gray. In a minute the boy had found the jacket and fez of a zouave drummer.

"Is this what I am to wear?" he asked.

The artist nodded. Dick threw off his own coarse coat and donned the trim jacket of the drummer-boy. As he put it on, he drew himself up and stood erect, in soldierly fashion, with his shoulders well squared. Then he adjusted the fez and marched back to the Alsatian.

"Dad 's vell," said the artist, examining him critically. "Now go lie down in de veat-field and I paind you."

Never had an artist a more patient model. Uncomplainingly the lad lay in the position assigned to him until every muscle in his body ached. Even then it was the Frenchman who bade him rise and rest, long before the American would have confessed his fatigue at the unwonted strain. Dick had never in his life been as happy as he was when first he put on that uniform. With a boy's faculty of self-deception, he felt as though he were in very truth a soldier, and as though the fate of the day might depend on his bearing himself bravely.

The sharp eyes of the artist quickly discovered the delight Dick took in wearing the zouave jacket and the fez, and to please the boy the good-natured Alsatian devised excuses to let the boy try on almost every uniform in the box, until at last it came to be understood that while Dick was in the cyclorama he might wear whatever military costume he liked.

One morning Dick was able to get to the building a little earlier than usual. He put on the dark blue uniform of a New York regiment and then looked about for the artist, whom he found at last high up on the wheeled tower, engaged in freshening the foliage of a tall tree. Dick climbed up and sat down beside him, watching his labors with never-failing interest. The painter greeted him pleasantly, paused in his work long enough to roll a cigarette, asked the boy a question or two, and then returned to his task. When the midday whistle shrilled through the air the Frenchman did not lay aside his brush at once, saying that he had almost finished what he had in hand and he wanted to spare himself the bother of clambering again to the top of the tower. The workmen left the building to eat their dinners.

"I vill finish in dree minudes now," the Alsatian remarked as he threw away his cigarette half-smoked and worked with increased energy.

A minute later Dick gave a sudden cry of alarm and disappeared over the side of the tower. The artist's cigarette had fallen among the shavings that littered the ground; it had smoldered there for a few seconds until some

chance breath of wind had fanned it into flame. When Dick happened to look down he saw a tiny little bonfire sparkling exactly under the inflammable canvas of the cyclorama. He called to the painter,—there was no one else in the building to hear his startled shout,—and he set out for the ground as fast as he could. As he came down the ladder he saw the flames brightening and beginning to blaze up, and he feared that he might be too late. He quickened his descent, but another glance below showed him the flames growing taller and thrusting their hot tongues towards the tinder-like picture. With boyish recklessness, half intentionally and half unconsciously, he loosened his hold on the ladder down which he was climbing and sprang to the ground. He plunged through the air for twenty feet or more; but in his unexpected start he lost his balance and fell, with turning body, and with arms and legs extending wildly. Then at last he landed heavily exactly on the fire, which had been the cause of his self-sacrificing movement and which was instantly extinguished by the weight of his body and by the shock of his fall. Where he had dropped he lay motionless. He had struck on his right hand and on his head.

The painter reached the ground a few seconds after the boy, and he found him lying in a heap on a mass of loose earth and shavings and like rubbish. Dick was insensible. Some of the workmen soon came running in at the loud call of the Alsatian, and one of them rang for an ambulance.

The boy had not moved when the doctor came.

"Is he dead?" asked the Alsatian, as the doctor arose from his examination.

"He 's pretty badly hurt," was the answer, "but I don't believe he 'll die. The right arm seems to be broken, and there are severe contusions on the head. We 'll take him to the hospital, and we 'll soon see what is the matter with him."

With a little aid from the doctor, the strong Alsatian raised the boy's body in his arms and bore it gently to the ambulance. As Dick was placed on the stretcher he opened his eyes and asked, "Did I save the panorama?"

"Bud yes—bud yes," cried the artist.

The boy smiled and closed his eyes and again became unconscious, as the doctor took his seat in the ambulance and it drove off.

The artist came to the hospital that afternoon and left instructions to give the boy every attention and every delicacy that might be good for him. They refused to let him see Dick, who was still insensible.

The next day the painter called again. He was then told that the boy's right arm had

been amputated, that the injuries to the head were serious but probably not fatal, and that the patient could receive no one. He was informed that it would be useless to see the boy, who was delirious with fever and not able to recognize any one.

The painter went to the hospital every day, and in time he began to get good news. Dick was a strong, healthy lad, and he was bearing up bravely. As soon as the fever abated and the boy came out of his delirium, the Alsatian brought a bunch of flowers with him on his daily visit and sent them up to the boy's bedside, but it was long before Dick had strength or desire to ask whence they came.

And so the days passed and the weeks. The spring had grown into the summer. Decoration Day had been celebrated, and the Fourth of July was near at hand. The cyclorama was finished after a while, and thrown open to the public. And the boy still lay on a bed in the hospital.

At last a day came when the doctor told the burly Alsatian with the gruff voice that Dick Harmony could begin to see his friends now; the artist was the only friend he had who cared enough for him to ask to see him.

The doctor conducted him to the bedside and stood by, lest the excitement might be more than the patient could bear.

As Dick saw the Frenchman his eyes brightened, he moved the stump of his right arm as though to hold out his hand, he tried to rise from the bed, and he fell back, feeble but happy.

"Is the cyclorama all right?" he cried, before his visitor could say a word.

"Bud yes—bud yes," answered the Alsatian. "Id vas you dad safed him."

The smile brightened on Dick's face as he asked, "Is it finished yet?"

The artist nodded.

"Can I see it soon?" inquired the boy.

The artist looked at the physician.

"We can let him out in less than a month, I think," said the doctor in reply to this mute interrogation.

"Den in less dan a mond you vill see it," the Frenchman declared.

"Will they let me in now that it is finished?" asked Dick, doubtfully.

"I vill dake you in myself," responded the painter. "Or how vill you lofe to come vid us—we need a boy dere now?"

Dick looked at him for a moment speechless. It seemed to him as though this offer opened the portals of Paradise.

"Do you mean it, honest?" he was able to ask at last.

The artist nodded again, smiling at the joy he saw in the boy's eyes.

"Of course I should like it," Dick went on. "I should like it better than anything else in the world. I don't care what wages you pay; I'll come for less than any other boy you can get."

The Frenchman was engaged in rolling a cigarette which he now put between his lips, at the same time drawing a match-box from his pocket. Suddenly he remembered where he was.

"Vell, den," he said, rising, "dad's all right. Ven you are all vell, you come to us and ve gif you a place."

"I'll get well pretty quick, I tell you," replied the boy. "I'm in a hurry to see how it looks now it is all done."

And this favorable prognostic was duly fulfilled. From the day of the artist's visit, and encouraged by the glad tidings he brought, the boy steadily improved. The arm made a good healing and there was no recurrence of the delirium. Just how serious might be the injury to the head the doctors had not been able to determine, but they were encouraged to hope that it would not again trouble him.

A fortnight later the convalescent was released, pale and feeble, but buoyed up by delightful anticipations. The good-natured Alsatian took him at once to the cyclorama, and supported his weak steps as he tottered up the spiral staircase and out upon the center platform, from which the battle-field stretched away on every side.

"Oh!" he cried, with an outbreak of joy as he gazed about him, "is n't it beautiful? This is a real battle, is n't it? I did n't think anything could be so pretty. I could stay here forever looking at it and looking at it."

The artist led him to one of the benches and the boy sank down on it, as though the excitement had been too much for him in his enfeebled state.

It was then about 3 in the afternoon, and at that hour Captain Carroll was accustomed to deliver a brief lecture to the spectators who might be assembled, in which he set forth the story of the battle with the fervent floridity of Hibernian eloquence.

Dick Harmony listened to the periods of the orator with awe-stricken attention.

"Was Captain Carroll really at Gettysburg?" he inquired of the Alsatian, who had taken a seat by his side.

"But yes—bud yes. It vas dere he lose his arm."

Then for the first time the boy saw that the old soldier had an empty sleeve pinned across the right breast of his uniform.

"He lost his arm fighting and I lost mine by accident," cried Dick, bitterly. "I had n't the luck to be a soldier."

The painter looked at the boy in surprise; then he said gravely:

"He is as you—you bode lost your arms on the field of baddle; Capdain Carroll ad de real Geddsysburg and you ad dis Geddsysburg here."

Dick gazed earnestly at the artist as this was said; but the large face of the Frenchman was placid and without a smile. Then the newsboy drew himself up and replied:

"Yes, that's true enough. I was wounded on the battle-field of Gettysburg, was n't it?"

And thereafter this idea remained with him and was never abandoned.

As Dick's strength returned he was put on duty. He was to sell descriptive pamphlets to the spectators on the central platform. A uniform was provided for him. To his delight it was not unlike that worn by Captain Carroll, and the boy proceeded at once to pin his sleeve across his breast as the old soldier had done. In other things also did he imitate the captain immediately—in his upright carriage, in his walk, in his manner of speech, and even in his special phrases.

From the old officer the boy learned the vocabulary of the American soldier, developed during the long marches and hard fights of four years of civil war. He spoke of the Confederate soldiers as "Johnnies"; he called an infantry musket a "howitzer"; he knew that "salt-horse" and "cow-feed" were nicknames for corned-beef and vegetables; and he referred to coffee as "boiled rye."

Captain Carroll was conscious that he served as a model for Dick, and he was flattered by it. He took a fancy to the lad, and talked to him about the war by the hour on the rainy days when the visitors to the cyclorama were scant.

"Were you in any battle besides Gettysburg?" Dick asked, one morning.

"I was in all of them, I think," was the Irishman's answer; "and I was wounded at most."

"Have you been hit more than once?" was the boy's eager question.

"I had me thumb shot off at Bull Run, and the whole hand taken off at Antietam, and the rest of the arm went at Gettysburg, as ye see. I come of a good stock, and I had to be economical of me mimbbers. There's some who never get wounded at all, at all, and there's more that get killed in every contemptuous little fight they go into—not that I regret me experience at all; I ped dear for it, but it was worth it. Ah, but there was illigant fightin' at Gettysburg!"

"I'm sure it was the greatest battle ever fought," declared Dick enthusiastically.

"I dunno," returned the Irishman. "There

was pretty work at Cold Harbor and in the Seven Days. It was then the Fightin' 41st was thinned out a bit; I got me wound in me lung there, and a bullet in me leg."

Dick gazed with awe at the veteran, who discovered a fresh wound whenever the tale of a new battle was told. He believed it all, and he did the Irishman little more than justice. The body of Captain Carroll was scarred with many a cicatrix, indelible records of his devotion to the adopted country in whose service he had lost his health.

In the hottest days of the summer Dick was at his post, although he confided to Captain Carroll that his head "felt queer sometimes," and the old soldier immediately returned that the bullet in his leg was giving him more trouble, and he was afraid the wound was going to open.

In the last week of June there came three days of intense heat, which greatly distressed both the veteran and the lad who kept him company on the central platform. On the fourth day of the hot spell Harry Brackett, who had left the "Gotham Gazette," to become the manager of the cyclorama, was detained by private affairs and did not arrive at the office until 1 o'clock. Then he found awaiting him a letter from Captain Carroll announcing the sudden re-opening of the wound in the leg, which would confine the veteran to the house for a week at least.

"What shall we do for a lecturer?" Brackett asked of the Alsatian painter, whom he had happened to find in the office.

"Is he necessary?" returned the artist.

"Is n't he?" was the journalist's reply. "The people pay their money not only to see a picture of the battle, but to hear an old soldier speak a pice about it, and stoke it up to them for all it's worth."

"Dey haf none to-day," the painter remarked, smiling.

"That's so," said Brackett. "Let's go up on the mushroom and see how they like it without a speech."

The Alsatian threw his cigarette away and followed the journalist down the long tunnel which led to the spiral stairs. As they reached the steps they heard a sound of applause.

"What's that for?" asked Brackett.

"I don't know," answered the Frenchman.

"Sounds as though some one had been making a speech and had got an encore."

"Hush!" said the artist, suddenly grasping Brackett's arm. "Lisden!"

From the platform above them came down the familiar periods of Captain Carroll's lecture.

Brackett stared at the painter in great surprise. "It is n't the Irishman, is it?" he asked.

"Hush!" said the artist again. "Lisden a liddle."

The voice from above was speaking again. "It is as though you were now gazing on a vision of the decisive onslaught of the supreme moment of the greatest civil war known to the history of man—a mighty war of a mighty people who fought their battles, not with hirelings and not with mercenaries, but with their own right arms, and who spent their own blood freely, and their children's blood and the blood of their children's children!"

Again the applause broke forth.

"It is the captain's speech," cried Brackett; "but it does n't sound like the captain's voice."

"It is de boy," said the artist, mounting the steps.

As they came out on top of the platform, they saw Dick Harmony standing by the rail on one side, as Captain Carroll was wont to do; and they heard him delivering the captain's speech, to which he had listened so often that he had unconsciously committed it to memory.

The artist and the journalist heard him out.

"The young feller's got it down fine, has n't he?" said Brackett. "He takes himself seriously too; he's talking just as though he had been in the battle himself."

"And vat harm is id?" asked the Frenchman.

When the lecture was ended Dick gravely answered the questions of some of the spectators, and then joined his friend in the center of the platform.

"You've done us a good turn, Dick," said Brackett; "and you've done it very well too. I've no doubt some of the people think you really were at the battle."

"Was n't I?" asked Dick, doubtfully.

The journalist looked at the boy in astonishment and gave a low whistle. He was about to answer when the painter grasped his arm and led him aside.

"You say de boy did vell," he whispered; "vy not let him alone? He is not lying; he believes he vas dere."

"But he is n't telling the truth either," replied Brackett. "Still, we shall have to let him lecture till the captain gets on his legs again."

But the captain never got on his legs again. His wound refused to heal, and under the exhaustion of the pain the old soldier died at last, after an illness of less than a fortnight.

During his absence Dick Harmony had

delivered his lecture whenever there was a sufficient gathering of spectators. By frequent repetition of the words he had been confirmed in his belief that he was speaking of what he had seen himself. There was a mental metempsychosis by which he transformed himself into the old soldier. He knew that he was Dick Harmony, but he felt also that he was a veteran of the Army of the Potomac. He had assimilated the information derived from the captain, and with the knowledge he seemed to think that he had acquired also the personality of the elder man.

III.

WHY MR. ROBERT WHITE DID NOT USE THE STORY HE HAD FOUND.

THE next afternoon as Mr. Robert White was again leaving the office of the editor of the "Gotham Gazette," the chief checked him once more with a query.

"By the way, White, have you found a story for us yet?" he asked.

"I think I have," was White's answer. "But I want to get expert testimony before I write it."

"Don't make it too scientific—the simply pathetic is what the women like best, you know."

"Well," rejoined White, "the story that I hope to tell is simple enough certainly, and I don't know but what it is pathetic too in a way, although I confess I thought it comic at first."

"I'm not sure," said the editor, "that I altogether approve of a story about which the author is in doubt, for then he is likely to puzzle the reader, and no woman likes that. However, I know I can rely on you. Good afternoon."

Robert White went to his desk and wrote his daily article,—it was on "Boston as the True Site of the Garden of Eden,"—and he sent it up to the composing-room. Then he walked up-town briskly and entered the College Club, where he found Doctor Cheever awaiting him. Doctor Cheever made a specialty of diseases of the mind. He was also White's family physician, and he and the journalist were old friends; they had been class-mates at college.

"Am I late?" White inquired.

"You asked me for 6:30 and it is now 6:31," Doctor Cheever answered.

"Let us proceed to the dining-room at once," White replied. "The dinner is ordered."

"Then, as your mind is now at rest about that most important matter, perhaps you can inform me why you asked me here."

"Sit down, and you shall know," said White; and he told the doctor the story of Dick Harmony's accident and its consequences, and the strange delusion under which the boy was laboring.

Doctor Cheever listened most attentively, now and again interrupting to put a pertinent question.

When White had finished his story his friend said, "This is a very interesting case you have been describing. I should like to see the boy for myself."

"That's just what I was going to suggest," replied White.

And so, when their dinner was over, they walked down the broad avenue to the cyclorama. A throng was already gathered on the platform, and the young voice of Dick Harmony could be heard indicating the main features of the great fight.

When, in his revolving around the outer rail, the boy came near Doctor Cheever, the physician asked a few questions about the battle-field, and so led the conversation easily to Dick's own share in it. The answers were not unlike those the boy had given Robert White on the preceding evening. Doctor Cheever was gentle and kindly, but his questions were more searching than White's had been.

When they had seen and heard enough, the doctor and the journalist came out into the street.

"Well?" asked Doctor Cheever.

"I wanted you to come here," White answered, "and examine the boy for yourself."

"Why?" queried the doctor.

"Because I think you can give me special information as to his mental status."

"It is an interesting case, certainly," Doctor Cheever replied, "but not altogether abnormal. The boy is perfectly honest in his false statements; he is saying only what he now believes to be strictly true. He wanted to have been at that battle; and after the injury to his head, his will was able to master his memory. That he now thinks and asserts that he was at the battle of Gettysburg you may call an astounding example of self-deception, and so should I, perhaps, if I had not seen other instances quite as startling."

"Just as George IV. came to believe that he was present in the flesh at Waterloo," suggested White.

"Precisely," the doctor returned; "but sometimes it happens without a broken head or insanity."

"I'm glad to have your opinion as to the boy's mental condition."

"What did you want it for?" was Doctor Cheever's next question.

"To use in a story," said the journalist. "I think I can work this up into a sketch for the Sunday paper—a sketch which would not be lacking in a certain novelty."

"Better not," remarked the doctor, dryly.

"Why not?" inquired White, a little provoked by his friend's manner.

"Why not?" Doctor Cheever repeated. "Why not?—why, because the boy might read it."

TOPICS OF THE TIME.

A Lay Sermon to the Clergy.

AS a rule the clergyman in partisan politics is a dupe and a danger, but a clergyman concerning himself, without cant, rancor, or extravagance, in the questions of the day on the moral side,—none the less if these questions are to be dealt with by legislation,—such a clergyman is a boon to the community. We are well aware that the clergyman's first and chief duty is the spiritual betterment of the individual, and that a nation of saints, if wise saints, would be a nation of good citizens. But good citizenship is to be promoted not only directly by "saving the soul" of the individual citizen, but also indirectly by all sorts of social and political and legislative devices.

No one can say that the clergy are not interesting themselves in temperance reform, and in many other reforms. The sermon preached last winter in New York and Washington by the Rev. Dr. Van Dyke, of the Brick Church, on "The National Sin of Literary

Piracy," is a notable evidence of the active interest of the pulpit in public morals. The preacher took for his text: "Righteousness exalteth a nation; but sin is a reproach to any people," and by his treatment of the subject fully justified his theme.
